Split hard shell squashes, scrape out the seeds and steam; then when the pulp is soft scrape it away from the shell. This saves material and labor. Half an hour to an hour is ample for cooking squash. The soft pulp may then be put thru a ricer or simply mashed, and seasoned with salt, pepper and butter. This prepared squash may be put thru bag and tube, like potato, for a garnish. Sometimes the shell may be trimmed in the shape of a dish without removing its contents. Or it can be baked either in one large piece or in individual portions, a method especially good for watery squashes as part of the juice evaporates, leaving the pulp drier and sweeter.

Cooked squash may be substituted for potato in hashes, croquettes or breads. A combination of cooked pumpkin or squash with cornmeal seems to have been devised by the early settlers to give variety to their corn bread. The soft pulp gave something the same texture as scalding the corn meal, and served to make the meal last longer. A cream of squash soup, if flavored with herbs or onion, is as satisfying as the popular "creams" of other vegetables. Squash pie is a combination of about equal proportions of cooked squash and uncooked custard, which are then cooked in a crust. Squash, like carrots or melon rinds, may be the basis of a preserve highly flavored with ginger or lemon. A surplus of pumpkin or squash which cannot be kept otherwise may be cut, pared and dried like apples or other fruits.

Carrots Another old standby is the carrot, which is not fairly appreciated by people generally, but which has many excellent qualities. As a garden ornament it would be worth a place, and it takes care of itself if given half a chance. Instead of planting it in rows in beds, in the usual fashion, use it as a border around plots of the taller vegetables like beans or corn, or to give a finish to the irregular course that squashes mark out for themselves. Is there any real reason why appearance should not be considered in laying out the vegetable garden as well as the flower beds? Perhaps the vegetables would be more highly appreciated if we realized their decorative possibilities.

Carrots may be steamed or boiled in their skins or scraped before cooking since the skin is very thin on the young root. Often it is simpler for the cook to scrape and cut the carrots in half inch cubes or strips before cooking, but in that case the water should be saved for soups or allowed to evaporate at the end of the cooking process so that all the sweet juices may be saved. A little butter and salt is the best dressing for choice young carrots; a white sauce makes the older ones more attractive.

Celery Like other salad plants, celery is mainly water but contains enough solids, especially mineral matter, to be a valuable vegetable. Celeriac, turnip-rooted celery, has much the same flavor, but the thick root is the part used instead of the stalks. This may be served raw when very young and tender but is generally cooked and served with a cream sauce, hot or cold with salad dressing.

Every head of celery may be sorted into two or three classes of stalks. The largest are often unfit for anything but flavoring soup. The next layer may be cut crosswise in half inch lengths, cooked an hour or more until tender, the water drained off for soup and the cooked sections put in a white or brown or tomato sauce, either in timbale cases or on toast. Another method is to scallop the celery in layers with white sauce and a sprinkle of cheese and buttered crumbs on top. Sometimes the stalks are cut in two inch pieces and these are only partly boiled and then dipped in batter and fried in deep fat. Celery, either cooked or raw, chopped fine, is an agreeable addition to stuffing for poultry or to sauces to serve with chicken or veal

The next layer of stalks may not be quite tender enough to eat at the table but are just the sort to cut in cubes for salads. Cut each stalk in two or three strips; lay ten or more of the strips on a board or stiff paper and then cut them across all at once in quarter inch cubes with a sharp knife. The white tips of the leaves make an attractive garnish for a salad or platter of cold meat.

But best of all are the three or four crisp, white little stalks in the middle of the head. These should never be wasted in soup or even in a chicken salad but should be served raw as a relish.

Peppers Sweet peppers, green or ripe, have grown in popular favor very rapidly of late and will be found even in war gardens. They may be canned for use later like the *pimientoes* (which they are) which formerly came from Spain. Like some of the other vegetables we have been considering, they are of value chiefly because they make more nutritious foods appetizing.

The seeds are rather hot and should be removed but may be saved to flavor soups. The "core" or little cushion on which the seeds rest, is a soft tender morsel and should be added to the stuffing of the pepper or chopped with it. A single pepper chopped fine makes a good flavoring for an omelet, a salad or hashed potatoes. The green peppers, when core and seeds are removed, have a large hollow space which seems to invite stuffing. Their attractive color, shape and flavor make them admirable vehicles to convey even hash to otherwise unwilling mouths. Rice and cheese served in peppers is a substantial meat substitute. Sweet corn cut from the cob may be cooked in peppers or have a bit of chopped pepper added to it. The ripe peppers combined with sweet corn, either fresh or canned, make a savory soup which is made more substantial by adding milk. Some of the least expensive cuts of meat, cooked slowly until the meat is tender in a casserole dish with a generous covering of peppers, tomatoes and onions will rival the choicer meats in the opinion of the family.

Egg-plant Egg-plant will not fruit well unless the soil is quite rich, but if well-nourished will often continue to mature its fruits after light frosts. The standard ways of preparing this fruit are frying and baking. It is cut in quarter inch slices, pared and the slices cut in halves, or it may be cut in two inch strips like vegetables for Julienne soup.

To bake the "egg" cut it in cubes, put them in a dish with seasoning and alternate layers of crumbs, cover with hot water or milk and bake about an hour. Or use the skins of the egg-plant for stuffing with a mixture of crumbs, seasoning and the pulp, which is parboiled before mixing with the other ingredients.

Potatoes and Salads Tho last spring the potato was one of the luxuries of life it is to be hoped that the thousands of new gardens will give their owners an abundant supply this fall. Altho potatoes will stand transportation better than many vegetables they are never so good as when dug just before they are cooked.

Baking is the best of all ways to cook new potatoes, for they are liable to have an excess of moisture which will be lost in the oven, and when baked the skins are tender and can be eaten.

New potatoes, also, are especially desirable for salads and may be made the basis of the mixt vegetables or Macedoine salads. Where the same person is both gardener and cook formal recipes for salads are wholly out of place. One takes what is at hand and proceeds to make the best thing possible of it. Potato, green corn and cucumbers are left from dinner, if in fairly equal proportions all right, but what does it matter if there is twice as much of one as of both the others? They are each compounds of water, mineral matter and a little starchy or sugary material. Since they lack fat and protein those must be added if they are to be the main dish for supper or luncheon. The fat may be added in the shape of olive oil or oil that comes from peanuts or maize, or it may be cream, sweet or sour, or a cooked dressing containing butter, or even bacon fat. Or the salad may have little or no fat in it but be garnished with crisp curls of bacon or almost transparent slices of cold roast pork rich in fat. There is a little protein in the green vegetables, especially the legumes, and salad dressings containing milk and eggs supply more. If the salad is to be the main dish a liberal garnish of hard-boiled eggs will bring it up to meat standards of fat and protein.

Every well regulated garden should have successive plantings of lettuce, corn-salad, chickory or other salad plants. With these aid and a good cooked dressing kept on hand, to which oil may be added as required, a salad is easily concocted from what is at hand.

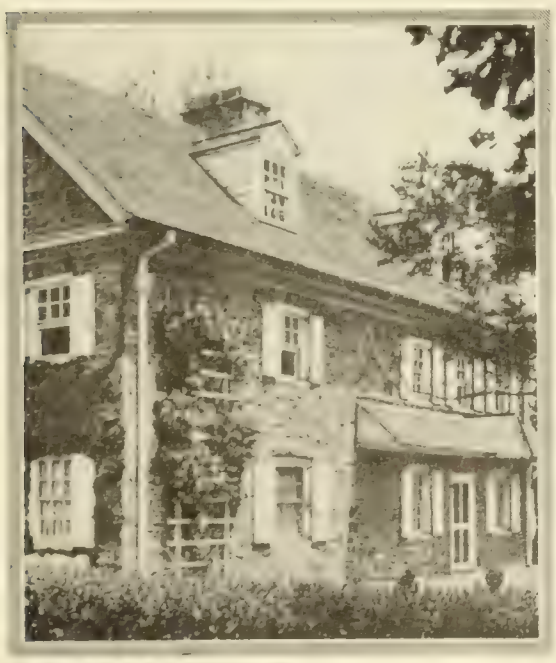
BUILDING IN THE VERNACULAR

BY HAROLD DONALDSON EBERLEIN

BUILDING in the vernacular! A well-sounding phrase, truly. But "Just what does it mean?" perhaps you say. Well—for the benefit of the hypothetical lay person, who doesn't know and isn't supposed to know, and still more for the benefit of the "gentle reader" who doesn't know and is supposed to know and is ashamed to admit that he doesn't know and is secretly glad when somebody "talks to the cat," or to the hypothetical lay person, so that he can find out without exposing his ignorance—building in the vernacular means making use of the common materials native to a given locality and the style of architecture peculiar to and characteristic of the region.

From "The Colonial Homes of Philadelphia," courtesy of J. B. Lippincott Co.

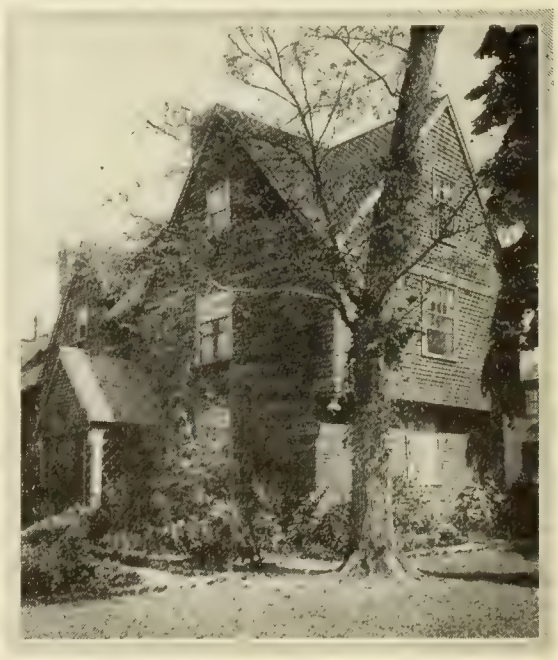
"Wyck," in Germantown, Philadelphia, built in 1691, is typical of Middle Colonies Vernacular in the German interpretation. A delightful house



Savage tribes and primitive peoples built altogether in the vernacular because common-sense and necessity alike prompted them to use the materials that were readiest at hand and because external influences had not gained sufficient force to create a desire for architectural importations. In a more advanced stage, while the promptings of both inclination and expediency to build in the vernacular were almost as urgent as in the primitive stage, there was also a strong element of tradition inherited from miscellaneous sources that had, in the course of time, become incorporated into the mass of popular taste and created well-defined preferences for methods and types that were not always in accord with the obvious course that expediency dictated and, sometimes, were quite at variance with it. Indeed, at this stage, tradition may be said to have become the dominant factor in determining architectural style.

This stage was conspicuously exemplified while our first forebears in the American colonies were adjusting their architectural practise to the conditions existing in the New World. They clung tenaciously to the building traditions they had brought with them from the several parts of England whence they came, and it was not until after the lapse of ten, fifteen or twenty years from the time of their arrival that they fully succeeded in accommodating tradition and inherited preference to local conditions and evolving from an amalgamation a colonial expression of architecture that might properly be termed vernacular, an expression consisting of tradition grafted upon and modified by the unalterable physical characteristics of the region. And, be it remembered, there was no one type that can be called the vernacular of the American colonies, for just as the types of colonists in the separate parts of the country differed exceedingly, the one from the other, and just as the natural conditions in the various sections of the colonies also differed widely, so likewise did the mode of architectural expression evolved in any one locality differ from all the others.

BEGINNING with the northern colonies, we find the early New England type of house which may be considered to have reached a truly vernacular and unmistakably individual stage by about 1680 or 1690. By that time the traditional forms transplanted from England, on the one hand, and the modifications imposed by local necessity, on the other, had become firmly welded together into a fully defined expression that plainly reflected the features of the British prototype whence it was ultimately derived and also, just as logically, the effect of regional influences. The average New England house, so soon as it had passed beyond the temporary stage of a mere log cabin shelter, hastily erected under pressure of immediate necessity, and had begun to display any approach to architectural style, exhibited the usual characteristics of the contemporary English house of moderate size. It was perfectly natural that this should be so. "First of all, the men who built the early New England houses and the men who lived in them were Englishmen, and, as Englishmen, they were naturally disposed by temperament to be strongly conservative and to cling tenaciously to precedent and tradition, particularly in a matter of such vital importance as the fashioning of houses. In the second place, all their training in craftsmanship was English, and it was but reasonable that they should continue to work in a new land with the same tools and to fashion their materials in precisely the same manner as they had been wont to do in the land of their birth." To take a well-known example, just such an English house in America was the "House of Seven Gables" in Salem, Massachusetts, at the outset of its career, and very similar to it were many other old houses thruout eastern Massachusetts. It was nothing more nor less than an English half-timber house, built as were the half-timber or "black and white" houses in England during the reigns of Queen Elizabeth or of the first James and Charles. Not the least significant thing is the fact that notwithstanding the abundance of stone and the presence of clay suitable for making brick, the early houses were almost invariably of timber construction—another evidence of the force of tradition.



But, the reader may object, this description of early New England houses does not tally with their present appearance. Very true, it does not. But it *does* correspond exactly with the appearance which, from much painstaking archeological research and the sifting of still remaining structural evidence by competent architects, we know beyond question they must have presented when they were first erected. What was true of the New England colonists, regarding their adherence to wonted methods of workmanship and construction and their strong attachment to traditional forms of architectural expression, was equally true of the other colonists. The English, the Welsh, the Dutch, the Swedes and the Germans continued to think and act as English, Welsh, Dutch, Swedes and Germans, and the results of their several mental attitudes are clearly traceable in the manifestations of early domestic architecture for which they were responsible.

THE colonists "were possest of no mean degree of clear-headed, practical common-sense and were eminently resourceful." The universal adoption of clapboard casing in New England, for example, was a case of

Courtesy of J. B. Lippincott Co.

"Wynnestay" in Philadelphia, built in 1689, is typical of Middle Colonies Vernacular in the Welsh and English interpretation

The House of Seven Gables in Salem is an example of the way early colonists clung to the architectural styles of old England

A modern expression of Vernacular feeling is this shingled house at Fox Point, Wisconsin, Elmer Gray was the architect

adaptation to local needs, and common-sense still further perscribed that the clapboard casing should become an integral part of the wall structure and not be merely a sheath to cover up a fabric whose principle of construction the outward aspect had ceased to express. The process of elimination could be traced in the lopping off of some of the gables and the reduction of the roof contour to the ordinary ridge type with two gable ends. This very thing was done to the "House of Seven Gables" in Salem. The same lopping performance went on in other old houses, too. Gradually the process of evolution produced a type of house peculiar to the locality and totally different from anything to be found elsewhere; a type of house suited, as long years of experience had proved, to all the various physical requirements of the region and also to the social and economic conditions of the average New England family. In other words, the process of evolution had arrived at a genuine and fully developed expression of *vernacular domestic architecture* belonging as unmistakably to the land of its origin as do codfish and baked beans.

TRAVELING southwestwardly after an examination of New England phases, the next important vernacular type in the colonies was to be found among the Dutch of Manhattan and the Hudson valley and among their kinsmen of western Long Island and northern New Jersey. The almost exact prototypes of the earliest Dutch dwellings in America were the small houses in Holland; and the earliest and purest specimens of these small American Dutch houses are now to be found in Kingston-on-Hudson and in old Hurley, a quiet little village only three miles away that has somehow managed to remain more typically Dutch than a good deal of present-day Holland. These houses are low and oblong, usually with an ell extension at one end in the rear, with unbroken ridge roofs, short eaves and a general absence of ornamental detail. The gable ends, until the much later occasional addition of dormers, contained the only windows that admitted light and air to the upper floor or attic, which was ordinarily used altogether as a storage place or for such operations as spinning, weaving or corn-husking. Bedrooms and living-rooms alike were on the ground floor and, with the exception of a hallway that sometimes ran thru the approximate center of the house, were purely fortuitous in their arrangement. The walls were of stone, but bricks, planks for the gable ends and plaster were also employed to help out in various places. Notwithstanding their apparently restricted dimensions, these houses were in reality roomy, cheerful and, for a thoroly informal and simple manner of life, convenient. It goes without saying that their style was essentially lacking in any element of formality.

The Dutchman readily adapted himself to conditions and, when stone was not at hand for his house walls, he built them of timbers and covered them with shingles, as in Long Island, or with clapboards. As time wore on a little, he showed his adaptability further by projecting the eaves to protect the walls from drippings and to give some shade to the windows; by making his roof into a flattened gambrel, thus giving the convenience of a second floor without really altering the exterior to any great extent; by continuing the eaves projection forward and putting pillars at the outer edge for support and, behold, the veranda was formed.

THE Middle Colonies house of vernacular pattern, modeled closely after the small stone and brick farmhouses of England and Wales, was a rectangular structure of brick or stone and, by the nature of its materials, in a land abundantly supplied with the best of timber, bore testimony to the potency of traditional preferences. The roof was of the ridge type, the eaves projected well over a generous cornice which was often continued across the gable ends as a belt course, the house door was frequently protected by a hood and there was not seldom a penthouse between the first and second floors. Tho penthouse and hood were generally dropt in later developments, the type retained undiminished its marked individuality and comfortable aspect. The use of stucco or roughcasting as a protection over walls of porous stone gave an additional touch of vernacular character. One of the most thoroly representative examples of this early type of Middle Colonies farmhouse is Wynnestay, shown in one of the accompanying illustrations, built near Philadelphia in 1689. Practically the only

The Vernacular in modern form. An old farmhouse of Pennsylvania stone restored by Joseph Patterson Sims, architect

alteration of any consequence that has ever been made to the fabric of Wynnestay was the raising of the ridgepole of the roof, on the oldest portion of the building, to the roof-line of an addition made in 1700. Doors and windows are low, but of generous breadth, and capped by heavy stone lintels made of thick, oblong blocks of quarry-faced native stone that must have cost no ordinary exertion and energy to set them in place. The dormers are sharp-peaked, and the walls are thick and solid.

Hundreds of houses of this same general type, sometimes smaller, oftentimes much larger, are to be found thruout the eastern counties of Pennsylvania, west Jersey and Delaware. Not seldom have penthouses and hoods disappeared and been replaced by the more modern porch, but, in the main, the houses belong to this same family, rich in informal and homelike quality, coupled with commodious comfort, that has commended it as a model for frequent modern emulation. In plan, the old houses of this type varied; sometimes one entered directly into a living-room from which the stairway also ascended, at other times there was a well-developed entrance and stair-hall. The vitality of this type is evidenced by its continued perpetuation and popularity and its suitability, in a slightly modified form, to modern needs. In this respect it is comparable to the Dutch colonial type which has been so ably revived in modern version by such men as Aymar Embury II.

An early eighteenth century Long Island Dutch house in which the flaring, bell like eaves have become a porch roof in the process of porch evolution

In the South still another vernacular type, derived from English antecedents, developed in which conspicuous features were massive outside chimneys at the ends of the building, dormer windows in the steep-pitched roof, short eaves and, oftentimes low, rambling wings at each side of the main structure. There was often, tho not invariably, a roofed porch at the house door, and the material of the walls was brick or stone, when it was possible to obtain one or the other, and wood when neither of the former could be had.

Nor is the genesis of American vernacular architecture wholly restric-

What To Do in September

A GARDEN GUIDE BY HUGH FINDLAY

PROFESSOR OF HORTICULTURE IN SYRACUSE UNIVERSITY COLLEGE OF AGRICULTURE

IN THE WAR GARDEN

Keep Up the Fight You have battled thru the trying month of August. you have held the trenches and made some advances but your success in this campaign for production hinges on your action during September. Keep the cultivator busy; strike down the advance of the fall weeds; keep in check the fall insects and be prepared for the first attack of frost.

Celery Keep celery growing vigorously. Apply weak liquid manure water at least once each week. Water the plants freely after each application. One tablespoonful of nitrate of soda dissolved in one gallon of water applied in the evening will also stimulate growth. Boards are by far the best means of blanching celery but soil is often used. As the plant is reaching full growth, begin to bank it.

Winter Squash Squash should be harvested before the frost discolors the skin. Squash vines and other vegetable growths not used should be dried and burned so as to destroy insect eggs and disease.

Asparagus Asparagus should be given special attention the latter part of the month. Clean out all fall weeds and apply a free application of coarse salt. If the beetle is destroying the foliage spray with arsinate of lead, one tablespoonful to a pail of water. Do not cut the tops until after the berries are red and never apply the winter protection of manure until after the frost has come to stay.

Cabbage If the head has started to form and the green worm is destroying it, sprinkle in a little fine salt. Poisons are not recommended after the cabbage starts to head. Keep the soil well cultivated. If the head begins to crack, push it over on its side or raise it a little by placing both hands on the under side close to the stem and lift it loose in the soil. By doing this a number of the feeding roots are destroyed and the head stops cracking.

Peas Make at least two sowings of early dwarf peas the first two weeks of this month. If the weather is favorable there will be two late crops of fine quality peas.

For the Hotbed Parsley plants should be potted in a rich soil for winter use. A few plants in the corner of the hotbed or greenhouse bench will supply flavoring and garnish during the winter. Seed of both head and loose leaf lettuce, if sown early in September, will make sturdy plants for the hotbed the last of the month. Get the hotbed ready at least four or five days before transplanting lettuce or other crops.

THE FLOWER GARDEN

Perennials Such hardy plants as hollyhock, sweet william, foxglove and hardy pink should be shifted during the first two weeks of September. The new bed should be well drained, full of humus in the form of well decayed manure and fertile, at least two feet in depth. Now is the time to rearrange your perennial beds if they have not been satisfactory during the summer.

Peonies and Dahlias Peonies if planted in September in a rich, deep, well drained soil, will bloom the following June. As they are very gross feeders it is advisable to add a considerable amount of bone meal to the soil. A light application of sheep manure, worked into the soil about the dahlias, will not only increase the size of the late blooms but strengthen the bulbous roots for next year.

Roses Mulch the hybrid perpetuals with sheep manure. A little bone meal and wood ashes added will strengthen this last growth and help to ripen the wood. Spray often to keep the red spider in check.

Bulbs Prepare the soil for the bulbs after the first frost has appeared. Dig in some well rotted horse manure mixt with bone meal. Keep the bulbs in a cool, dry place until the last of the month when they may safely be planted.

House Plants Cuttings may be made of colius and geraniums at this time. Plants of begonia, geraniums cut back, heliotrope, lemon verbena, flowering maple and snapdragon, if potted in rich soil, will bloom at various periods during the winter. Before shifting the plants from your garden, water them thoroly, take as much of the soil adhering to the roots as possible and place the newly potted plants in a shady place for two or three days before putting them in a sunny window. Spray the plants frequently with clear water for the first three weeks.

IN THE GREENHOUSE

Palms and Ferns Place palms and ferns in a shaded greenhouse early this month. Wash the palm leaves with a soft sponge and fish oil soap. All scale insects and vermin of any kind should be removed before putting the plants into the greenhouse. If the soil is held in the fern pot by both hands the top or fronds may be swished about in a tub of fish oil soap-suds. Allow the plant to stand for an hour after washing and then spray with clear water. If the insects are hard to remove use an old tooth brush, kept moist with fish oil soap, and loosen the scale.

Chrysanthemums The early varieties are coming into bloom. Keep the heating pipes well painted with sulfur. Some of the varieties are subject to mildew. Dust the foliage, if this disease appears, with flower of sulfur. Spray the foliage only on bright days and have it dry before evening. Keep an even, cool temperature in the greenhouse. Never sprinkle the late varieties when the flower is cup shape if the sun is very bright. A drop of water in the bud may cause the tips of the petals to turn brown.

Carnations Keep the plants well sprayed and work a little lime into the soil the latter part of the month. Mulch the plants early and keep the soil well cultivated. If any plant looks sickly, replace it by another in fresh soil. Nothing is gained by mothering a sickly plant.

Bulbs Bulbs for Christmas bloom should be planted this month and started in a dark, cool place for from six to eight weeks so as to develop a strong root system.

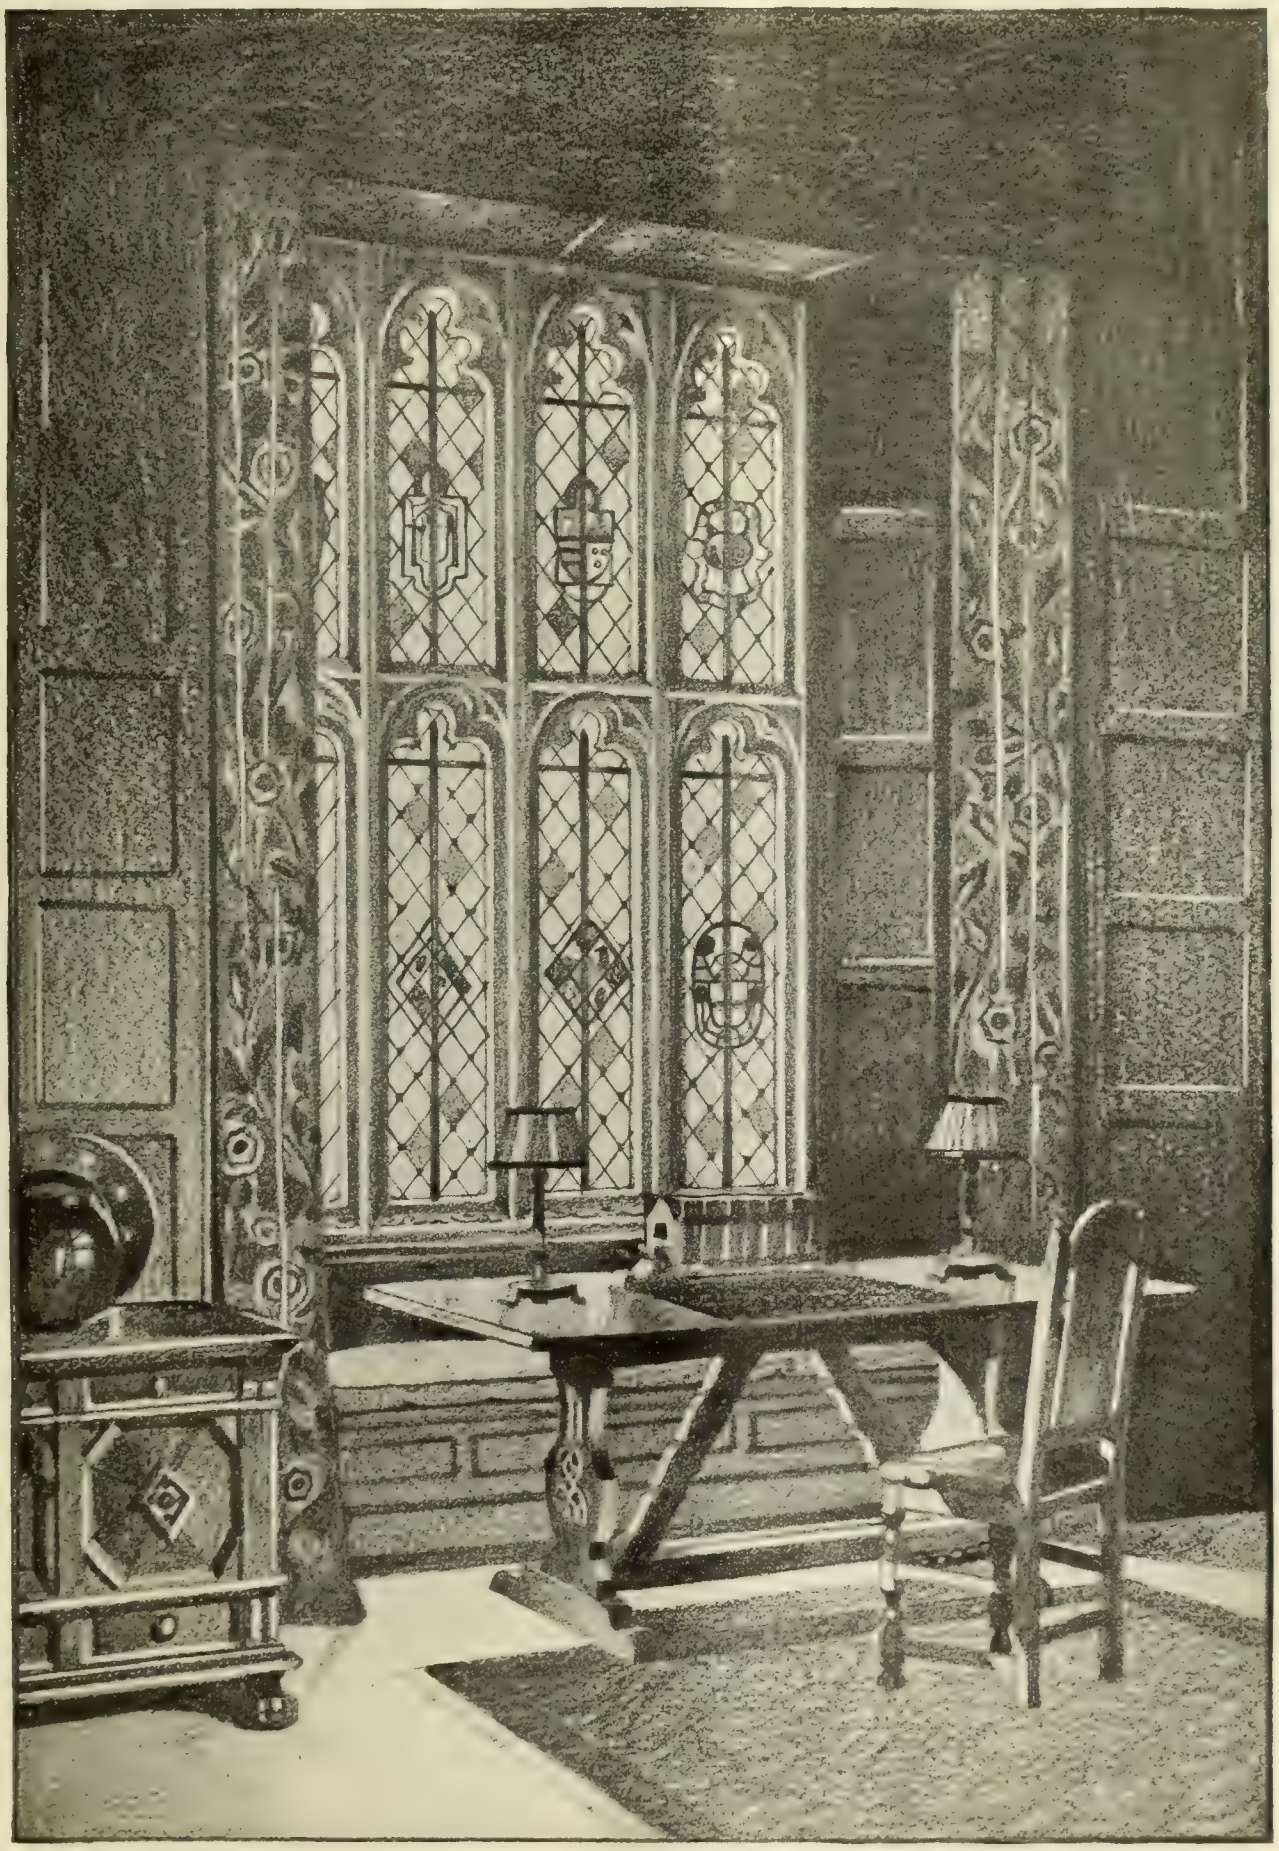
Vegetables Vegetables can be successfully grown in combination with flowers. Such crops as cucumbers, beans and tomatoes do well in a fairly warm house. The soil for cucumbers should be very rich but care should be exercized in placing the manure. Never allow it to come in contact with the stem. The tissue of the stem near the surface of the soil is very tender and decays quickly. Cucumbers may be started in strawberry baskets, at the same time that radishes are planted in the bed. The radishes can be removed before the cucumbers are ready to transplant. Tomato plants should be grown near the glass. String beans in pots may occupy the front part of the bench while the tomatoes are growing. Sow the seed of cauliflower and lettuce in flats prior to transplanting to the hotbed in October.

Enemies Pests such as green fly may be kept in check by burning tobacco stems after sundown, preferably on damp or rainy evenings. Keep the smoke cool by moistening the tobacco stems. Dust the edges of walks and moist walls with lime mixt with a little salt to prevent slugs. Get the traps in readiness for mice. This is the month they come under cover.

Ventilation and Heat Paint the heating pipes in the rose house with sulfur. Spray the roses and carnations early in the morning on bright days so that the foliage may be dry before sundown. Great care must be exercized in ventilating during this changeable month. Too much heat will encourage a weak abnormal growth, and a chill or draft will check the normal growth.

FRUITS AND BERRIES

Blackberries and Raspberries Keep the berries free from weeds; cultivate well between the rows and cut old canes off close to the ground. Do not mulch the soil with manure until it is well frozen.

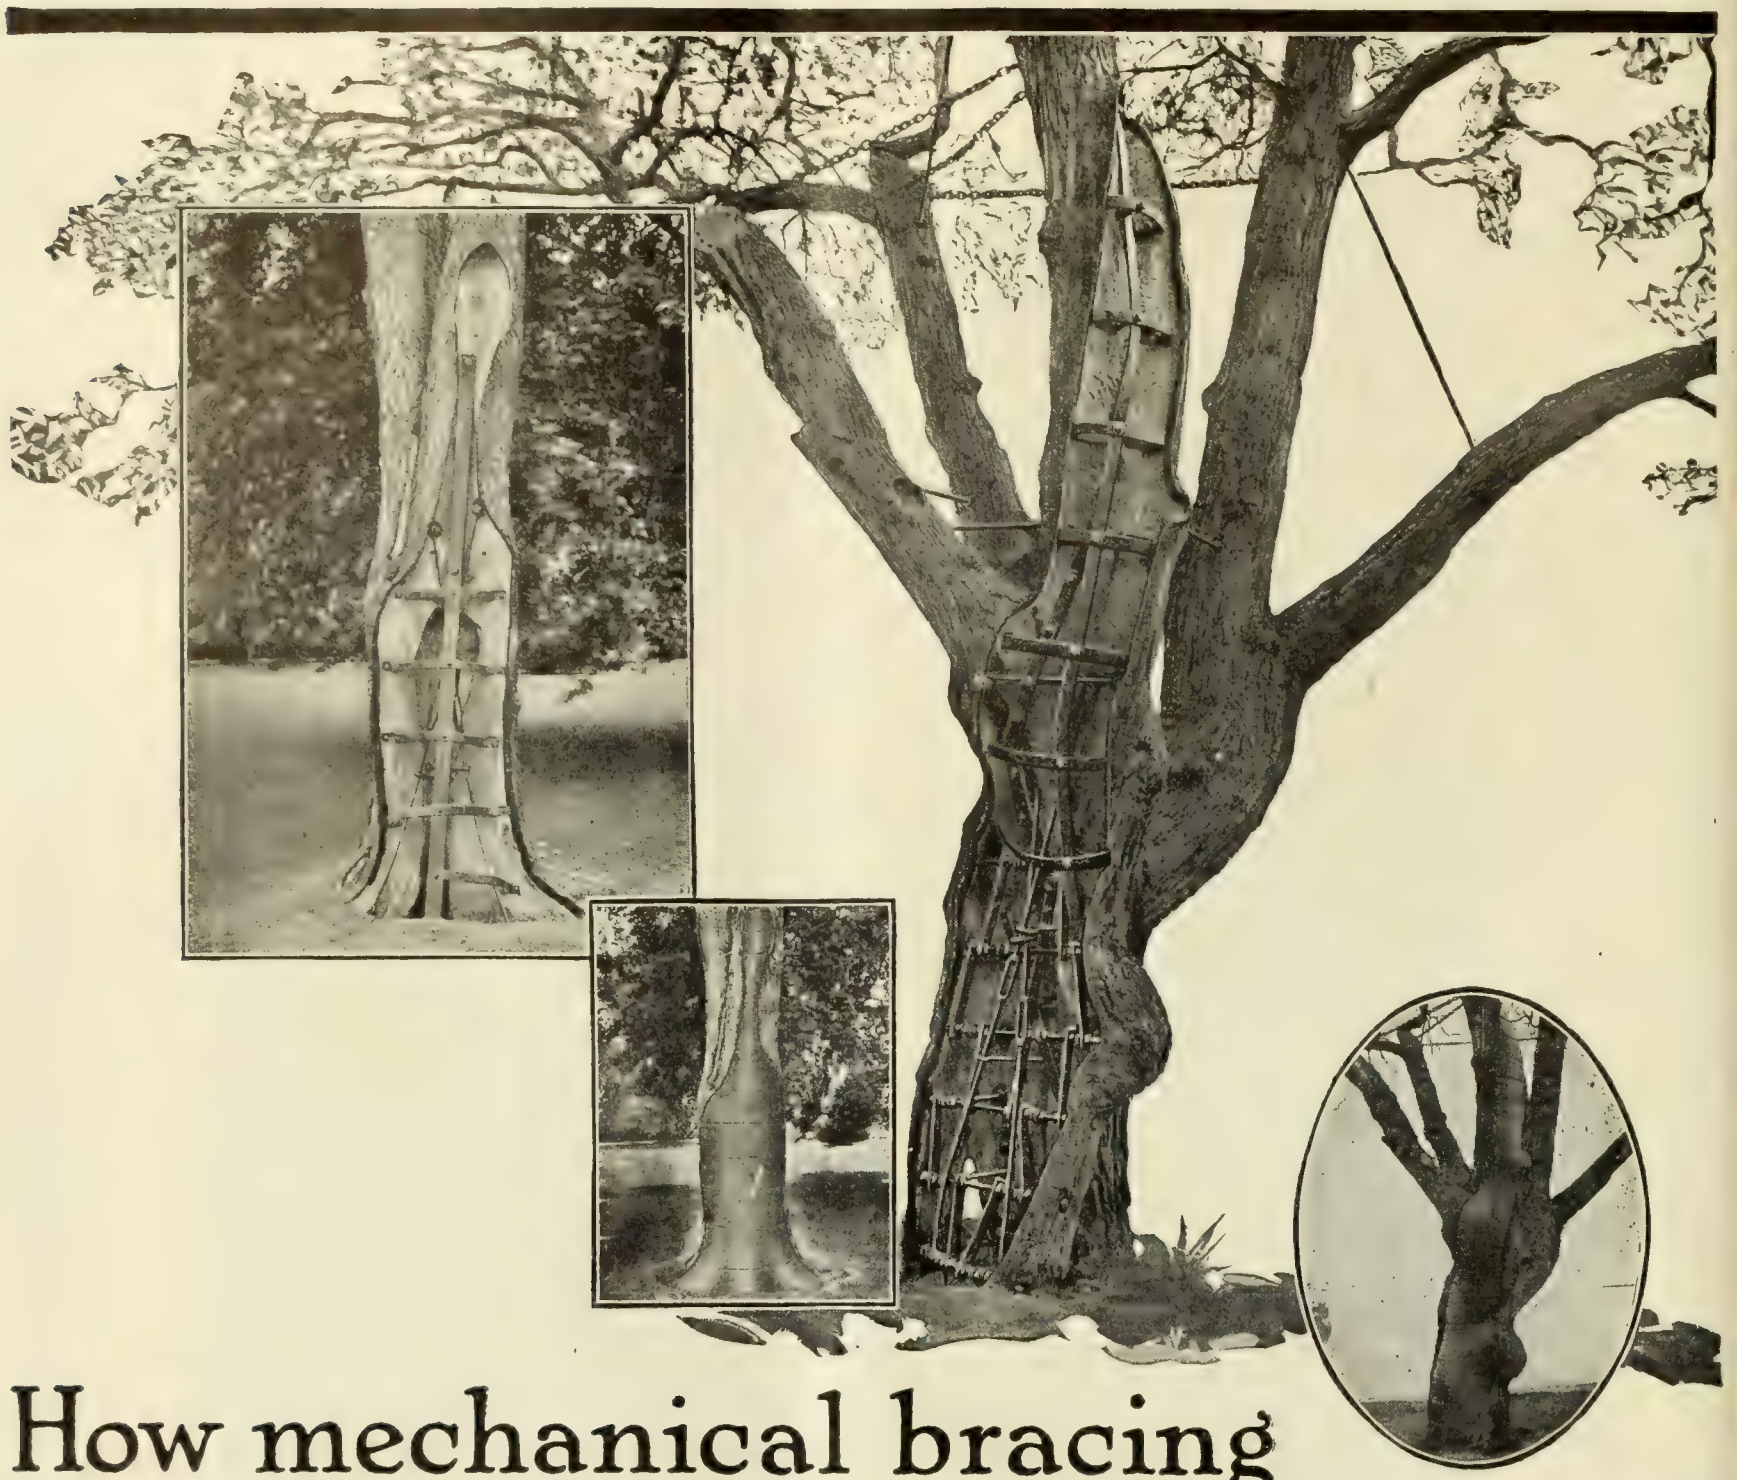


Gooseberries and Currants Work a little wood ashes into the soil to help ripen the wood and buds. Cut out old branches if the plant is too compact. Take cuttings of these fruits the last of this month, pack them in moist sand in a cool place and they will be in good condition for transplanting early in the spring.

Apples Cut the grass and rake it under the tips of the limbs. It not only makes a fine mulch but it also prevents, to a large extent, the bruising of windfall apples. If the orchard is cultivated it is not too late to sow a cover crop of peas and rye or corn and rye. Clean out hedge rows near the orchard which are only breeding places for rabbits and insects.

Storing See that the fruit cellar is well aired, and thoroly cleaned. Place a little clean dry straw on the shelves before storing the apples. Potatoes may be stored on the floor and apples on benches in the same cellar. Pad the basket with burlap or some material like it before picking apples. Do not break or pull out the stem or break off the fruit spur while picking. Never store a bruised apple.

WAR GARDEN BUREAU



The Independent-Countryside War Garden Bureau, 119 West Fortieth Street, New York, will answer your garden questions freely and promptly and will give you expert advice about any of your garden problems. The dates given on this page are for the latitude of New York City. For every hundred miles north or south subtract or add from five to eight days.

How mechanical bracing restores strength to decayed trees

THE internal woody tissue of the tree has the same function as the bones in the human body—structural support.

When this has been destroyed by decay, Nature is helpless to restore it and the tree, if neglected, will soon succumb to the force of the winds. And no treatment can permanently save it unless that treatment supplies scientifically the strength that has been lost.

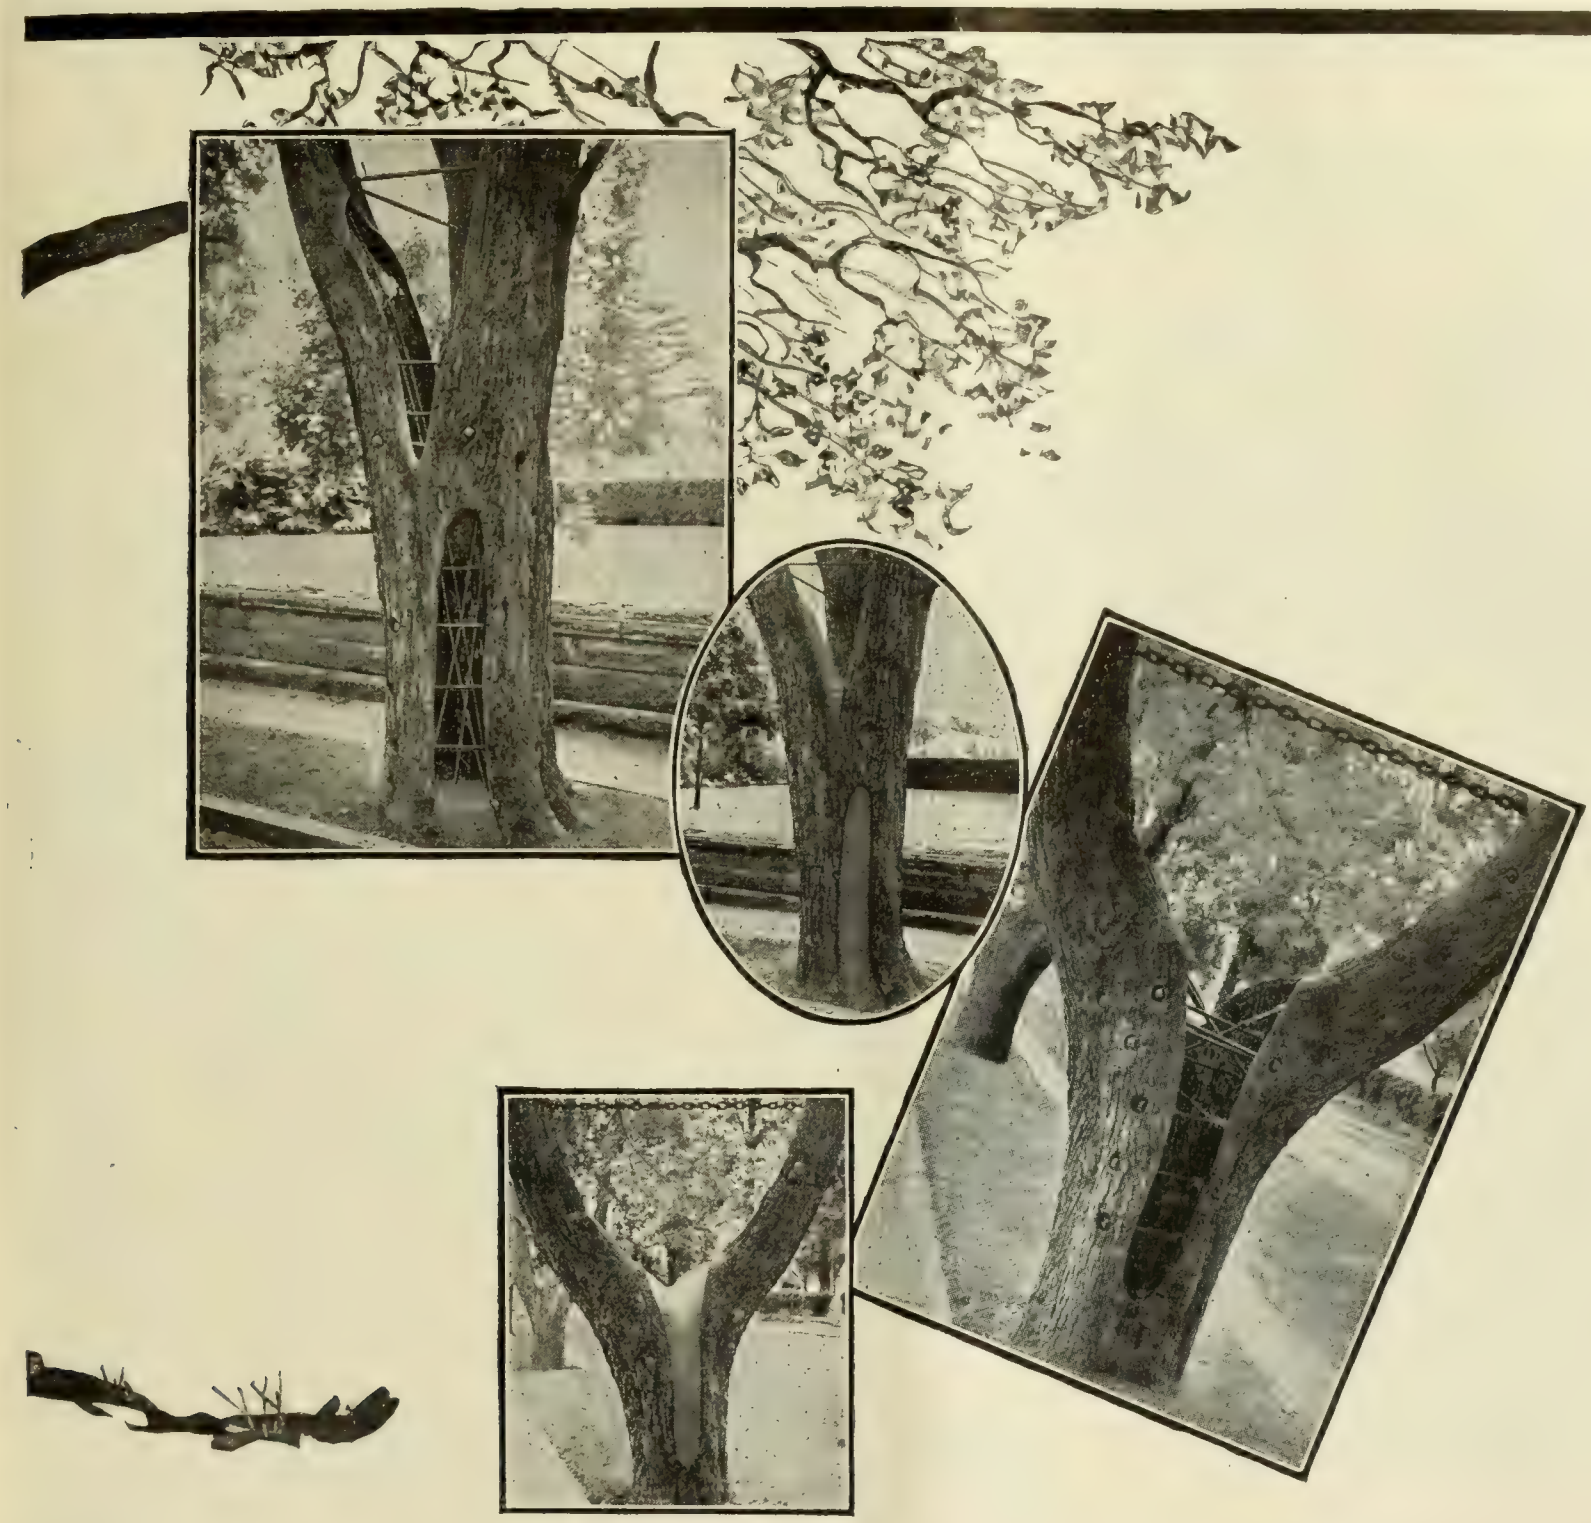
Merely to fill the cavity with cement will not answer. The violent swaying of trees by the winds makes correct mechanical bracing of decay-weakened cavities absolutely imperative.

Correct mechanical bracing involves something more than just fixing bars and bolts in the cavity.

Every tree is different, and therefore the bracing of each tree must differ from the bracing used in all other trees, at least to some extent.

The tree in photograph No. 1, for example, required a combination of bolts and lock-nuts, reinforcing rods, and cross-bolts with lock-nuts above the crotch.

The tree in photograph No. 2 needed a backbone and rib arrangement of iron straps, plus torsion rods and anchors.



The tree in photograph No. 3 required a combination of bolts and criss-cross bolts with lock-nuts, torsion rods and chains.

The tree in photograph No. 4 was so weak that it required a complicated and complete system of internal bracing, including cross-bolts, criss-cross bolts, iron straps, anchors, torsion rods, iron backbone and ribs, lock-nuts, bolts above the crotch, plus chains and lag-hooks higher up.

Davey Tree Surgeons are the only men in the world who are really trained for this work

Every Davey Tree Surgeon is trained to the point of finished skill. He is allowed no responsibility until he has conclusively demonstrated his fitness. And he must have shown himself to be a man of conscience, a lover of trees and a worker—a man fully conscious of the great responsibility that is his, when he is entrusted with the care of your priceless trees.

Davey Tree Surgeons are the only Tree Surgeons officially endorsed by the United States Government, which engaged them to save the

priceless trees on the Capitol grounds and elsewhere.

They are the only Tree Surgeons endorsed by thousands of estate owners—prominent men and women whose recommendations you can accept with complete confidence.

And they are the only Tree Surgeons who are backed by a successful and responsible house, amply able to make good in every instance, and not needing, for the sake of temporary existence, to sacrifice in the slightest degree its high standards.

Write today for FREE examination of your trees

—and booklet, "When Your Trees Need the Tree Surgeon." What is the real condition of your trees? Only the experienced Tree Surgeon can tell you fully and definitely. Without cost or obligation to you, a Davey Tree Surgeon will visit your place, and render an honest verdict regarding their condition and needs. Write today.

Three typical letters out of hundreds received from satisfied Davey clients

From Mr. Thomas Goodwillie, Standard Oil Company, Baltimore, Md.: "The work that your men have done on the forest trees on my property at 205 Wendover Road, Guilford, Baltimore, has been highly satisfactory, and as it appears now, it will mean a saving of four forest trees, which showed marked symptoms of decline."

From Mrs. H. W. Straley, Washington, D. C., and "Strahlehurst," Princeton, W. Va.: "I wish to thank you for the very splendid work done, which is decidedly worth while; also to thank you separately and individually for the splendid young men. They were all skilled, conscientious workmen, as well as kind, courteous gentlemen."

From U. T. Hungerford, U. T. Hungerford Brass & Copper Co., New York: "When you took hold of the job many of the trees were in bad condition, and my Superintendent tells me that if many of these trees had not been treated by you, they would have been blown down during the gales last summer. As it is, he did not lose a single tree, due, I believe, to the treatment given them by you."

Davey Tree Surgeons

FOR *SAFE* TREE SURGERY *Every real Davey Tree Surgeon is in the employ of the Davey Tree Expert Co., and the public is cautioned against those falsely representing themselves*

This Picture

an untouched photographic reproduction of a corner of one of my Peony fields, shows to what wonderful perfection and profusion of bloom PETERSON PEONIES have been brought.

Twenty-four years of enthusiastic devotion have taught me how to grow this noble flower so that the roots I sell are possessed of most unusual vigor and vitality—roots that show surprising results the first season after planting and prove an ever-increasing delight as the years come on.

Peterson Peonies more than "make good"

They are Peonies of performance—not merely those of clever advertising. Many thousands of people have learned this to their joy.

Why Not You?

My 1917 Peony catalog, beautifully illustrated with my own photographs, will gladly be sent you on request.

(Note—Peonies should be planted in the Fall.)

216 N. Calvert St., Baltimore, Md., Sept. 29, 1916.
In a letter received from you some time ago, you stated that the roots you would send me would be a revelation—they *are* in every sense of the word. These roots were planted for me by an old gardener who has known nothing but flowers for half a century, and he tells me they are the finest and most promising lot of roots that have ever come to his notice, and he knows his business.—W. G. Blandford.

Beaver, Pa., June 28, 1917.
I desire to thank you for the magnificent peonies which I bought of you last year, every one of which grew, and has bloomed profusely. I have been buying and growing peonies for fifteen years and I never in all my experience saw such magnificent peonies the first year planted.
—John B. McClure.

80 Montclair Ave., Montclair, N. J., Sept. 26, 1916.
My order of peonies reached me yesterday in splendid condition. I had a man from our local florist's set them today and he told me of the hundreds he had set he had set few orders which were as fine as yours, in fact, he said one of your roots would make two or three ordinary plants.—(Mrs.) Edith T. Bridge.

Hamburg, N. Y., August 10, 1916.
The peony roots purchased of you were the finest roots I ever saw. This year they all bloomed and the beauty of them surpassed my expectation by far. People came to see them from near and far and went into raptures over them. It is by far the finest collection in Hamburg.
—Mrs. Geo. J. Brendel.

THE POULTRY YARD IN SEPTEMBER

BY E. I. FARRINGTON

WITH the prices of grain still abnormally high, many amateurs are questioning the advisability of carrying over large flocks of poultry this winter. It is certain that the fowls will fail to pay their way unless they are well managed and rigidly culled. There will be a loss if many boarders are carried thru the cold months.

MEETING WAR CONDITIONS

It will be necessary to simplify the feeding methods as much as possible and to keep down the cost of the feed bill. It will pay to make a special effort to utilize the waste from the home table. Many families can provide at least one meal a day for their small flock by the judicious use of table scraps. One good way to use all these scraps without waste is to put them thru a meat grinder. Another is to keep a kettle on the back of the stove and to throw in all the waste material, allowing it to cook until needed, and then to mix it with bran.

Considerable emphasis should be placed on the feeding of vegetables like turnips, Swiss chard, mangel-wurzels, red beets and so on. In Scotland it is usual to store kohl-rabi for winter use and it might well be done here. In some sections kohl-rabi seed planted now will yield a crop this fall. Grass clippings properly dried and stored in bags or barrels in a dry place will provide an economical green ration when soaked out.

Wheat is considered the best laying ration, but it is exceedingly high. The Government experts, therefore, have worked out a wheatless ration which gives very satisfactory results. It is composed of a scratch mixture made up of two pounds of cracked corn and one pound of oats, and a dry mash which consists of two pounds of corn meal and a pound of beef scraps. The recommendation is that the scratch mixture be fed sparingly so that the hens will eat about equal parts of this mixture and the dry mash. It is well to remember that when wheat is omitted from the feeding ration, beef scraps must be fed liberally. Fortunately in most parts of the country beef scraps are comparatively cheap for the food value which they contain. Poultry keepers are learning that wheat is not really essential to egg production.

POULTRY HOUSES

New poultry houses which are to be used during the winter should be completed before the end of this month so that they may have sufficient time to dry out. He must be an audacious man who will say that any particular kind of poultry house is the best. Many different types have been evolved, most of which have some advantages. One point, however, has been well established. That is that open poultry houses are altogether preferable to those which can be closed up tightly.

It used to be thought necessary to have warm houses in winter, for which reason they were built with double walls and even with double doors and windows. It has been proved beyond a doubt, tho, that poultry thrive much better in a cold but dry atmosphere than in one which is warm and humid. Hens seldom suffer from the cold if they are in a dry place and protected from drafts. The so-called "open front" house has therefore come into common use, and is perhaps as satisfactory as any for either the professional poultryman or the amateur. Yet such a house is not properly

built unless it is at least ten feet deep, or better, twelve. The roosts in a shallow house are necessarily too close to the opening.

The shed roof type of house is the simplest to build and is suited to all parts of the country. It is important, tho, to get the proportions right. It should not be over eight feet high at the front, and four feet is about the right hight at the rear. The length of the house will depend, of course, upon the number of the fowls to be accommodated. It is safe to figure that each hen should have four square feet of floor space, at a minimum. It is better to have more room for fowls of larger breeds.

Not long ago it was considered that all hens were better when kept in small flocks but not a few commercial poultrymen are now keeping flocks of as many as five hundred hens in one apartment. The amateur can safely keep from twenty-five to fifty fowls of the same age together and thereby save much time and labor in caring for the birds.

In houses of the more extreme type the whole front is allowed to remain open, being covered only with poultry netting to confine the birds. This may be satisfactory with the very deep house, having a double pitch roof, but with a house only ten or twelve feet deep it is much better to have a little different arrangement. The scheme which seems to work best is a long opening about three feet above the floor, the only covering being a muslin curtain tacked to a frame which can be lowered when high winds are blowing or when the temperature runs unusually low. A window containing a single glass sash placed under this opening provides additional light in case the curtain is lowered and, what is still more important, allows the sun to play on the floor very early in the morning when the hens are just off the roost. When this arrangement of the front of the house is made, no wind blows directly on the birds, yet they get plenty of sunlight and have an abundance of fresh air. Moreover a large part of the house is flooded with sunlight each day.

Single board walls covered with roofing paper are sufficient. Paper is also to be preferred for the roof as a rule, because it gives better results than shingles when there is but little pitch. With matched boards and a good quality of patent roofing, any poultry house will be tight and dry. The floor may be of earth, boards or concrete. If in a location where the water seeps away quickly, an earth floor will be entirely satisfactory but should be built up somewhat higher than the surface of the outside ground so that it will be dry. The earth should be thoroly tamped down and several inches of gravel thrown on top.

Some cement floors are good and some are bad. It depends upon how they are laid. If they rest on the ground, moisture will almost certainly rise thru the cement and make them damp, but if the earth is dug out a foot deep and a layer of stones or cinders substituted there will be no trouble from this source. It is always necessary to keep cement floors covered with several inches of sand, with a deep litter above, as they are cold to the feet. A cement floor is durable, of course, and ratproof. In a permanent house it is probably the best kind to use, for it is without doubt the most sanitary.

It is impossible to state accurately what the cost of the poultry house should be because of varying conditions thruout the country. There is a general rule among poultry keepers, tho, that when the business is being undertaken on a money making basis, the cost should not be more than one dollar for each hen to be housed.

First Cost will be Your ONLY Cost if you use Kno-Burn *Expanded Metal Lath*

THE *cheapest* wall base is the one that unites with plaster or stucco to make a wall that lasts for years without any expense for upkeep or repairs. That's why experienced architects and builders specify metal lath.

Kno-Burn Expanded Metal Lath is made with a mesh that clinches the plaster so tightly that it never can come off. It expands and contracts with the plaster—preventing cracks. It forms a fireproof, vermin-proof, trouble-proof wall.

KELSEY HEALTH HEAT

Investigate Its Economy Satisfaction

BEING a warm air heat, you doubtless at once think of comparing it with the usual furnace heat.

Please don't.

The comparison is not a fair one.

Not fair to furnaces.

Not fair, because there is no comparison. You will find that no one claims that such a heat is "more economical" than a Kelsey. Some do however say it is "as economical."

Which you at once recognize is only another way of saying that Kelsey is the *most* economical. Otherwise why would the Kelsey be taken as the standard for comparison?

But when it comes to radiator heats, then that's a different matter.

The Kelsey is far more economical than steam. We do not however claim so great an economy superiority over hot water.

Both with steam and hot water, bear in mind however, that you first must "heat the water" or "get up steam," before you get any heat.

With the Kelsey, the minute you "start the heat," that minute you get heat.

It does none of its heating by proxy.

In its directness, there is a direct saving.

Of greatest importance, however, is the fact that it *heats with freshly heated fresh air.* Air that is warmed to an agreeable temperature and automatically mixed with just the right healthful amount of moisture.

It combines heat and ventilation in one.

Heats any room in any weather, regardless of the wind's direction.

BUILDING IN THE VERNACULAR

(*Continued from page 337*)

ed to the eastern states, for, thanks to the Spanish mission founders, the seeds of a domestic type were planted in California, a type that afterward developed into the bungalow form, which, whatever may be said for or against it in other parts of the country, has amply demonstrated its suitability for the climate and conditions of the land where it was evolved.

As opposed to the vernacular, truly colonial and informal types just enumerated, was the Georgian mode which began to be in evidence from about 1720 onward and brought the elements of formality and stateliness into American domestic architecture. It was transplanted from England fully developed and, altho it underwent some slight local modifications in the course of becoming naturalized, it nevertheless remained distinct and unmistakable wherever it occurred. The Georgian mode was always Georgian; it imposed itself and was not absorbed. By the same token, it did not become vernacular, and its distinctness, formal symmetry and classic spirit imparted to it something of an exotic flavor as compared with the inherently intimate and informal vernacular modes peculiar to the different sections of the country.

To sum up briefly the qualities presented by implication in the preceding analysis and common to the American vernacular types: they are *safe*, having long since passed the experimental stage and been proved by the test of time; they are *consistent* with the climate and with local social conditions; they are peculiarly *susceptible of adaptation* to modern needs without losing their individuality, because they represent a steady, normal, progressive growth and not a recent transplanting; for the same reasons they possess vitality, vigor and permanence; they yield unrivaled opportunities for ingenious use of native materials and the texture interest dependent thereon; they are expressive of American social ideals; they are unpretentious and informal and, therefore, other things being equal, are likely to be less expensive of construction than purely exotic types.

Unless the house of average size be well designed the architectural ensemble of the countryside will inevitably suffer. Most of the exotic types, as we know them, presuppose the expenditure of large sums in their erection, far larger sums than the average client can afford to spend. What, then, are we to do? If the so-called exotic types are pared down and shorn of their nobility in an endeavor to put them within the reach of the average purse, there is no telling how long it will take us to assimilate them nor how great is the likelihood that, when they have at last been assimilated, they will no longer possess the character that gave them their former charm and that they may have become abortions and monstrosities during the process.

In view of these facts, when one is about to build, especially when one is about to build a house in proximity to other houses, and the "repertoire of architectural styles" is under scrutiny, common-sense counsels to weigh well the merits of vernacular types. Without surrendering our eclectic liberty it behooves us to increase by all possible means our knowledge and appreciation of our architectural heritage so that the countryside may be the better for our intelligent choice and for our realization that architecture ought not to be regarded as a purely technical matter, particularly when we come to apply the tests of suitability to climate and individual purposes.

The New Books

Knowing Your Neighbors

A book that has long been awaited by those interested in social welfare is Mary E. Richmond's *Social Diagnosis*. It represents the first systematic textbook covering a subject which only within the last decades has come to a considerable measure of public recognition, and its publication, we may hope, marks a new epoch in the history of social work, namely, the epoch of its general recognition. Miss Richmond attacks her subject fortified by many years of continuous and varied case study such as grounds the scientific knowledge of the horticulturist and the physician. The test of experience rather than of theory. the teaching of results followed thru months and years, give her a firm foundation of fact beneath any generalizations that she makes.

The book is cast in three parts, Part III being largely illustrative and documentary. In the hundred pages which comprize Part I, the author deals with the processes whereby we secure evidence about people. Legal processes and medical methods for arriving at the truth are here fruitfully analyzed. The commoner sources of error in the process of trying to get at facts are exemplified and made vivid to us.

Part II is the kernel of the whole book. Thirty pages are devoted to the first interview with the person to be helped, and 245 to the study of other sources of information—the opinions of his family, of his relations, of doctors, teachers, employers, neighbors, public officials, social agencies, are here studied in illuminating and dramatic detail. Every adult American should read this and discover thereby how superficially he knows his own friends, and with what devoted intimacy and closeness of contact it is possible reverentially to study a human being. The most surprizing thing, however, in the book is that while thirty pages are devoted to the first interview, and 245 pages to the "sources" listed above, there is only the most casual reference to any second, third or fourth interview. In my own experience of the attempt to work into the knowledge of another person's life, I have found that neither the first interview nor the investigation of outside sources gives me the richest and most intimate knowledge. It is the *subsequent interviews* with the person that have guided me best. In future editions of the book I hope that systematic treatment will be given to the technique of interviews subsequent to the first.

The author is remarkably successful in holding a proper balance between generalization and example. She gives no principles unsupported by example, no examples which do not support some principle. But it is a thousand pities that the most valuable of these examples are tucked away in pages of type so small that a considerable body of readers will probably skip them altogether. As I see it, this is the most serious fault in the book. It should have been put in two volumes and with a larger type thruout.

Another leading interest of the present reviewer in the reading of this book has

Residence at E. Norwalk, Conn.

This House Can't Burn— Can *Yours*?

FACE that question right now—in time. So many have found out the tremendous value of safety—too late. So many have lost all that is dear to them—just because they did not know how the fire peril sweeps down when it is least expected—wiping out at one blow a whole life's happiness. *Be sure—be safe. Build throughout of Natco Hollow Tile.*

Science has made it possible for you to have safety as well as comfort and beauty. Natco is the material that made the skyscraper possible. It can't burn. When carelessness brings danger, Natco stands guard over your home—because you have been wise enough to choose right—in time.

Made from clay —baked by fire— it cannot be destroyed by fire.

While it costs more than criminally dangerous wood construction, with Natco you buy safety—everlasting safety for a sum so low that in a few years you get it back in lower coal bills, and lower maintenance cost. Can there be any question in your mind—now that you think of it—in time? And it is building for a lifetime—for safety, beauty and comfort too.

Natco means lower coal bills. Building the Natco way pays for itself in a very few years. Natco is warmer in winter—cooler in summer—thanks to the blankets of still air contained in the cells of the tile. Natco is damp proof, vermin proof, solid, permanent, and everlastingly safe. Can you afford to be always in danger?

Send today for the interesting 32-page book "Fireproof Houses" sent free on request. It contains photographs and descriptions of beautiful Natco residences designed by leading architects. And it may save your life and the lives of those you love.

been to see how Miss Richmond would succeed, where practically every one else seems to have failed, in giving to the dangerous, overworked word *social* a definition both clear and true: *Social Diagnosis* studies the "situation and personality of a human being in some social need," i. e., "in relation to the other human beings upon whom he in any way depends or who depend upon him, and in relation also to the social institutions of his community."

Presumably Miss Richmond believes that social diagnosis thus defined should give us the materials most necessary to help people. She does not intend to leave out any important part of the human life. But to my mind the most important social relato my mind the most important social relato God and to their ideals. We cannot understand a person's life so as to exercize our best powers for its guidance if we confine our study to his relations to other human beings and institutions. Before Miss Richmond publishes the next edition of this book the great increase of interest in character study resulting from the studies of Dr. William Healy, author of "The Individual Delinquent," and of others who have tried to work so far as they could into the intricacies of human personality, will make it necessary for her to deal with social relations not only with human personalities but with those disembodied spirits that we call ideals or ideal comrades or saints, as well as with the fundamental questions of religion. Miss Richmond has felt it best to exclude a study of the client's religious life as part of his socially important personality. Institutional religion, church membership and church relations have interested her. She has felt that one could adequately diagnose and serve the needs of a human being without knowing just what his religion or irreligion means to him. In my opinion this is an impossible attempt. If I am right in this a new meaning will have to be given to the word *social*, and the whole orientation of social work must be reversed. RICHARD C. CABOT.

Social Diagnosis, by M. E. Richmond. Russell Sage Foundation. $2.

Ancient Beliefs

THE MYTHOLOGY OF ALL RACES, to be completed in thirteen volumes, is an ambitious undertaking. That it will be carried thru in a scientific and trustworthy way is guaranteed by its able editors, Prof. Louis Herbert Gray and Prof. George Foot Moore. It is planned to cover the entire field, collecting into a single series the myths of the whole human race. More than a dozen specialists, American, Oriental and European, are coöperating in the task of bringing together and organizing the scattered materials of this important subject.

In the case of some peoples, such as the Babylonians, Hebrews, Greeks and Romans, their mythological systems and traditions are fairly well known. Their literatures, which have strongly influenced our own culture and religion, have made their myths common knowledge and they are set forth in many classic and popular writings. But in the case of many peoples, such as the Slavic, Siberian and American Indian races, few comprehensive works are to be found, and in the case of some, as the Armenians, none at all.

In the first volume the Greek and Roman section is excellently set forth by Professor Fox, of Princeton. The abundance of material in this field has proved a perplexing problem for the author under the allotted space limitations, and he has exercized great skill in the organization and presentation of the subject. In his valuable introduction he discusses the nature, purpose

and value of myths, the character and classification of Greek myths, and their relations to ethics, science and art. The volume is beautifully illustrated with more than sixty plates, many of them finely colored.

Two more volumes in the series have already come from the press. These are of special interest to American readers because the peoples whose myths they record are largely under the American flag. That by Professor Dixon, of Harvard, is devoted to "Oceanic Mythology," covering the Hawaiian Islands and the Philippines as well as Australia, New Zealand and the other islands of the Pacific. The value of the work for comparative study of the universal human inquiry into origins may be seen in the Hawaiian account of the drama of creation, which develops the evolutionary motive, and parallels in many ways the old Babylonian and Sumerian account of the creation of the world, partly preserved for us in Biblical stories.

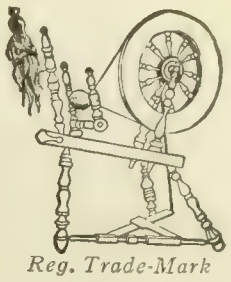
The study of the *North American* races is by Professor Alexander, of the University of Nebraska. Altho many partial accounts and special treatises on the Indian myths have been in existence, this is the first systematic and comprehensive treatment of the subject. Both volumes are beautifully illustrated with pictures of primitive art, religious symbols and picture-language signs and supplied with helpful maps.

Thus far the work is a model of clearness, comprehensiveness and convenient form. Critical appendices with notes and bibliographies assist in making appeal to the scholar as well as to the general reader.

The Mythology of All Races. L. H. Gray and E. F. Moore, eds. Marshall Jones Company, Boston. 13 vols. $78.

A French Critic

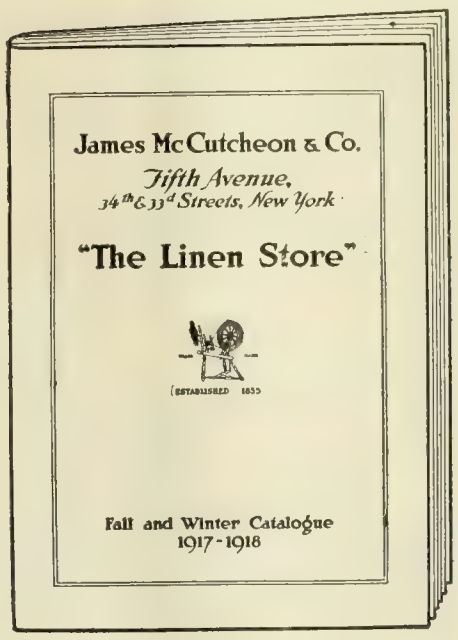
ALBERT LEON GUÉRADE attempts to formulate penetrating and lasting dicta as to the literary niches in which *Five Masters of French Romance*, France, Loti, Bourget, Barres and Rolland belong. He himself writing with French clarity of style, critical penetration, piquancy of phrase and fancy, flashes broad lights on the very vitals of French life since 1870. He envelops Anatole France in a not wholly unbroken cloud of worship; and Bourget in a mist of distaste. He wraps Pierre Loti in the veritable sea-scape-sunset glamour, and Rolland in a wide-spreading glory.



This is to say, the essayist has been creative in an unusual and critical fashion. And, lest we think Guérade lacking in concrete logical treatment of mere facts, let us say that the individual novels of these five romanticists are concretely set before us in a way to make us genuinely eager to read those still unknown—save Bourget's!

Five Masters of French Romance, by A. L. Guérade. Charles Scribner's Sons. $1.50.

Out of the Ghetto



WITHOUT the support of commendatory remarks by Colonel Roosevelt on the outside cover, *My Mother and I*, by E. G. Stern, is a book that would stand on its own merits. It is another self-revelation story of the ghetto, the story of a young woman who rose, intellectually and socially, out of "Soho," the slum of a Middle Western city where her family lived, into the life of an American university and an American home. But altho she grew away from the ideas and tastes of her parents she did not outgrow and could not forget the rich motherhood of her mother. The interplay of forces in the lives of these two Jewish women of two generations, the im-

migrant and the American full-fledged, makes interesting reading.

The ideal of the book is the ideal of the American home. Says the author:

In the four walls which enclose that which I call so simply "an American home" lie the treasures of the world. From the doors of each American home wind invisible paths leading to the beauty and art of all ages. . . . From the threshold of each home spreads a great highway taking our children to the learning and wisdom of poet and sage in the public schools of our country. In its four walls live American citizens, who each have the privilege to help make those laws which govern a great nation conceived in the spirit of liberty.

My Mother and I, by E. G. Stern. The Macmillan Company. $1.

Touching on the War

One important aspect of modern preparedness is knowledge of the languages of the nations with which we must deal as friends or as foes. First lessons in *Spoken French for Doctors and Nurses*, by Ernest H. Wilkins, Algernon Coleman and Ethel Preston, is designed to meet one aspect of this need. (The University of Chicago Press, 50 cents.)

The publications of the Government covering all matters relating to our infantry have come out in twenty-five volumes. These are in constant demand among officers and privates. All have now been combined in a strongly bound buckram covered book, well indexed, which, if cumbersome, is far less trouble than twenty-five separate books. (J. B. Lippincott Company, $6.)

The practical, commonsense manner in which the women of France rose to support their burden of war, has moved Gertrude Atherton, who worked beside them, to an entirely merited tribute of admiration. The second part of *The Living Present* is less worth while being an exposition of her own feminist views, and is irritating or amusing, as one takes that sort of thing. (F. A. Stokes Company, $1.50.)

Brothers in Arms, by E. Alexander Powell, is a kind of panegyric on the arrival of the French Mission to the United States. In vigorous and sometimes heroic diction, the author traces the historic friendship between the United States and France. By this, he strives to rouse his fellow countrymen to a real sense of the part they must maintain in the Great War. (Houghton, Mifflin Company, 50 cents.)

Lord Stowell was the father of English prize law and substantially of American as well. E. S. Roscoe's book about him is of pertinent value for besides reviewing his life, and he was a notable character, it sketches his leading decisions on prize, blockade, neutrality, contraband, and brings these principles thru the century since they were uttered showing their application to the Declaration of London and to present day problems. (Houghton, Mifflin Company, $1.50.)

The Peril of Prussianism, by Prof. Douglas Wilson Johnson, of Columbia University, is a popular account of the unceasing expansion of the Prussian state, written to enlighten the American public as to the reasons which made it imperative for us to enter the Great War. One of the most interesting features of the book is a series of historical maps showing the area controlled by the Hohenzollern dynasty in succeeding centuries from the origin of the Brandenburg monarchy to the present day. (G. P. Putnam's Sons, 75 cents.)

The Retreat from Mons, by a Member of the British General Staff, is one of several works which have appeared on that historic event. The semi-official little volume admits records are still clouded concerning the actions of Maroilles and Le Cateau and if it does not add much to what is already known of the indomitable spirit of the British troops in the famous retreat, it is a concise and, so far as possible, faithful narrative of a kind to refresh the mem-

ory as to the units and changing positions of the British Expeditionary Force. (Houghton, Mifflin Company, 50 cents.)

Stories

William MacLeod Raine's *The Yukon Trail* is a novel of the popular but unimportant type which has to do with the rivalry of an Alaska "boss" and a special Government investigator in their love for a charming Irish girl. (Houghton, Mifflin Company, $1.35.)

The Diplomat, by Guy Fleming, is a novel of young bucks and "bloods" in English society, written in a gossipy old-fashioned style with an attitude of mind that takes for granted our leisure and our continued interest in many well-to-do personages. (Longmans, Green & Co., $1.50.)

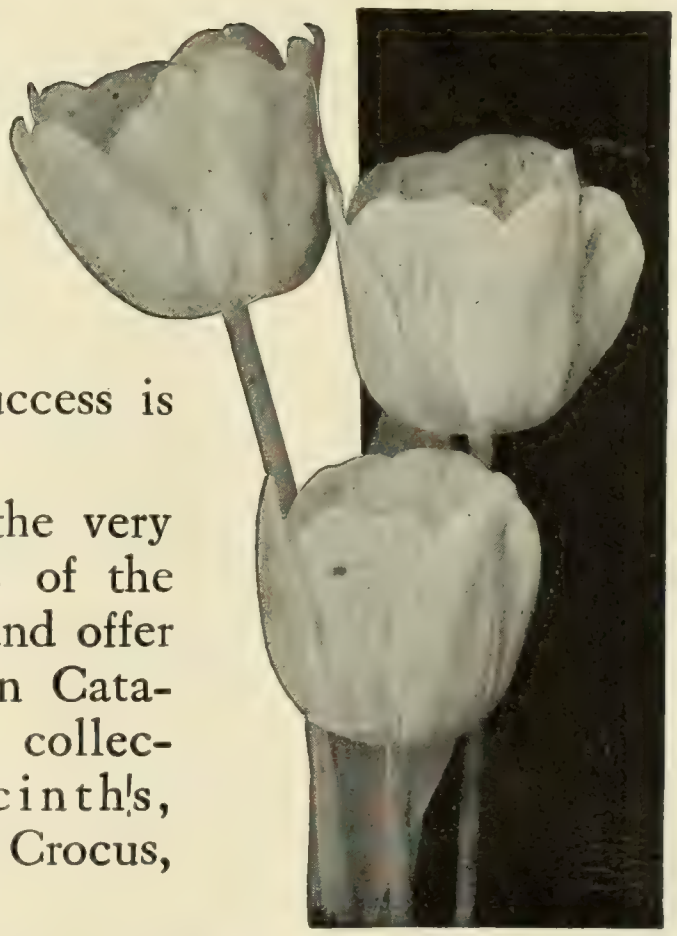
Mary and Jane Findlater have written a volume of good short stories of Scottish life under the flavorless title, *Seen and Heard Before and After 1914*. Perhaps the most interesting tale is "Real Estate," which shows how two dull and aimless women with nothing to do find an occupation and spiritual prosperity thru severe financial losses. (E. P. Dutton & Co., $1.50.)

So natural and human are the letters of *Christine* to her mother that it is hard to believe they are not really her letters but a new novel by Alice Cholmondeley. Were they indeed the letters of an English girl studying music in Berlin during the winter and summer of 1914 they would form a convincing document on the state of the German mind before the war. A charming and intensely interesting book. (The Macmillan Company, $1.25.)

In view of the fact that books about life in the navy are few, we may welcome *Pincher Martin O. D.*, by "Taffrail." It is a story of the every day life of a British seaman in peace and in war, which gives a detailed account of his food and his drink, his work and his habits, his slang and his opinions. Several stirring encounters with U-boats, cruisers and destroyers in the North Sea are described. (Houghton, Mifflin Company, $1.50.)

Around the House

An inclusive and detailed ledger is *My Family Account Book*, planned by Blanche Geary. Altho few housekeepers will use accounts carried to so fine a point, the exact system will be a great help to those unaccustomed to strict account keeping, and the budget page is very clear and suggestive. (The Woman's Press, New York, 50 cents.)



The Margin of Happiness is the outgrowth of informal talks prefacing the practical work of Mrs. Franks's classes in domestic science. She discusses the general problem of running a household, on which by this time there would seem little new to be said, (discovery of one least virtue in the American housewife would be novel indeed!) but she is no amateur reformer, treating her subject with a conservatism and good sense decidedly effective. (G. P. Putnam's Sons, $1.50.)

Among the host of new works on economy in food, *How to Cut Food Costs* is an excellent little book, warranted to make clear the science of food values to any reader and bringing the measuring of costs down to penny worths. That the author, L. F. Cooper, was formerly head dietitian of the Battle Creek Sanitarium speaks for the reliability and the practical nature of the advice. (Good Health Publishing Company, Battle Creek, Michigan.)

A book, the outgrowth of the need of the visiting housekeeper and the dispensary nurse for balanced menus for out patients is *Food for the Worker*, by Frances Stern and G. T. Spitz. A complete dietary for seven weeks and a series of very economical recipes, all with food values and costs worked out, take the main part of the book, with a discussion of food requirements, supplies and prices for introduction. (Whitcomb and Barrows, Boston, $1.)

Dreer's Reliable Spring-Blooming Bulbs

DO not miss the joy of having a bed or border of Bulbs next Spring. Plant them this Fall as early as you can and success is certain.

The Independent Investor's Service

Luigi Criscuolo, Director

The Independent offers a Service for Investors in which personal attention is given to the desires of its subscribers for information in regard to investments of all kinds. We cannot, of course, decide for our readers where they should put their savings and will not undertake the responsibility of recommending specific securities to any individual. But we ask our readers to write to us frankly and this Department will give them by letter or thru the columns of The Independent such impartial information as may assist them in making a wise decision for themselves. Readers who request advice on investments will receive better service when they specify the class of securities now held, approximate amounts of each, stating if the investment is for an estate, business or professional man, woman or minor. All information given will be held in strict confidence.

Practical Christianity

If country ministers and church committees would ponder well the suggestions made in *The New Country Church Building*, by Rev. Edmund Brunner, many communities might be spared needless expense, foolish display and unusable church equipments. (Missionary Education Movement, 75 cents.)

Christian Home Training, by Martyn Summerbell, is a protest against leaving for the schools what is properly home training. It urges home life, thru as long a period as possible, with definite religious training adapted to modern conditions, as the best remedy for the evils of the age. (Christian Publishing Association, 75 cents.)

Faith in Christ, by John J. Moment, is a spirited appeal for the leadership of Christ in the religious life. The chapters are short, the language crisp and vivid with metaphor and illustration, and the substance challenging to the thoughtful mind. It is a valuable book for supporting the wavering faith of the common man in these troublous times. (Charles Scribner's Sons, $1.35.)

Prayers for Home, School and Sunday School is a beautiful group of prayers where the editor fully appreciates the little child's love of rhythm and repetition, and the deeper feelings of the older ones. Tho not many are adapted to use in public schools, in private schools, in the home and Sunday school, they would provide splendid suggestive training. (G. H. Doran Company, 60 cents.)

The essential elements of Christianity are doubtless contained in *The Social Teachings of the Prophets and Jesus*. Prof. Charles Foster Kent's discussion of these great themes is put into a volume that will be of much assistance to Christian preachers and teachers. The evolution of the ideals of the kingdom of God and their application to social problems are well exprest. (Charles Scribner's Sons, $1.50.)

The Minister's Son, by Rev. Clarence E. N. Macartney, was inspired by the reelection of President Wilson, who is a son of the manse. In spite of aspersions to the contrary, a splendid record of achievement has been made by sons of the clergy. Scores of notable scientists, philosophers, authors, educators and statesmen are cited to show the value and inspiration of training in the ministerial home. (Eakins, Palmer and Harrar, Philadelphia, 50 cents.)

Good Ministers of Jesus Christ, by Bishop William F. McDowell, contains the Lyman Beecher Lectures on Preaching delivered at Yale last spring. The style is clear and incisive, the substance rich with accumulated wisdom and instinct with passionate earnestness. The ministry of Jesus in its great aspects of revelation, redemption, conservation, is commended as the type of ministry still needed. (Abingdon Press, $1.25.)

Jesus: for the Men of Today, by Prof. George H. Gilbert, is an attractive life of Christ in story form. The main facts of the Gospel narrative are made to live again amid the homely human surroundings of Galilee and Judea. The ample historical and archeological knowledge of the author guarantee the accuracy of the picture, and the characters are sketched with the modern touches of realism. (G. H. Doran Company, $1.)

In *The Christian Ministry and Social Problems* Bishop Charles D. Williams discusses with deep conviction and enthusiasm the demands upon religion and the opportunities of ministers brought about by the new social conscience, the present unjust distribution of wealth, and the attempts on every hand to devise schemes of justice rather than charity. The author holds that the ministry should not only represent the truest and deepest radicalism, but should give a religious interpretation to all movements that embody true Christian ideals, whatever may be their form. (The Macmillan Company, $1.)

THE GAP BETWEEN TWO GENERATIONS

(*Continued from page 318*)

in which I would have to live. I told my family about it with breathless interest. And my governess, now in charge of a younger sister, said, "What utter nonsense! As if children could have any valuable ideas on such subjects!" I remember explaining impatiently that it was not done because our ideas were supposed to be valuable but to teach us how to think so that we would be ready for life later on. How I understood that I do not know. I wondered why it was that I, who was still a little girl, could know the value of my teacher's plan and the reason for the plan, while my adorably clever mother and my good governess could not. In discussing it later my governess said, "It may be all right for boys to bother their heads about such things but what good can it do girls?" I was instantly curious as to her exact meaning. This was the first time I had felt the sharp edge of androcentric prejudice and of the world's artful discrimination against women. "Why shouldn't girls know as much about things as boys?" I asked. "Because," said my governess, "they don't need to know. They never do things in the world as men do. They haven't the brains." I looked at her steadily for a moment. I was only thirteen years of age but every nerve in my body tingled with beautiful anger, every bit of me, flesh and soul inherited from fathers as well as from mothers, from pride as well as from gentleness, rebelled gloriously against the idea. "Maybe they don't use their brains the same way," I flashed, "but I know it isn't true about women not having brains. I have brains. Etta (one of my school friends) and I are better in our studies than any boy in the class except Johnnie. And we don't study any more than the boys, either."

Until that day most of the opinions held at home had been final and decisive with me. But from that day on I gave the opinions learned at school or the opinions which I discovered for myself, first place in my intellectual world. From that day on I gave myself up to school wholeheartedly.

In looking back I love my mother for her patient wistfulness in watching this separation of my real interests from the home she had made and kept lovely for us. I love her for her willingness to let my interests grow even when she had no part in them, and for her large-heartedness in letting me choose the studies and occupations which interested me most, even when she knew that they were creating for me a new world in which she did not live. I would have been a dangerous young person, I fear, if I had been thwarted. For I was very stubborn and very sensitive. And so, in looking back I am most grateful, altho I never guessed, at the time, what it must have cost her to let me spend my time on subjects and activities which would never lead me to the goal her education had taught her to seek. But perhaps, while I was living the life of the young ego passionately seeking its own, mother was patiently waiting for the time when school days would be over and I would settle down to a life more like her own.

But I did not settle down. When my years in the secondary school were over I spent one restless year at home learning to play bridge and to keep house. I did not mind the housekeeping because it might possibly be of value sometime to know something about it, but I objected to the bridge whist. I was supposed to be grown up and was admitted to the society of my

YOUR BUSINESS AND THE WAR

The Independent offers you the free service of its Efficiency Plan and Purchase Department to help you put your business house in order.

We are at war. It is a time for clear thinking and exact planning. It is a time to consider thrift, economy, cost-saving, organization, equipment, efficiency.

ARE YOU READY?

You will lose some of your valued men. How will you replace the lost effort? How will you keep your business machine running smoothly under the new war conditions? Have you figured out the way to meet the emergencies which are inevitable?

Is your business in "the third line of defense"? Do you know the list of "war trades" that experience has taught England must be carried on and not suffered to slacken? Do you know how this list compares with ours in the United States?

Have you arranged your office expenses on the budget system? Have you estimated what your business should cost for the next twelve months?

Have you considered how many machines there are on the market that will make your workers more efficient—and save many dollars in your pay-roll?

Without cost to you, The Independent-Harper's Weekly Efficiency Service stands ready to help you meet these questions squarely. Our files of information are at your service. Our expert counsellors are at your service.

This is a time to chart your course; to perceive your actual needs; to take an inventory of your dependable resources; to strike a balance on which you can proceed intelligently and with every possible chance of future surprise and shock eliminated.

IF YOU WILL WRITE

to our Plan and Purchase Department and ask for its Check List of useful suggestions as to appliances, and ways and means the chances are that you will get new light on some business problems that concern you now more than ever before.

When you get the Check List, mark it carefully. State your problem exactly and fully, and within a reasonable time you will receive a complete report on the matters you have indicated.

We have served hundreds of executives throughout the United States during the last few months in all lines of business endeavor. We are ready to help you now—without expense or obligation on your part.

The Independent-Harper's Weekly Efficiency Service
119 West Fortieth Street New York City

elders. But I was bored by it. The tremendously interesting game of life which school had been teaching me to play was interrupted. I seemed to be sitting at home patiently waiting for a man to come and dispose of my life for me. I remembered Napoleon. I wanted to triumph over circumstances. But I did not know how. I was not sure what I wanted. But when my friends who had gone to college came home for vacations and talked of their new interests I felt that I had not grown as they had grown. And I wanted to go to college. I told my family that I would like to go to the big university in the town where we lived. They opposed the idea. They said I was not strong enough for college work. I said I would be a special student. They said they did not approve of the university in town. I said I would go to another if they wanted to send me. They did not want to send me. My mother said that it was time I should think of womanly things. I said that I thought college was womanly. We argued. I begged. I coaxed. But I was not sent to college.

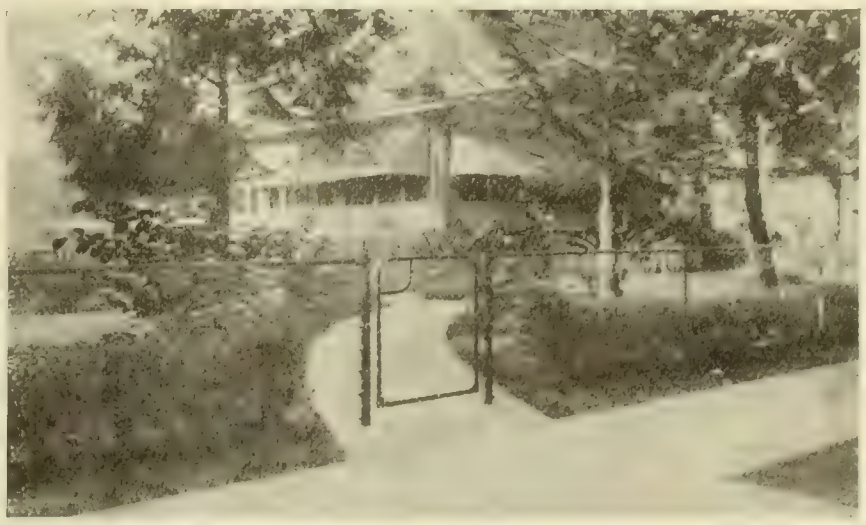
The fall term opened and I made up my mind to go to college whether my family opposed it or not. I knew that I was wasting my time at home and that I was not intellectually mature. I knew that my life was still a problem. Finally the day came when I went to my father and mother quietly and said, "I am going to the university. I have been to see the professors. I am to be admitted to class next week." Then all opposition disappeared. My father and mother knew that I would go. They realized that I was a grown woman, a child of my own generation ready to take my life in my hands. My father smiled gravely and sighed as if he were remembering something in his own young manhood, perhaps a day when he became "of age" and decided to solve his own problems. My mother's lips twitched and her pretty white hands trembled. Then my father got out his check book and wanted to know what my expenses would be.

"You are a dear," I said, throwing my arms around him, and then kissing mother, "you are both dears," I said, "but I can't let you pay for my lectures because you didn't approve. I shall have to earn my tuition myself." They told me that they had never begrudged me the money for the tuition. I told them that I knew that. It would have been quite unlike them to begrudge me anything. But I told them that I thought it would not be right to take their money and use it for something they had not wanted me to do. My father closed his check book. "If there is any way in which I can help, let me know," he said. He was treating me as he would have treated a son. And as for mother she did not need to tell me that she would help if I needed help! My parents might have built up a wall of bitterness higher than the intellectual gap between us was deep, but they never did. They kept my respect and affection by giving me their respect and affection when we could not agree. I have realized in these later years how big they were. For altho young women of their generation sometimes opposed their parents in matters of love and sometimes even eloped with forbidden suitors, few of them would have shared my feelings about education and opportunity and fewer still would have refused a father's financial assistance on grounds which seemed good and sufficient reason to me. I went to the local university for several years and I did pay my own way. By going I put away from me the intellectual scheme of things which belonged to my mother's generation and grew up with my own generation as a pioneer in a new world of new ideas.

THE WOMAN BEHIND THE GUN

We are glad of the opportunity to introduce to our readers our contemporary "The New France," the first number of which has just been published. It has a different place and a different function from any of the other periodicals which have aimed to bring about a Franco-American Entente, since it deals neither with international politics nor with the achievements of the two republics in art and letters. "The New France" aims to strengthen the ties of commerce and industry between France and the United States. We in America need to realize more clearly that "behind France embattled there is always France the hard-working, the country of industry, economy and precision." A brief extract from an article by Pierre Hamp on the work of the French women in the munitions factories may in some degree help us toward this realization.

Between the sewing machine or the typewriter key and the mechanic's lathe there is no very great distance; there is more fatigue in making clothes on a sewing machine for the troops than in turning a 75 mm. gun on a lathe one meter long. To pass the inside border of the hem exactly under the needle requires about the same attention as to follow with one's eye the working of the tool while calibrating the weapon.



Woman could easily pass directly from her previous tasks to this treatment of steel in the workshops, for she had been spending herself before in more exhausting work. No great effort is required of her in metal turning. She has soon come to excel at it, and is as efficient as man and often more so. In a workshop for making shell cases one woman succeeded in a fortnight in attaining the average rate of production at piece-work rates. She asked if she would be paid for all she made, irrespective of their number. This privilege was given, and in six weeks she reached a scale of production twice as great as that of the men.

At first the foremen had to set the speed and fix the tools upon the women's lathes. They could then operate only machines thus made ready. "We have to be behind them all the time," complained the foremen. But soon many of the women could dispense with such assistance, and were able to regulate iron-cutting tools in the same way that they used to change the needles in Singer sewing machines or the margins on Underwood typewriters.

This employment of women is a great spur to improving machinery. While at first they had to work in old shops adapted to men, they are now beginning work in new shops which have been especially designed for them.

It was formerly thought that woman's care could not be trusted when very exact measurements had to be made, but the eyes of an embroiderer are sharper than those of a man, and machines for making light artillery presented few difficulties to her. The adjustment and testing of a shell fuse require careful attention; no defects are tolerated. The adjuster has to discover errors that the workmen have overlooked. This delicate work is just the reverse of the heavy forging, as the working woman uses only her eyes and the tips of her fingers. Long tables are covered with copper pieces arranged in perfect order. The women must make sure that every piece is in perfect condition and exact in caliber, by means of delicate steel gauges, for the slightest defect may prevent the shell from exploding or make it explode in the guns.

A NUMBER OF THINGS

BY EDWIN E. SLOSSON

Curious that two desirable things added together should sometimes make an undesirable thing. It is proposed to use *f* in place of *ph* in such words as "philosophy." That sounds sensible. It is proposed to use the English instead of the Latin order in college degrees. That sounds sensible, too. But if both these reforms are adopted I foresee that those who are now proud to write Ph.D. after their names will speedily abandon the practise.

*
* *

Opinions are not so important as attitudes.

Selfishness is not living as one wishes to live, it is asking others to live as one wishes to live. And unselfishness is letting other people's lives alone, not interfering with them.

I wish I knew who said that. I found it in a recent article introduced by the words:

A recent British writer who lent for a brief space a certain dignity to British letters has pointed out, quite truly, that

Now whom does he mean? Why didn't he give his name instead of a description? I lost my fondness for charades at the age of sixteen. It is a vile custom, this of not telling whom you borrow from. But I'll get even with this man. I won't mention *his* name.

*
* *

Talking of maverick quotations here is another:

Partir, c'est mourir un peu
Et jusqu'à l'Adieu Suprême
C'est son âme que l'on seme
Que l'on seme à chaque adieu.

Who can tell me the author of that? And who can give me a good translation of it? I tried it myself, but after fussing over it for half an hour all I could make of it was the following:

Each parting is a little death,
We sow our souls along the way
In farewells till at last we say
Good-by to all with our last breath.

The trouble with that as a translation is that all the poetry has leaked out in transit. I handed the French quatrain to the lady across the table and this is what she made of it:

Parting is a little death
Its pangs the loss supreme foretell
The soul, sad sower, scattereth
Bits of itself in each farewell!

This is better poetry, but less literal. But the reader is not entitled to criticize these versions unless he can improve upon them.

*
* *

Of course the journalist is always in a hurry and so sometimes, I fear, inclined to be impatient at not finding just what he wants at once. But if when I run across Bryant Park into the New York Public Library I have to wait over seven and a half minutes for my book to be delivered in the big reading room I console myself with the remembrance of my experience in the library of Berlin—the Germans are models of efficiency, you know. After I had hunted up the book I wanted in the catalog—no easy task—and made out the necessary documents, including information as to my private affairs that no American census taker ever dared to ask, and when the librarian had ascertained that the book was in, he politely notified me that all was in order, *und morgen kommen Sie*. I could get the book tomorrow.

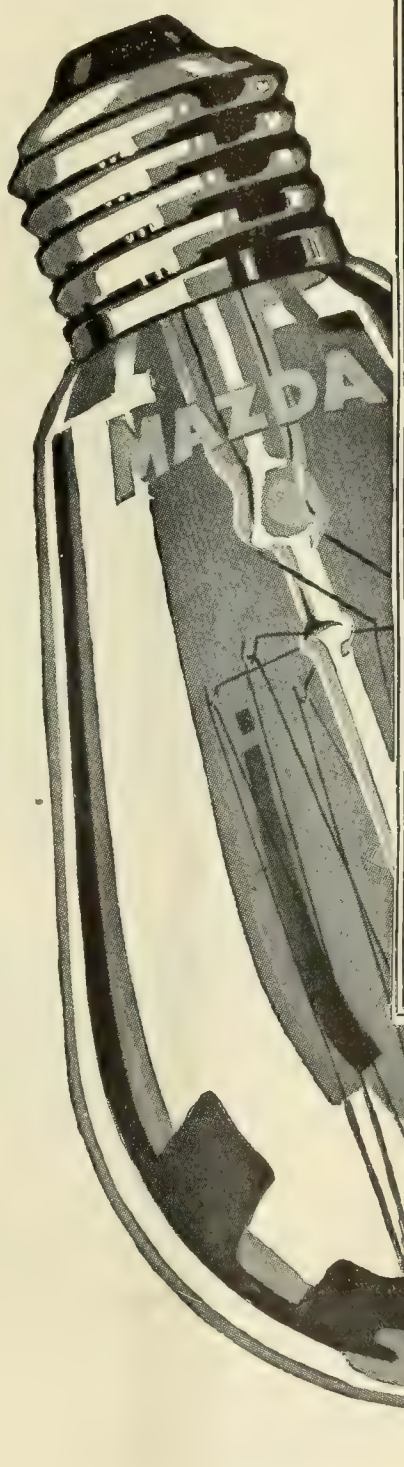
No, I never find fault with librarians for lack of efficiency—of their own kind. Sometimes I have thought they erred on the other side, and were too diligent, too

patient, too thoro and too careful. For instance, their curious curiosity to know what a middle initial stands for. In being shown thru one of the leading libraries of this country there was pointed out to me an assistant who, I was told with some pride, devoted her whole time to running down middle names. She looked overworked. And she was, even tho she only put in two hours a day.

A few weeks ago I got a letter from a librarian in the antipodes asking what the E. stood for in my name. There was, it appeared, a book of mine in the library there which the people of that country were anxious to read, but she evidently thought it unsafe to give it to them until she ascertained what mystery was concealed behind that E. The tone of her letter conveyed the impression that she suspected me of concealing it, either for the purpose of bothering librarians or shielding some discreditable godfather. Not so. I am not ashamed of the respected uncle from whom I received it nor is it uneuphonious. But if the public remember two out of three of my names it is more than I have any right to expect. It is more than I can remember of other people's.

The meek reader as well as the obedient cataloger is almost driven to rebellion at the thirty-first entry of "Lafayette, Marie Jean Paul Roch Yves Gilbert Motier, marquis de, 1757-1834,"—"Byron, George Gordon Noel Byron, 6th baron, 1788-1824,"—"Marie Antoinette, queen consort of Louis XVI, King of France, 1755-1793,"—"George Washington, President of the United States, 1732-1799." Somewhere there should be a full, precise description of every book in the library, but sometimes one wonders if the extraordinary amount of information packed by means of abbreviations, colons, semi-colons, brackets, and parentheses on a small card be not the reason for the course in the use of the card catalog now given freshmen at various universities. Consistency is a cracked jewel. Librarians catalog proper names in the native tongue of the owner thereof now, and deny acquaintance with pseudonyms. This is valuable practise for the cataloger but hard on the unerudite public who find Gorki under P, and Philip IV under F, George Sand under D, George Birmingham under H, Norman Angell under L, and old Frederick of Urbino as Federico and finally call in the head cataloger to disentangle the Albrecht von Brandenburgs and explain why one is "graf von Sachsen" and another plain "abp. of Mainz."

* * *



Pince-nez=sansculotte. I have been revolving these two words in my head for the last two months, convinced that somehow there was in them the makings of a pun or a good, old-fashioned conundrum. But it is too much bother. I give it up and turn over the crude materials to whoever can use them.

* * *

This newspaper discussion of whether the plural of bus is "busses" or "buses" shows how much the world has lost by the neglect of the classics. Of course the only proper plural is bi.

* * *

For the benefit of out-of-town tourists I may explain that Greenwich Village is situated at the cross-roads of Fourth and Tenth Streets. It is inhabited by Bohemians who are trying to live as tho they were in a Russian novel. Their diet consists of truffles and their chief industry is running playhouses too small to hold any audience.

What lies back of the brilliance of a MAZDA lamp? All the facilities of the world's greatest lamp makers supporting the standards set by MAZDA Service. ::

MAZDA

"Not the name of a thing, but the mark of a service"

The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

Remington Indiana

Some time ago I had a chance to read a letter from a prominent Englishman to an American friend which contains a passage so curious that I am taking the liberty of quoting it. I have not been able to make up my mind whether it is as pessimistic as it appears or as satiric as it sounds.

Not even the most timid now expects that the existence of England is going to be imperiled in *this* war. The one after is a different matter, for coalitions are already forming for it. But I don't feel sure that *you* won't be in then. For remember what a great military power we are and are to remain. If you want to remain at peace or to survive to the Finals of the World Dominion Stakes—the next war being the Semi-Finals—hadn't you better sell the Philippines, buy us out of the West Indies and beware of growing too large a navy?

No doubt the time has come for the earth to be unified politically as it has been economically and what better fate could befall it than to be unified under British rule? But the imagination rather boggles at a series of wars, each worse than its predecessor by as much as the latter exceeded the one before. Of course we shall go on "fighting for Civilization" as before and shall compel the others to come in, but one wonders whether our rulers have considered the possibility, not of defeat (for that is impossible for a people so brave and so easily led!) but that the thing may go on until Civilization has been driven entirely underground. It need not perish even so, if it can build its dug-outs deep enough. But what if the whole show busts up and the European race commits suicide?

*
* *

What a different country this would have been if the ideals of its founders had been carried out! For instance, there would be never a lawyer in America if the first Adelantado of the South Sea and Governor of Panama had had his way. This is what Vasco Nuñez de Balboa wrote to the king of Spain:

One thing I supplicate your highness, for it is much in your service, and that is, that you would give orders, under a great penalty, that no bachelor of law, or of anything else, except medicine, should be allowed to come to these parts of the Tierra-firme, for no bachelor comes here who is not a devil, and who does not lead the life of a devil; and not only are they bad themselves, but also make and continue a thousand law-suits and iniquities. This regulation would be greatly for your Highness's service, for the land is new.

Poor Vasco Nuñez, good reason had he to fear the black gowned LL.B's who followed his trail thru the jungle like carrion crows. It was Bachelor Corral who stole his ten thousand gold pieces and it was Licentiate Gasper de Espiñosa, alumnus of the University of Salamanca, who condemned him to death for the crime of discovering the biggest ocean in the world.

*
* *

A Freshman in the University of Hesperus was presenting his first theme to the professor in English. It seemed to him that he had followed the prescribed form of heading: Name of class, name of instructor, name of student, title of theme. But the practised eye of the professor noted an omission.

"You forgot your date," he said to the student as he handed back the manuscript.

"Must I put that down?" inquired the Freshman.

"Certainly."

Blushingly the Freshman pulled out his pen and wrote "Mary Jones" at the head of the manuscript.

A cat may look at a king, but he laughs best who laughs last.

ALL THE KING'S MEN

(*Continued from page 325*)

be set aside every year toward providing them with dowers. Dowers are quite as cheap in the long run as supporting daughters in spinsterhood conformable with their social station during the whole course of their lives. Then there were probably poor relations to be accorded pensions. And no telling how much went out for "representation" in the two winter months that the family spent in Berlin attending the court, and during the two summer months which they were wont to spend at bathing places. There were besides the game preserves to be kept stocked, the accidents to mounts to be made good, the state lottery to be played, insurance policies to be kept running, no end of things. And all belonging to an "order" that must be maintained.

"Well," I said, rising from my chair, as Frau von W. entered the room and advanced toward us, "there is one comforting thought: On three thousand a year Carl in America can have his farm at last. After the first strangeness wears off, he will be happy."

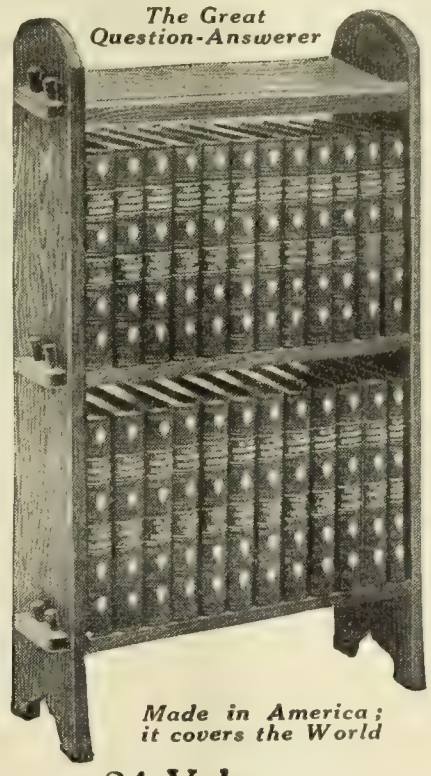
The Freiherr sprang to his feet. "What!" he exclaimed, in a voice of almost insulting wrath. "You imagine that a noble Prussian estate has money for America? Money for the king, money for the family honor, yes; that the Waldows have always had, and with God, will always have. But for a——?"

"What he suffers," murmured Frau von W., who had started leading me away at his first words, and sank upon the nearest fauteuil within her boudoir. "He suffers terribly." A sobbing catch held her voice, and then she added in a tone of admiration: "But he does his duty."

THEY are fanatics, I thought to myself on the drive home, reflecting on how the English, for example, will support their erratic sons with continued affection and help in America, in spite of the fact that America is not a monarchy. I wondered for a moment whether the Freiherr's narrowness and harshness could be due to his having been so long an officer. It would not be strange if men who pass their youth in army commands should carry a summary habit of dealing with things into married life. But there was the early part of my painful visit—the scene of the ledger, over which I had found him brooding. The book contained indisputable proof of his having wrestled in much thought with the problem of Carl's welfare: he had not settled the problem with military promptness, without ado, but had pondered over it with concern and love, like any other parent. What had baffled him were the requirements of their caste. The *Ordnung* of Junker living, nothing else, made it impossible for him to confer a boon upon one son without unsettling the position in social life of all his other children. And now the same "order" was requiring him to cast the son adrift without support, because he could represent class prestige no longer.

Everywhere one turns one comes up against this *Ordnung*. It is Protean; sometimes it means an old standard, sometimes a new rule. But as you see, if the lower classes are tyrannized over politically by the Junkers, Junkerdom itself is tyrannized over by *Ordnung*.

As for the hallowed doctrine of obedience which always accompanies that of order, I have seen worse examples without ever being able to forget my first vivid realization of what may be the results of it upon the humble.



On our place was one of those bent over, wizened old women Germans call "Mut-

In the ordinary revision of a reference work, corrections are made by cutting out of the plates obsolete or erroneous matter and inserting new material to fill the space.

In necessary present-day revision, however, there is so much new knowledge to be added that cutting and then patching up old plates becomes insufficient and impracticable.

The remedy is to *revise, rewrite, enlarge, reset* and print from *new plates*, just as has been done in preparing the recently completed Second Edition of

Made in America; it covers the World

24 Volumes
80,000 Articles

STRONG POINTS

1. **Accuracy:** all important articles *written by specialists.*
2. **Authority:** can be quoted *on any subject* without fear of successful contradiction.
3. **Comprehensiveness:** covers a wider field than any other general reference-work. It contains 80,000 articles—*30,000 more than any other encyclopædia.*
4. **Lucidity:** written in language so plain that *even the young folks can understand.*
5. **Illustrations and Maps:** carefully prepared to *illuminate* and *explain* the text.
6. **Convenience:** printed on thin paper—not *too* thin but easy to *handle* and to *leaf.*
7. **Arrangement:** all subjects alphabetically arranged and *easy to find.*
8. **Pronunciation:** all except the most common words made clear by a simple phonetic system. *Derivations also indicated.*
9. **Bibliography:** every important subject supplemented by a *full list of books* that may be consulted.
10. **Courses of Reading and Study:** afford specialized help toward *self-instruction* in leading branches of knowledge.
11. **Research Bureau Service:** provides subscribers the *free privilege* of information from our Editors on *any encyclopædic subject.*
12. **Attractiveness:** monthly prizes stimulate use of volumes thus *increasing their interest and value.*

CON-SER-TEX

THE IDEAL
COVERING FOR
SLEEPING BALCONIES
PORCH FLOORS
AND ROOFS

Save Money, Secure Satisfaction, Avoid Future Expense

USE CON-SER-TEX CANVAS ROOFING

It makes a neat, attractive, durable surface which will last as long as the house itself.

This roofing material costs less than most others, is inexpensive to lay. For years has been giving satisfactory service.

Wherever a neat, artistic waterproof surface is wanted CON-SER-TEX should be used. It will not leak, buckle, crack, stretch, peel or rot.

CON-SER-TEX is a canvas roofing chemically treated to protect the fiber from mildew and the detrimental action of the oil in paint.

Water-proof, Weather-proof, Wear-proof

CON-SER-TEX is a perfect material for a roof, porch covering, or porch floor: on sleeping balconies, garage roofs, etc. In the suburban sections of the towns and cities throughout the United States, you will find hundreds of attractive and artistic homes where CON-SER-TEX is largely used—it renders continued satisfaction.

Investigate its merits. Send us the dimensions of your roof, porch floors, sleeping balcony, or the surface you want covered. We will mail you samples showing quality, width, weight, and free illustrated copy of "Roofing Facts and Figures."

ter." Her daily leading of the ducks across the park, to and from the pond, so attracted our little son that he would leave his play and fall in line behind the feathered waddlers. One day the Mutter failed to come, and the boy was disconsolate, the procession to the pond without thrills, for the sad reason that her substitute let no tidbits fall for the ducks along the way. The child wanted to see "the poor, sick Klimpemutter," and in the face of custom I took him to see her. It was the first time I had set foot within her cottage, or within any cottage. Her whole life long she had lived and worked as a gardener's help upon the place. And what had she to show for her toil in decrepit age? A damp room, with a window that looked out on dirt piles in the rear of the forcing house. A bed was in it, a stove built of brown tiles, a chair, a table and a cupboard. Some dirt-thickened jackets and skirts hung on nails driven into the woodwork of the door. Of comforts there was no suggestion beyond a mat that lay in front of the bed, and warmed a space of the brick pavement. A chromo portrait of the Emperor had been tacked to the brick wall near the stove, but now hung by a single corner. The yellow and crimson colors of the ragged print composed the one bright spot within the whole dark-hued place, excepting, for the moment, the white clad figure of the boy with the radiant flowers in his hand.

Across my mind flashed sunny pictures of remembered homes of garden workers on the Hudson—homes, too, not toiled fifty long years for. And people in them, I had presently to add in a passionate revolt of thought, whose souls had not been so dehumanized as to kiss one's hands with an expression like a dog cowering in licking terror. For the absence of comforts in the room was but a symbol of the absence of self esteem, the sense of merit, of desert, of vanity, of hope, of satisfactions, of any brightening encouragements of a spiritual nature, within the heart of this victim of social "order and obedience."

"OF course you terrified her," scolded my husband on our return. "Whoever heard of a lady intruding on the squalid barrenness it is the duty of menials to protect gentry from the sight of. If she needs anything, send it to her by one of the servants. I have ordered the Circle doctor to look after her so long as it is necessary. Transferring her to other quarters is out of the question. All the rest would take offense. And they would be quite right. You can't insult the head gardener by lodging a female helper in as many rooms as he is entitled to. But you will never learn," he concluded in a tone of exasperation, "that this is a land of order."

Three weeks later when the body of the Mutter was carried out of the room to the hearse, a commissioner stalked in and began searching about. Under the mattress of the bed he found a postal savings book and confiscated it.

Then in a month or two the village gossips were reporting that the Mutter's savings had amounted to 183 marks (about forty-six dollars), but that the authorities would keep back a part of it in addition to their fee. "Why is that?" I demanded, "when it was her wish that 'everything' should go to her old sister?"

"But, Frau Gräfin," answered Mamzell, "it is a penalty, the money the authorities mean to keep. The Klimpfin either didn't know the law, or else she purposely evaded it. Anyway, she failed to inform them that she possest savings. So now they take a fine from what she left in punishment of her silence."

The business had seemed to me very pal-

try from the first. How can a genuinely benevolent government afford to pay salaries to officials for ferreting out such insignificant hoardings as the poor Mutter's? It maintains what amounts to an army of such men in all of its departments, and will talk of "frugality" when an extra paid clerk in a village post office, for instance, discovers some week a word or two scribbled inside a newspaper, and collects two cents of fine from the recipient of the paper. Is not its system of minute inquisition and prosecution a device for accustoming the people to fear its omniscience and rigor rather than an honest expedient?

"Well," I said aloud, "and what are the villagers saying about it?"

"What should they say?" she exclaimed: "it is only in accord with order," "*es ist ja in der Ordnung.*"

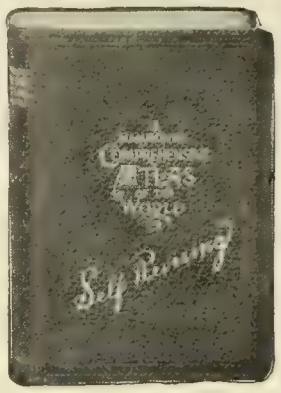
THE very name of their idol has come to exercize a hypnotic influence upon Germans' minds. If you label any measure "*Ordnung,*" obedience is rendered to it almost mechanically. I cannot see how more new laws in addition to the countless restrictive laws swaddling them already, even altho they be laws restricting the autocratic powers of the throne, can effect any real change in Germanism, that is to say, rouse the people out of their stupor of automatic docility, and put them into communication with their common sense. A disruption only can effect this. M. Jaurés, I think, was right when he thundered his reproaches at the German delegates to the International Socialists' convention, in 1912, for the want in their history of a national revolution, the revolution so-called of '48 having composed but a series of local outbreaks. Prussianized Germany, under the spell of an ideal that originally represented a curb to individual turbulence, but has become a curb to all individual acting and thinking, needs a very great revolution. For it is the mission of great political revolutions to do more than secure political government; they must and do create a moral change, by bursting open the crust of mental habits that enclose society, and set free the souls of men. But so long as the German people behold their army, which is the "bronze flower" of their national ideal, standing upright against the onslaught of the armies assailing it, it would be fatuous, I think, to expect a spontaneous revulsion of feeling in them mighty enough to burst the teguments of Prussian *Ordnung und Gehorsamkeit.*

Saugerties, New York

THE SUBSTITUTE

(After Alfred Tennyson)

Come into the kitchen, Maud,
For our bad black cook has flown.
Come into the kitchen, Maud,
I am here at the range alone.
And the smell of burnt bacon is wafted abroad,
And the smoke in my eyes has blown.



There has fallen a storage egg
From my hand to the waiting plate.
Oh, take it from me, I beg,
'Twas out of a last year's crate.
The toast seems to say, "Don't drop it here"—
The coffee-pot moans, "It's fate!"
The saucepan shrinks from my hand in fear,
And the puffed oats mutter, "We wait."

Are you coming, my own, my sweet?
Oh, come and be cook instead!
Pray hasten your laggard feet—
Why, why did you linger in bed?
These eggs are not fit to beat,
They were lain in a century dead.
If you count upon me to fix something to eat
We'll feast upon prunes and bread.

—*Judge.*

A SELF-REVISING Atlas
A HANDY Atlas
A BARGAIN

Bound in FLEXIBLE MOROCCO like a Bible. Just the right size to hold in one hand or to fit in the ordinary bookshelf.

A Self-Revising Atlas is unusual. This is not a "back number" as most atlases are to-day, but fully revised right up to New Year's Day—THIS YEAR.

It is *the newest thing in atlas making*, providing large scale maps in a volume of handy size, bound in flexible Morocco, just like a Bible. It is a compact, convenient volume, and not a cumbersome, unwieldy affair like the atlases you know about—it's not the kind of a "geography" you used to try to hide behind in your younger days at school.

A *good* atlas is the most necessary of all reference books—in the home, office or library. Present conditions multiply its value and usefulness. Intelligent understanding of momentous, history-making events which crowd the news despatches is impossible without up-to-date and large-scale maps to refer to.

Our Comprehensive Self-Revising Atlas of the World overcomes the objectionable features of the large, flat, unwieldy atlases that are hard to refer to, and always in the way. It is a handsome, convenient, flexible volume that is an ornament to any library table or bookshelf.

THE PUBLIC HAS LONG BEEN WAITING FOR AN ATLAS JUST LIKE THIS

Special new large-scale maps of the European Frontiers show the several War Zones with comprehensive accuracy.

There are 512 pages in this handy, compact volume, actual size 9½ by 6¾ by 1¼, bound in flexible leather, with round corners, stamped in gold. It contains beautifully engraved large-scale maps of all the States, Canadian Provinces, Countries of the World, etc., printed in four colors, showing Cities, Towns, Counties, Railroads, Lakes, Rivers, etc., all thoroughly revised and up-to-date. Each map occupies 2, 4, 6 or 8 pages, as required, thus achieving the long sought ideal in atlas making, of providing easily readable, large-scale maps in a compact volume of handy size.

RECENT CHANGES NOTED

New Towns, Post Offices and Railroad Stations are added in incredible numbers each year, and this Self-Revising Atlas shows them all to date. A Complete Index of the United States includes all towns of 100 population, or over, and locates them instantly on the State Maps. Copious statistical matter is included, relating to every Country in the World. What you want to know and find *is here.*

THE SELF-REVISING FEATURE

The Warring Nations of the World are making History and *New Maps Every Day.* When the War is over all existing Atlases will be obsolete, except this one with its SELF-REVISING GUARANTEE. Please read our guarantee carefully, for we have made it as strong and straightforward as we possibly could. The frequent use of an up-to-date Atlas is a habit that will yield big returns in an intelligent understanding of history and events in your own Country as well as throughout the World. Every member of the family will be interested in this beautiful book, and will use it frequently with pleasure and profit.

Self-Revising Guarantee Your copy contains a certificate entitling you to a sixteen page supplement of maps showing the new boundaries of all countries affected as determined by the Peace Treaties, to be mailed free within sixty days after the war is over. This supplement will bring the atlas up-to-date, and give maps showing Europe before and after the war in one complete book.

A SPECIAL BARGAIN—FREE APPROVAL OFFER.

Real bargains sometimes do exist, and we want to prove that this is one to you. We will gladly send you this handsome, handy, Self-Revising Atlas, charges prepaid, and if it doesn't please you, send it back at our expense. If you desire to keep it remit, *not* the regular price, which is $5.00, but the SPECIAL LIMITED PRICE of $2.95.

We are able to make this offer for reasons we cannot now explain, but if the rise in cost of paper continues, and if the proposed new tax and postal rates go into effect we shall have to withdraw our terms immediately. Therefore it would seem wise to take advantage of the opportunity, before it is too late. So please cut out and mail the coupon today.

C. S. HAMMOND & CO., 30 Church St., New York City

HAMMOND & CO., 30 Church St., New York
You may send me a copy of your Self-Revising Atlas of the World, prepaid and without obligation to me. If I desire to keep it I will remit the Special Price of $2.95 within five days. Otherwise I will return the Atlas at your expense and owe you nothing.

ALLABOUGH & SON Woolworth Building New York

WHEN THE GAS FLOWS

(*Continued from page 320*)

ter of the room. We were all there, brancardiers, dog and cat. Some one laughed and we all sat down, white and sheepish, our hands all a-quiver, around the table. Out came the ever ready coffee pot and our readier cups. We had hardly touched the scalding stuff when down the steps with a clatter rushed a brancardier. He shouted something excitedly. There was a sudden commotion. I did not understand it at first until I looked across the room and saw a pair of goggle eyes glaring at me thru the half haze. Then it came over me with a sudden sinking of my heart and a heavy feeling in the pit of my stomach what the trouble was. I fumbled at my belt. Thank God! it was there! I had half expected it not to be. I drew it out—gingerly, fearfully—and adjusted the straps over my head. The next moment I was in another world; a world of smell; a great waste of mingling odor and soul devouring fear. The world I had left I could see dimly thru mica eyes. I saw a dozen frog-like men scurrying around. I saw the huge trench hound standing quietly, while his great frog of a master adjusted a curious contraption of straps and cloth over his head. It was funny, horribly funny. I laughed and choked on a dozen evil odors which rushed wrathfully down my throat. I sat down and breathed gently, fearing lest I might again disturb that life-saving vapor surrounding my face.

Presently one of the Frenchmen lifted his mask and snuffed cautiously. The result of his investigation seemed satisfactory and one by one the masks came off, mine among the last. I drew a deep breath of fresh air and satisfaction, and grinned at a jolly little Frenchman whose face was flushed with the exertion of keeping quiet. For the moment the possibility of going thru such another ordeal never occurred to me. Not so the Frenchmen. The Boche might catch them napping once but not twice. They hustled about in preparation. One man, dubbed by us the official snuffer, was stationed outside to give warning. Others set about covering the floor with blankets, while each hung his gas mask around his neck, ready for instant use. The bombardment had ceased and everything was still but for the incessant distant rumble of heavy guns. We waited expectant. Presently—pss-ss-ss-s-s phut! four or five times in rapid succession. Down tumbled the official snuffer. "Bang!" slammed the blanketed door, and in a jiffy we had again become as many human frogs. This time things were more calm. We sat down quietly and breathed as carefully as possible our man-made atmosphere. Thru the muffled door we could hear occasionally the "phut-phut" of the gas shells. Presently they stopped. The death-like silence was nerve-racking. The gas seemed to have killed all sound. My mask was stifling and I felt that I must be suffocating. I felt a tugging at my elbow and turned to find a brancardier jerking at a newspaper on which I was leaning. I thought the gas must have gone to his head. Why should a Frenchman who could hardly read his own language wish to read an English newspaper in the midst of a German gas attack? However, I grinned stupidly and gave him the paper. He immediately tore it up and shoved the pieces into the fireplace. Then he threw several sticks of wood on top and set the whole off with a candle. The blue smoke began to fill the room and gas masks to come off. I had watched the whole proceeding in a sort of stupor, struggling

What Is the Matter With Me?

"WHY don't I get ahead—I work as hard as I can, I have as much sense as other men?" A million men are asking themselves that question today. The answer is simple. You have the brains, you work as hard as other men—but you do not put work and brains together. The

Course in Personal Efficiency

IS now showing 20,000 men how to get more pleasure—more money out of life.

R. S. Howland, who owns fruit groves in Florida, found that it gave him 24 hours more a week—a whole day. Suppose you had one day more a week in which to make money, or to play golf, or to run your car?

R. F. Brune, a grocer of California, got $3000 a year extra in income and cut down his working hours.

El Swanson, Secretary of the Fort Pitt Chocolate Company, Inc., got a 33 1-3% raise in salary.

E. Q. Cannon, President of the Salt Lake Stamp Company, learned how to quit before quitting time.

And so it goes with 20,000 men all over the United States. What you get out of efficiency is what you want to get—whether it is leisure, health, money, or peace of mind—that thing you find in it.

Harrington Emerson has applied his principles to over 200 factories, railroads and other organizations. They are studied by efficiency engineers in America, in England, in France, in Germany, and in other countries who have learned them from Emerson.

Every day that you work wrong is a day taken out of your future success. Send the coupon today. It costs you nothing and may mean the doorway to a great new future for you.

First Lesson and Big Book FREE

It's too big to explain—too new and too vital. Send the coupon for the first lesson free. Follow its instructions. Then if you feel your work easier and its results bigger—you can have the whole course. Let the course reorganize you and your life, as its principles have reorganized hundreds of plants and factories. Your capital is brains—your servant is time. Let this course teach you to make the most of both.

Whoever—wherever—whatever you are you need Efficiency. Send the coupon today for the whole story and the first lesson FREE and the big 14 chapter book, "A Short Cut to Success."

Metropolitan Hospital Training School for Nurses
BLACKWELL'S ISLAND, NEW YORK CITY

offers a three years course of training. The school is registered by the University of the State of New York, and connected with a hospital of nearly two thousand beds, which gives ample opportunity for a broad, general training.

The Nurses' Residence, removed from the hospital, is homelike and ideally located.

Requirements: At least one year of high school or equivalent. Age limit—18 to 35 years.

Remuneration—$10.00, $12.00 and $15.00 per month; the increase made yearly.

For information address Superintendent, MISS AGNES S. WARD

with my determination to die of suffocation rather than German gas. It suddenly dawned on me what it was all about, and I jerked off my gas mask and filled my lungs with wood smoke. Thicker and thicker became the haze. "Why do they make such a smoke?" I asked. "It drives the gas away," was the only answer I could get. Why it drove the gas away I could not imagine, but contented myself with the thought, at least, that it did.

But soon the smoke became unbearable. Our eyes began to smart and we choked on every breath. "Let's go out doors," some one suggested. It was a risk, but two of us decided to chance it. We approached the battered door and as no one seemed to object we undid the bar and swung it open, half expecting to be blown over by a rush of evil smelling gas. We ascended the steps and stood drinking in great drafts of the cold, keen air of dawn. The east was pale with the first faint flush of day. We could half see around us the débris thrown by a huge shell which had struck in a pile of trash in the middle of the courtyard. The walls of the building were plastered with mud. A huge hunk of turf reposed on the roof of one of the cars. The whole thing was rather ghastly and funny, and I grinned sleepily as I rubbed my burning eyes. As I did so, my hand caught in a strap around my neck. I looked down and saw my gas mask swinging. I took it off, folded it carefully and slipt it back in its case—a henceforth priceless possession.

If the Irish convention is enabled to bring a settlement to Ireland, then our hearts need no more go "Pity Pat."—*Cassell's.*

"Do you often change your environment?"

"Shure an' I do; ivry Saturday noight."—*Penn Punch Bowl.*

William looking down the gun
Pulls the trigger "just for fun."
Mother says in accents pained—
William is so scatter-brained.
—*Tiger.*

John H. Woods, a Brooklyn undertaker, advertises in a theatrical program as follows:

"During my career as an undertaker I am yet to have my first dissatisfied patron."—*New York World.*

Presiding Genius—What is the charge against Private Jones?

Sergeant—If yer plase, 'e's been drunk, an' 'e's been breakin' things, an' he won't obey no orders. In fact, 'e's been behavin' ginrally as tho 'e wuz the bloomin' colonel himself!—*Sydney Bulletin.*

It appears that once a Westerner, visiting New York, was held up by a footpad with the demand:

"Give me your money, or I'll blow out your brains!"

"Blow away," said the man from the West. "You can live in New York without brains, but you cannot without money."—*The Lamb.*

"Germany's claim that she imports nothing, buys only of herself, and so is growing rich from the war, is a dreadful fallacy."

The speaker was Herbert C. Hoover, chairman of the American Food Board.

"Germany," he went on, "is like the young man who wisely thought he'd grow his own garden-stuff. This young man had been digging for about an hour when his spade turned up a quarter. Ten minutes later he found another quarter. Then he found a dime. Then he found a quarter again.

"'By gosh,' he said, 'I've struck a silver mine,' and, straightening up, he felt something cold slide down his leg. Another quarter lay at his feet. He grasped the truth: There was a hole in his pocket."—*Washington Star.*

Mr. Purinton's War Service Question Box

Miss A. L. W., Connecticut. "For a long time the waste of tin cans in American households has troubled me; they disfigure otherwise picturesque spots in the country, or fill up empty city lots to no purpose. The rag man will not buy them, nor the Salvation Army take them. Why may not cans once used be sterilized, and have new tops soldered on? What institution would consider this matter? And is there any little pamphlet I could distribute among my neighbors who think more of getting and showing money than of saving it?"

Every grocer and every housewife should belong to a wartime committee on the preservation and utilization of empty receptacles; or, in plain parlance, a tin-can saving club. *One pile* of old cans now going to waste in a certain part of the country means a loss of more than $10,000—the salvage worth of this collection of cans. The total yearly waste is enormous. First find how many tins, approximately, are thrown away each year in your community; then figure out a plan for the town to preserve them for shipping; then write the following men for advice and coöperation: Frank E. Gorrell, secretary National Canners' Association, Washington, D. C.; Secretary Houston, U. S. Department of Agriculture, and Secretary Redfield, U. S. Department of Commerce, both Washington, D. C. A series of Thrift pamphlets for general use may be had from American Society for Thrift, 6 North Clark street, Chicago.

Prof. R. J. Y., New York. "I have read a statement that the British Food Council are advising thoro mastication of all food as a war measure, with announcement that if people would chew twice as long they would eat only half as much. How far is this true, on general principles and for special adoption by the American family? Should the experiment be tried here?"

It certainly should. I know about seven women and three men who eat slowly enough—and my acquaintance list runs into the thousands. Probably 299 Americans out of every 300 need education in mastication; tho we regard it an extreme statement to promise a man he can live on half as much food when he chews it twice as long—a reduction of twenty to thirty per cent would be nearer the truth. See Horace Fletcher's books (published by F. A. Stokes, New York).

The habit of natural (complete) chewing of all foods lessens in various ways the amount needed: by sharpening sense of taste, which then discards unnatural and unnecessary dishes; by getting maximum of nutrition from all edibles, due to increased digestibility; by curing abnormal cravings and restoring a hungry appreciation of simple fare; by cutting out the false ideas and customs of porcine hospitality, and making nourishment the real object of eating.

A Young Man from Connecticut. "I have just graduated from a theological seminary. Had contemplated taking a small chapel for the summer, but am now undecided, because of the war. I consider that my duty as a minister lies on the constructive side of war activity. Should I enlist, or take the chapel, or do something else? How about working in a factory or other industry during the week, and maintaining services on Sunday?"

You have answered your own query, in suggesting that you work as a laborer during the week and minister as a pastor on Sunday. We believe that every young clergyman, war or no war, should do what you are doing, by way of apprenticeship. The sooner a preacher learns that religion is life, the sooner he can make every life religious.

Get a job—a man's job. Let your sermons evolve out of your own experience. Learn why your fellow-employees do not go to church. Make your chapel fill the daily needs of *workers*. Vitalize it, practicalize it, socialize it. Harmonize war and worship, tell your people how fighting and praying can go together. But do not let your pastorate be mentioned where you work—neither employers nor employees want a preacher in their midst.

You are undertaking a big thing. Success to you.

"How the United States could honorably have kept out of war I do not see, and yet with a boyhood of strict Quaker training I do not see how I could possibly put any heart into the tak-

School and Military SUPPLY WEEK

SEPTEMBER 1st to 8th, INCLUSIVE

This week has been set apart for special displays and demonstrations by the army of Parker dealers. To the Army man and the Navy man just going into service—to the student just beginning the year's work—the Parker SAFETY-SEALED Fountain Pen is a necessity. See your dealer's window.

***SAFETY-SEALED*—The new type "no holes in the wall" fountain pen. Ink can't get out to soil clothes or person. In event of accident to interior mechanism the pen automatically changes from a Self-Filler to a non-Self-Filler without interruption of service.**

PARKER INK TABLETS for a soldier's "kit" in place of fluid ink. Ten cents per box of 36

Parker Pen Co., 239 Mill Street, Janesville, Wisconsin. New York Retail Store, Woolworth Building

INTERLAKEN

A School community on a 700-acre estate with woodlands and water. "Where boys learn by doing"

Prepares for all universities. Thorough instruction in German, French, Spanish; in mathematics, physics, chemistry. Botany. Life preparedness sought by applying academic work in practical mechanical and agricultural training. Each boy is daily assigned some practical work in either the wood or metal shops, light or power plant, or on the farm. A simple open-air life, with plenty of athletics, group and team games, develops a robust body. Initiative and executive developed through opportunities of leadership in work assignments. Observation trips to factories, city institutions, etc. Boys received at any time. Summer camp, mid-June to September. Address

HEADMASTER, Box 128, Rolling Prairie, LaPorte Co., Ind.

THE STONE SCHOOL

Cornwall-on-Hudson, Box 5, New York

FIFTY-FIRST YEAR

A School in the Heart of the Open Country. For Boys from 9 to 19.

ATHLETICS: Two fields with excellent facilities for all sports, under supervision; hiking, woods life, swimming pool.

You are invited to come and see for yourself. Catalog sent on application.

ALVAN E. DUERR, Headmaster

Union Theological Seminary

Broadway at 120th St., New York City

The charter requires that, "Equal privileges of admission and instruction, with all the advantages of the Institution, shall be allowed to Students of every denomination of Christians." Eighty-second Year begins September 26, 1917. For catalogue, address The Dean of Students.

Blake Country School

LAKEWOOD, N. J.

An ideal school for a boy who wishes to be rapidly prepared for college. The mild climate makes possible horseback riding and other outdoor sports throughout the winter. Special attention given to boys in delicate health. Located in pines near three mile lake.

WHITNEY CASEMENT WINDOW HARDWARE

Ushers in a New Era in Casement Window Construction

By overcoming all the faults of the ordinary hinged casement window—Whitney Casement Window Hardware not only increases the desirability of casement windows for sun rooms and sleeping porches—but also makes them practical for any and all parts of the home and for all other types of buildings.

In fact, casement windows installed with Whitney Hardware have many advantages over the ordinary double hung, sliding sash windows. Whitney windows are absolutely tight and storm-proof when closed—also burglar-proof.

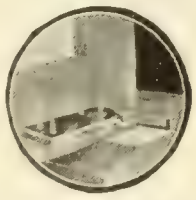
They open outward—out of the way of shades, curtains and furniture. They afford perfect control of ventilation and drafts. You can easily move the sash to either side of the opening and have a wide unobstructed view of the outdoors and a clear sweep of the breezes when desired. They never rattle or slam shut—always work smoothly and quietly.

We manufacture only the patented Whitney Window Hardware and screen fittings—use any style sash you wish. If you cannot get the sash locally, we will quote you on your requirements complete, f. o. b. Minneapolis.

Our service department will help you, without charge, to adapt Whitney Windows to any unusual requirements, furnishing you with drawings and specifications that will enable your contractor or carpenter to make successful installation.

FREE—Write for interesting portfolio of artistic and practical casement window designs for different types of homes.

If West of Mississippi, and in Wisconsin, address



Whitney Window Corporation
313 Fifth Street South
MINNEAPOLIS, MINN.

If East of Mississippi, address

H. E. Holbrook Company
448 John Hancock Bldg.
BOSTON, MASS.

This shows the Whitney hinge that is fastened to top of sash. The roller runs in a groove.

This shows the Whitney hinge that is fastened to bottom of sash. It has a shoe that slides in a waterproof metal track.

THE FEAR OF COLOR

Send $1.00 for our Booklet "Fear of Color. Fear of Plants. Fear of Plants as Weeds." This Booklet will mark the beginning of a revolution in cultivation of soil, especially gardening in town and country. Onions and carrots 1500 to 2000 bushels per acre. No hand weeding. No hand thinning. The greatest single annual economic leak is ignorant, careless and slovenly cultivation of soil and spacing of crops. Nature conserves, upbuilds and enriches soil by growing plants upon it. Upbuild your soil in field and garden by efficiently growing and spacing crops. Let us tell you how. Upbuild, conserve and guard your health by growing and eating northern grown vegetables, northern grown and highly colored fruits, which properly feed stomach, intestines and colon. Efficient field and garden hand tools illustrated and uses explained alone are worth the price of the booklet. Money returned as cheerfully as taken, if not satisfied.

A. H. & N. M. LAKE
Box 109 Marshfield, Wis.

ing of life. But I want to do something for my country. Into work even as dangerous as actual fighting I could put every ounce of energy I possess."

The Government has expressly taken into consideration those of pacifist training. If you are really prepared for hard work and considerable risk join an active unit of the Red Cross. It is patriotic work and by no means dishonorable.

"Some time ago I wrote the Quartermaster's Department of the Army concerning a place in that department, but have not yet received a reply. I have four years' experience in bookkeeping, clerical and mercantile work and thought I could best serve my country in that line."

Demand for men in the Quartermaster's Department varies with different localities. You could learn the facts by personal application at the nearest regimental headquarters.

"I am an efficient stenographer, twenty-three years old. Washington is calling for stenographers, but I'd much rather do something else than pull down a salary for the cause. Is there anything else I could do to help win this war?"

We believe, in spite of your creditable feeling, that you would be doing very useful war service if you secured a post in a Government department and so relieved a man for other duty. Register at once by mail with the National League for Women's Service, 257 Madison Avenue, New York City.

"I am forty-four years of age; a teacher in a state normal school; have a wife and four small children; A. M. Columbia University; reared on a farm and can do farm work but have not capital enough to start for myself. Am ready and willing to operate a farm, if it will pay enough to keep my family."

You might send your name and qualifications to the Department of Agriculture, and also to the Council of National Defense, Washington, D. C., but unless your ability in farm work is more than average, it is unlikely that it will bring in enough to support your family. Teaching is good and patriotic work, especially if you have organized your students for food production. If you haven't and want information, apply to the Government Printing Office, Washington, D. C., for Bulletin 1916, No. 4, of the Department of the Interior, Bureau of Education, on "School Gardens"; to Mr. R. L. Templin, Cleveland, Ohio, and to the Education Department of Augusta, Maine, for free pamphlets on the same subject.

Mr. J. B. K., Pennsylvania. "My work is handling correspondence for a sales organization, sometimes dictating 100 letters per day. Have taught school, and managed a farm. Age is twenty-nine. Where could I be of most benefit?"

When this answer appears, you will doubtless be enrolled under the draft registration. Consult the official who took your enrolment, or the mayor or sheriff, as to preferential application for special duty based on your experience.

Your training in salesmanship might be turned to account in gaining local recruits for different branches of service; in teaching farmers and truckmen to market their products effectively; in establishing, or extending, branches of patriotic organizations; in rousing public sentiment for community efficiency on patriotic lines. A national institution such as the World's Salesmanship Congress, Kresge Building, Detroit; or the Sheldon School, Area, Illinois, would probably have war data on professional services that salesmen could offer.

Mr. E. S., Wisconsin. "Do you believe that with careful guidance a business can be established and tided over the present troublous times? Is the risk too great? I have planned going into business for myself, and my enthusiasm has grown till my mind has been practically transferred from my present employment. Am I honest with my employer in staying on? Yet would I be justified in opening a new store at this time? I am writing you because I know of no other source from which I can obtain such competent counsel—I have written you previously and had my questions answered thru your column in The Independent."

You should consult national business organizations such as the Federal Trade Commission, also the National Chamber of Commerce, both of Washington, D. C. Probably good advice may be had from the National Association of Manufacturers, Secretary George S. Boudinot, 30 Church street, New York; and from the Babson Statistical Organization, Wellesley Hills, Massa-

Danersk Furniture

The Charming Thing is Rarely the Usual Thing

Individuality in furniture can best be obtained by buying from those people who manufacture. DANERSK FURNITURE is made in our own factories. We have every modern facility for immediate decoration of your choice from our complete line. We ship daily direct to all parts of the country beautiful pieces in antique walnut and old Venetian colorings. Tell us the pieces you desire and we will send samples of fabrics and suggestions for color schemes.

Do not compromise when you can have things just as they ought to be.

Write today for our valuable Catalog "P-9" or call at Exhibition Rooms.

A regular quarterly dividend of 2½ per cent on the capital stock of Mergenthaler Linotype Company will be paid on September 29, 1917, to the stockholders of record as they appear at the close of business on September 4, 1917. The Transfer Books will not be closed.

FRED'K J. WARBURTON, Treasurer.

chusetts. Are you familiar with the work of special business counselors? Write E. St. Elmo Lewis, care his publishers, Ronald Press, Vesey street, New York.

Don't be too impatient. Your enthusiasm will have to stand the cooling process, anyway. Get all your plans and ideas on paper, lock them away securely. Then put your head and heart into your job, serve your employer even better than before (to make sure of being honest with him) and regard all new efforts a later asset of experience.

Mrs. F. P., Illinois. "We are of English descent. Our boy of twenty would like us to advise him where to serve. His greatest talent is music—piano, banjo, and so forth. He seems to want to join the Y. M. C. A. corps now being formed at his university, and to go to France. Will you help him to a decision?"

Could he not belong to a regimental band, or otherwise volunteer to make his music a war utility? The power of martial music, to animate, exalt, cheer up and speed on the soldiers of an army, puts the volunteer musician right alongside the volunteer gunner, or standard-bearer. Good music also is a fine help to relaxation in the trenches. If your boy can play well a small instrument easily carried, he may go to France with a real mission.

The nearest U. S. army post in your state is at Fort Sheridan, or at Rock Island Arsenal. Write the commandant for detailed instructions regarding volunteer musicians, or privates with musical training.

Miss R. C. J., Pennsylvania. "Most of the young people in our neighborhood have adopted the craze of wearing the flag as a mark of patriotism. The boys wear the national emblem on their neckties and collars, the girls wear it on belts, handkerchiefs and hosiery. They call me unpatriotic because I think such a display is extremely bad taste. Will you tell us how the flag should be worn, if at all?"

Your friends are guilty of worse than "bad taste." It is a violation of law to wear the American flag as a part of one's dress. Whoever does it makes himself or herself liable to arrest, and fine or imprisonment.

The flag should be worn as a symbol—not as a part of one's attire, whether painted, stitched or woven. It should always carry an impression of dignity, modesty, nobility.

Mr. E. S. W., Pennsylvania. "How far do you think so-called patriotic celebrations are justifiable? Is it good citizenship to march and sing and shout and orate, all to no purpose? I have been asked to join a dozen of these loose-lung parties in our town, have invariably refused, and am now suspected of being a German spy because of trying to use a little patriotic reason. What is your opinion, as an efficiency expert?"

We agree with you. But we suggest that, before you disagree with everybody else in town, you prepare a fitting substitute for a "loose-lung party." What are *you* doing for your country? Would you want everybody to stay home from a celebration in order to follow your patriotic lead? Are you a born Ishmaelite, therefore incapable of producing social standards for normal people?

Every patriotic celebration should look to some definite, prompt *action* by the audience. Money should be raised, or memberships taken, or districts allotted for campaigning, or volunteers enlisted for local war work, or communities appointed and started out, or something else practical and immediate accomplished. Why don't you learn to harness and ultilize the energy wasted on hurrah-meetings, instead of trying to freeze it dead? Your psychology needs reversing.

Miss A. F. J., District of Columbia. "Will you kindly tell me how I can get in touch with and get the literature of several national women's organizations which are represented here in Washington, D. C.?"

Inquire of your telephone company for particulars or the business telephone directory of Washington (almost every large city in the United States has a publication of this kind). Look under classified index for list of organizations.

Watch local papers for mention of club officials, under club and society news. And obtain from the editor of the newspaper you take a list of local club directories, published in Blue Book form or otherwise.

Visit large bookshops and news dealers until you find a national yearbook or almanac on sale; this should present a roster of leading American women's organizations. Apply to headquarters for address of local branch.

Trade Mark INDEPENDENCE THROUGH THRIFT *Adopted 1916*

A Simple System for Encouraging Thrift

$10 Thrift Bonds offer a most convenient and logical system for the promotion and encouragement of Thrift. This system is fully matured after five years of investigation of the small investment field.

$10 THRIFT BONDS

are distributed through employers, large and small, and merchants. Every day an increasing number of stores and industrial concerns handle them.

Thrift Bonds are 3% certificates of ownership in Governmental obligations held by the Equitable Trust Company of New York as Trustee. They are absolutely safe.

Thrift Bonds accepted at par in exchange for Liberty Loan Bonds or other Governmental war issues, when issued, with no charge to holders except transportation, premium and accrued interest, if any, at the date of the exchange.

Correspondence with Banks, Employers and Merchants is especially invited.

Market Place Talks

BY LUIGI CRISCUOLO

THE BOND MARKET AND BOND PRICES

THE apathy which has prevailed in the market for long term bonds for the past quarter demonstrates that many investors have been waiting for lower prices. They have not reasoned, as many experts, that bond prices have very largely discounted most of the immediate factors that have deprest them, such as fear of excessive taxation and the consequential selling of securities of all kinds by large holders in order that they might switch into non-taxable government or municipal bonds. Now comes the announcement that the next issue of United States Government bonds may bear 4 per cent interest and be free of normal taxes only. This means but one thing: there will no longer be any incentive for large holders to sell their railroad and corporation securities in substantial blocks.

If we are to assume that there is to be an upward turn in bond prices, or at least a cessation of drastic liquidation, it may be well to point out to the investor to what extent bond prices have dropt in the last decade. Let us repeat, what was said here some time ago, that the great wave of liquidation that we have felt did not begin with the outbreak of the European war in August, 1914. Clouds had begun to gather in the continental chancelleries as far back as 1909, and it was learned in 1914 that the Teuton bankers had made a quiet quest for gold from that time on. They obtained the metal thru the continued sale of American and other foreign securities held by their institutions. It is therefore interesting to make a comparison of prices a decade ago and about the first of last July, using active bonds of the very best type, that is to say, legal investments for savings banks in New York State.

The table shown herewith calls attention to the fact that bonds of this class, which sold in 1906 at prices returning from 3.45 to 4.10 per cent, have recently been selling at prices to return from 4.10 to 4.90 per cent, and some other issues not existing in 1906 which are in the same category have sold on a much higher basis. It is extremely significant that these declines have not occurred along with any impairment of the properties covered, or with any substantial decrease in margin of earnings. We have to deal with absolutely the best grade of corporation securities that can be purchased, bonds which sell on their intrinsic merit as underlying issues, without any artificial bolster such as tax exemption or eligibility for postal savings deposits which is possest by municipal or government bonds. It is well to point out that in most cases millions of dollars of new money has gone into the properties covered thru the sale of bond issues which are secured by mortgages junior to those securing the bonds cited. The question at once occurs, in view of the large decline from prices in normal times, Is this the right time to buy bonds of this type?

MANY of the bonds referred to bear 3.50 or 4 per cent interest. The fact that about 1906 the prosperity of the country made money cheap facilitated financing on easy rates by corporations having excellent credit. Since that time the country has passed thru a period of reconstruction, both politically and industrially. There have been enacted many reforms in corporation finance as well as in government administration.

However, the crusade for better corporation finance and better government caused a great upset. It resulted in the panic of 1907 and had a great deal to do with the reorganization period which began in 1913 with the receivership of the St. Louis and San Francisco Railroad and is just about terminating. After the effect of the panic of 1907 was beginning to disappear, the Europeans began selling securities quietly, and gradually the disturbance began to have its effect upon business in general here and abroad, altho the reason was not generally known here. Due to the fact that we had an enormous purchasing power, securities were absorbed. There was a slightly rising tendency in the bond market in 1910 and 1911 followed by a gradual de-

* Prices are as of about July first; in many cases present prices are lower.

cline in 1912 and 1913, then a sharp rise early in 1913 which extended thru 1914. The rise terminated in the middle of summer with the outbreak of the war.

One very apparent result of European liquidation was the change in the interest rate on long term railroad bonds from 4 per cent to 4.50 per cent in 1913-14 when the New York Central and the Chicago, Milwaukee and St. Paul created their great refunding mortgages which have been the models for other railroads, and finally to 5 per cent when the Baltimore & Ohio created its refunding mortgage in 1915. Since the first of this year, many railroads have either kept out of the market or have resorted to the issuance of short term notes secured by mortgage bonds.

It was the lack of market for 4 per cent bonds at or near par about 1911 and 1912 that caused many railroads to resort to short term issues bearing 5 per cent interest. This, in turn, aided in placing a number of roads into the hands of receivers when they found that market conditions prevented them from selling long term bonds in order to refund maturing notes.

AS to whether bonds are now cheap or not, who can say for certain? Let us not indulge in predictions. There has recently been a tendency to finance corporate needs thru the issuance of short term notes, but it is to be hoped that this will not lead to overexpansion of business. However, it is hardly conceivable that, with the billions of dollars of Liberty Loan funds placed in circulation, industry will not continue to flourish. At the same time, it is fair to assume that if the investor is buying for the long swing and not merely for temporary investment or for pure speculation, bonds purchased at present prices will prove a highly profitable operation a few years hence. For every year like 1907 and 1914 we most certainly have years like 1906 when bonds sell readily on a 3.50 per cent basis, and it is not at all a stretch of the imagination to say that investors are today getting a better deal than ever before. When the reconstruction period following peace is successfully concluded we may again see high grade bonds which are now selling on from a 4.75 per cent to a 6 per cent basis sell up to from a 3.50 to a 5 per cent basis.

Railroad bonds which are legal investments for New York savings banks have been used here as a criterion because they are the best known and form an excellent barometer of money conditions. However, the same argument applies in the proper degree to lower grade railroad bonds and to industrial and public utility bonds which have been selling at low prices due to changing conditions in the security markets. These conditions, in most cases, have no wise affected their intrinsic value as securities, at least not so as to impair their value permanently. It is pointed out that the investor who has a few hundred dollars or a few thousand to invest cannot do better than begin inquiring now among reliable investment firms for sound and seasoned securities, rather than consider the many promotions that are being offered so generally in glowing terms.

A great many people have only a few hundred dollars to invest, but whether a man has a hundred dollars or a hundred thousand, he should *start right*. The time is now ripe for consideration by conservative investors of sound securities, and even if prices do go lower, bonds well-bought will show enough appreciation in years to come to make the purchaser feel that he was wise in taking advantage of conditions.

MOTOR PROGRESS

Conducted by Clarkson Lloyd

KEEPING CARBURETORS THRIFTY

UNDER the hood of your passenger car or truck is a small but highly diverting and often diabolical contrivance made of brass or copper. It is called a carburetor. And statisticians could, I believe, easily prove that it has done more to swell the ranks of the profane than any other object of its size known to man.

Perhaps the ill-repute into which carburetors as a class have fallen is due to the fact that few people really understand them. To revile what we do not comprehend is an all too common custom.

Suppose, for the sake of lucidity, we reduce a carburetor to its lowest terms.

It was discovered that gasoline, then a highly volatile liquid, would explode when mixt with air in certain proportions, so as to form a vapor. By itself, it appeared, it would burn slowly—as kerosene does. But with air added it would burn quickly. The theory of all explosives is the same. An explosion is merely very rapid combustion; the instantaneous union of some substance with oxygen, and a correspondingly instantaneous expansion of gases caused by intense heat and producing force.

One of the first methods of exploding gasoline vapor was to expose a sort of pool of the liquid to the air. Being volatile it quickly vaporized and was then ignited. The trouble with this method was that it was difficult to gage the proportions of the two ingredients. And since the proportions are of paramount importance so far as the result is concerned, a way was sought to regulate them.

(Right here it might be well to explain the words carburetion and carburetor. Gasoline is made up largely of carbon. Mixing gasoline with air is called carburetion and, of course, it is accomplished by a carburetor.)

Having determined by experiment that gasoline mixt with air is explosive in ratios ranging from four parts air to one of gasoline to sixteen parts air to one of gasoline, the problem was to construct a device which would mechanically mix the two in this range of proportions. It was solved by means of a float chamber, a nozzle and a mixing tube. Since these are all embodied in the carburetors of today, I will try to describe them.

First, the float chamber. The function of this was to separate from the main gasoline supply a small known quantity for immediate combustion in the cylinders of the engine. Picture the float chamber as a cylindrical metal box, a hole in the center of the top and a hole at the bottom of one side. The hole in the top was fitted with a narrow tube connecting it with the gasoline tank. That at the bottom was fitted with a horizontal tube (at right angles to the vertical axis of the box), said tube being shaped like an "L" lying on its back, thus ⌐. Inside the box and fitting it closely was another box, without holes, but with a pointed spindle mounted in the center, just beneath the center tube of the outer box.

Gasoline, flowing into the outer box thru the center tube, raised the inner box, which, being airtight, floated hence the name. When it reached a certain level the pointed spindle floated up into the lower end of the feed tube and cut off the incoming supply. Now, of course, a certain amount of gasoline ran out of the float chamber, thru the L shaped tube. If the incoming supply had not been checked by the pointed spindle, pressure would have caused an overflow at the vertical end—or nozzle—of the L shaped tube. But since the flow was checked, there was gasoline in the float chamber and in the tube, ready for use, and the level of the fuel in the vertical nozzle was the same as the level in the float chamber.

Having segregated a stated amount of gasoline to be mixt with air all that remained was to accomplish the mixing in the correct proportions. This was done by placing the free end of a tube leading to the engine cylinder directly over the vertical nozzle. The diameter of this tube was calculated so that when fully open it would admit sixteen times as much air as there was gasoline in the nozzle. This simple arrangement, then, was the mixing tube. When the piston of the cylinder was made to take a downward stroke, it sucked in air which, passing the open nozzle, drew gasoline with it and combined to make an explosive charge.

THIS used up some of the gasoline in the float chamber, and consequently the level dropt and the float dropt and the pointed spindle came out of the feed pipe allowing a further entrance of gasoline from the main tank, until the level was restored and the supply once more checked.

That is practically all there is to carburetion. But not quite all. There remain various disturbing elements which tend to complicate what is really an essentially simple operation.

For instance, there is engine speed to be considered. And temperature and quality of fuel and humidity and the design of the engine.

The crude carburetor I have described contained the essentials. Altho it is a far cry from some of the delicate instruments now in use, it serves as an excellent point from which to view and to analyze present day carburetors and their peculiarities. In some of the extremely low priced machines the carburetor even now is only slightly more developed.

At all times the problem of perfect combustion in the engine has depended upon perfect carburetion. In other words, the thing engineers have striven for is to construct a device which would give a perfectly regulated mixture of fuel and air: just enough gasoline and just enough air, combined so as to make a power-yielding vapor, controllable at all speeds.

Ask the Motor Editor anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give in this department an opinion as to the relative merits of various makes of cars or accessories, it is always ready to give full and impartial information about any individual product.

One of the first things the experimenters found was that the amount of gasoline flowing from the float chamber to the nozzle must be regulated for climacteric and other varying conditions. Thus was born the needle valve—of which you have undoubtedly heard. By tapping the L shaped tube of the crude model I have already described, and inserting a screw, they were able to cut down or increase the quantity of gasoline which reached the nozzle. This adjustable screw made it possible to determine the minimum amount of fuel with which the engine would deliver its full power and then to set the screw at this position.

Another early discovery was that a fixt air opening, while satisfactory at slow speeds or with stationary engines working at constant speeds, was unsatisfactory when used with a variable speed machine. This is because an engine running fast needs less gasoline and more air than when running slowly. The difficulty was overcome by setting in the side of the mixing tube a spring valve. The increased suction of the cylinders as the engine was speeded up opened this valve automatically and admitted more air. As the speed decreased the suction also decreased and the valve, operated by its spring, gradually admitted less air until, at a certain point it admitted none at all.

In this we have what is today known as the auxiliary air valve. And today it is still further improved by a screw which controls the tension of its spring.

ADDING these two adjustments was a long stride toward obtaining flexibility—that is, a carburetor which would give good results at both low and high speeds.

At the same time, however, as the demand for tractability and responsiveness increased, it was found that the old style carburetor with its crude float valve, nozzle and mixing tube was inadequate. The gas mixture, for instance, did not feed quickly enough. And so a Venturi tube supplanted the old fashioned mixing tube. A Venturi tube is shaped like a rather fat-waisted hour-glass, open at both ends. And for some absurd reason liquids and gases flow thru it faster than thru a straight tube.

The old style, combined float and float-valve was found to be unstable. It had a tendency to wabble and its pointed spindle did not always fit properly into the feed tube. So nowadays, the float valve is separate from the float, but connected with it by means of a lever.

Finally, in their development of the carburetor, engineers abolished external tubes and grouped all parts of the instrument in compact form. The gasoline nozzle, mixing tube, float chamber and air inlets are all contained in a case of thin copper or brass. This shortens the distance traversed by the two ingredients, and the mixture itself makes the instrument more responsive, less liable to leakage and waste by evaporation.

Having traced briefly the development of the carburetor from its beginnings, I will take up later the question of its ailments and the cures therefor.

THE BATTALION OF DEATH

ON the cover of The Independent this week is a portrait of a woman soldier of Russia, one of the thousands who are fighting in the first line trenches to maintain the honor of the young republic. Their unit—they themselves named it "the Battalion of Death"— was organized just after the revolution when the anarchistic and socialistic propagandists were striving to demoralize the troops at the front; their leader is Madame Vera Batchkerev, who enlisted when the war first broke out, attained the rank of second lieutenant, was six times wounded, and received a military decoration for courage under fire. Already the battalion has been in several engagements, alone it held a German trench after the men of the Russian army had retreated, and when finally forced to fall back "the Battalion of Death" took German prisoners with them. Each woman carries a ration of cyanide of potassium to be used in the event of capture. They obey the strictest military discipline and they are trained under the supervision of the Ministry of War.

REMARKABLE REMARKS

AMY LOWELL—I work at night.

BILLY SUNDAY—Samson was a regular guy.

J. OGDEN ARMOUR—The rich man gets few thrills.

THE POPE—Sermons should be exclusively religious.

GENERAL GALLIENI—Don't criticize until you can correct.

PROF. H. M. KALLEN—Legal fictions make social factions.

MARY PICKFORD—No school girl should wear a lot of jewelry.

SENATOR STONE—I abominate kings, kaisers, czars, emperors.

REV. L. C. LEWIS—The priest no more serves God than anyone else.

DR. BEVERLY ROBINSON—There is a lot of tommyrot in present day surgery.

GLENN FRANK—I question whether there is any real demand for lectures.

ROBERT GOLDSMITH—Civilization must not be crucified upon an iron cross.

CHARLES L. DICKEY (father of twenty-three)—We take things as they come.

ED HOWE—A revolutionist is one who tries to substitute his plans for nature's.

EMPEROR WILLIAM—We stand erect at the year's close, immovable, victorious, intrepid.

WOODROW WILSON—Let us never speak of profits and patriotism in the same sentence.

REV. CORTLAND MYERS—If the Kaiser is a Christian then the Devil in hell is a Christian.

LAURA JEAN LIBBY—No wife can force money out of a man's pocket against a man's will.

DR. HARVEY S. WILEY—Raw goat's milk is much safer for children than raw cow's milk.

GOVERNOR FERGUSON OF TEXAS—Lay on Macduff and damned be he who first cries Take him off.

SENATOR REED—More and more we whine and crawl between the legs of those who master us.

CARDINAL GIBBONS—Prohibition in any of the large cities is practically impossible of enforcement.

ELIHU ROOT—I hope that the American women will go to the front if the men fail in the task set for us.

P. CASPAR HARVEY—That conspicuous silence that is heard comes from the 26,533 college graduates of last June.

ROGER W. BABSON—The average bank clerk can be compared intellectually only to a galley slave.

HELEN KELLER—When I learned the meaning of "I" and "me" and found that I was something I began to think.

GENERAL PERSHING—A Frenchman is half child and half soldier, but an Englishman is half child and half policeman.

PROF. IRVING FISHER—Why has Japan's progress in civilization in recent years been more rapid than that of any other nation?

MAX EASTMAN—I propose that a regiment from East St. Louis shall occupy the post of honor in ridding the world of German frightfulness.

MA SUNDAY—A good time according to the right standard and a good time according to the devil's standard are two vastly different propositions.

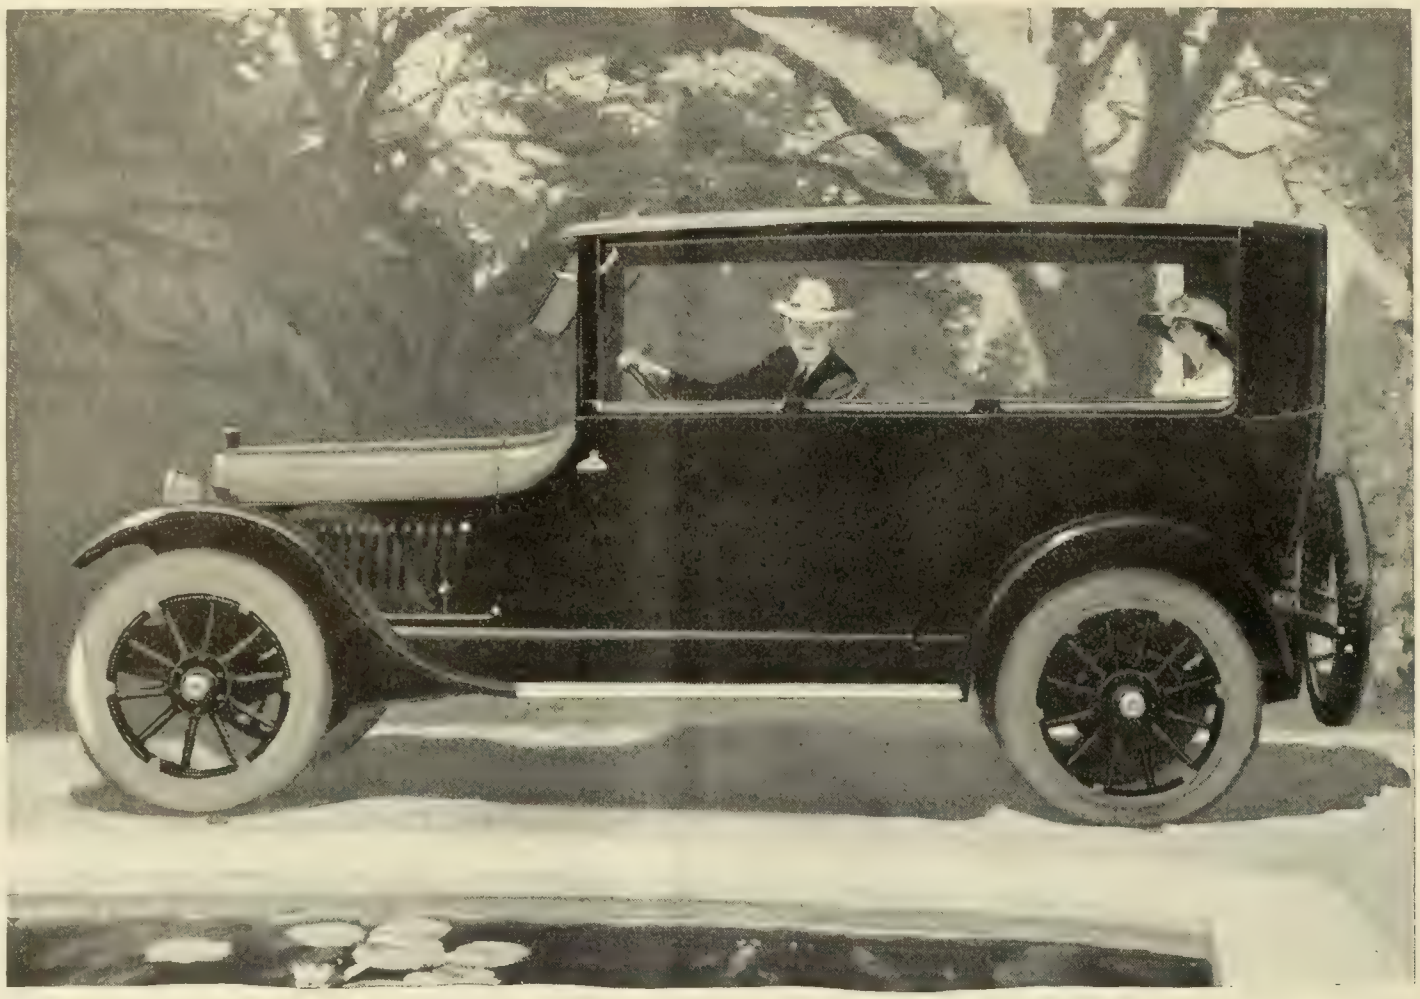
ORVILLE WRIGHT—At the speed which we expect an aeroplane to maintain—70 or 80 miles per hour—there is no means of transportation that is so safe.

OTTO H. KAHN—The worst and least permissible way of saving during the war is to cut down on one's charitable and altruistic contributions along one's habitual channels.

COLONEL HENRY WATTERSON—I have found only three classes of women who want the suffrage: those who want to exploit their own interest, those who are soured on life and the brainless sheep who think it is fashionable.

PROF. FRANKLIN H. GIDDINGS—Our government is based on the agreement both tacit and implied that the minority shall always have the right to free speech, a free press and a free agitation in order to convert itself, if possible, from a minority into a majority.

EX-AMBASSADOR GERARD—The Kaiser talked rather despondently about the war. I tried to cheer him up by saying the German troops would soon enter Paris, but he answered: "The English change the whole situation; an obstinate nation, they will keep up the war. It cannot end soon."



THE FOOD FIGHT

Under this head, every week, The Independent will print some vital part of the information which is being circulated by the Department of Agriculture to aid American housekeepers in their patriotic and intensely necessary work of conserving food.

CANNING isn't the only way to preserve food, there is drying to be considered, too. Community drying plants are just as practicable as community kitchens. Nebraska seems to be the leader in the movement. Her housewives are fully alive to the importance of preserving fruits and vegetables which would otherwise die in the garden; for just now most gardens are producing more than their owners can eat.

Some of the community drying plants in Nebraska are in churches, some of them are in schools, some of them are in the rooms of the county defense councils, some of them in the basements of public libraries. Special clubs have been organized for the work in some communities, but in most cases it has been undertaken by a local woman's club or the city improvement association. At each plant they hire a caretaker and pay her by the hour to look after the work. Any woman may bring her surplus fruit and vegetables and for a minimum charge, which just covers the cost of operation, have them dried there. Wild greens are being dried, too, and in one of the plants the women have been preparing noodles while eggs are cheap. Like the community garden and the community kitchen the community drying plant is a commendable combination of personal economy and patriotism.

CHANDLER SIX

Do You Know Why Chandler Leads All Other High-Grade Cars?

DO you know why in four years' time the Chandler has passed and left behind, one by one, a long line of other well-known cars?

There are perhaps several reasons, all of which would appear very clearly if you had the opportunity or took the time to analyze the history and business policies of the automobile industry. But there is one big basic reason which to you as a motorist is the essential reason, and that one reason is this—that ever since the first Chandler car was designed and built and marketed four years ago last month, the Chandler has offered the finest of design, construction, and equipment at the lowest possible price.

The Chandler today offers this excess of value, this dependability of service, just as distinctly as at any time in the four years past.

THE MEN WHO GUIDE AMERICA

This photograph of President Wilson and his Cabinet was taken very recently just outside the executive offices of the White House. In the front row, left to right, are William C. Redfield, Secretary of Commerce; Robert Lansing, Secretary of State; David F. Houston, Secretary of Agriculture; President Wilson; William G. McAdoo, Secretary of the Treasury; Albert S. Burleson, Postmaster General. In the top row, left to right, are Josephus Daniels, Secretary of the Navy; William B. Wilson, Secretary of Labor; Newton D. Baker, Secretary of War; Thomas W. Gregory, Attorney General, and Franklin K. Lane, Secretary of the Interior

NO PEACE WITHOUT GUARANTEES

PRESIDENT WILSON'S reply to the Pope could not have been improved upon. It set the whole matter in the clearest perspective.

As the President pointed out with convincing emphasis, the question is not, On what terms shall we make peace? but With whom shall we make peace? We are fighting German autocracy, German militarism, German aggression, German faithlessness, German bloodthirstiness, German treachery, the German purpose to dominate the world by force, personified in "a vast military establishment controlled by an irresponsible government." We will make peace only with the German people.

There is one simple and all-sufficient reason why we cannot treat with "the present rulers of Germany." It is that we cannot take their word. They have taught, and the rest of the world has learned the lesson well, that no pledge that they can give is worth the scrap of paper it is written on. Those rulers and the system which they represent are now the ruthless masters of the German people. Whether the submission of the German people to their mastery is voluntary or involuntary it is no business of ours to determine. But it is our business to see to it that that mastery is not extended over the rest of the world.

There is one thing indispensable to any approach to peace. The world must have guarantees that it will not happen again. The will of the German autocracy to impose itself upon the world by might must be rendered impotent. If the German people can and will accomplish this, well and good. If not, those peoples whom the Imperial German Government has forced within the circle of its foes must do it themselves.

Until that is done in one way or the other there can be no peace. When that is done the further terms of peace can be considered, with some hope of mutual agreement.

President Wilson has performed a great service to the Allied cause and to the world in making this single and fundamental condition clear, unconfused by any discussion of collateral issues, however important and vital. It is exceedingly gratifying that his presentation of the matter has received unstinted approval in Great Britain and France. So long as we and our allies stand firm on this platform of principle our position is impregnable.

RUSS AND SLAV

THE attention of the world is largely absorbed by the battles of Champagne and the Carso, but probably the future is being determined quite as much by the struggle that is going on in the convention halls of Dublin and Moscow. There at opposite ends of Europe two peoples, two dissevered branches of the same race, are meeting to decide their own destinies, the first time in centuries that they have had a chance to prove their capacity for self-government. The accident of war has given them both this opportunity. The outside world looks with sympathy upon the efforts of both peoples to form a more perfect union, insure domestic tranquillity and provide for the common defense. Yet the hope of the outside world is dashed with doubt, for neither people, for all its admirable and lovable traits, has so far shown itself gifted with that ability for organization and government which its nearest neighbor has manifested and sometimes misused.

The French ethnologists class the two peoples as the same in blood, the Celto-Slavic race. This classification is based upon such physical features as the shape of the head and color of the hair, but the same affinity might be deduced from their psychical characteristics. Leroy-Beaulieu, who knows and admires them both, says that the Slavs and Celts frequently exhibit "a liveliness, quickness, warmth, at times a mobility, petulance, exuberance, . . . a mercurial, mutable, anarchical spirit, a spirit of incoherence, division, separatism, which has thrown great difficulties in the way of their national existence and has been the chief obstacle to the progress of their civilization."

Both the Dublin and the Moscow conventions have the same problem, the fusing, or at least the harmonizing, of two antagonistic racial stocks, but the problem of Moscow is more serious, for here the ethnic elements are more numerous and diverse. But fundamentally there are two and essentially the same two as in Ireland, the Teuton and the Celt, the Russ and the Slav. The Russ has there been for a thousand years the dominant, militant, organizing, ruling caste. The Slav became the slave. The word Slav was not, as is sometimes supposed, given in contempt to that race but rather the reverse. Servants in the Roman Empire came to be called slaves because they often were Slavs.

The Russ, the original Russians, were a branch of the Northman, or Norman race, which erupted from the Scandinavian peninsula about A. D. 800 and flowed like lava over Europe. They conquered France, Germany, England and Russia and made their power felt in Spain, Sicily, Italy and Constantinople. They held the sea power of the civilized world and wherever they settled they formed a ruling caste that has in some degree maintained its position ever since, regardless of changes in the form of government. The British rule in Egypt, India and the Pacific Islands, the French rule in Algeria, Timbuktu and Cambodia, the Russian rule in Baku and Vladivostok, the German rule in Alsace and Africa, may all be traced back to that primary impulse that drove the Viking ships out of the fiords a thousand years ago.

A wise Providence has so ordered that no one race possesses all the gifts, otherwise the other races would become dispensable. But natural endowments have been distributed unequally so that one race or strain has more and another less of any particular ability. It happened that this Norman race was especially endowed with the gift for governing and so it is apt to come in or be called in wherever a people are too indolent or too quarrelsome to govern themselves.

This was the case in Russia if we may believe the most ancient of its chronicles. The monk Nestor of Kiev says that the Slavic tribes got tired of paying tribute to their Norman conquerors and uniting drove them out. But then the tribes took to fighting each other and family quarreled with family and there was no law in the land. So the Slavs took counsel together again and said: "Let us find a prince who will govern us and deliver judgment according to the law." Then they sent ambassadors by ship across the Baltic to Scandinavia and said to the Northmen: "Our land is great and fruitful, but there is no order in it. Come and be our princes and rule over us." So Rurik the Peaceful in his Viking ship sailed over the sea and became the first ruler of the Slavs. And with him came other chieftains, who were called the Russ, meaning the "rowers," and these went up the rivers and then down the rivers to the south until they came to another sea, and on the far shore of it the most magnificent city in the world, the City of the Emperor, Czargrad, or, as the Greeks called it, Constantinople. But Constantinople they could not take, nor have they since, tho they have tried it for a thousand years.

The narrative of Nestor is too naïve to command our credence. It is diagrammatic history if it be history at all. But the mere existence of such a legend is evidence that there were then two races in Russia, one unambitious, pleasure loving and inclined to anarchy, and the other stern, ad-

venturous and domineering. For a long time the Russ and the Slav are referred to as distinct racial castes like the Greeks among the Egyptians or the Romans among the Gauls. But in the course of centuries they have commingled and now all are called Russians and all are called Slavs. The nation is a unit, yet we can still trace in it, as in a child, the conflicting characteristics of the two parental strains. The tyrannical but constructive Russ mind is now subordinated and the less aggressive but more disorderly Slav mind is uppermost. It is like watching an alternating personality. The first sign of the change was the public renunciation of the old Russ ambition to possess Constantinople. Another sign of it is the shift of the center of gravity of the empire from the City of Peter to Holy Moscow. Widukind, the Saxon chronicler of a thousand years ago, distinguished between the races by saying: "The Saxons fight for glory and the expansion of their frontier. The Slavs fight only for freedom."

It seems this distinction still holds, but we hope that history will not repeat itself, that Russia will not again break up into warring tribes and be forced to call in or submit to foreign rulers. Just over the Dvina River and pushing to come in there are the Po-Russians, or Near-Russians, whose gift for governing is so overdeveloped as to have become a menace to the world. Russia may well suffer a good deal from disorder and inefficiency rather than fall under Prussian rulership.

The ability to govern and to be governed is not a monopoly of Norman blood. The Romans, who were undeniably gifted in that way, were wrong when they thought they had a monopoly. Other races can govern themselves in their own way and it is often a better way. They ought at least to have a chance to try it.

But when we look more closely at the Moscow convention we see that it is not merely a struggle between the two primary races. The two personages most conspicuous upon the platform are neither Russ nor Slav. One is a frail and fiery figure, black of hair and eye, eloquent and self-sacrificing. That is Kerensky the Jew. The other is in Cossack uniform and his small eyes, scanty beard and high cheek bones betray his Tatar blood. This is Korniloff, commander-in-chief of the Russian armies, an office held not many months ago by that "great blond beast," the Grand Duke Nicholas. Russia in her hour of peril has called to the front these representatives of the Semitic and Mongolic races, who also form part of the Russian people. Russia's problem is America's problem, how to get various races to live together in harmony and how to get the best out of each of them. No other countries in the world have such varied ethnic material to draw upon as these two great republics, and they ought therefore to be able to accomplish greater things than any nation has done before.

PARTY LABELS

THERE are two kinds of misleading labels to be found on canned goods; those which tell you lies and those which tell you nothing. You can grind up some plaster and sell it as Bliggen's Best Baking Soda, running the risks of conflict with the pure food law, or sell it as Bliggen's Bakerine—Try It in Your Bread! In the latter case your conscience may remain unclouded, for you have told no untruth to any one. Also, the novelty of the name helps the sale.

It is the same with political parties. Sometimes we have a case of obvious misbranding, as, for instance, the "National Liberal" party in Germany, which has come to represent the Pan-Germans and Imperialists to an even greater extent than the "Conservative" party. But far more common is the ambiguous title. Thus we have the "Republican" party in a country where there are no royalists; and a "Democratic" party, which in its time has included every shade of opinion from the radicalism of Jefferson and Wilson to the aristocrats who championed slavery. Such titles have this convenience, that they enable the parties which have copyrighted them to change their platforms and principles at every opportunity.

Sometimes names that seem on their surface to bear a real meaning cover serious ambiguities. It is proper to speak of "Conservatives" and of "Radicals" or "Progressives" if there is a definite issue before the people and only two sides to the question. But if these terms are made general they become misleading. No one will admit that he is opposed to "progress," but what one man considers progress may seem decadence to another. In a broad sense all human beings are radicals and all are conservatives. The most rabid revolutionist whom you can find follows custom at least nine-tenths of the time. He is in favor of abolishing the police, but he eats ice cream with a teaspoon instead of a pitchfork and wears a hat instead of a bushel basket on his head. Nor is the conservative content with the universe exactly as it stands. He may be opposed to the abolition of monarchy, but he has no objections whatever to the abolition of tuberculosis or the I. W. W. A consistent conservative would be inconsistent in every other respect. So long as capitalism lasted he would uphold it, but if socialism were established he would have to become a Socialist in order to continue to be a champion of the existing order and the Powers that Be. If only a lunatic could be conservative at every point, not even a lunatic could contrive to be always radical. Radicalism may mean to some the extension of the authority of the government; to others it implies the abolition of all government. To most people the word has a flavor of democracy about it, but Nietzsche, who is called, and not without reason, a radical, was a far more fanatical aristocrat than Bismarck.

Of course the way of common sense would be to label the parties after their actual policies; as the "Abolitionists," who favored the abolition of slavery, or the "Prohibitionists," who believe in the prohibition of liquor. But such definite titles are a poor advertisement. They fit only one issue and attract only the people already interested in it. They have no vague attractive flavor such as belongs to words like progress or democracy. Even the purposely meaningless titles sometimes acquire too definite a meaning and have to be discarded. Thus the British "Tory" party found that their political goods were not selling in a market where "Toryism" had become associated with stupidity and oppression. They therefore assumed the more dignified trade mark of "Conservative." Unhappily the extension of the franchise and the changefulness of modern industrial society made the idea of conservatism unpopular. So once again the party changed their label and became "Unionist." But this name refers to the Irish Home Rule issue; the policy of maintaining the existing union between Great Britain and Ireland. When Home Rule is granted and the issue is dead, a fourth firm name will be necessary.

We cannot, then, blame the men of politics for seeking party names which have no reason other than a sonorous sound or pleasant associations. Every business does the same. But consumer and voter must learn to judge only by experience and be sceptical of the outside of the can. The proof of the pudding is in the eating and not in the designation thereof.

WE KNOW YOU NOW

NOW that President Wilson has stated that the chief war aim of the United States is to obliterate political autocracy, the anti-war faction can no longer pose as mere slackers, hyphenates, impractical radicals, Utopian non-resistants or traitors. All of these names are too honorable to fit. The American copperheads, whatever mask they may wear, from the white disguise of pacifism to the red disguise of anarchy, will henceforth be known to all men as haters of free government and the willing tools of Nero.

LET THE GERMAN PEOPLE SPEAK!

President Wilson's Answer to the Pope's Plan for Peace

Washington, D. C., August 27, 1917.

To His Holiness Benedictus XV, Pope:

In acknowledgment of the communication of your Holiness to the belligerent peoples, dated August 1, 1917, the President of the United States requests me to transmit the following reply:

EVERY heart that has not been blinded and hardened by this terrible war must be touched by this moving appeal of his Holiness the Pope, must feel the dignity and force of the humane and generous motives which prompted it, and must fervently wish that we might take the path of peace he so persuasively points out. But it would be folly to take it if it does not in fact lead to the goal he proposes. Our response must be based upon the stern facts, and upon nothing else. It is not a mere cessation of arms he desires; it is a stable and enduring peace. **This agony must not be gone thru with again,** and it must be a matter of very sober judgment what will insure us against it.

His Holiness in substance proposes that we return to the status quo ante-bellum and that then there be a general condonation, disarmament and a concert of nations based upon an acceptance of the principle of arbitration; that by a similar concert freedom of the seas be established; and that the territorial claims of France and Italy, the perplexing problems of the Balkan States, and the restitution of Poland be left to such conciliatory adjustments as may be possible in the new temper of such a peace, due regard being paid to the aspirations of the peoples whose political fortunes and affiliations will be involved.

It is manifest that no part of this program can be successfully carried out unless the restitution of the status quo ante furnishes a firm and satisfactory basis for it. **The object of this war is to deliver the free peoples of the world from the menace and the actual power of a vast military establishment, controlled by an irresponsible Government,** which, having secretly planned to dominate the world, proceeded to carry the plan out without regard either to the sacred obligations of treaty or the long-established practises and long-cherished principles of international action and honor; which chose its own time for the war; delivered its blow fiercely and suddenly; stopped at no barrier, either of law or of mercy; swept a whole continent within the tide of blood—not the blood of soldiers only, but the blood of innocent women and children also and of the helpless poor; and now stands balked, but not defeated, the enemy of four-fifths of the world.

This power is not the German people. It is the ruthless master of the German people. It is no business of ours how that great people came under its control or submitted with temporary zest to the domination of its purpose; but it is our business to see to it that the history of the rest of the world is no longer left to its handling.

To deal with such a power by way of peace upon the plan proposed by his Holiness the Pope would, so far as we can see, involve a recuperation of its strength and a renewal of its policy; would make it necessary to create a permanent hostile combination of nations against the German people, who are its instruments; and would result in abandoning the new-born Russia to the intrigue, the manifold subtle interference, and the certain counter-revolution which would be attempted by all the malign influences to which the German Government has of late accustomed the world.

Can peace be based upon a restitution of its power or upon any word of honor it could pledge in a treaty of settlement and accommodation?

Responsible statesmen must now everywhere see, if they never saw before, that no peace can rest securely upon political or economic restrictions meant to benefit some nations and cripple or embarrass others, upon vindictive action of any sort, or any kind of revenge or deliberate injury. The American people have suffered intolerable wrongs at the hands of the Imperial German Government, but they desire no reprisal upon the German people, who have themselves suffered all things in this war, which they did not choose. They believe that **peace should rest upon the rights of peoples, not the rights of Governments**—the rights of peoples, great or small, weak or powerful—their equal right to freedom and security and self-government and to a participation upon fair terms in the economic opportunities of the world, the German people, of course, included, if they will accept equality and not seek domination.

The test, therefore, of every plan of peace is this: Is it based upon the faith of all the peoples involved, or merely upon the word of an ambitious and intriguing Government, on the one hand, and of a group of free peoples, on the other? This is a test which goes to the root of the matter; and it is the test which must be applied.

The purposes of the United States in this war are known to the whole world—to every people to whom the truth has been permitted to come. They do not need to be stated again. We seek no material advantage of any kind. We believe that the intolerable wrongs done in this war by the furious and brutal power of the Imperial German Government ought to be repaired, but not at the expense of the sovereignty of any people—rather a vindication of the sovereignty both of those that are weak and of those that are strong. Punitive damages, the dismemberment of empires, the establishment of selfish and exclusive economic leagues, we deem inexpedient, and in the end worse than futile, no proper basis for a peace of any kind, least of all for an enduring peace. That must be based upon justice and fairness and the common rights of mankind.

We cannot take the word of the present rulers of Germany as a guarantee of anything that is to endure unless explicitly supported by such conclusive evidence of the will and purpose of the German people themselves as the other peoples of the world would be justified in accepting. Without such guarantees treaties of settlement, agreements for disarmament, covenants to set up arbitration in the place of force, territorial adjustments, reconstitutions of small nations, if made with the German Government, no man, no nation, could now depend on.

We must await some new evidence of the purposes of the great peoples of the Central Powers. God grant it may be given soon and in a way to restore the confidence of all peoples everywhere in the faith of nations and the possibility of a covenanted peace.

Robert Lansing,
Secretary of State of the United States of America.

THE STORY OF THE WEEK

Taxing War Profits

The Senate has taken up the question of taxes on war time profits after reaching a tentative compromise on the income tax. The vote on the whole revenue bill has been scheduled for Monday, September 10. The early date was fixed under the threat of the cloture limiting debate, for it was evident that unrestricted speech would delay unduly a measure that bristled so with controversial points that would normally occupy the attention of the Senate for weeks. In the meantime the House of Representatives will have under consideration the authorization of an eleven billion dollar bond and certificate issue. The budget of the first year of American participation in the Great War is now placed at a grand total of $19,300,000,000. This monster sum includes expenditures not related to the state of war of about $1,300,000,000; loans to the Allies amounting to $7,000,000,000; a billion dollar appropriation to the Shipping Board, and the rest for military purposes and interest on the national debt.

IN THE REVIEWING STAND

Guests of honor at New York's big farewell to troops for France: Governor Whitman, ex-President Roosevelt, Mayor Mitchel and General Bell

The radicals in the Senate wished a flat eighty per cent tax on war profits and suggested by way of compromise a large number of amendments providing for taxes on a graduated scale or at a flat rate of from one-half to three-fourths of the total excess profit. Senator Bankhead of Alabama proposed to base the war profits tax on profits earned in relation to actual invested capital, whereas the Finance Committee favors taxing instead profits in excess of normal peace time rates. The revenue bill in its present shape will raise about $2,500,000,000, but Senator La Follette wishes to increase this sum by a billion of extra taxation on war profits and incomes.

Triumphant Italy

For the first time in the Great War the Italians have outdone all their allies by a military success. While the progress of the Entente Allies is slow in the west and defeat is the rule in the east the Austro-Italian war front is crumbling rapidly under the pressure of

© *Underwood & Underwood*

GOOD-BY, GOOD LUCK, GOD BLESS YOU!—NEW YORK'S SEND-OFF TO THE NATIONAL GUARD

Twenty-five thousand troops in khaki marched down Fifth Avenue thru Washington Arch last week in the greatest military parade New York has ever seen; and with eyes a little blurred, what with the strain of searching out faces and the thoughts that came when the faces were found, the families and friends—two million and a half of them—smiled farewell to the men who are going "over there"

General Cadorna's forces. Of course the tide of battle may turn at any time; indeed the withdrawal of Austrian divisions from the Russo-Rumanian front will almost certainly slow up the Italian advance. But the opening of the Isonzo offensive has been wholly auspicious. By the twenty-sixth of August the Italians estimated that the Austrians had lost 100,000 men, of whom nearly a fourth were made prisoner. Seventy-five cannon were also taken.

The chief successes of the Italians after the capture of Monte Santo were on the Bainsizza Plateau, east of the Isonzo River. On the Carso, lying directly on the road to Trieste, progress has been much slower. Trieste, however, is menaced by the Italian success to such a degree that a part of the civilian population is reported to have deserted the city. This seems in part attributable also to the frequent bombardments which Trieste has suffered from Italian aeroplanes and from British and Italian monitors. The sixteen inch shells from these floating batteries are raking the defenses of the Austrian seacoast and coöperating effectively with the artillery on land. The latest report is that the Austrian naval base at Pola, which shelters the Austro-Hungarian fleet, may soon be raided by the monitors.

The Western Front

For yet another week the British have been checked in Flanders by the strongly pro-German wet weather, which is at one and the same time spoiling crops in Great Britain and giving the German defense a respite in Belgium. No military operations of major importance have occurred on the western front except before Verdun where the French continue to press back the German lines and recover the much contested ground taken by the Germans in their offensive of more than a year ago. The fighting was particularly hot around the important position of Beaumont to the east of the Meuse.

It is believed that the bulk of the German army is now in the west. Allied military experts estimate that on the Russo-Rumanian front there are 137 enemy divisions, but that only 88 of these are German; the rest being Austro-Hungarian, Bulgarian and Turkish. In the west there are 148 German divisions, of which number more than eighty face the French lines. There are also an uncertain number of German divisions in the Balkans and in the Ottoman Empire. The Italian front seems to be held practically wholly by the Austro-Hungarian forces. These estimates, supposing them to be correct, are so only for the moment, because the military authorities of the Central Powers have always depended greatly upon the ease with which their armies can be shifted from one war zone to another.

General Maurice of the British General Staff offers figures to disprove the common assertion that England holds her own sons in reserve and throws colonial troops into the fight. At the present time there are six British soldiers in France to every colonial, and for the whole period of the war the casualties of the British on the western front were to those of the overseas troops as thirteen is to two. Winston Churchill, Minister of Munitions, estimates that his department is employing no less than two million persons, which is one explanation of the enormous superiority in shell power now attained by the British.

THE STRUGGLE FOR RUMANIA
The dotted area is now in the possession of the Central Powers. The arrows indicate the direction of the present Austro-German offensive

The Eastern Front

The Germans and Austrians have resumed their attempt to crush Rumania before winter sets in. A great contrast was observable in the conduct of the Russian and the Rumanian troops in recent engagements in western Moldavia. The Rumanian army fought, indeed, without success but with great stubbornness and gave ground slowly, even according to the testimony of their enemies. But the Russians broke and fled in some parts of the line even before the Germans attacked. These concerted mutinies on the eve of battle can have only one explanation, that the old leaven of sedition is still active in the Russian army. Fortunately the Germans were not able to push the advantage given them by the rout of the Russians and did not take any important city. The future of the Moldavian line of defense is very dark unless the Russian army recovers its morale or the western allies are able to prevent the Germans and Austrians from reinforcing the eastern offensive.

In other parts of the Russian war zone there has been little activity. East of Czernowitz a thousand Russians were taken prisoner on August 27. Further north there was no attempt at an offensive and even the advance on Riga seems to have been abandoned for the present. The Russians appear to have done very good work in checking the German drive at the northern extremity of their line. But sooner or later the Germans will probably strike a weak point on the Russian front which will enable them to penetrate into the interior as far as they think it advisable to go. Perhaps they have already done so in the south.

THE GREAT WAR

August 27 — Twenty-three British ships lost during week. President Wilson answers the Pope's peace message.

August 28—Civilians reported to be leaving Trieste. Germany yields to Argentina's demands.

August 29—Russians retreat in Rumania. Italians carry Bainsizza Plateau.

August 30—Italians repulse Austrian counter-attacks. Kerensky announces revival of death penalty in Russian army.

August 31—Germans bombard Riga from air and sea. Italians attack Monte San Gabriele.

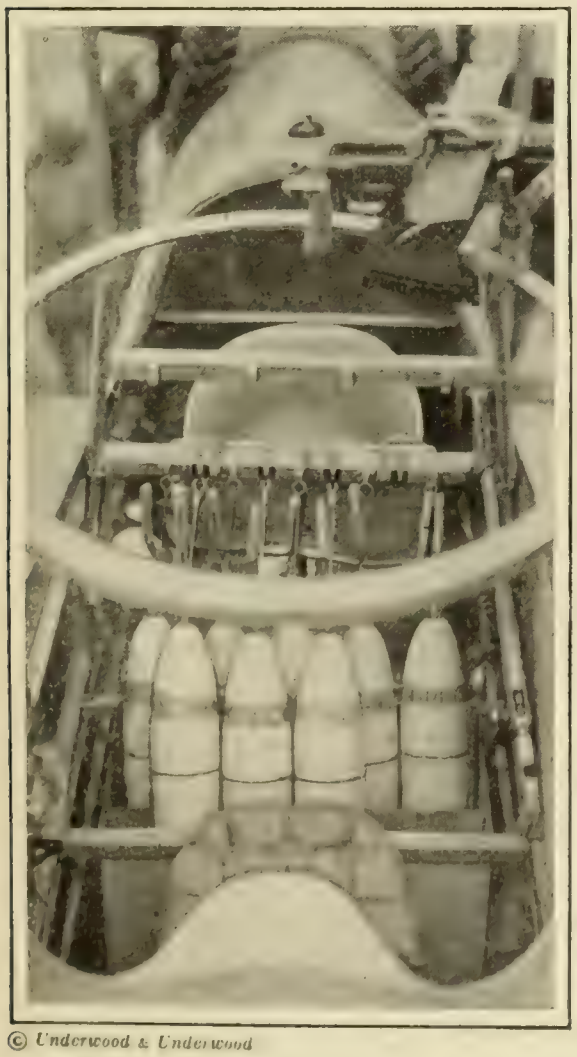
Homeless Pacifists

The dove of peace, like the dove of Noah, has been winging its way in vain over the waste of waters to find a resting place. The People's Council, an organization of American pacifists of every shade, has for weeks planned to hold a great convention in Minneapolis and was only prevented from doing so by the inhospitable attitude of the people of Minnesota. The Socialist Mayor, Thomas Van Lear, was willing to have the convention meet in Minneapolis and to afford it every necessary protection. Governor Burnquist thought differently. He asked the sheriff of Hennepin County what were the prospects of the convention passing off without disturbance and the sheriff told him "that said convention and meeting, if held, in his opinion, would result in bloodshed, rioting and loss of life." Thereupon the Governor announced that the pacifists could not meet anywhere within the state of Minnesota and that all local authorities were called upon to see to the enforcement of this order.

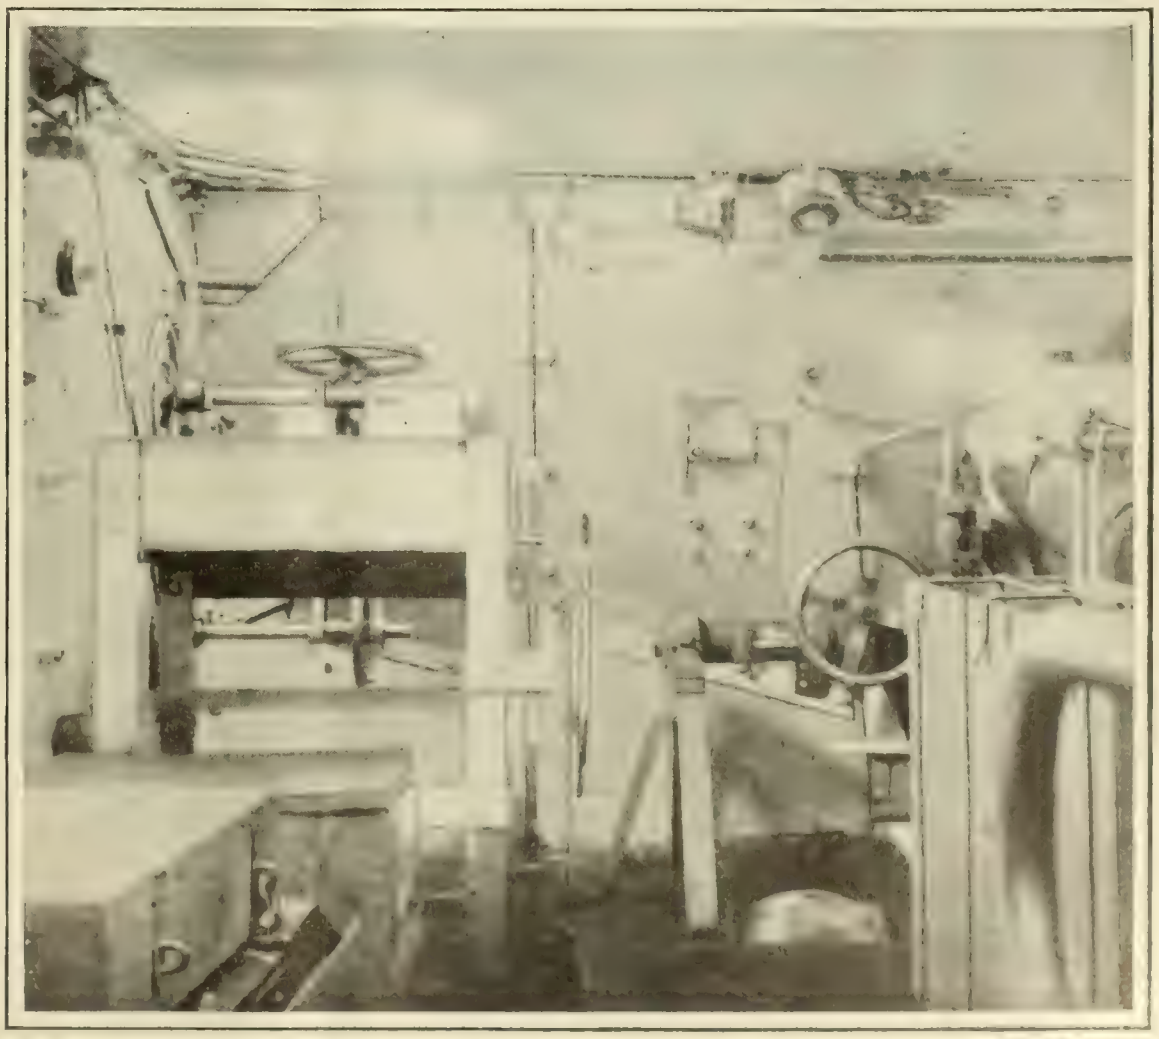
Even before Governor Burnquist had issued his mandate the convention had experienced much difficulty in finding a hall of assembly. Louis Lochner, the presiding genius of the contemplated gathering, advised the forty thousand persons whom he expected to attend that they come prepared to camp in the open. A rival convention of labor men, loyal to the United States and devoted to the cause for which the nation is fighting, was scheduled to meet in Minneapolis at the same time as the convention of the People's Council. Samuel Gompers was chief among the organizers of the pro-American meeting. Had the two conventions been held in the same city at the same time there might well have been a conflict; if not among the delegates themselves, between their respective sympathizers.

North Dakota then seemed to offer a refuge. Governor Frazier declared his willingness to permit the People's Council to assemble within the state and promised to take any steps necessary to safeguard their meetings from interruption or mob violence. So Fargo, North Dakota, was selected as the place of meeting after Mr. Lochner had sent a telegram of protest to President Wilson at Governor Burnquist's action.

Russia Speaks There has been no more picturesque and significant event in the whole romantic story of the Russian revolution than the great conference held at the old Russian capital of Moscow. Premier Kerensky did a very daring thing in permitting representatives of every phase of opinion, including many who were altogether hostile to the provisional Government, to assemble and discuss the situation of the country. The Council of Workmen's and Soldiers' Delegates voted against any hostile demonstration or attempted strike while the Moscow conference was in progress, but there were some partial and local strikes instigated by extremists. The truth is that the Moscow conference did not really enjoy the confidence of the radical pacifists and ultra-Socialists in spite of the fact that they had some representation in it. The Moscow meeting was not counter-revolutionary or "reactionary" in the sense that any considerable number of those who attended wished to restore the monarchy or the old bureaucratic system of government, but it was true that the majority of the delegates did desire a restoration of strict army discipline and the stern suppression of all pro-German or pacifist agitation.



The keynote speech of the gathering was Premier Kerensky's stirring address which opened the first day's session. He recounted the shameful rout of disloyal troops that had sacrificed the military fruits of the revolution, the internal disorders that menaced the country, and the attempts of minor nationalities, such as the Finns, to separate themselves altogether from the republic and its cause. He warned all who sought by violence or conspiracy to undo the work of the revolution that the Government would not hesitate to crush sedition with blood and iron. Other speakers talked in the same strain and even rebuked the provisional Government for being so much under the influence of the Council of Workmen's and Soldiers' Delegates. Such questions as capital punishment and the refusal of soldiers to salute their officers were matters of hot debate in the convention.



General Korniloff, the gallant Siberian Cossack, received a tremendous ovation. As he inspected the guard of honor the soldiers flung roses under his feet and the band burst into the "Marseillaise." In a speech of astonishing candor he informed the convention that the army was torn by anarchy, that the Rumanian army might be destroyed and a way opened thru Riga to Petrograd, and that the Russians faced a shortage of both food and munitions which might in time cause a military disaster as great as the retreat of 1915 which lost the Russians both Poland and Galicia. He demanded a return to the full rigor of military discipline. All the speakers opposed the idea of a separate peace with the Central Powers and Premier Kerensky told how one such offer had already been rejected by the provisional government.

President Wilson's message of greeting to the conference, expressing confidence in "the ultimate triumph of ideals of democracy and self-government against all enemies within and without" and pledging "every material and moral assistance" that this Government could give was received with general applause. On the whole the Moscow gathering was a valuable factor in strengthening a common patriotic feeling among the divergent parties and nationalities of Russia, altho it failed to shape a definite program of action.

German Chancellor Seeks Compromise Chancellor Michaelis, still unwilling or unpermitted to grant Parliamentary institutions to the German people, has attempted a compromise. He will form a "free commission" of seven members of the Reichstag and seven members of the Bundesrat under his presidency. The Reichstag members of the commission are selected with a view to representing the principal political parties, but none of them are to be responsible in any way to the party organizations. The free commission is to be a purely advisory body designed only to give the real Government a chance to sound public opinion thru the party leaders. Issues of the war that may arise will be discussed by the free commission, but only confidentially. Neither the public nor the Reichstag will be permitted to share these confidences until the Government gives the word.

The *Weser Zeitung* hazards the guess that one of the tasks of the Chancellor will be to arrange a compromise on the Alsace-Lorraine question, whereby the province remains within the German Empire, but is elevated from the rank of Reichsland, or "territory" according to the nearest equivalent American phrase, to a State of the Empire, perhaps as a Duchy. This solu-

tion would be equally distasteful to the French, who have repeatedly pledged themselves to continue the war until Alsace-Lorraine was freed from German rule, and to the rulers of Germany who have always considered the Reichsland as a conquered province without any rights that the Imperial Government could not terminate at will. The German Socialists, however, would be for the most part glad to see a measure of home rule given to Alsace-Lorraine, altho they are as a party opposed to giving it back to France or even permitting it to become an independent buffer state like Luxemburg. If the report is correct, Chancellor Michaelis is evidently attempting to get rid of one of the difficulties in the way of peace by conciliating a national element whose case is sure to be brought up at the forthcoming peace conference.

Venizelos Warns Monarchy

That the Greek monarchy may be only temporary was intimated by Premier Venizelos in the course of a warm debate on the recent deposition of King Constantine. An opposition member of Parliament raised the point that the ex-ruler had never been constitutionally removed from office since the act of abdication was not presented to Parliament. He accused the Entente Allies of deposing Constantine without consulting Greece. Another deputy declared that he had been deeply impressed by what he had seen of republican institutions in the United States and he exprest a desire to see a similar constitution in Greece. Premier Venizelos, in reply, said that while the Government did not believe that the time was yet ripe for the establishment of a Hellenic republic he had more than once assured the deposed monarch that all nations were outgrowing royal institutions and that it was only a question of how long the inevitable change could be postponed. The conduct of Constantine, he added, had weakened monarchy in Greece and converted many of the people to republicanism who had hitherto been loyal subjects. "The Government, nevertheless," he concluded, "is of the opinion that it is our duty to give the monarchy another trial. This is, of course, a final trial, but I am sure that the Greek people and the coming Constituent Assembly will be disposed to render possible the continuation of our present system of democracy presided over by a king." The phrase about a "final trial" was taken as a clear warning that if the present king should hamper the war policy of the Venizelos ministry or show any of the pro-German leanings that characterized his predecessor the dynasty might have to go. France and Russia, at least, would welcome a republic in Greece and the other Allied powers might not feel called upon to interfere again in behalf of a hostile royal house. But for the immediate present King Alexander is safe, as the Greek Parliament indorsed the position taken by Premier Venizelos.

The London Socialist Conference

The Inter-Allied Socialist and Labor Conference which met at London concluded its first session without taking any positive action on the question of participation in the coming Stockholm meeting, which will be attended by German and neutral delegates and by such of the Allies as choose to be represented and are not prevented from going by their respective Governments. The Belgian delegates refused to consider taking part in the Stockholm conference and a minority of the other delegates supported their stand. A majority of the London conference were British delegates representing various shades of Socialist and working class opinion; there were also representatives from France, Russia, Belgium, Italy and South Africa. No one from the United States took part.

On the question of terms of peace the conference was divided. The British Socialist Party declared that the war was a common responsibility and that reparation must be made from a common fund to which all belligerents should contribute. This party also favors the restoration of all conquered territory, including the German colonies. Other British factions and the French and Belgian delegates by no means agreed that such terms were satisfactory.

Germany Yields to Argentina

The guarantees against outrages on merchant vessels which Germany refused to the United States and to other American republics have been granted to Argentina. The question arose over the sinking of the "Toro." The Argentine Government demanded an immediate apology and assurances that thereafter Argentine vessels should not be subject to attack by German submarines. Dreading a suspension of diplomatic relations with the strongest of the Spanish American republics and a possible declaration of war consequent upon such a break, the German Government has sent a conciliatory note covering completely all of the demands of Argentina. After promising an indemnity, the note expresses the regret felt by the Imperial Government at being forced to disregard international maritime law because "of the illegal acts of its enemies."

The most important clause of the German note is as follows:

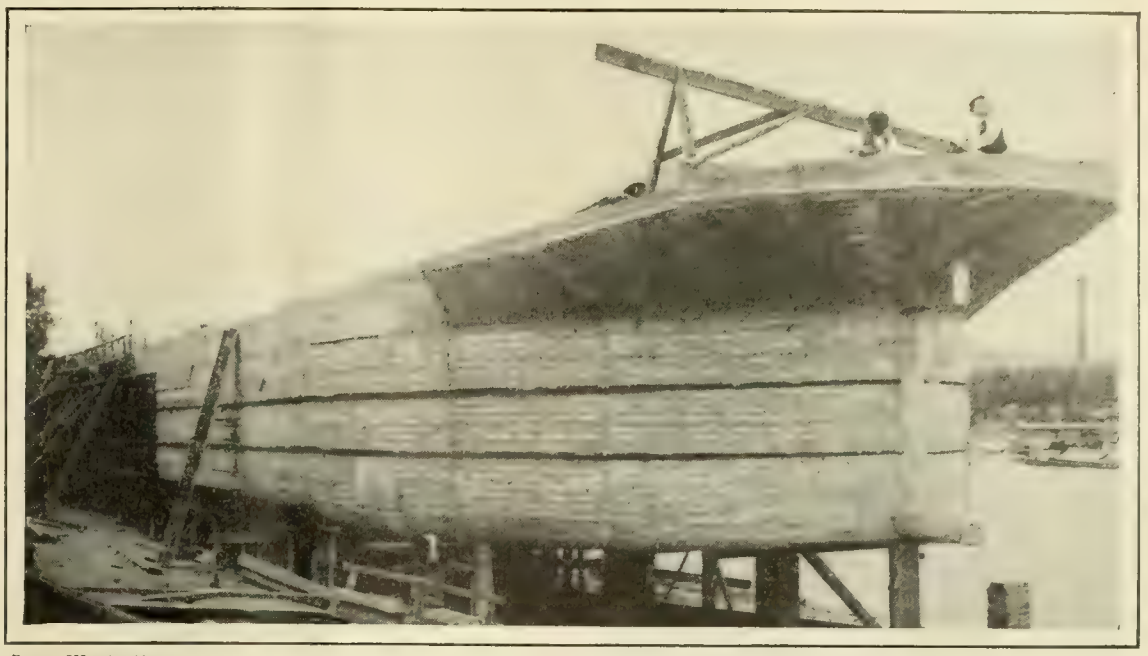
> The naval forces of the German Empire have received orders and instructions in agreement with this viewpoint, and the Imperial German Government is convinced that after these declarations no incident will occur to disturb the friendly relations between Germany and Argentina.

This reads like a definite assurance that all ordinary merchant traffic flying the Argentine flag can pass safely thru the war zone to the ports of the Allies. Peru is still awaiting similar as-

surances and similar satisfaction for outrages against her shipping and may eventually declare war on Germany if they are withheld. Germany's submarine policy has already added the United States, Cuba, China, Brazil, Liberia and Siam to the number of her active enemies and closed diplomatic relations also with Bolivia and nearly all the little republics of the Caribbean region.

Submarines More Active

The losses in British shipping for the week ending August 26 show an increase over the preceding fortnight, tho a trifle less than the average for the whole period of unrestricted U-boat warfare. Eighteen vessels of more than 1600 tons each were sunk as compared with fifteen the previous week, and five of smaller tonnage as compared with three. Italian shipping fared rather better, with the loss of one large ship and some smaller craft. The French lost three large ships and one of less than 1600 tons. Norwegian shipping continues to suffer losses comparable in proportion to the size of the national merchant marine with the losses of the belligerent nations. It is reported also that a mine field has broken adrift and the tide has washed many mines ashore on the Norwegian coast.



President Wilson has approved the estimates of Secretary of the Navy Daniels for additional appropriations amounting to no less than $350,000,000 to be spent on torpedo boat destroyers with which to fight the submarine. Many of the new engine building plants to be established for the new destroyers will be located in the interior of the country. The Government's merchant ship construction program as approved by the Shipping Board calls for a total of 1270 ships of 7,968,000 tons in addition to the two million tons already in course of construction in American yards which has been commandeered by the Emergency Fleet Corporation. The cost of the new merchant marine for the fiscal year is apportioned as follows: building, $400,000,000; commandeering, $265,000,000; purchase, $150,000,000.

The Embargo and the Neutrals

President Wilson has issued new and more drastic rules for regulating exports from the United States to the Allied and neutral nations. In addition to the previously enumerated commodities on the export control list, such as foodstuffs and munitions of war, cotton, sugar and lumber may be withheld even from the Entente Allies. Toward the neutrals the license policy is even more sweeping. All the European neutrals that have or can have any commerce with Germany are cut off, except by special license, from nearly every commodity exported by the United States.

The President made it very clear that export control was not necessarily export prohibition since licenses would be granted wherever possible. "It is our wish and intention to minister to the needs of the neutral nations as far as our resources permit. This task will be discharged without other than the very proper qualification that the liberation of our surplus products shall not be made the occasion of benefit to the enemy, either directly or indirectly."

A compromise has been reached in regard to the shipment of grain to the Netherlands from the United States. Thirty vessels were permitted to leave port with full cargoes on condition that the Dutch allowed their vessels to be used to send grain to the Belgians. It is, of course, no longer possible for us to deal directly with the part of Belgium occupied by our enemy and hitherto the Dutch have not permitted their ships to engage in this service because of the great risk of their being sunk in the danger zone established by Germany. Sweden has sold at cost over half a million bushels of wheat in this country to the Belgian Relief Commission in return for permission to import rye from the United States. Norway has offered the use of a large part of her merchant marine in return for the right to buy grain and other foodstuffs here on behalf of the Norwegian people.

Press Illustrating

WE MAY NEXT BUILD SHIPS OF STONE

The scarcity of wood and steel now is bringing to particular attention the possibilities of cement or concrete ships. Tho they have proved practicable in isolated instances no nation has yet adopted them generally. This photograph shows a concrete ship built in France. Norway has several on the seas at present. The advantages urged for the concrete ship are that it can be made practically torpedo-proof, and that by adopting a standardized form of construction immense numbers can be economically turned out in a comparatively short time. It is urged that concrete vessels require practically no maintenance, do not rot or rust, do not have to be painted or calked, will stand rough usage, can be handled by small crews, are less likely to buckle under strain than any other kind of vessel, and are lighter than wooden ships

Wilson Answers the Pope

The President of the United States has defined the war aims of the nation in a message to Pope Benedict XV, the text of which is printed in this number of The Independent. In this note the Pope's suggestion of a proper basis for peace is rejected, not because the conditions there laid down are unsatisfactory but because no treaty of any kind can be relied upon to bind the hands of the present rulers of the Central Powers. If the power of these men remains unbroken they will renew their strength and their policy of aggression. No peace can be concluded until the German people themselves can guarantee it. A democratic reconstruction of Germany is the only condition mentioned in the note; indeed, other aims would appear to be repudiated.

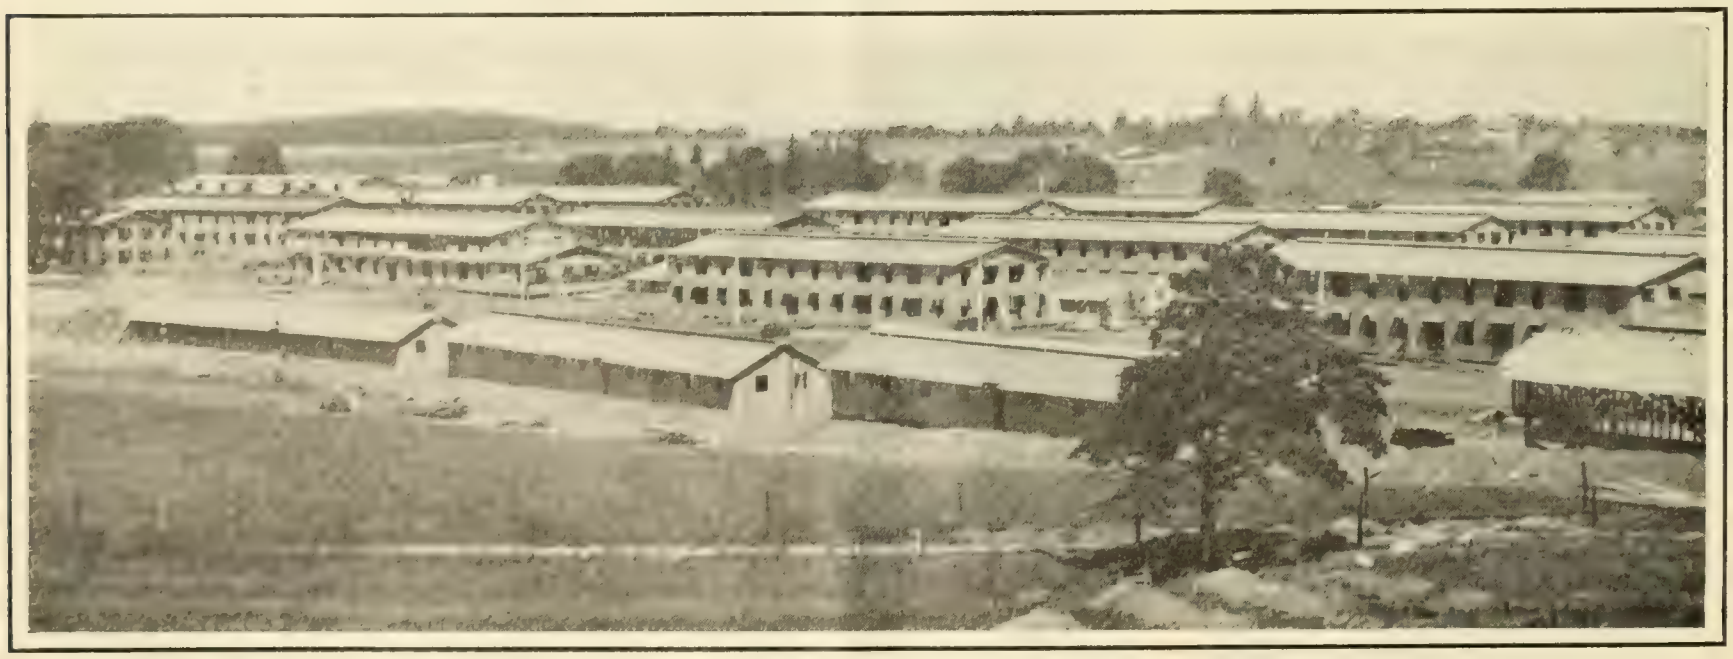
It is interesting to consider the pronouncement of President Wilson with previous announcements of war aims by various Governments. The repudiation of punitive damages corresponds with the Russian formula, but the western Allies will certainly not interpret it as excluding damages to restore injuries done to occupied or invaded countries. If "the dismemberment of empires" is taken in its strictest sense it will forbid all the territorial readjustments which formed the basis of the declaration of terms by the Entente Allies. This may, however, overshoot President Wilson's meaning, as he favored the recognition of the rights of nationalities even before we entered the war and the Pope's note, also, hinted at some shifting of boundary lines. The unconditional demand for a democratic Government in Germany finds no parallel whatever in any other official utterance during the war, altho Premier Lloyd George once mentioned incidentally that a democratic Germany might obtain somewhat easier conditions of peace. The repudiation of anti-German economic leagues was one of the demands of the German Reichstag. If this policy is adopted the resolution adopted at the Paris conference of the Entente Allies will be canceled. It is impossible to say how far the Entente Allies had approved the President's note before its publication, but it has been very well received by the French and British press.

Conserving the Doctors

For some time there has been a good deal of complaint that physicians and medical students had been enrolled in the draft army in spite of the fact that their specialized usefulness as doctors was much greater than their probable usefulness as ordinary privates in the trenches. Provost Marshal General Crowder, with the approval of Presi-

dent Wilson, issued new regulations to cover all such cases. Hereafter hospital internes who are graduates of well recognized medical schools and medical students in their fourth, third or second year in any good medical school may join the enlisted reserve corps and when called before an examining board present their membership in the corps as evidence that they are already part of the military services of the United States. The intention of this order is to make men of adequate medical training into a separate unit liable to service in the line of their profession.

Thus far in the work of examining drafted men policemen and firemen have not been exempted because of the nature of their civilian duties in spite of many appeals from local authorities that this be done. Nor have farmers been exempted as a class, altho in very many individual cases the exemption boards have taken into consideration the usefulness of their work and the difficulty of replacing the farmer during his absence with substitute labor. So far as is possible most of the farmers drafted will not be called for service until October, thus making possible the gathering of the September harvest. Representative Shouse, of Kansas, suggested to the President the general exemption of farmers, but President Wilson replied that to exempt a whole social class would lead to jealousy among other parts of the population. The question of the exemption of married men is still giving an infinity of trouble. Regulations from Washington make the dependency of the wife the test, but some local boards interpret this as applying to all women now supported by their husbands and others do not exempt unless it is plain that the wife would not be able to support herself on her husband's army pay together with what she could earn working for herself.



The Coal Question The recent adjustments in price schedules for anthracite and bituminous coal are not received with much favor either by the owners of the industry or the men in their employ. Some of the operators from the Alabama, Tennessee and Kentucky fields predict that the present price scale for bituminous coal at the pit mouth will close forty per cent of the mines in those regions. Even more apprehensive are some of the miners who fear that their hopes of increased wage scales will be thwarted by the inability of the coal owners to meet them. The United Mine Workers of America have decided to meet the operators in conference on September 6 to discuss the question of wages. "If it is necessary," explained the secretary of the union "to go further and present the claims of the United Mine Workers for an increase in wages to the Federal Government, so it will agree to increase the selling price of coal sufficiently to allow an increase in the mining scale, this will be done." Particularly affected by this decision of the miners are the fields of the Great Lakes region. The union has requested its members to refrain for the present from any strikes or cessation of work in order to avoid embarrassing the Government in its prosecution of the war.

Wanted—a Meat Dictator A number of important meat packers made a proposal for the regulation of the meat industry to Food Administrator Hoover. They urged that a meat dictator should be chosen, with the assistance of an advisory board on which there should be representatives of the packing companies, livestock producers and railroads. If the man chosen for this responsible post and his advisers would work out an equitable plan for the distribution of livestock supplies the packers promised to abide by it. Mr. Hoover explained that the Government had no power to fix the price of meat, altho it could name what it considered a fair profit and trust to voluntary coöperation by producers, packers and public agencies to solve the problems of the industry.

While in Chicago he appealed to the press of the agricultural regions of the country to support the efforts of the Government on behalf of food conservation and to combat the false notion prevalent among some farmers that there would be an attempt to fix prices so low as to wipe out their profits. He addrest 126 representatives of farm journals from twenty-four states, with an aggregate circulation of some 12,000,000 readers. He advocated the raising of more livestock for shipment to Europe on the ground that it would be more reasonable for the Allies to import meat from the United States than fodder to feed their own pigs and cattle. Mr. Hoover vigorously denied the assertion of Representative George Young that he had recommended fixing a maximum price of $1.65 a bushel on this year's wheat crop. The entire question of ascertaining a just price was in the hands of a committee appointed by President Wilson, and Mr. Hoover's duty was simply to see that prices were not determined to the consumer by speculative profits of the middlemen.

Grain, Cotton and Steel There have been no dealings in wheat for future delivery at Chicago since August 25. The cash price is about $2.25, and it is expected in that market that the price fixed by the Government will be between $2 and $2.30. While corn for delivery in December is sold at $1.08, the cash price is about $1.95, as stocks on hand are very small. Reports from foreign wheat fields continue to show the need of conservation here and in Canada. Crop reduction is especially noticeable in the Scandinavian countries. The acreage in France is less than last year's by 22 per cent, and 40 per cent below normal. In Australia a decrease of acreage is reported, but in that country there is a large stock of old wheat. Canada will have the assistance of thousands of farm laborers from the United States in harvesting her grain. The price of cotton at New York has declined from 27¾ to 22¼ cents a pound.

Prices in the steel industry have not yet been fixed by the Government. Since the Federal Trade Commission began its inquiry prices have declined a little, the average reduction for eight leading products having been about 10 per cent in the last month. Manufacturers are selling to the Government at rates to be determined hereafter.

Senator Johnson, ex-Governor of California

KILLING THE GOLDEN GOOSE

BY JOHN W. WEEKS

IT is a difficult task, at times, to discuss the question of war profits, and their legitimate relation to the needs of the Government, so that it will be popularly understood. This is true, I am convinced, largely because of the almost universal impression among those not familiar with the larger activities of our everyday life that whenever an individual or an industrial concern realizes large profits they immediately bury their treasure where no one can find it. If that were true it would be a very serious matter, indeed. But wealth—and especially such surplus wealth as has been occasioned by the past three years of European warfare—has a great variety of uses, not necessarily selfish and personal, but from the public standpoint, and it is a few of these uses which I wish to point out in the hope that some of those now advocating a wholesale conscription of war profits solely for the purposes of war will see that the present generation has many other things to do besides the waging of war which require as much surplus wealth as the war itself.

Take our vast industrial system, for instance. Every year a large part of our surplus earnings goes into industrial development and expansion, and if those surplus earnings are materially augmented by war profits, as they have been during the past three years, our development policy, upon the welfare of which depends the welfare and advancement of millions of individuals, is the principal gainer. In 1916—and 1916 must be considered a fair example of a year in which war profits were accumulated—surplus earnings to the vast amount of $1,864,000,000 were immediately invested in securities. Of this amount, approximately $1,000,000,000 was invested in industrial companies, thereby making possible the vast expansion of our industries and the consequent employment of hundreds of thousands of men. More than $500,000,000 was invested in the securities of public service corporations, making possible the extension of telephone, light, water and other conveniences to the public. More than $300,000,000 of the war-profits of 1916 was invested in railway securities, enabling the railroads to better cope with the transportation needs of the manufacturer, the farmer, and the traveler.

Figures, perhaps, are tiresome, but they must be employed if the public is to be made to understand that surplus wealth does not necessarily mean idle wealth, but does mean, rather, *useful* and *necessary* wealth. One of the countless outlets for surplus wealth which might easily be overlooked is the item of new machinery. Every one knows that machinery wears out, and that it must be replaced if the factories are to be continued, and the thousands of employees kept at work. But who would imagine, at first thought, that during a single year approximately $2,000,000,000, or one-tenth of the estimated cost of the first year of our war, would be expended for new machinery alone? And, yet, such was the case in 1916, according to the best obtainable statistics. And then there are our everyday building operations. New building operations in 113 of the leading cities of the country during 1916 amounted to $114,331,891, and if this census had been taken for all of the cities in the country the total figure would have been many times more than that amount.

EVERY one is interested in schools and universities, and yet not every one takes the time to consider how important a part is played by surplus wealth in maintaining these institutions. Take, for example, Harvard University. During 1916 Harvard received gifts, bequests and endowments amounting approximately to $25,000,000. Chicago University received from voluntary sources during 1916 the sum of $6,500,000. Yale University, Princeton, and scores of smaller, tho vastly important, institutions of education received gifts and bequests amounting to millions of dollars. During that one year of war profits, the total of gifts and bequests to public institutions, and other sums expended for the public welfare, amounted to approximately $1,000,000,000. The increase by corporations to employees in wages and bonuses amounted to nearly $400,000,000. War gifts to Belgium, France, England, Serbia and other countries amounted to more than $35,000,000.

THESE figures could easily be enlarged upon, if other channels of everyday human endeavor were sought out and investigated, but surely they will suffice to demonstrate the fact that surplus wealth has countless necessary and actual uses which are of the greatest importance to practically every citizen of the country. It might be argued that all of these things—with the exception of the charities and endowments—are investments, and result merely in still further augmented fortunes. Perhaps this is true; but the fact remains that we must have them—the universities, the factories, the great transportation systems, the eleemosynary institutions, the office buildings, the apartments, the telephone systems, and all of the other countless cogs in our everyday life. We must have them in ever-increasing abundance and efficiency, and they can be secured from nowhere but from surplus earnings.

Another condition which is frequently overlooked is the high cost of every business operation at this time, and the possibility, if not the probability, that the war might come to a comparatively early end. For example, a mill may be carrying in raw material, either on hand or under contract, a stock representing a very large proportion of its earnings for the year. That stock,

if wool or cotton, for instance, at the going price today, would be worth something like three times the normal prices. Therefore, if the war should end during the next year, we may naturally assume that these prices would return to normal, which would mean that the owner would have to charge off a very large part of the present value of his stock, the charge-off amounting, in some cases which I have investigated, to substantially the profits for this fiscal year; so if the manufacturer is forced to pay in excess profits taxes of fifty or even a larger percentage of his earnings he is likely to lose that amount in the shrinkage of his materials on hand.

Many other conditions occur to me which would seem to be sufficient to indicate the desirability, if not the necessity, of placing limitations on the amount of war profits the Government takes—especially until business can become adjusted to these new conditions. No one will argue that surplus wealth should not do its share in the war. It should do a very large share, indeed. But in determining what its share should be, we should first be sure that we are not crippling the country's normal, tho vastly increasing, domestic needs. It matters comparatively little to the man of vast income whether he invests most of his surplus in industrial channels, or turns it over to the Government for the purposes of the war. It is the duty of Congress, therefore, to decide how much of that surplus we need for our ordinary, peaceful pursuits and how much for war.

Washington, D. C.

WHY NOT A DOLLAR DRAFT?

BY HIRAM W. JOHNSON

THE design that I believe the Congress should have in mind in relation to the taxation of war profits is that ultimately we may do that which is best for all the people of the nation, and that behind the line of trenches, which will be ours in the near future, we may have a contented people, a people not irritated by any sense of injustice or inequality in taxation, and that finally we may not only conscript the blood of the nation, but we may conscript a part of the wealth of this nation that is coined out of its blood.

With a boundless enthusiasm we conscripted, in a very brief period, the youth of this land. With an enthusiasm that would brook no delay, we took our youth and sent that forth to fight for this nation, and to die, if necessary, upon a foreign soil. I ask that same enthusiasm for conscripting the wealth of the nation today to stand behind the lads that have gone forth to fight our battle over the seas. In asking this I ask nought that interferes with legitimate enterprise or with going business concerns. I ask the conscription of war profits, and I ask a response as ready to the experience of Britain as was given in conscripting our youth.

THOSE who coin the blood of war are the ones best able to pay the expense of war. Those who make swollen war profits out of this particular exigency are those who ought to pay for the cost of this war. It is, indeed, to me quite a trivial thing to take from the swollen fortunes that have come from war in the last couple of years the little moiety that this bill, by the majority, takes. We are staggered when we think of the amount of money thus far required, this year, in this undertaking—$20,000,000,000. I confess that it is infinite to me. All this our people are willing to do. But in doing it, in accepting not alone the burdens placed upon them, a burden greater than was ever placed upon any other people, but also with responding with their best beloved, and their blood, they ask that burden, as much of it as possible, be taken from those who make profits out of this war.

THE war profits are derived from the war and the war alone. Let the war cease the first day of December next, or within the next year, and the war profits then cease. Is it wise statesmanship to look to a time in the future when there may be no war profits, with the expectation that that time in the future, when the war has ceased and there are no war profits, to tax these particular swollen fortunes?

I submit there can be no future as to these war profits, because they are fleeting, ephemeral at best, lasting alone with the war, with the exigency, with the strife, and with the conflict, ceasing the very moment that the war ceases. So I insist that we proceed to take the largest share of the war profits that it is possible to take in this conjuncture of affairs and to devote those war profits to the prosecution of the particular enterprise which itself makes the war profits.

England today takes 80 per cent of the war profits there to run the war. Do you realize how much we take based upon the minimum of $3,000,000,000 for the last year? We take additionally under this bill, less than 20 per cent and England takes 80 per cent of war profits. I would not follow blindly, of course, the advice, either of allies or of neutral nations. I would not, of course, ask the Senate under any other circumstances to follow another nation in taking an undue proportion of war profits merely because that other nation did it. But, oh, how persuasive indeed, how convincing were the arguments of what England did when we dealt with our blood and how little persuasive and little convincing those arguments are when we deal with our wealth.

The estimated war profits, according to the figures stated by the Chairman of the Finance Committee in 1916 were $3,000,000,000 as a minimum sum. The war profits tax in this bill amounts to $562,000,000, a little less than 20 per cent of the war profits. This year the war profits it is estimated will amount to $4,000,000,000 and more. Oh, think of what they come from, and why it is that they exist at all, and then understanding what makes them, and for such a brief period, why hesitate from taking the very largest portion of those war profits that it is possible to take to carry on our great adventure and in order to protect us from financial difficulty in our war?

I insist that these taxes should be raised so that practically every dollar under this bill may be raised by war profits taxes, by income taxes, and by the taxes upon alcoholic beverages and the like, and that every consumer's tax that is in the bill, whether it be little or whether it be big, whether it touch one source or one class or another class, shall be eliminated, and we take the money from where we ought to take it—from the war profits made out of this great conflict!

Washington, D. C.

NAMED

BY MARY CAROLYN DAVIES

A white flower drifts across the sky—
The moon, said you, the moon?
A splash of swinging gold on high—
The sun, did you say, at noon?

Far-scattered flakes of drifted snow—
The stars, said you, at night?
Ah, well, I am young, I do not know;
It may be you are right.

The Independent-Harper's Weekly
NEWS-PICTORIAL

A BITTER PILL FOR THE KAISER

The keynote of German trench defense is this cylindrical concrete structure, nicknamed the "pill-box." These strongholds, roughly made all in one piece, dot the entire length of the Hindenburg line. Used singly they are merely shelters or substitutes for dug-outs; with the proper internal arrangements and loop holes they are machine gun posts, or clustered together they make redoubts. The "pill-box" is not easily shattered by shell fire; this one still stands in spite of the terrific bombardment during the British advance which captured it

KAMERAD! KAMERAD!

The photograph below was snapped at 4:30 o'clock in the morning by a French "cuirassier" who had just taken part in a surprize attack on the German position. It shows the first of the Boches to leave their trenches. They have thrown down their guns and are running toward the French troops, crying "Kamerad!" and holding up their hands as they offer to surrender themselves as prisoners. Reports recently have suggested an increasing willingness on the part of German soldiers to exchange the hardships of fighting for the comparative comfort of a prison camp

BACK TO THE SEA

OUR OPPORTUNITY TO BECOME A SEAFARING NATION AGAIN

BY COMMODORE MILLER

PRESIDENT OF THE NATIONAL NAUTICAL TRAINING ASSOCIATION

NOTHING finer has resulted from the Great War than the magnificent effort which democratic and unprepared America has made during the last five months to master the staggering problems presented by the emergency. The people have realized that the two great tasks before them were to supply food to England and to carry an army to France, and that the solution of these difficulties depended wholly upon the creation of a national merchant marine. The reorganized Shipping Board, headed by a man of high reputation in the Navy and a man of wide experience in civilian construction, will undoubtedly carry on the work of shipbuilding with all possible speed.

But it is not enough to build ships; we must find officers and men competent to run them. Our new commercial fleet will require the services of no less than 10,000 officers and 50,000 seamen. Does the country yet realize the magnitude of the problem of manning the American merchant marine?

The Navy, with characteristic foresight and energy, has enrolled a large number of men in the Naval Reserve. This force will be temporarily available for duty on transports and auxiliaries, but we cannot rely upon it as a permanent source of supply of the men needed by the commercial fleet. Most of the men enlisting in the Naval Reserve are not of the class which follows the sea as a vocation. They have enlisted from patriotic motives to serve the nation in time of war, and with the return of peace we cannot look for a continuation of enlistments for commercial service.

Mr. Henry Howard, of Boston, an enthusiastic yachtsman, has started a movement, under the authority of the Shipping Board, for the education of seamen with a view to making them eligible for promotion from the forecastle to the cabin. But it is questionable if a sufficient number of men capable of filling officers' positions can be obtained by this means alone. Our future enlarged merchant fleet must be officered by men versed in the management of the intricate modern steamer, and able, as in the old days of the clipper ships, to represent their owners abroad. Therefore preparedness, for peace as well as for the immediate necessities of war, demands an enlarged supply of trained men for sea service.

To accomplish this object, a memorable meeting was held at the India House in New York on June 28, 1917, under the auspices of the National Marine League of the United States. Much thought was devoted to the question: What can the marine interests in New York, the largest commercial center of the United States, do individually and collectively to train young men? The fact was brought out that only two states, New York and Massachusetts, maintained school ships and that applicants had to be residents of the state.

Some day we hope that the Department of Commerce will have its own "Annapolis" to train the officers of our merchant marine. Until then individual and corporate activity must supply the deficiency. Civilians are patriotically giving their services to meet the nation's need in every line of effort and the marine interests desire to do their "bit" with the rest. Inspired with this idea the meeting agreed to organize the National Nautical Training Association, supported and directed by men of the highest standing in New York and in other states as well. Funds for the purposes of the association will be raised by the voluntary contributions of public spirited men.

The plan of the Nautical Training Association is to begin with the boy. The instruction given by the Government thru the Naval Reserve and by educating seamen already in service for higher positions is one-sided, since it applies only to men. As soon as possible the association [*Continued on page 402*

FARMS AND THE MAN

BY DAVID Y. THOMAS

PROFESSOR OF POLITICAL SCIENCE
AT THE UNIVERSITY OF ARKANSAS

THE world is grasping, almost gasping, for food. Napoleon's aphorism about an army moving on its belly is not very elegant but is very expressive. Man does not live by bread alone, but it is equally true that he cannot live without it. Just now the American farmer is being called on to exert himself as never before in order that the allied armies may continue to move. Attempts are being made to organize everything with that end in view during the war.

It is time for us to realize now that this is not a question of wartime alone. If an army moves on its belly, so does society in time of peace. Everything on which civilization depends, except air and sunshine, comes ultimately out of the ground. A large part of it comes in the form of agricultural products. Some writers have been disposed to belittle Jefferson for the emphasis he laid on agriculture. After his day there developed a political party which left agriculture to take care of itself and proceeded to nurse manufacturing. In recent years, however, we have begun to realize that it is well to keep close to the soil. From it our living comes.

This keeping close to the soil is not an easy problem and is calling now for serious consideration. In other industries we have fought against large scale production, but finally succumbed to it and tried to impose regulation—regulation mainly for the benefit of the consumer, partly for the laborer. The question of the labor supply entered very little into this fight, but labor is coming in now for consideration in the matter of control.

ONE of the most serious problems in agriculture is the labor supply. It is an eternal question; just now it is very acute. There are two ways of keeping labor and land together. One is to allow large scale production with a few individuals or companies owning both land and labor. We tried that in this country until the Civil War and then abolished it so far as concerns the ownership of labor. Large scale production, that is the ownership of large areas, continues and there the labor question is a serious one, both from the point of view of supply to the operator and of the condition of the laborer. The other way of keeping land and labor together is to allow and encourage the laborer to own the land on which he works. Then he cannot easily run away and leave it when wages happen to be high in other industries. What has been the policy of our Government in this matter and what are the results?

In its land policy our Government has had two things in view, revenue from the sales and ownership by actual settlers. For many years the first policy was foremost. A long drawn out fight finally resulted in the homestead act of 1863, which puts the latter first. The first policy has been a complete failure; the latter cannot be said to have been a brilliant success.

Under the homestead law over 100,000,000 acres have been patented. In this way many thousands of families found homes, tho many acres were taken by dummy settlers who turned them over to speculators. Also, many of the 160 acre tracts taken by settlers have since passed into the hands of large holders. No care whatever was taken to prevent the monopolization of lands not agricultural. As a result today 60,000 people, or about 12,000 families, own about one-fourth the area of the United States. More than 25,000,000 acres are owned by foreigners, one English nobleman controlling 1,750,000 acres. In California one man owns 17,000,000 acres. A German, Weyerhaesuer, who came to this country a poor boy in 1850, gathered in 14,539,000 acres in California and Oregon. Beside these princely estates the King farm of 1,000,000 acres and the Taft dairy farm and truck garden of 60,000 acres in Texas look small.

SINCE the Civil War economists have congratulated the country on the break-up of large estates. It is easy to point to the census tables and show that the average size of farms is decreasing, but we must not overlook the fact that the census table is based on cultivation, not on ownership. The facts about ownership are difficult to obtain. A few may be gleaned from the census. These, supplemented by what we may gather from state reports and the news items of the daily press, lead to the conclusion that land monopolization is steadily marching on.

In 1910 we had 9,869,776 families living in the country. For these families we had 878,798,325 acres in 6,361,502 farms of the average size of 138.1 acres. Evidently more than one family lived on the same farm in many cases, for there were 3,500,000 more families than farms. While the average size of farms for the whole area was 138.1 acres, 200,000,000 acres, or nearly one-fourth, was in farms of 4230 acres. The owners of 3,948,722 farms operate them, but only 2,588,396 are free from mortgage. The 200,000,000 acres in large farms are owned by 47,276 persons, or 9455 families. More than one-third of the farms, 2,234,676 acres, are operated by tenants who rent them from the owners. The large farms must be operated by tenants or hired labor.

Assuming that all of our rural population is engaged in food production, we find that less than half of it is bound to the soil by anything stronger than the uncertain ties of low rents and good wages. The increase in land values has raised rents, and higher wages in other industries has proved a strong attraction to the mobile part of our farm labor. It is not easy to get land; it is comparatively easy to move to higher wages.

But we have land in abundance. Of the 878,798,325 acres in farms only a little over half is in cultivation. Besides this, there are millions of acres owned by the railroads and in private hands not listed as farms. The Government still has about 150,000,000 acres, but the more desirable lands are in private hands. To get these lands in cultivation is the problem. Modern farming requires capital. It now costs $10 to $15 an acre to clear land, rid it of stumps and get it ready for cultivation. There was a time when the timber on many of these lands would have paid the cost of clearing. Now the owners of these lands, having robbed them of the timber, are very desirous of disposing of them to farmers. They hold "land congresses"—one was recently held at New Orleans—to discuss ways and means of selling their cut-over lands. Until they can do this we often help them hold for higher prices by assessing such lands at a lower percentage of value than that on improved lands.

The time for action is at hand. If we believe in large scale production—figures can easily be produced to demonstrate its efficiency—then we should begin to regulate it. The producer must have labor. If we still believe that it is better for the laborer to own the land on which he works, then we should make it possible for him to get and hold it. The following suggestions are not offered as a complete solution. The writer does not claim to have any panacea. They are offered as a starting point.

SOME of the landholders are trying to sell. Let us help them—by assessing unimproved lands at double their value. Another way to help is by the progressive land tax. In one county in Arkansas three persons or corporations are said to own eighty-five per cent of the lands. Several efforts have been made to get a progressive tax measure thru the Legislature, but the landed interests always block the reform.

If the holder needs help to sell, much more does the purchaser need help to buy. The Federal Farm Loan Bank offers him practically nothing for this. The last Arkansas Legislature submitted a somewhat radical amendment authorizing the state to issue $9,000,000 of bonds to help people buy farms not exceeding eighty acres. It is dangerous and will need careful handling, but under it a man can buy, clear and cultivate even the cut-over lands. Massachusetts has taken some radical steps to help the city dwellers buy homes and will also help her farmers.

On the Government lands the homestead law should be amended so as to abolish outright the system of giving in absolute ownership at any time. Let a man homestead as now. When he decides that he wants to give up farming or move elsewhere, the lands should revert to the Government and be held for the next farmer. It will be easy enough to adjust the matter of improvements.

Fayetteville, Arkansas

Him—How did you like the stage hangings in that Shakespeare show?

Slim—There weren't no hangings, y' boob, he killed 'em with a sword.—*Efficiency.*

Stude A—I need five dollars and I've only got four.

Stude B—That's easy. Pawn the four dollars for three dollars and sell the pawn-ticket for two dollars."—*Lehigh Burr.*

It is thought that lady voters will be unduly influenced by candidates' personal appearances. This makes the majority of M.P.'s in favor of female suffrage all the more surprizing.—*London Opinion.*

Even gentle woman is capable, when dealing with tramps, of perpetrating a type of humor of which one would little suspect her.

"I told dat lady," Cinder Smith relates, "dat I wanted just a little sumpin' to keep soul an' body together."

"An' what did she give you?" inquired Billy Trucks, feelingly.

Cinder Smith exhibited the handout. "She give me dis safety pin."—*Globe.*

"The 'orn of the 'unter is 'eard on the 'ill," sang the little boy at the Ragged School treat. But somehow his version of that line in "Kathleen Mavourneen" jarred on the nerves of the old squire.

"My little man," he said, kindly, "why don't you put a few more aitches in your song?"

"Garn!" advised the little man, politely. "Don't yer know there ain't no 'h' in moosic? It only goes up ter G!"—*London Ideas.*

Secretary of War Baker tells a story of a country youth who was driving to the county fair with his sweetheart when they passed a booth where fresh popcorn was for sale.

"My, Abner, ain't that nice?" said the girl.

"Ain't what nice?" asked stupid Abner.

"Why, the popcorn; it smells so awfully good." replied the girl.

"It does smell kind o' fine," drawled the youth. "I'll jest drive a little closer so you can get a better smell."—*Philadelphia Ledger.*

Vexation and grief struggled for mastery in Gertrude's soul.

"Mother, do come out and speak to Freddy," she said. "He's treadin 'on all the ants in the garden."

"How very unkind!" said the mother.

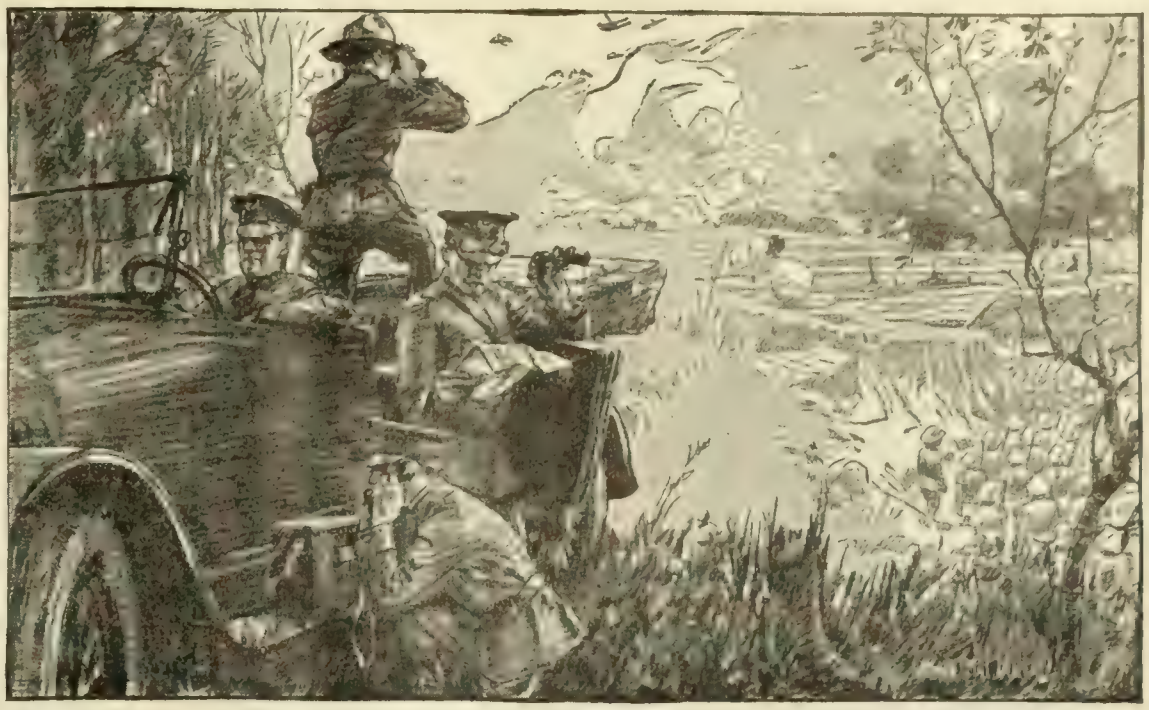
"Yes, that's what I've told him," said Gertrude, "but he won't let me tread on a single one."—*Chicago Herald.*

From Copenhagen, however, comes the information that the Liberal press and politicians in Germany manifest an increasing apprehension that when the Chancellor breaks silence he will speak with a decided pro-German accent.—*Exchange.*

What is there surprizing in the fact that the German Chancellor should "speak with a decided pro-German accent"? Did our contemporary expect him to use an Irish brogue, or a neutral stutter, or a pro-Ally drawl?

Over the garden fence the conversation had suddenly turned acrimonious.

"An' if yore boy 'Erbert ties any more cans to our pore dog's tail," was Mrs. Moggins' stern ultimatum, "'e'll 'ear about it, that's all. Oh, an' per'aps you've done wiv that saucepan wot you borrowed last Monday."



"'Erbert," asked Mrs. Grubb shrilly, "wot 'ave you bin doin' to Mrs. Moggins' dog?"

"Nothin, ma!" replied the small boy, unblushingly.

"There," said his mother triumphantly.

"An' you returned 'er saucepan yesterday, didn't you, dearie?"

"Sent it back by 'er dog!" said 'Erbert calmly.—*The Passing Show.*

Courier of Soldier and Civilian

Our troops are now on the firing line in France. While at home every instrumentality of our government and private industry is being urged at top speed to insure victory. The telephone is in universal demand as courier, bringing to the front men and the materials of war.

From the farms the telephone courier brings foodstuffs; from the mines the telephone courier calls forth metals; from the factories this courier gathers manufactured products. The telephone courier leads troop and supply trains to the front; summons fighting flotillas and transports; and, in fact, leads practically every contributing unit of supply to the firing line.

At such a time, when the government is straining at its task and every industry is loyally contributing its energy, this national courier is constantly being used to call up the reserves. It is at the base of every contributing activity.

The right of way must be given to the military for the direction of troops and to the government for the marshaling of endless supplies. To do this, and also to make the telephone serve all other needs, both patriotic and private, all must economize.

SHOULD A COLLEGE GIRL THINK?

THE SECOND ARTICLE IN "THE GAP BETWEEN TWO GENERATIONS"

BY HARRIET ORNE

THE fact that many women of my generation have gone to college and studied science and sociology has done as much as any other one thing to deepen and widen the gulf between us and our mothers. Certainly going to college changed me as nothing else would have changed me at that time. I went to college an Episcopalian and left college an agnostic with strong enthusiasm for social reform. I went with an established belief in the divine right of the upper classes to be as "upper" as possible and I came away a radical social-democrat with a large, vague, but very sincere interest in the people who never go to the opera. To be sure my democracy was frothy, aggressive and ineffectual, as snobbish in its own way as my earlier ideas. But it was a beginning, and a revolutionary change. I went to college supposing that health, wealth, fame, perhaps even greatness and genius, were gifts of the gods bestowed upon a few, blessings that one could hardly hope to achieve. I came away with the belief that it is vitally important for each member of society to fulfil the measure of his own individual possibilities, to thrust down his roots deeply and lift up his head proudly and achieve as much as he can of all good things. I came away feeling that marriage is not the whole destiny of woman, but rather the great normal, racial privilege. This intellectual upheaval was as strenuous as a volcanic eruption and I came forth, like all proselytes to new credos, with convictions as intense and fiery as hot lava—and just about as useful at the time—and with a very sulfurous anger at things as they were—and are.

I knew by this time that I was not alone in going thru all this. Many a girl had said to me, "Mother is a dear, but I wouldn't say that to her. She doesn't understand." And one young man with a youthful serio-comic grin had remarked, "Our parents are really younger than we are, less sophisticated intellectually. They are always absolutely sure that if we disagree with them we are wrong. And we do have to be so careful not to hurt their feelings!" It was and is a rather amusing thought. But it is strangely true. I scarcely believed it when he said it, for I did not realize how fast I was being whirled away from the old static and ordered intellectual scheme into the dynamic eddies of modern thought. But later, when I began to talk of my new ideas at home to my mother and her friends I learned how much suffering ideas can cause. I began to argue with my family. Sometimes when my enthusiasm boiled over I ranted. I wanted to argue quietly as we had argued on the campus and in the class room. I did not want to make my family and their old friends believe just as I did. My hard earned and much vaunted tolerance prevented me from desiring that. But I wanted them to understand *why I believed and thought as I did,* and in an endeavor to explain myself I gave reasons. They opposed my reasons with statements of their position as the right and proper one for a young woman of my class. They did not want to give reasons. They did not want to consider my ideas. They took it for granted that they were not worth considering. Let me say that I believe parents should always be willing to consider their children's ideas, no matter how strange they may seem; that they should be eager to get the reasons that lie behind them. For any ideas and ideals to which young people can honestly and enthusiastically adhere deserve consideration, yes, even tho they are altogether wrong. And if parents and older people generally would only listen tolerantly and receptively when youth pours out its heart they would win the respect of youth in larger measure and be able, in time of need, to make the clever suggestion that would safeguard youth against the extremes of thought that are unsound.

AFTER a while I learned that many of the older people with whom I talked were clinging to their ideas for practical reasons. And they kindly wanted to save me from the social obloquy of thinking as no one in my set thought, and seeming "queer." This was not true of my father and mother. They held their ideas as a part of the aristocratic scheme of life to which they had been bred. But the thinking of many of their friends was mere expediency and honest youth detests expediency. Therefore, for a while, I made myself quite disagreeable. Finally I learned to keep my opinions under lock and key and to listen quietly to the opinions of my elders while revolutions foamed and burned in my heart and mind. I would not acquiesce in ideas that seemed to impair my intellectual integrity, but I tried to avoid hurting those I loved or being hurt by them, with the bayonet pricks of warring ideas. But in so doing I became spiritually lonely. Spiritual loneliness is dangerous to youth, for youth should be frank and social and friendly. And by keeping silence I lost the benefit that might have accrued to me in the sympathy and wisdom of my father and mother. Much of life's wisdom that they might have taught me, much, also, that their friends might have taught me I did not learn at the time. For I thought that if they would not or could not understand my ideas and if they must always be protected from my opinons I would never be able to explain enough of my feeling and need to get any advice that would be valuable. I thought that their advice would necessarily be out of keeping with my scheme of things, a blue patch on a green garment. And for this reason I often wounded and repelled those who would have helped me. Believe me, parents should not have feelings too easily hurt by new ideas. A young boy or girl should be free to express all of his opinions at home. The catharsis of ideas is good for him, for her. Young people scorn ideas that must be protected with cotton batting and do not wish to follow in the intellectual footsteps of those who cannot bear to know that they differ from them. I talked not long ago with a young professional woman. "Do you still feel about religion as you did when you were a child?" I asked. She hesitated. "In mother's presence I appear to," she said. "I haven't the courage to undeceive her. It would make her old age sad, perhaps bitter."

I have said that I went to college an Episcopalian and came away agnostic. I think I need not explain why, for it could not be done in a few words. The thing which I wish to emphasize is this, that for me, the giving up of the church I loved was as truly religious in spirit as the old allegiance to it had been. It cost me much personal sorrow, far more than I have ever felt in the loss of a friend by death. The same thing was true of other young men and women, friends of mine, who, for honesty's sake, made the same sacrifice of old credos. That is what the churches seldom recognize and what the friends of my father and mother could not believe and understand. I think this is why:

To my mother's generation the world offered a choice of several religious authorities, just as a grocery offers a choice of several brands of canned goods. For the humble or for the esthetic there was the Roman Catholic authority, for the provincial the Methodist or Baptist authority, for the conventional and correct the Episcopal authority, and, if one must be severely intellectual—which Heaven forbid—the Unitarian authority! It was generally recognized that good Christians and fine human types belonged to all denominations. But it was considered essential to accept some one of the generally respected authorities. For belief, in and of itself, was supposed to be meritorious and mysteriously beneficial. With my mother's generation believing was a matter of willing—"the will to believe"—therefore a matter of duty. And since they supposed that it was their duty to believe certain things the women of my mother's generation went about the duty womanfully and succeeded in achieving a respectable amount of faith in whatever it seemed desirable to believe. But education has made that attitude of mind impossible for thinking women of my generation.

A course in biology had taught me something of cause and effect in the universe and had stimulated the love of truth for its own sake, the desire to know truth even if the knowledge must destroy preconceived notions about it. I had learned that all sound thinking must build hypotheses on foundations of the known truth, and that if generally accepted authorities seemed to be in disagreement with the truth made

known to me it was important ethically to renounce them, no matter how pleasant and comfortable the beliefs they offered might seem to be. Honesty became more important to me than docile credulity as a religious duty. I not only did not believe as my mother and her friends believed. I could not. But they thought of me not as a human being separated from their ideas by powerful convictions but simply as a stubborn child saying "I won't" to something which might do me good if I would accept it. Nothing can be done to bring young people of my type "into the fold" with the fathers and mothers they love while those fathers and mothers persist in treating them in such a way as to reveal that idea.

"Try just to keep your religion as you learned it at your mother's knee," said one of my mother's friends when I was discussing the matter with her. It seemed impossible to me, just as impossible as wearing the shoes I had worn in my cradle. I said so. "You will find it a great help in time of trouble," she said gently. It was just the wrong thing to say. I answered rudely. "Should I make my ideas sofa pillows to soften life's spankings," I asked. "Should I try to befog my mind because it may make life easier? If I do not believe a thing because I am convinced of the truth of it has my belief in it any value? I never will. If I believe in anything it must be because it seems true to me in a normal, healthy state of mind, not because I am driven to it by my own weakness, not because I am too much of a baby to take what life may bring. The God I worship is not afraid of my questions."

The good lady gave me up in despair. She was unable to discern the fact that my agnosticism was profoundly religious. She simply decided that *I supposed she was a hypocrite* because she still believed as she always had believed and, naturally, she was resentful. But I did not consider her a hypocrite. I knew she was as honest as I, in her way, for she had never even heard the arguments which had changed my way of thinking.

In reality we were nearer together than we realized. For her way of serving God and my way of serving man were the fruit of the same spirit. She was humble before dogma and accepted old mythology literally. I was humble before fact and enjoyed old mythologies as poetic symbols of stalwart human truths. But altho biology had wrought this change that created a difference in thought between us, altho it had caused me to doubt the Christian theology as expounded in churches, Jesus was still, for me, as for her, the Sublime Teacher, better loved after I had won the hard knowledge of my times than ever he had been when I had placidly accepted him as a part of the church.

And with a more mature understanding of Christian ethics as a social force still inefficiently used, still applied only to personal and individual lives, there was growing in me, also, the belief in democracy to which I have referred. And I think that this fact was what made me most "trying" to my family and friends. We were not "painfully pious," but young people always make their new ideas obnoxious when they have no way of using and testing them. I passed thru intellectual phases as rapidly as one passes thru changing landscapes on a transcontinental train. I do not know how my mother and father lived thru it. But to myself I seemed to be just the same person that I always had been—growing. I discussed the difference between the actual wage a man receives and the real value of that wage based on its purchasing

Don't Go By-

Don't Keep That Corn

Every drug store that you pass has Blue-jay waiting for you.

Stop and get it, and it means the end of any corn.

Pass it by, and the corn will stay. You know that from experience.

Blue-jay does more than end a corn. It proves that corns are needless.

Apply it, and the corn pain stops. Leave it on two days, and the whole corn disappears. Only extra stubborn corns need a second application.

Prove that once, and corn troubles end forever. You will never again permit them.

To millions of people—users of Blue-jay—corns are a pest of the past.

Do what they did—try it. See what a Blue-jay does. Learn why so many millions are now used each year.

Lay aside the old-time methods. Use this modern way tonight. You will wish that you had started years ago.

power. I said that criminals were victims of bad training and heredity and that society should not take vengeance on them, but should try to help them and, better, to prevent them. I asserted that the country was not free and that we would never have real democracy until women could vote. I declared that a man had no right to own a million dollars as the product of other men's labor. Modified forms of all these beliefs I still cherish. But I have been able to consider many aspects of life since those tonic days at college, and I think I should not make the same statements now with the same cocksure crudity. It was all worse than heterodox to friends of my mother. It was unpleasant. How could any properly brought up young woman of good family allow herself to become "so different" as a result of a little education? I acquired a reputation for being "queer," which caused me much sorrow, for at heart I was not very queer. I was only living thru a lonely intellectual struggle. In an endeavor to solve my problems and find new companionships that would not throttle my ideas I began to make friends of a new sort. One night when I had received as a caller a young journalist who was rather out at the elbows and wore a socialist necktie my father asked me, "Who was that poor lost soul calling on you?" A sense of humor should have come to the rescue, for my interest in the young man was quite superficial; he was just a new kind of person, a specimen. But with considerable hauteur I told my father that I wished he would not make fun of my friends. He smiled quizzically and told me I was a "great girl." On another occasion when I had invited a militant suffragist and a new thought leader to afternoon tea my mother caused me much bitterness of soul by asking with perfect good humor, "Who were those funny old pussies?" I was constantly torn by the conflict of my desire to be entirely loyal to my mother and father and my desire to reach out into unknown worlds and unknown lives and make friends among those who had something for me which I needed.

In later years I have comforted myself with the thought that I have inherited all of my capacity for democracy from those two very vital and loving aristocrats, my mother and father. For they practised it, in their way, as effectually as I have ever practised it. I like to remember my father's great courtesy to the stenographers and other women who worked for him. I like in particular, to remember my mother's large, fostering, motherly kindness, which was always without any taint of condescension, always spontaneous and human. And here is one of my memory pictures of my mother which served to soothe me in my girlhood when I most doubted her democracy.

A little Irish housemaid who had lived with us several months had finally decided to take the advice of her priest—she was a devout Catholic—and become a nun. My mother entered into the spirit of it beautifully, helped her to use good judgment in purchasing the linens required for entrance into the convent, helped her with the hemming and planning as if she had been a daughter or the daughter of a friend. When the time came for the little maid to go we all said goodby and wished her happiness. And she looked back upon us and upon the world she was leaving with all the ache and the smile in her eyes that only an Irish face can show. I think mother realized that no warm maternal arms would gather that little girl close again, and that her own mother in the old country would be glad to have another mother take her place. At any rate, she took her in her

Journalism As An Aid To History Teaching

By EDWIN E. SLOSSON, Ph.D.

Literary Editor of The Independent

Associate in the School of Journalism, Columbia University

This address, which was given before the History Section of the New York State Teachers' Association at Rochester, November 23, 1915, has been published in pamphlet form and will be furnished free to teachers. Write to The Independent, 119 West 40th St., New York.

arms and kissed her gently and cheerily and then sent her off with a laugh and a joke.

But little pictures like this were not all that I had to make manifest my mother's belief in democracy. For in one thing she belonged rather more to my generation than to her own. She believed in labor and loved it. Her way of saying this was to tell us that we could do any work in the world, "like ladies." And toward the end of my college experience, when I was deciding on many matters that had to do with my life-work I found that, unlike most of her friends, my mother was willing to believe in my right to labor and in my right to choose what kind of labor I would do. She said that she did not want a daughter of hers to marry "for a home." She did not want me to marry save for love. And she thought that "good hard work" was healthy and sensible. She agreed with me that it does much to save women from cults and eccentricities and banal sentimentalities, and even from those perfervid affairs which dissipate energy, soil consciences and ruin homes. This essentially democratic belief in labor as a fulfilment of personality remained with me always and the fact that I could share it with my mother was a great comfort in days to come, as I shall tell later.

Small Verses of the Great War

WILLIE'S PA

Air: "Solomon Levi"

Oh, Willie Jones's fond mamma brought
  him to Plattsburg town,
To see his father at the camp go marching
  up and down;
And Willie grew excited as the band began
  to play,
And when he saw his papa march, the people heard him say:

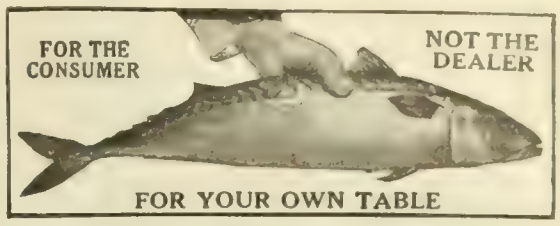
Chorus

"Oh, look at him, ma-ma, ain't he simply
  grand?
See the way he holds his gun and swings
  the other hand.
The captain's walking up in front, and now
  he's calling 'Hep,'
And every one but my papa is marching out
  of step."

—By J. L. Felbel in Rookie Rhymes.

THE HERO

He sat beside me on the bench.
  "I was at Mons——" said he.
"No! Really?" I exclaimed. "You're just
  The man I've longed to see!
That wonderful retreat! I beg,
  Tell me the tale afresh:
Thrice blessed I, to meet at last
  A hero in the flesh!"



"I was at Mons——" The haggard man
  Began his tale anew.
"Before you start," I intervened;
  "They are Virginian. Do!"
He took the proffered cigaret;
  I offered him a light.
Then carefully composed myself
  To listen, with delight.

"I was at Mons——" Again his voice
  Fell on my eager ears.
"Each time I hear those words," I said,
  "I'm almost moved to tears.
That tale is never told, but I
  Attend with bated breath.
And bless those gallant Tommies who
  Were faithful unto death."

"I was at Mons——" "Ere you begin,"
  I interposed again,
"Perhaps a mouthful from my flask
  Will mitigate the strain."
He swallowed half of the contents—
  Perhaps a trifle more—
Then spake: "I was at Mons," said he,
  "Ten years before the war."

—The Passing Show.

Salt Mackerel
CODFISH, FRESH LOBSTER

FAMILIES who are fond of **FISH** can be supplied **DIRECT** from **GLOUCESTER, MASS.**, by the **FRANK E. DAVIS COMPANY**, with newly caught, **KEEPABLE OCEAN FISH**, choicer than any inland dealer could possibly furnish.

We sell **ONLY TO THE CONSUMER DIRECT**, sending by **EXPRESS RIGHT TO YOUR HOME.** We **PREPAY** express on all orders east of Kansas. Our fish are pure, appetizing and economical and we want **YOU** to try some, payment subject to your approval.

SALT MACKEREL, fat, meaty, juicy fish, are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

CODFISH, as we salt it, is white, boneless and ready for instant use. It makes a substantial meal, a fine change from meat, at a much lower cost.

FRESH LOBSTER is the best thing known for salads. Right fresh from the water, our lobsters simply are boiled and packed in **PARCHMENT LINED CANS.** They come to you as the purest and safest lobsters you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

FRIED CLAMS is a relishable, hearty dish, that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

FRESH MACKEREL, perfect for frying, **SHRIMP** to cream on toast, **CRABMEAT** for Newburg or deviled, **SALMON** ready to serve, **SARDINES** of all kinds, **TUNNY** for salad, **SANDWICH FILLINGS** and every good thing packed here or abroad you can get direct from us and keep right on your pantry shelf for regular or emergency use.

With every order we send **BOOK OF RECIPES** for preparing all our products. *Write for it.* Our list tells how each kind of fish is put up, with the delivered price so you can choose just what you will enjoy most. Send the coupon for it now.

WHY BONDS?

The Nation needs money. Bonds extend long after "war profits" end. They increase all taxes, burden industry until paid and ultimately cost $2.00 for every $1.00 raised. They increase living costs and reduce wages.

THINK OR PAY

A tax on land **values** only will raise yearly $5,000,000,000, will abolish all other taxes, force idle land into use, increase crops, benefit industry and perpetuate real prosperity.

The New Books

Soldier Spirit

IN a certain aspect *Carry On*, by Lieut. Coningsby Dawson, is one of the great books of the war. The private letters of which the volume is composed were not written for publication, and for this reason breathe the very soul of the author in the most frankly intimate manner. We have referred before to the spiritual rebirth exprest by several young Americans at the front, but in these letters the writer paints a veritable Gethsemane of the human race, a sublime joy of the individual in casting aside all that is mean, selfish and ignoble, to "go West," if need be, in the spirit of a new regeneration. An heroic glory shines even upon those fearsome scenes. Let us take one example given by Mr. Dawson.

"During a fierce engagement a British officer saw a German officer impaled in the barbed wire, writhing in anguish. He said quietly, 'I can't bear to look at that poor chap any longer.' Under a terrific fire he went out, released the German officer, and carried him to a German trench. The fire ceased. Both sides watched. Then the German commander came out, took from his own bosom the Iron Cross, and pinned it to the breast of the British officer. Of a truth such episodes are 'the holiest ideals of chivalry.'"

These same ideals of chivalry we find in *Victor Chapman's Letters from France.* The young aviator had a knight-errant spirit which, until the war, had never found anything quite big enough to dedicate itself to. The letters are interesting not so much for the experiences of trench fighting and flying which they contain as for the picture which they, and the accompanying memoir, give of a lovable, capable boy who did heroic deeds in an utterly self-effacing way. As might be expected of a war book

Underwood & Underwood

Tommy in the Trenches

prefaced by General Bramwell Booth, a religious note is frequently sounded in *Souls in Khaki*, by Arthur E. Copping. Anyone who knows the descendants of the Scotch Covenanters or Cromwell's Puritans, will not doubt that all Mr. Copping says of their going into battle strong in the might of their Lord of Hosts is the literal truth. Only, as he insists, on the war front this faith must be genuine to win respect. Lest, from this, his book might be mistaken for a kind of war tract, we should add that many of the scenes he describes after leaving London for the front, including his personal experiences under fire after owning himself to have been previously a physical coward—he was cured of that forever—are brought home to the general reader by the frankness of his approach, and the human outlook of a man ever ready to extend the hand of comradeship and brotherhood.

The Y. M. C. A. of England and of the United States has been doing wonderful work for the well-being of soldiers and prisoners in each of the warring countries. Of all the gift books by which various war charities have sought to turn pennies their way, this of the association, *Told in the Huts*, seems—as a book to read, not merely to buy for the good of the cause—quite the most successful. It is made up of short stories. Some relate to the work in the Red Triangle huts, but most are simply soldier stories, short, dramatic and at times pretty close to literature. With the exception of a few sketches by Baden-Powell the uncommonly good illustrations, full of movement and force, are the work of one artist-soldier.

Because it is work of the men of the trenches this collection has a spontaneity and directness that makes it worth while evidence as to what men became at the front.

A collection of essays, imaginary, war front conversations, and autobiographical sketches, make up *A Student in Arms*, by the late Lieut. Donald Hankey, of the British Army. The volume also contains his previously published and widely read "Don't Worry." At Rugby, the R. M. Academy, and later in the military service, Donald Hankey was never one of his caste, tho, at Oxford, where he went to study with the idea of becoming a military chaplain, he found a more congenial atmosphere. He reacted in time to a kind of democratic faith resembling that held by the Salvation Army.

Then came the war. He enlisted so that he might become a soldier from the bottom up, and really get at close grips with the inner conscience of the English masses. That he succeeded, these pages stand as a vital and living record. All doubts had now fled from him, and his end would seem to have been almost what he wished. He fell leading his men in a forlorn attack.

Two English clergymen, T. W. Pym and Geoffrey Gordon, strive in *Papers From Picardy* to reach the ground which Donald Hankey won by putting himself on the same social level with the enlisted men of the British army. But they go only half way. They do not seem to be able to climb out of the pulpit, or divest themselves of the ecclesiastical habit. Tommy's terrible swear words—especially when he gets slightly hurt—cannot be accepted as evidence of a penitent spirit. These are particularly reprehensible when, as Tommy says, he's "been praying like hell," and when they are familiarly addrest as "Gawd."

They fear Tommy may come back from the war an even greater sinner than he entered it. They see labor in abundance,

SCHOOLS AND COLLEGES

NEW YORK

THE STONE SCHOOL
Cornwall-on-Hudson, Box 5, New York
FIFTY-FIRST YEAR
A School in the Heart of the Open Country. For Boys from 9 to 19.

LOCATION: 50 miles from New York, on a spur of Storm King Mountain, 900 feet above sea level. Healthful, invigorating unusually adapted to a sane and simple out-of-door life.

Books at a Bargain

THE Modern Library has out an interesting dozen and more works, mainly by writers of today. This series, tho it runs now and again into the paths trodden by other such handy publications, and now and again into needlessly unhealthful regions, for the most part manages to give in pleasant and cheap form books still of moment, that are not readily come at save in the regular editions. There is Meredith's *Diana*, for instance, and Hardy's *Mayor of Casterbridge*. There are thirteen of Maupassant's stories, those loved of the teacher of technic, and there is the unpleasantly realistic *Red Lily* of Anatole France. *Thus Spake Zarathustra* may, one hopes, persuade some to read Nietzsche himself rather than essays upon him. Shaw's early novel, *The Unsocial Socialist*, is here, and an excellent mate, the one work from quite another generation, Schopenhauer's *Studies in Pessimism*. Why, by the way, do these publishers never tell us who are the translators, a matter sometimes of moment. A worth while volume is Wells's *War in the Air*, a prophecy in its fulfilment nowadays. *Treasure Island* is the one book on the shelf often reprinted.

It looks as tho in this new series we might expect not the established classics, nor contemporary ephemera, but books, of an exotic type in some instances, perhaps, but books whose originality has held them some few score years apart from the rank and file of publications.

The Modern Library. Boni and Liveright, New York. 60 cents each.

Unpleasant New England

FOR her new novel, *Summer*, Edith Wharton has chosen the time-worn theme of the unsophisticated country girl seduced by the clever lad from the city. But, since mankind has been making books from the days of King Rameses, all themes, in a sense, are old, and the value of any work of art depends not upon the theme but upon the skill with which it is used. Fresh and powerful characterization will make any old theme new. And in this art of presenting human beings who are more than types and of making their behavior seem real and inevitable Mrs. Wharton excels.

Charity Royall is a girl of strong vitality who has lived a bleak and meager life, tho reaching out, spiritually, into a greater and sweeter world still unknown to her, in which she vaguely believes. Her mother and father had been undesirable citizens and her guardian, the lawyer who adopted her, altho he had his good qualities, was not just the person to act as home-maker for a little girl. She grew up restless and eager to get away from North Dormer, full of tragic desire for the opportunities that belong to youth.

Then came Lucius Harney. He was not in any sense a sinister personality, not the callous and wilful exploiter of innocence who stalks balefully thru a melodrama, wearing very broad shoulders. He was quite a kindly, intelligent, engaging young man. To the reader he seems to love Charity sincerely, and this apparent sincerity is

prepossessing. Why then, did he love and run away? Was it, as Mr. Royall said, because he knew he could have Charity without marriage? Was it because he consciously felt the girl's primitive impulse to love lavishly and without calculation that which seemed to be superior to her environment? And why, oh why, did he marry the girl he did marry?

To those who hold in memory the exquisite calm beauty of the "Valley of Decision," the brilliancy of "Madame de Treymes," the tragic but unerring psychology of "Ethan Frome," *Summer* must be a disappointment. Altho neither the young man nor the village life are quite convincing it is a well written tale with one real character, Lawyer Royall. But it is a story of incident rather than of character and emotion. It lacks Mrs. Wharton's distinction of characterization and, for all its forceful directness, quite beyond the skill of most of our story writers, it entirely lacks her distinction of style. She was not intensely interested in the people of North Dormer, and we have had from her within the year such living reports of real happenings in France that we suspect we have in these the sufficient cause for an unexpected likeness to other workers of the New England quarry in this sordid and uncheerful history.

Summer, by Edith Wharton. D. Appleton & Co. $1.50.

Zangwill Dissects Nationality

THE PRINCIPLE OF NATIONALITIES, by Israel Zangwill, is the latest of eight Conway memorial lectures printed on behalf of the South Place Ethical Society. As it consists of this one lecture the book is naturally a small one, but no elaborate discussion has contributed more that is penetrating, sane and original to the problem of nationality than Mr. Zangwill's analysis. He traces nationality not to race, speech or type of culture, but in part to geographical accident and in part to the events of history, which produce a feeling of brotherhood among those who have labored and fought together; or, as he felicitously puts the matter, nationality is the product of Contiguous Coöperation. His fourfold division of national states is also worth noting and remembering; the simple nationality, where political boundaries exactly coincide with nationality, the complex nationality where many peoples are mingled together in one state, the compound nationality where different peoples are leagued into a federation, and the Turkish type where one people constitutes the state altho alien peoples live within its boundaries.

Mr. Zangwill does not altogether like the national idea and he inclines to be scornful of the romantic haze in which it is sometimes enveloped, but for all that he recognizes the existence and strength of national patriotism and he is opposed to all attempts to repress or restrain it by alien power.

Mr. Zangwill adds attractiveness to his study by many delightful touches of wit. We may select a few casual sayings as examples of many others. "Packs of wolves are not unaware of their unity because they do not howl about lupinity." "The Turks are handicapped like the Magyars by the fact that their minority nationalities are majorities." "Treitschke was unaware that his ideal of a world-illumining Germany, purged of Jews, was only a plagiarism from Judaism." "Many so-called Cosmopolitans are merely people who have adopted a more romantic nationality."

The Principle of Nationalities, by Israel Zangwill. The Macmillan Company. 50 cents.

SCHOOLS AND COLLEGES

INDIANA

INTERLAKEN

A School community on a 700-acre estate with woodlands and water. "Where boys learn by doing"

Prepares for all universities. Thorough instruction in German, French, Spanish; in mathematics, physics, chemistry. Botany. Life preparedness sought by applying academic work in practical mechanical and agricultural training. Each boy is daily assigned some practical work in either the wood or metal shops, light or power plant, or on the farm. A simple open-air life, with plenty of athletics, group and team games, develops a robust body. Initiative and executive developed through opportunities of leadership in work assignments. Observation trips to factories, city institutions, etc. Boys received at any time. Summer camp, mid-June to September. Address

Look for the Name of the Powder

ANY sportsman who gives the matter a moment's thought will agree that the powder contained in the shotgun shells he uses is a factor of prime importance to him when shooting either in the field or at the traps.

This being so it is a matter of ordinary prudence when buying loaded shotgun shells to specify that they be loaded with a powder with which you are familiar—a powder upon which you can depend under all circumstances.

You get such a powder when you specify either Infallible or "E. C."—the two Hercules Smokeless Shotgun Powders.

Undoubtedly the name of your favorite make of shell is given in the list at the right. You can obtain either of these Hercules Powders in *that shell* by *asking your dealer for it.*

On the top wad of every shell, and on the cover of the box in which the shells are sold, is printed the name of the powder with which the shell is loaded. Look for this name when buying. See that it is either Infallible or "E. C."

These powders are of high quality and uniform quality. They give light recoil, even patterns, and high velocity. Write for a free booklet which describes them fully.

Infallible and "E. C." can be obtained in all of the following makes of shotgun shells.

BACK TO THE SEA

(*Continued from page 391*)

will establish a school on the water front near the port of New York to give the young recruits their preliminary training. Afterward they will gain practical experience by service on such ships as may be available for training at sea. The course should not be less than one year before the boys are fitted for minor positions on sea-going vessels.

Boys from every state will be welcomed, the citizens of each state contributing in proportion to the number of cadets furnished by them. The principal requirement for admission to the school will be good character and the age of those who enter will probably be from sixteen to eighteen. One reason why ample funds must be supplied to carry on the work is that it is planned to make the school free to all the boys who enter it, except perhaps for a deposit to cover the cost of the uniform.

This school will, we hope, prove only a beginning. New training schools may in time be established and perhaps the Federal Government may assume control. But the work must first be well under way and the school equipped and organized. We must begin with the little and work toward the big.

To launch this enterprize two things are necessary, popular endorsement and money. Both should be freely given, for the cause is a worthy one; nothing less than the restoration of the American flag to its rightful position on the seas in peace and war alike. Only an active interest in this cause on the part of citizens in every part of the country can bring success to our undertaking.

In the days before the Civil War the United States had a merchant marine which was the envy of the greatest commercial nations of the Old World. The great mass of the population lived within a few miles of the coast and the desire of nearly every small boy was to run away to sea and become a sailor. Among a seafaring people it was not difficult to find good crews for all the ships that could be built.

But for the last few decades our development has been landward. We were, as a people, devoted to the mighty task of conquering a continent for civilization. We permitted a good part of our foreign trade and most of our shipping tonnage to be captured by our European rivals. It is now of no avail to lament this long neglect of the world's great waterways. In fact, it was not wholly an evil, for by concentrating on the development of the inland states we have created a remarkable railroad system and thus made possible the opening of the great agricultural region of the Mississippi Valley with the products of which we are now feeding our Allies as well as our own people.

The time has come, however, when we must once more look seaward if we would maintain either our security or our prosperity. Preparedness demands the education of the coming generation to the habit and love of the sea. We must have Americans to officer our merchant marine during the war, and we ought to have them in time of peace. Yet men must be found to handle the new ships which we are building and, unless the American people become once more a seafaring nation, it is not American men who will do it but aliens from other nations that have not lost the salt from their blood and still "go down to the sea in ships."

It takes time to make a sailor. We cannot begin too soon to educate the youth of the land, nor too quickly to spread broadcast over the country a knowledge and ap-

INSURANCE

Service of The Independent

A constantly increasing number of readers are securing valuable information through the Insurance Service Department conducted by W. E. Underwood, Director.

preciation of the value of ocean trade to our industrial prosperity. The men of both coasts must start this movement and the people of the interior states, who are now a majority of the whole population, must be induced to take an active interest in it.

A large proportion of the boys in the training school should come from the states of the interior. Two years are required to fit them into the "sea habit." Every lad will be doing double duty; helping America to attain victory in the great war for democracy and at the same time giving her a high place among the nations in the peaceful rivalries of trade. In addition, he will have chosen an honorable career, as beneficial to his own character as to the welfare of his country.

If this matter of training the coming generation can be properly presented to the people of the Middle West there is little doubt that the appeal will meet a strong response. Evidence of this is afforded by the results obtained in these states by the recruiting campaigns of the Navy and of the Naval Militia. Every young man in the merchant marine will be a living advertisement of the training school and serve to arouse the interest of the people in his own town and state in the foreign trade of the United States. Enthusiastic boys make interested parents. The school will bring back to the sea, both in interest and in person, the men and the sons of the men who navigated the Western plains in the "prairie schooner."

The West understands also the economic motive for developing our sea borne trade. If the people of the interior are to prosper, their products must no longer be permitted to lie rotting at the seaports. The sons of the West have run the cars to the coast. They must also learn to transfer the train loads to the ships and carry them overseas to their transatlantic customers.

The accident of this war has brought to America a great responsibility and a great opportunity. Our responsibility is to create and man a commercial fleet adequate to transport all the foodstuffs and supplies needed by the Entente Allies and a large American army into the bargain. Our opportunity is to put this merchant marine on a permanent basis and make it wholly American, in personnel as well as in nominal ownership and control.

New York City

A certain rector just before the service was called to the vestibule to meet a couple who wanted to be married. He explained that there wasn't time for the ceremony then, "but," said he, "if you will be seated, I will give an opportunity at the end of the service for you to come forward, and I will then perform the ceremony."

The couple agreed, and at the proper moment the clergyman said: "Will those who wish to be united in the holy bond of matrimony please come forward?"

Whereupon thirteen women and one man proceeded to the altar.—*Blighty.*

Shortly after a new administration took over a well known Western railway, a great number of claims were preferred against the company on account of horses and cattle being killed along the line in Texas. Not only that, but it appeared that every animal killed invariably figured in the claims presented as being of the best blood in Texas.

The claims finally became so numerous and the majority so unreasonable, that one day the president of the road became much excited while discussing the situation with one of the road's attorneys.

"Do you know," he exclaimed, bringing down his fist on the desk by way of emphasis, "I have reached the conclusion that nothing in Texas so improves live stock as crossing it with a locomotive."—*New Idea.*

EMERGENCY INDUSTRIAL HOSPITALS
Richman Bros. (left) and Upson Nut Co. (right), both of Cleveland, Ohio

Caring for the Injured Employe

ONE of the essentials in the management of the modern industrial plant is the proper care of the sick and injured. This is of course important from the practical as well as the humane standpoint. It is a matter of both self-interest and duty on the part of the management. Sickness must be prevented and shortened—injuries followed by the quickest possible recoveries—as an *efficiency* measure.

"Standard" Fixtures for Emergency Industrial Hospitals

afford a valuable means toward the above end. They promote sanitation, are of real aid to medical attendants and nurses, help in bringing about speedy convalescence and repay their cost many times in a brief period.

A booklet published by this company, "Factory Sanitation," contains much valuable information along this line. Write and receive it free.

"Standard" Plumbing Fixtures for the Home

represent the complete, up-to-date line for Bathroom, Kitchen and Laundry. Their supremacy is the result of experience, service and quality. Talk to your plumber about "Standard". Look for the Green and Gold label. If interested in plumbing fixtures for domestic use, write for free copy of "Standard" Plumbing Fixtures for the Home, also new Sink Booklet.

SOLDIERS' AND SAILORS' INSURANCE

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

IT is desirable that I outline as fully as I can in my limited space the plan of death and disability insurance now under consideration by the Government for the benefit of the men composing the military and naval forces engaged in the war. I will try to waste no words.

The benefits fall under three heads: support of dependents during the absence of the men; compensation for injuries or disabilities; a life insurance coverage.

To illustrate the first: a private soldier receives $33 a month. It is proposed that he be compelled to allot not less than $15 of his pay, and not more than fifty per cent of it, to the support of his family; whereupon the Government will supplement this with an allowance ranging from $5 to $50. A man with a wife and two children, who will allot $15, will secure for them from the Government $32.50 additional, bringing the combined amount due the family to $47.50 a month. The Government will add $5 for a third child. If the man also has a dependent parent and to his compulsory allotment he will add $5, making the whole sum $20, the Government will make a further allowance of $10. So that the soldier or sailor with a wife, three children and a father or mother dependent on him would thus secure to them a total monthly income of $67.50. The Government will contribute a maximum supplementary amount for dependents in addition to those named.

NOW as to death and disability benefits falling under the second head of this description. These extend to and cover officers, men and nurses while in active service as part of the military or naval forces. The plan adopted follows the general lines on which the various workmen's compensation schemes are operated, the object being to displace the pension system in this instance. While under some circumstances this plan yields less than the present pension system, under others, especially in providing for a man's dependents in the event of his death, it gives more. The amount of the compensation payable for total disabilities is based on a percentage of the man's pay with a minimum of from $40 to $75 a month according to the size of the family, increasing for the higher officers to a maximum of $200 a month. Indemnities for partial disabilities are calculated on the amounts payable for total disabilities, adjusted to the average impairment of earning capacity as measured by injuries in civil occupations. Medical, surgical and hospital treatment, supplies and appliances are included.

The rehabilitation and reëducation of injured men is an important part of this compensation plan. As the Secretary of the Treasury observes in a circular outlining the bill: "Compensation is a helpful measuse of justice, but rehabilitation and reeducation fitting him for a life of activity and usefulness, either in his former or some other vocation, is an obligation fundamental both to him and his fellowmen." The manner and means by which this object is to be attained have not been settled; but two principles are incorporated in the bill:

1. The man's obligations to avail himself of such opportunities as the Government may provide or cause to be provided under penalty of loss of compensation during any period of unreasonable refusal.

2. A man's right to disability compensation regardless of his individual economic recuperation.

The practical operation of the compensation plan is thus illustrated by using the case of an unmarried man in the ranks who has lost both legs and both arms. Under the pension system he would receive $100 a month, no consideration being given to the number of future dependents. The compensation system proposed would give him while he remained unmarried $40 a month, an additional $20 if he required a nurse or attendant, and $10 more for a widowed mother dependent on him. If he should marry the monthly allowance would be increased $15; for each of the first two children a further addition of $10—a possible maximum of $105 a month. Artificial limbs and treatment are also included.

This income would not be affected by any earnings on his own account. A provision of the bill permits him to commute as much as $20 a month of his income from the Government (estimated to be worth $1000 or more) to be used as capital in embarking in a small business if he so desires.

If, as the result of injury or disease incurred or contracted while in the service, death occurs, compensation based on the man's pay runs to his dependents, the amount depending on the size of the family. The sums range from a minimum of $15 to a maximum of $60 for privates, to a maximum of $200 a month for the higher officers. Funeral allowances not exceeding $100 are made. Compensation is made to widows until two years after their remarriage; to children until they are eighteen, unless they are physically or mentally incapable of self-support. The circumstances of the family at the time of each monthly payment and not at the time of the injury determines the amount to be paid.

COMING to the life insurance provision, which is the third section of this explanation, we find it to consist of a principal sum from $1000 to $10,000, covering against total disability and death while in active service, at nominal cost to those who take it. The excess cost would be borne by the Government. We are informed in the explanation of the plan made by the Secretary of the Treasury that as the Government will not have the usual expenses incident to the insurance business, the premium rates to be charged are based on the normal mortality experience without "loading" or any overhead charges. The figure named is approximately $8 per $1000. The Secretary of the Treasury explains that:

"The cheapest form of insurance, costing during the war on an average $8 per $1000 of insurance and thus bringing even the maximum of $10,000 insurance within the reach of practically every private, is provided for. After the war the insurance may be converted into other forms with earlier maturity, the premiums to be based, however, on the same mortality tables and without 'loading.' All insurance is to be payable in installments, to be non-assignable and free from the claims of creditors either of the insured or of the beneficiary. It is to be limited to wife, children and other specified kindred. It must be applied for within 120 days after the terms are promulgated or subsequent enlistment or entrance into the service. For those who are totally disabled or die before they have had an opportunity to insure within the prescribed period of 120 days, insurance in the sum of $5000 is deemed to have been applied for and granted."

The Insurance Department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. Address all communications on insurance subjects to the director of The Independent Insurance Service

I have now presented in brief the whole of the Government's plan as embodied in a voluminous bill which is soon to have the attention of Congress. Leaving out of account for the moment the life insurance privilege just described, there can be no question that the benefits provided for the men and their families and dependents are wisely planned and generous as to proportions. But it is the judgment of representatives of the great life insurance companies that the proposal to grant insurance in a specific sum at a certain cost to the men is, in view of the abundant provision made in the compensation benefits, superfluous and unwise.

If the proponents of the measure believe that the compensation guaranteed is insufficient and that it should be supplemented by the benefits derivable under a life insurance policy, then they should agree on the proper supplementary amount and give it free of cost, just as is done in the matter of the other benefits. As it is, what will be the result? The greater number of the men will not buy the life insurance even at $8 per $1000; of those who do take it, the majority will have the minimum amount, while a few will each have two, three, five and ten times that. This works a decided unevenness of compensatory protection to different men performing the same service.

BY way of illustrating the value of the compensation benefits described, their sufficiency in ordinary cases, consider now that the amount of the average policy in force, on January 1, 1917, in the life insurance companies (taking them all together) reporting to the New York Insurance Department was $1800 and that the life insurance value of the compensation benefit payable to a widow with two children is about $8500. Compare the average of $1800 life insurance with $10,000, the life insurance equivalent of $40 a month payable for disability thru injury. The life insurance equivalent of the compensation due a disabled soldier with a wife and two or more children dependent on him is about $12,000.

President Ide, of the Home Life, has pointed out that there seem to be impracticabilities in the life insurance portion of the scheme which will not be easy to overcome. We are calculating on putting a million men under arms. If they take an average of $5000 apiece the Government will have in force $5,000,000,000 of insurance "before any proper organization," as he says, "for the handling of such an enormous enterprise could be established or perfected." This is about equal in amount to the total insurance in force in the three largest life insurance companies in the world.

THE NEW PLAYS

We agree with President Wilson and Colonel Roosevelt in commending *The Country Cousin* as the true American comedy. You'll like it—every bit! (Gaiety Theater.)

De Luxe Annie, denominated on the bills as "a psychological play of mystery by Edward Clark," depicts the criminal and angelic adventures of a female Dr. Jekyll and Mr. Hyde. Popular rubbish. (Booth Theater.)

What Happened to Jones? is one of the few comedies that stand successfully the test of a revival twenty years after the original production. Written by George Broadhurst. Hale Hamilton plays "Jones." (Forty-eighth Street Theater.)

A Tailor Made Man, by Harry James Smith, wholesome, highly amusing comedy in which a tailor's presser, masquerading in a customer's dress suit, enters high society and succeeds in doing some of the things Napoleon left undone. The most "efficient" stenographer ever portrayed on the stage appears in the third act. (Cohan & Harris Theater.)

REMARKABLE REMARKS

KAISER WILHELM—Onward with God!

GENERAL PERSHING—Lafayette, *nous voila*.

ELIHU ROOT—I have faith in God's people.

R. B. DELVIN—Be a backer, not a slacker.

"MA" SUNDAY—God wants you to have a good time.

DR. W. A. EVANS—Reading in bed is a lazy bad habit.

LAURA JEAN LIBBY—There should be no evasion on the wife's part.

GENERAL GALLIENI—If you have brains use them; if not plant cabbages.

CHAMP CLARK—We have not degenerated into a race of mollycoddles.

JOHN D. ROCKEFELLER—I let my deeds speak for me and not my words.

REV. CORTLAND MYERS—If the Kaiser is a Christian then I am an atheist.

MAYOR THOMPSON OF CHICAGO—The Pope is the only sane man in Europe.

CHARLES E. HUGHES—Congress should call any one to serve who is able to serve.

J. OGDEN ARMOUR—Loyalty in an employee is worth a whole lot more than ability.

BILLY SUNDAY—They say I rub the fur the wrong way. I say let the cats turn around.

SECRETARY BAKER—The United States is now in the dominant moral position of the world.

DAVID LLOYD GEORGE—Heaven knows, this war has taught us more than we yet understand.

AMY LOWELL—I studied and worked incessantly for ten years before I ever published a line.

RABINDRANATH TAGORE—The sleep that sits on babies' eyes, does anybody know from where it comes?

JOB E. HEDGES—We did not go to war; God Almighty took America by the scruff of the neck and threw her in.

GLENN FRANK—The lecturer should study his applause as a chemist studies the reactions in his test tubes.

ED HOWE—I am honestly of the opinion that the work of Tagore is neither beautiful, important nor interesting.

ROGER W. BABSON—Any officer of a bank runs the risk of losing his job by even speaking in favor of movements which really help the working classes.

P CASPAR HARVEY—The family belongs to the great American middle-class if the milk bottle sits on the front porch.

BONAR LAW—The German Emperor has become a great empire builder, but it is not his empire that he is building.

GEORGE L. BEER—American political life has been largely dominated by three concepts: Independence, Union and the Monroe Doctrine.

ORVILLE WRIGHT—We can get better and cheaper service out of two aeroplanes of moderate size than we can get out of one which is twice as large.

SAMUEL GOMPERS—When I am hit on one cheek I am willing to turn the other, but after that I have no more cheeks and must use the fists that God gave me.

CHARLES EDWARD RUSSELL—La Follette, Stone, Gronna and the Kaiser's Iron Cross brigade have no more right in the Senate than Benedict Arnold has in heaven.

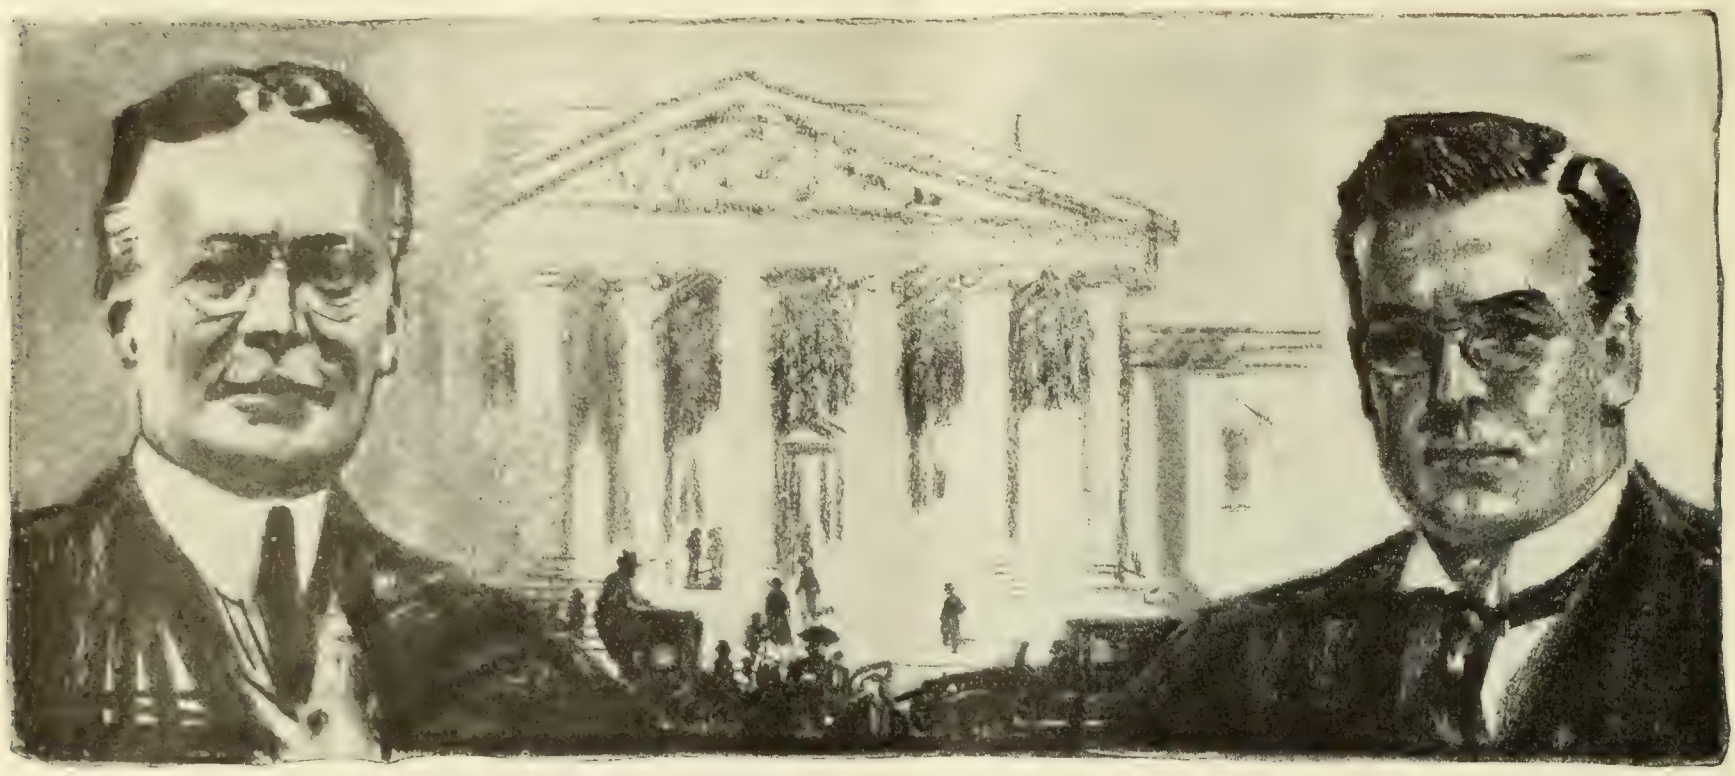
THEODORE ROOSEVELT—It's no use going out to help grow beans and potatoes until you can tell them apart or until you know which end of the hoe goes in the ground.

THE FOOD FIGHT

Under this head, every week, The Independent will print some vital part of the information which is being circulated by the Department of Agriculture to aid American housekeepers in their patriotic and intensely necessary work of conserving food.

HAVE you tried "fifty-fifty biscuits"—Uncle Sam's latest idea for saving wheat flour in hot bread? You use two cups of cornmeal, soy beans which can be home ground, finely crushed peanuts, or rice flour to two cups of white flour. Or you can use one cup of cornmeal and one cup of ground soy beans or crushed peanuts with the wheat product.

You can make "fifty-fifty" muffins with one and one-half cups of cooked and mashed sweet or Irish potato, or cooked cereal, or ground soy beans, to an equal amount of flour. Then there are "fifty-fifty" recipes for wafers and for cornmeal cookies.



How to make all these "fifty-fifties" as well as entire cornmeal gems and yeast breads and rolls made in part of finely crushed peanuts, sweet or Irish potato, soy-bean meal (which can be made at home by grinding soy beans in a handmill), rice, cornmeal or cooked cereals, is described in detail in United States Department of Agriculture Circular No. A91, "Partial Substitutes for Wheat in Bread Making." Here is a sample recipe—the one for "fifty-fifty" biscuits as worked out by Hannah L. Wessling, Specialist in Home Demonstration Work:

"FIFTY-FIFTY BISCUITS"

- 2 cups cornmeal, ground soy beans, or finely ground peanuts, rice flour, or other substitute.
- 2 cups white flour.
- 4 teaspoons baking powder.
- 2 teaspoons salt.
- 4 tablespoons shortening.
- Liquid sufficient to mix to proper consistency (1 to 1¼ cups).

Sift together the flour, meal, salt and baking powder twice. Have the shortening as cold as possible and cut it into the mixture with a knife, finally rubbing it in with the hands. Mix quickly with the cold liquid (milk, skim milk or water) forming a fairly soft dough which can be rolled on the board. Turn onto a floured board; roll into sheet not over one-half inch thick; cut into rounds; place these in lightly floured biscuit tins (or shallow pans) and bake ten to twelve minutes in a rather hot oven. If peanuts are used, the roasted and shelled nuts should be finely crushed with a rolling pin.

In making the flour and peanut biscuits the flour and other dry ingredients should be sifted together twice and then mixt thoroly with the crushed peanuts.

How two men built up a great bank

The directors of a big New York trust company were hunting for two unusually able men to make vice-presidents. The bank was being reorganized. Strong leaders were needed.

Before making their choice, the directors considered many men in the banking world. The future of the bank depended largely upon the experience and judgment of the men they selected.

Selected for their business knowledge

In the end the directors chose two men without any previous banking experience. One was a successful real estate agent; the other a big life insurance man. These men were selected because their business knowledge was broad and sound.

The directors' choice has been more than justified.

The two new vice-presidents have placed this trust company among the foremost banking institutions of America. Each has advanced to the very forefront of the banking world.

Today, one of these men is president of another, even bigger trust company—the second largest in America. The other man is partner in one of the strongest private banking firms in the world.

Why they succeeded

These two men succeeded in a totally new business because they had mastered the principles underlying *all* business. They were able to build up a great bank because of their unusual grasp of business fundamentals.

This same knowledge lies behind every big success. Once acquired, it needs only the personal qualities of determination and energy to make success sure for any one.

It is this broad grasp of big business principles that the Alexander Hamilton Institute is giving to more than 60,000 men in America today.

Based upon the actual experience of thousands of successful business men

The Institute collects, classifies and transmits thru the Modern Business Course and Service, the best thought and practice in modern business. It gives you a thoro and sound training in the fundamental principles underlying all departments of business.

In our national crisis today, the need for this broad executive training is rapidly increasing. Men in all branches of business are being called upon to assume the work of others and to fill more responsible positions. This demand for trained executives will be even greater in the coming struggle for world-markets. For men and women too, who are prepared there will be more opportunities than ever before to succeed in a big way.

The kind of men enrolled

Presidents of big corporations are often enrolled for the Modern Business Course and Service along with ambitious young men in their employ.

Among the 60,000 subscribers are such men as E. R. Behrend, President of the Hammermill Paper Co.; N. A. Hawkins, Manager of Sales, Ford Motor Co.; William C. D'Arcy, President of the Associated Advertising Clubs of the World; A. T. Hardin, Vice-President, New York Central Lines; Melville W. Mix, President of the Dodge Mfg. Co.—and scores of others equally prominent.

In the Standard Oil Co. 291 men are enrolled in the Alexander Hamilton Institute; in the U. S. Steel Corporation 450; in the National Cash Register Co. 194; in the Pennsylvania Railroad 108; in the General Electric Co. 300—and so on down the list of the biggest concerns in America.

Advisory Council

Business and educational authority of the highest standing is represented in the Advisory Council of the Institute. This Council includes Frank A. Vanderlip, President of the National City Bank of New York; Judge E. H. Gary, head of the U. S. Steel Corporation; John Hays Hammond, the eminent engineer; Jeremiah W. Jenks, the statistician and economist, and Joseph French Johnson, Dean of the New York University School of Commerce.

"Forging Ahead in Business"

A careful reading of the interesting book, "Forging Ahead in Business," will show you how to prepare for the increasing number of business opportunities that are bound to come during the next few years. Every man and woman with either a business or a career to guide to bigger, surer success, should read this book. Simply fill out and send the coupon below.

HARPER'S WEEKLY

WAR AS AN INDUSTRY

THREE years of war have educated the American people to its meaning. We know that war is no longer, if indeed it ever was, an affair of young men with uniforms and rifles going out to shoot the enemy while the rest of the nation carried on "business as usual" and applauded the soldiers on their return. It was Krupp's factories and not the Kaiser's mailed fist or "shining armor" that won the first Belgian campaign. It was the train dispatcher and the maker of railroad supplies that defeated the Russians. It was the two million men and women in the British munitions factories that compelled the German retreat in the west. Even the men actually in the war zone follow the most varied and specialized occupations. He who says "soldier" may mean by the term baker, lumberman, dentist, blacksmith, engineer, electrician, musician, chemist or mechanician. The man in the front trenches is the apex of a great industrial pyramid which includes nearly every trade and occupation known to mankind, with the exception of a few that minister to the luxuries of peace times.

The moral of this for the people of the United States is that we should never confront another war either in the state of unpreparedness which is represented by a small volunteer army or only half-prepared, with compulsory service for the army and no organization of war industry. We must make universal service a reality as well as a name. When the time comes that the other nations of the world will consent with us to a general disarmament this period of training may be devoted to some peaceful service to the community, such as was suggested by that far-sighted American philosopher, the late William James, in his "Moral Equivalent of War." We trust that the necessity for the individual nation to organize its citizenry for the common defense will become as obsolete under international federation as the sheriff's posse has become in cities whose peace is safeguarded by a good police force. But so long as there exists in the world a military menace to our national liberties every one who shares the privileges of American citizenship ought to be taught some useful part in the great industry of war.

Of course the acquirement of a war technic will take a certain amount of time and absorb a certain fraction of the productive energy of the nation. But as some counterbalance to this we must reckon the cost of economic disorganization on the eve of battle. The transition from a peace basis to a war basis at present is a frightful waste not of money only but of time and human ability as well. Thousands of men and women are thrown into the ranks of the unemployed by the failure of their businesses and yet no place has been made ready for them in the industries of war. Skilled artizans and farmers, just the men to feel first the impulse of patriotism, enlist in the army while the fields go untilled and the men at the front curse the lack of ammunition which prolongs the agony of the campaign. New fleets of merchant shipping are built and experienced sailors cannot be found to man them. Coal miners go on strike for double wages, confident that their places cannot be filled. The liquor trade and other parasitic businesses flourish, and the worst class of slackers, the wasters, keep servants and tradesmen busy ministering to their pleasures while the army is short of the most elementary necessities and the poor in the great cities are face to face with famine. All this is true even in Germany, the land which claims a permanent monopoly of every kind of efficiency.

The needs of war time may be reduced to five: men to fight at the front; men and women to supply their immediate needs or to make the tools of war; men and women to care for the needs of the civilian community; men and women to care for transportation, and men and women to "tide over" the enterprizes of peace until the end of the war. All persons in any way capable of productive effort should be enlisted in one of these five national services from the instant war is declared and it should be the primary duty of the national Government to preserve a due balance among them. The first class consists of all the physically sound young men whose civilian work can be taken over by others during the war without economic loss. Ordinary military training should be given to all persons in this group.

The teaching of war technic to the other groups is still to be developed. So far as possible it should be in line with the chosen occupation of the individual, but it might well be given in summer camps or university extension classes and, of course, in schools and colleges, so that the feeling of comradeship and patriotic coöperation might be emphasized as strongly as in the regular military service. Large factories, manufacturing and electrical establishments in particular, would perform a great patriotic service by giving facilities for a few weeks' training each year at the plant in the application of mechanical, chemical and electrical processes to the special needs of war. All agricultural schools should give a course on the proper balance of crops with each other and with live stock when there is a large standing army to be fed according to the standard diet provided by the Government. Railroad men should be instructed in the handling and shipment of munitions of war and every merchant ship should be available as an efficient transport.

Some of the trades farthest removed from military life in the limited sense of the word can be made surprizingly useful in war time with a little special training. The baker ought to be taught the use of the army oven as a part of his business. The veterinary surgeon can specialize a little on the army mule and the cavalry charger. The photographer should be given a little practise in military observation work. The chauffeur ought not to be licensed until he has proved his knowledge of how to repair a military transport automobile or an army ambulance. The jeweler might well

study the officer's field glass and chronometer. Every tailor should learn to make the standard national uniforms and every cobbler to make army boots before necessity compels him to learn in a hurry what he should have known all along. Even the painter has a field opened to his talents in the new science of camouflage.

An objection may be raised to this universal conscription that it would tend to introduce militarism into the whole of industrial life. It would be far more likely to introduce the civilian spirit into the business of war. The nation would simply turn from mere money making to the task of the common defense without any accompaniment of red tape or gold braid, of arrogant officers or "shot at sunrise" courts martial. Every man and every woman, young or old, strong or sickly, would slip into an appointed and duly prepared post of duty; at the hospital bedside, in the camp kitchen, at the telegraph key, at the engine throttle, at the plow, in the coal mine, in the lumber camp, at a clerk's desk in Washington or even the schoolhouse and the hearthside. Wherever work had to be done there would be a man or woman trained *before* the war to do it. This common basis of service would in time become as much a matter of course as going to school and since all would have the share that they were able to perform in the work of the war it would be the logical basis of a common citizenship and a universal franchise.

SPURLOS VERSENKT

RELUCTANT as people are to learn the German language nowadays there is one more phrase that must be memorized. The world has never forgotten the words of Count von Bismarck when he said the European problem would be settled not with diplomacy but *mit Blut und Eisen.* Count Luxburg, Chargé d'Affaires at Buenos Aires, gave equally apt expression to the German spirit when he said that in consequence of the release of German vessels by the Argentine Government the Argentine steamers "Oran" and "Guazo" nearing Bordeaux should "be spared if possible or else *spurlos versenkt.*" "Sunk without leaving a trace"—it is an unforgettable phrase. It will stick in the memory of mankind along with Chancellor von Bethmann-Hollweg's reference to the Belgian treaty as "a scrap of paper." We thank thee, Germany, for that word! "With blood and iron," "a scrap of paper" and "sunk without leaving a trace"—these three phrases give the measure of German militarism by the hight of its arrogance, the breadth of its duplicity and the depth of its depravity. We know now that a German diplomat enjoying the hospitality of a friendly nation will recommend the destruction with all on board of an innocent merchant vessel bearing the flag of the nation to which he is accredited and will send a message to that effect thru the embassy of another neutral nation. It would be hard to conceive of a single act involving more violations of the spirit and letter of international law. And this revelation comes at the same time as the news of the bombing of the American hospital in France and the publication of the letters in which the Kaiser ten years ago conspired with the Czar to conclude a secret alliance and betray France.

The case against Germany can be referred to the world jury without argument for the prosecution. Nothing that has been charged against her by her enemies can equal what she has boasted of herself. Who can deny that the Kaiser means to be an autocrat when he himself claims that his will is law? Who would have imagined that the German foreign policy involved the turning of Texas and Arizona over to Mexico if Foreign Minister Zimmermann had not said it? The German generals have declared that war must be merciless. The German statesmen have bragged of their treachery. The German rulers have gloried in their unlimited power. The German professors have taught that there can be no law to restrain a state. The German poets have praised hatred. The German pastors have preached oppression. The most effective anti-German propaganda has been the translation of German books and papers, the publication of the diaries of the German soldiers and the dispatches of German diplomats. Arraigned before the bar of public opinion Germany brags "Guilty!"

TIME TO STOP IT

THE principles governing freedom of speech in this country are simple, they have been tried out and applied for three generations, and there is no excuse for any misunderstanding about them.

Restless souls, dissatisfied saints, revolutionaries, Fenians and little brothers to the Hun can hire a hall if they want to, and talk themselves tired in condemnation of any law or administrative act, so long as they don't themselves disobey the law or incite others to disobey it while it stands as law. But there is no principle of liberty or rule of law or of morals that entitles them to use public places for such a purpose.

To what extent impromptu meetings and loose talk shall be permitted in public places depends on circumstances and expediences. When the world is at peace and no serious domestic disorders vex, it is often wise to permit ranters to rant. They explode in the open air and do no great harm. Even then, however, the public convenience and safety are first considerations, and it does not follow that gas bombs are harmless in congested places like Union Square or the corner of Broadway and Thirty-fourth street because they once were harmless in Hyde Park.

Much more must public considerations rule when the nation is at war. Then, to win victory, public authority will and rightly may override all lesser rights and interests, always excepting one paramount moral good, namely, the civilization, including the popular freedom, for which alone a war is justifiable. This paramount good requires that even in war we must maintain the right to question in a reasonable and decent way whether the war is justifiable; how long it should be waged, and by what methods; the course of legislation, and the conduct of government. Neither Great Britain nor France has curtailed this right in the present war, and there is not the slightest danger that the United States will curtail it.

But curtail open sedition and overt obstruction of the nation's war activities we must and shall, and it is elementary common sense to hold that anti-war meetings in public places are overt obstruction. If, as war measures, the Government may draft men for the army, commandeer ships, railroads and mines, and fix prices, it certainly may say what goings on are permissible in public places, and what are not.

Anti-war meetings in public places should be stopped absolutely thruout the United States. If force is necessary, use it relentlessly, and never mind then if highbrows get hurt, along with the mob.

THE GERMAN GOVERNMENT AND THE GERMAN PEOPLE

WE believe that President Wilson is both right and politic in his insistence upon a distinction between the German Government and the German people, altho his efforts to do so are met with skepticism in England and with repudiation in Germany. He is right because there is and always has been a considerable element in Germany that detests militarism and all its works and has never approved of Germany's aggressive designs. He is politic because it is only thru the strengthening of this element that any dependence can be placed upon Germany in the future.

In spite of the emphatic and almost unanimous assertions of the German press that the people are a unit and have

perfect confidence in the Kaiser it is evident that this is not true. The Socialist press is as cordial as it could be toward any enemy utterance and, while disappointed that the President rejected the Pope's peace proposals, is obviously pleased to see that he expresses approval of the main points of the Socialist peace proposals, namely, no punitive indemnities, no forcible annexations and no commercial boycott. Even the conservative press by the very fury with which it denounces the President betrays its fear that his words may have an effect on public opinion. For instance, the *Rhenish Westphalian Gazette* in attacking the "pharisaical hypocrisy" of the American note says:

> Mr. Wilson knows that there are people in Germany who are particularly susceptible to such utterances by an enemy, but he is at last seen thru, even by his former friends here, and we can therefore hardly believe that he will have great success in his attempt to influence the feeling in Germany.

No matter how many of Mr. Wilson's "former friends" may now have turned against him we are glad to be assured from such a source that still "there are people in Germany who are particularly susceptible to such utterances." That's all we wanted to know, thank you. That gives us something to work on and we presume that they will be still more "susceptible" by next fall.

The fact that the Reichstag recently voted by a large majority for an immediate peace without annexations or indemnities in spite of the opposition of the Government and the furious antagonism of the Pan-Germanists shows that a strong current of popular opinion is setting in that direction. No other parliament among the fifteen belligerents, except the Russian Duma, has taken so pronounced a step toward peace. Of course we could not accept the terms of settlement proposed by the Reichstag or even the more moderate terms proposed by the Socialists included in that majority, but the first peace proposals presented are never acceptable to the opponent. We must some time begin to talk over terms with somebody in Germany and the only question is whether we shall treat with the Hohenzollerns and the Junkers or with the Liberals and Socialists. Obviously it is our best policy to give as much encouragement as we can to the advances of the popular party, however little their present ideas may suit us. To refuse to treat with any groups of the German people without the approval of the German Government is not to liberate Germany but to fasten Kaiserism more firmly upon it. It is playing into the hands of the enemy, for, as the President points out, Kaiserism is the enemy.

A large part of the criticism of the President's policy seems to be based upon the idea that he is trying to shield the German people from a merited punishment by throwing all the guilt upon their rulers. Now this is an absurd idea, for like much of the criticism directed against the President it assumes that he is an ignoramus. We have had presidents who might have been criticized for lack of acquaintance with foreign affairs, but they had not been teaching the subject for twenty-five years. When a writer wants to refresh his mind on the constitution of the German Empire in order to convict the President of ignorance of this subject he will probably refer to that handy little volume entitled "The State" and perhaps without noticing that its author was Woodrow Wilson. It may fairly be assumed that Mr. Wilson has not forgotten what he then knew about the Reichstag franchise. He knows as well as any of his critics how far that body represents the people and he knows better than any of them who were the active agents in starting the war.

But the question is not who made the war, but who can make peace. Whatever may be the answer to the first question, the answer to the second question is "the German people." Consequently we are not concerned with the Kaiser but with the people. A war is not a court of justice. A war cannot pass upon the guilt or innocence of any one; it can never decide a question of right and wrong. We have no desire to convict or convince Germany. We only desire to make Germany powerless to harm the world. It would not be worth continuing the fighting an hour to extort a document signed by the Kaiser and countersigned by Bethmann-Hollweg, Tirpitz and Moltke acknowledging their guilt, repenting of their deeds and beseeching pardon of God and man. Such a document would be, indeed, "a scrap of paper." If the whole German people or such of them as wished for war should put on sackcloth and ashes and cry "Peccavi!" by the hour it would not make a particle of difference with our peace terms. Such repentance might perhaps alleviate their lot in the next world, but—it may be wicked but that's how we feel—we do not care much to have their lot alleviated. Somehow we do not take so friendly an interest in Germans as we used to and we do not care any more how they feel or what they think. The war against them is to secure reparation for damages and guarantees for the future, not conviction of sin and promises of reform. It would be useless if not hopeless to strive for the latter, but there is a good prospect of getting the former if we encourage that part of the German people who are anxious for a permanent peace.

"ONWARD WITH GOD"

THE Vandelaincourt Hospital, in the region of Verdun, again was bombarded by German aviators for six and a half hours last night. Nineteen persons were killed and twenty-six wounded. The hostile aeroplanes flew over the hospital every twenty minutes from half-past eight o'clock in the evening until three o'clock in the morning. —*Cable to the Associated Press, September 6.*

WHO IS USING THE PANAMA CANAL?

THE report of the Panama Canal for the fiscal year ending July 1, 1917, shows that during the twelve months preceding, 1876 seagoing vessels passed thru the Canal in one direction or the other. Of these 464 were American, 780 British and 632 of other foreign registry. Comparing 1917 with 1915, the first year of the Canal's operations, we see that there has been an increase of 160 per cent in the foreign shipping but a slight decrease in the American. The number of British ships using the Canal has increased by 70 per cent, the Chilean by 60 per cent, the Norwegian by 250 per cent, and the Japanese by 1100 per cent, while the American has lost ground.

It would seem from this that the Panama Canal was a philanthropic enterprize, constructed by the American people at a cost of $400,000,000 chiefly for the benefit of foreign commerce. Yet the fault is not in the Canal. It is our own lack of ships that leaves us in the lurch. Evidently the somewhat selfish anticipations entertained at the outset of the war that American commerce among the Americas would gain at the expense of the belligerents have not been justified by experience. Such ships as we have are absorbed in European commerce and we could use ten times as many. Whether it be peace or war, what we need is a mercantile marine and we hope that the vessels in building for the present emergency will be equally serviceable in after years.

A COMPARISON

"I want America to beat Germany, but I want Germany to beat England," says the half way loyalist.

"I want our artillery to smash the enemy's infantry, but I hope that his aviators will be able to drop bombs on our cavalry."

"I hope that our fullback will win the game and that our left end (whom I don't like) will lose it."

"I hope that our advertising manager will make us wealthy, and that the cashier will run away with the funds."

Partnerships, teams, armies and alliances win or lose as units.

THE STORY OF THE WEEK

Germans Win Riga

The German army has at last delivered its long delayed blow at the northern end of the Russian war front. Riga, for both political and military reasons the most important Baltic port between Petrograd and the German frontier, is now in the hands of the invader. If the season is not too late (for a winter campaign in northern Russia is almost out of the question) and if a sufficient number of army corps can be spared for the purpose we may expect an attempt to reach Petrograd. The Russians can still oppose superior forces to any German offensive, but the Germans hope that defeat and internal dissensions will have demoralized the Russian army to such a degree that no serious resistance will be attempted. The Russian navy, also, is thought to be disorganized and mutinous to such a degree that the Germans may aspire to the naval occupation of the Gulf of Riga and even of the Gulf of Finland, thus dominating entirely the eastern shore of the Baltic and making easier an attack on the Russian capital. Even if the Germans decide not to push their advantage further this autumn the capture of Riga is important. It "restores" to Germany an old Teutonic settlement, which is at the same time one of the largest cities of Russia, and it puts new heart in the civil population of Germany which may prolong their endurance of the privations of war for months. If not the most important, it is the most spectacular success that Germany has won since the collapse of Rumania nearly a year ago.

As usual, since the revolution, the official despatches of the Russian Government admit to the full all that can be claimed by the victorious enemy. We learn from them that the Russians were driven back on a forty-mile front. This gave the Germans not only the city of Riga but a considerable extent of territory beyond the Dvina (or Düna) River. On other parts of the front the week brought very little change. Mackensen's Rumanian campaign has apparently been suspended for a few days so that the Germans could concentrate their resources in the north.

THE GREAT WAR

September 1—Germans sent to reinforce Austrian lines on the Carso front. Mackensen gains in Rumania.

September 2—Russian Government crushes monarchist plot. Germans cross the Dvina. Twenty-three British ships sunk during week.

September 3—Riga falls to the Germans. Chatham bombarded in great air raid.

September 4—Russians retreat in the north. Italians drop bombs on Austrian fleet.

September 5—Germans bombard London. Italians resume battle in the Julian Alps.

September 6—German warships enter Gulf of Riga. House of Representatives passes $11,500,000,000 war bond bill. American hospital in France attacked by air raiders.

September 7—French ministry resigns. President Wilson proclaims embargo on precious metals.

September 8—Austrians halt Italian drive. French advance near Verdun.

September 9—Austrians repulse Italian attack on Monte San Gabriele. Civilians begin to leave Petrograd.

How Russia Takes It

The loss of Riga would matter but little to Russia if the nation were united in its resistance. But the most that can be said is that Premier Kerensky's Government is still the recognized legal authority of the Russian commonwealth and that it has shown a praiseworthy determination to bring order out of chaos—if it can. The task is a great one. The recent Moscow conference shows that the Government can count on the devoted loyalty of the majority in furthering all measures that may be necessary to repel the invader. But there is more than one disloyal faction with which to reckon. Recent municipal elections in Petrograd, held at the very time that German successes were threatening the existence of free Russia, gave two radical parties, the Social Revolutionists and the "Bolsheviki," control of the municipal council with 73 and 70 councillors respectively. The Constitutional Democrats, a moderate republican party in favor of continuing the war, elected only 44 councillors. The Petrograd Council of Workmen's and Soldiers' Delegates protested against the establishment of capital punishment for military offenses and demanded that the order be revoked.

While the anarchism of Petrograd disturbs the Russian republic a still more sinister menace, altho fortunately confined to a very small circle of conspirators, has appeared in a recent attempt to restore Czarism. A number of arrests were made, including some of persons high in rank and position under the old monarchy. Minister of Justice Yaroudny was forced to resign for his laxity in ferreting out the plot. The Czar himself is safely a prisoner in Tobolsk, Siberia, and the most reactionary of his recent ministers, Boris Stürmer, has just died in prison.

The Cossacks, who have been without exception the most loyal element in the Russian army, are now discontented because the Government has abolished

ANOTHER GLORIOUS GERMAN VICTORY

their special privileges and placed the Cossack districts under the same system of government as the rest of the republic. General Korniloff, the brilliant Cossack commander, is favored in some quarters as a possible successor to Premier Kerensky should the latter prove unable to cope with the political and military difficulties confronting him.

The Advance on Trieste

Will the Italians have Trieste before the Germans have Petrograd? This question is now uppermost in the minds of every student of the two principal offensive movements of the present hour. Austria claims to have checked the Italian advance for the present, but even if this is true the credit cannot go to the arms of the Hapsburg monarchy, since Germany has had to lend troops to strengthen the Austrian lines. During the course of the present Isonzo campaign the Italians have taken 30,672 prisoners including 858 officers. On their part the Austrians claim to have captured 160 officers and 6300 men. It is noteworthy that the check to the Italian forward movement occurred in the Carso region where the German forces are reported to have been stationed.

The hottest fighting of the week has raged on Monte San Gabriele, the last of the chain of peaks east of Gorizia dominating the Isonzo valley. The Italians assaulted this mountain hight but were soon dislodged by Austrian counter-attacks, and since then there has been a continuous struggle for its possession with the advantage inclining toward the Italians. On the Bainsizza Plateau the Italians have made considerable territorial gains, but further to the south, on the Carso and near Monte Hermada, the report from Vienna declares that "the enemy can no longer boast of having gained a yard of ground." The Italians have bombarded Trieste from the air and the sea and claim to hold the Austrian fleet closely bottled up in the harbor of Pola. If the Italian army can overcome the mountain barrier, not only Trieste but Pola will not improbably fall into their possession and Austria-Hungary will be forced to sink or surrender the Imperial fleet or trust it in unequal combat with the Italian navy in the Adriatic.

American Hospital Raided

It has frequently been said that when the American casualty lists began to come in the United States would wake up to the fact of war. We have now an opportunity to test the truth of that belief. On September 6 German air raiders visited an American Red Cross hospital and, either by accident or design, struck it with their bombs. One officer and two enlisted aids were killed and nineteen persons injured, including medical officers, patients and hospital attendants. The Harvard and the St. Louis hospital units were among those that suffered from the bombardment.

The Germans did not single out the American hospital for special attention as French and British hospitals have also been attacked within the last few days and considerable numbers killed or injured. To judge from these frequent raids on hospitals it would appear that the enemy has ceased to respect the Red Cross, but it must be remembered that marksmanship in bomb dropping from a great hight is rarely accurate, and a hospital that is struck was not necessarily intended as a target. The aerial activity of both the Germans and the Allies on the western front is now of very great intensity. Both sides have many more airplanes in use than ever before and neither side has yet been able to attain unchallenged superiority in the air. The French and British seem to have the greater number of aircraft and to win the majority of single combats between aviators, but the Germans are able to keep them busy at the front and at the same time spare airplanes for raids on the chief centers of population in France and England.

Aside from the war in the air the western front has been comparatively quiet, not in the sense that fighting ceased but simply that it has taken the form of trench raids and local attacks rather than any great offensive. French reports indicate that the Germans are planning another retreat in the west, abandoning Belgium as far east as Courtrai and Thourout and flooding and devastating the intervening area in such a way as to check the advance of the French and British troops.

Is Sweden Unneutral?

The most startling of all recent diplomatic revelations has come from the Department of State at Washington which has secured telegrams sent from Count Luxburg, the German diplomatic representative in Argentina, to the Foreign Office of Germany. The remarkable feature of the case is that the messages were sent thru the Swedish legation in Buenos Aires, the Argentine capital. If this was done with the knowledge of the Swedish Government the case is very serious, for it would amount to an act of war against the Entente Allies; but it is more probable that the Swedish Legation in Argentina was acting on its own responsibility.

The telegrams were dated at a time when the German Government had a controversy with Argentina over submarine warfare. The first, sent in May, urged the German authorities either to spare the Argentine steamers now bound for Europe or else to sink them "without a trace being left." The second, sent in July, recommended the German Government not to give Argentina a promise to sink no more ships. As we know, Germany disregarded this advice and yielded to Argentina. The same message referred to the Argentine Minister for Foreign Affairs as "a notorious ass and Anglophile." Another message, sent a few days later, again suggested sinking Argentine ships without leaving any clue to their disappearance. On no previous occasion has any German statesman so shamelessly avowed the policy of murdering all neutrals who dared to enter the barred zone of the ocean

Plots and Mysteries — This is a time of revelations. Ever since the Russian revolution both the Central Powers and the Entente Allies have been unearthing compromising documents and reporting significant official statements. A few weeks ago the German Chancellor accused France of scheming conquests on the west bank of the Rhine even beyond Alsace-Lorraine. The Allies produced interesting evidence corroborating their contention that the military party in Germany had determined upon war early in July, 1914. The new Greek Government revealed correspondence between the Kaiser and ex-King Constantine which proved an early secret alliance between Germany and Turkey and Constantine's wish to aid the Central Powers. Premier Kerensky of Russia made public the offer of a separate peace which Germany had made to the revolutionary Government. These various revelations have received brief mention in recent numbers of The Independent.

Some of this publicity has come thru American channels. Ex-Ambassador Gerard's account of his years in Germany has given the world many interesting glimpses of the shifts of opinion and attitude within the German ruling inner circle during the last three years. Herman Bernstein's despatches, based on the archives of the deposed Russian Czar, have awakened the widest interest in France and England because they show that during the Russo-Japanese War the Kaiser was laboring to bring about a Russo-German alliance. France, altho an ally of Russia at the time, was not to be consulted until after the agreement had been made. In case of a war with England, which the Kaiser seemed to think not improbable, Denmark was to be occupied by Russian and German armies in order to close the Baltic to the British.

Most interesting and mysterious of all is the trial of General Soukhomlinoff for treason. Facts brought out at the trial prove that he, and other conspirators of high rank, deliberately wrecked the Russian army and smoothed the way to victory for the enemy. But Chancellor Michaelis claims that the evidence at the trial also shows that the Czar's wish for peace was frustrated by Russian military officials who disregarded his order to stop mobilization. This phase of the trial has not been made public either in the American or the English press. Even if the contentions of Chancellor Michaelis are verified, it still remains to be proved, of course, that the mobilization was other than a defensive precaution or that Germany could not have prevented war by accepting the Russian offer of arbitration or by restraining Austria. But it is interesting, none the less, as evidence of the utter anarchy that reigned at Petrograd, when the Czar, nominal autocrat of all the Russias, could be openly tricked and defied by his immediate subordinates.

A New Polish Partition? — The Polish State Council, a body established by the Germans to give a semblance of self-government to the Poles even in time of war, has resigned, probably because it was not consulted in the disposition of the Polish regiments in the war zone. It had been part of the German plan to rely upon the well-justified hatred of the Poles and Polish Jews for the Czar and the Russian Government to create an independent Polish army, foreshadowing the establishment of an independent kingdom, to fight the Russians. Of course the Prussian and Austrian Poles were simply a part of the armies of their respective governments and were accorded no special recognition. But the Russian Poles were still, technically, Russian subjects even after the German occupation of the country and could not simply be drafted into the army of the conqueror. Since the Russian revolution, however, the Poles have lost whatever enthusiasm they may have had for the cause of the Central Powers and the experiment of a "national army" from Russian Poland has become a more and more evident failure. Another source of dissatisfaction was the urgent need of reserves to stem the Italian advance on the western frontier of Austria. The Austro-Hungarian Government cast covetous eyes upon the Polish "national army" in the east as a possible reserve force.

Therefore the German and Austrian press has been demanding a new solution of the Polish question and the matter is under consideration by the rulers of the Central Powers. The latest report is that Germany will take enough of Russian Poland to gain a "strategic frontier" in the east. The rest will be joined to Galicia in a new Austrian Poland which will be self-governing under the crown of Emperor Karl just as the Kingdom of Hungary is today. The great advantage of this new arrangement is that Polish troops will become available under Austrian command for use on any front where the needs of the Central Powers may place them.

CAN A TANK CLIMB A TREE?

This big French "battleship on land" seems to be trying it, but the indications are that the tree won't stand for it long

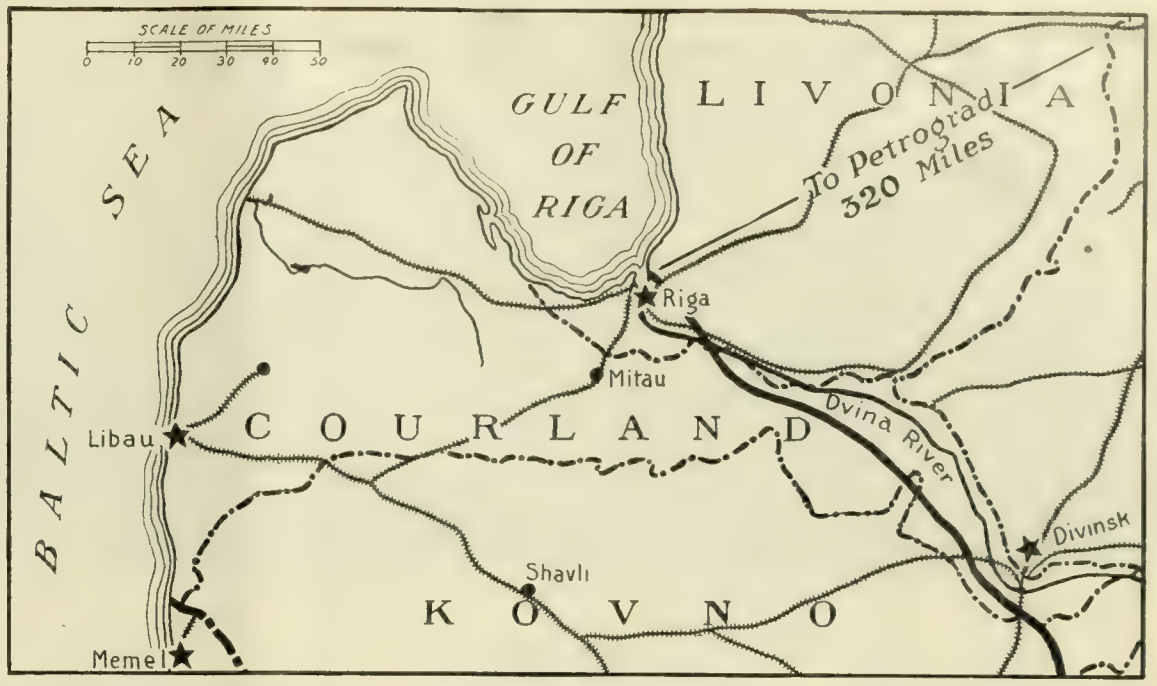
Canadian Politics — Sir Robert Borden remains Prime Minister of the Dominion of Canada. After carrying into law his compulsory military service measure he offered to resign in the interests of harmony and permit the formation of a non-partizan "win the war" cabinet, containing both Conservative and Liberal loyalists. As a coalition with the French Canadians of Quebec was impossible, since they are almost to a man opponents of conscription, he offered places in the ministry to some of the English Liberals of the Western Provinces. The Conservative caucus in Parliament refused to permit his resignation on the ground that he was the best man to head the ministry in such a perilous hour.

Sir Wilfrid Laurier, still opposed to conscription in principle and practice, has declared that "as the bill is now law it is the duty of all loyal subjects to see it carried out harmoniously." While treason has no countenance from the political opponents of compulsory service, it is still openly preached among the people. Thus a mass meeting of French Canadians in Montreal passed a resolution in which was the statement that "if the conscription bill is enforced, Borden and his men will have to suffer the penalty of death." All omens point to a general election in the autumn which will be a straight fight between Conservative conscriptionists and Liberal anti-conscription-

ists and may be accompanied by no small degree of violence.

Colonel John S. Dennis, commanding the western division of the British recruiting station, warns Canadian and British residents of the United States that if they do not enlist voluntarily they will within a few weeks be subject to conscription. Some Irish-Americans have petitioned Congress to exempt them from any law making aliens of the Allied nations resident in the United States liable to compulsory military service on the ground that the British Government has not yet ventured to apply conscription to the people of Ireland.

Birds of Prey Strike England



Since the beginning of 1915 at least 823 men, women and children have been slain on British soil by German aircraft. Thirty raids are responsible for this death list and, of course, there have also been other raids which did not succeed in killing any one or which were kept out of the papers. For obvious reasons the extent of military damage done in these aerial bombardments is rarely disclosed by the British Government, and the statements from German sources are mere guesswork, since it is very difficult for the air raider to estimate with exactness the damage his bombs have done. The moral effect of the bombardments has been far out of proportion to the material effect, but it has been exactly the opposite of what the Germans expected and hoped. Instead of being intimidated or disheartened the British people have been enraged to such a degree that the Government has found it difficult to withstand the popular cry for reprisals in kind against unfortified German cities.

The bloodiest of all the raids occurred on the night of September 3. Six German airplanes followed the south bank of the Thames to Chatham. At Chatham they let fall a number of bombs. They succeeded in striking the naval barracks and killing 108 persons and wounding 92. Most of those killed or injured were naval men. The anti-aircraft guns failed to bring down any of the raiders. The following night there was an attack on London by some twenty machines. From shortly before midnight to one o'clock in the morning forty bombs were scattered over the city. Eleven persons were killed and sixty-two injured; but as some compensation one airplane is reported to have been destroyed off the seacoast. Such a moonlight attack on London has been rare, as aviators have usually selected the gray light of morning for their bombardments.

Back from the Arctic

Donald B. MacMillan and the rest of the Arctic exploration expedition, organized by the American Museum of Natural History and assisted by the University of Illinois, have returned to civilization. During four years the expedition did not suffer the loss of a single man, in spite of the fact that the ship they started to the north on in 1913 had been wrecked on the Labrador coast and that more than one relief expedition was fitted out to rescue the party after their prolonged sojourn in the Arctic had given rise to rumors of disaster. To Captain Robert Bartlett of the steamer "Neptune" belongs the honor of finding the MacMillan party. The isolation of the explorers may be imagined from the fact that altho they had heard from the Eskimos that there was a European war they were still debating among themselves whether or not Paris had been taken when Captain Bartlett found them.

The results of the expedition were rather important; of greater interest to geographers in fact than a visit to the North Pole would have been. "Crocker Land," placed on the maps by Peary, turned out to be only a wonderful mirage, so clear that it deceived the MacMillan party until they tried to locate the place where it was seen. The explorers remapped a large part of the coast of Ellesmere Land and northern Greenland and discovered a new glacier, second in size only to the Humboldt among Arctic glaciers, which they named the American Museum Glacier. They also found some records left by earlier explorers.

ON TO PETROGRAD!

The German army, whose position is indicated by the heavy black line, has taken the city of Riga and crossed the Dvina River on the way toward the Russian capital

Stockholm Conference Postponed

The International Socialist Conference, which was to have been held at Stockholm on September 9, has been indefinitely postponed because most of the Entente Allies had refused to issue passports to delegates from their respective countries. This postponement has also suspended the plans for a conference of women of the belligerent and neutral countries which was to meet at Stockholm. The later Socialist meeting at Zimmerwald, Switzerland, has been thrust into the discard with the Stockholm conference. The last straw that broke the determination of the organizers of the international conference was the decision of the Trades Union Congress not to send British delegates to Stockholm. The vote for the resolution, commending the principle of an international workers' conference but declaring that it would be useless in practise until the workingmen of the Entente nations had formulated their peace program, was 2,894,000 to 91,000.

The Flight of the Doves

The People's Council of America for Democracy and Peace for several days spent carfare and valuable time in a vain attempt to find a place of meeting. After being forbidden to hold their conference at Minneapolis they tried North Dakota, where the Governor was more friendly than the Minnesota executive had been. But the local authorities at Fargo, North Dakota, reversed the action of the Governor and prevented the council from meeting in the town. Hudson, Wisconsin, took similar action. A Milwaukee conference was then suggested, but the Governor of Wisconsin opposed the project. Washington, D. C., was also proposed by some of the pacifists, but a meeting there was not even attempted because of the certainty of police interference.

Only Chicago offered a refuge, and this was against the express wishes of Governor Lowden of Illinois, who declared that he was "satisfied that this meeting was designed for the purpose of bringing on draft riots and obstructing the Government in other respects." Mayor Thompson, however, undertook the responsibility of allowing the hospitality of the city to the People's Council and a short meeting was held there on September 2. Rabbi Magnes delivered the "keynote" speech, which was largely devoted to denouncing the interference of the authorities with free speech. Congressman Mason of Illinois and ex-Senator Weeks of California spoke to similar effect. Various committees were chosen for future propaganda and resolutions adopted for the repeal

Press Illustrating

THE MORNING CRANK

It's not prescribed in official army regulations—this daily drill of "turning over" a Ford engine, but the boys at the ambulance drivers' training camp in Morristown, New Jersey, have come to make it an exhibition stunt

of the conscription act and for an early peace. The Chicago City Council by a vote of 42 to 6 commended the position of Governor Lowden in opposing the pacifist meeting. So far as may be judged from the city press, the people of Chicago are with the Governor and Council against the Mayor and the anti-war agitators.

Loyal Lawyers The annual meeting of the American Bar Association at Saratoga Springs, New York, has been of unusual interest this year to the layman as well as to the man of law. In addition to the discussion on domestic issues, particularly those directly affecting the legal profession, the assembled Bar Association devoted much time to formulating America's grievances against Germany from the standpoint of international law. Among the violations of the laws and usages of war committed by our enemies were enumerated the sinking of merchant ships without summons, the attempt to exclude American commerce from the high seas by proclamation, the destruction of hospital and relief ships sailing under German safe conduct, "grave and homicidal conspiracies against the domestic peace, trade and manufactures of this country and against peace on its borders" while we were yet a neutral nation, wanton devastation of occupied territory by German armies, levying illegal tribute on occupied towns and provinces, the killing of non-combatants, the deportation of civilians into exile and slavery and the introduction of the novel doctrine that a merchant captain defending his ship from submarine attack is guilty of a capital offense. Elihu Root and Charles E. Hughes made war speeches at the sessions of the Bar Association. Mr. Hughes gave a long and interesting argument in defense of the extensive war powers which have been assumed and exercized by the President and Congress and combated the idea that the Federal Constitution imposes narrow restrictions on the use of the military forces of the country. He denied that the force of the Constitution was in any way suspended by the existence of a state of war, saying that "while we are at war, we are not in revolution."

Texas Governor Impeached On August 23 the Texas House of Representatives adopted by vote of 82 to 51 the recommendation of the committee of the whole that impeachment charges be preferred against Governor James E. Ferguson and that a committee of nine be chosen to draw up formal articles of impeachment for the approval of the House. On the following day twenty-one articles of impeachment were filed in the Senate by the committee of nine, all of which had received the indorsement of the House by majorities ranging from seven to thirty-eight votes. With this action, Lieutenant Governor W. P. Hobby became acting Governor of Texas and jurisdiction in the matter passed into the hands of the Senate.

The principal charges contained in the articles of impeachment were that Governor Ferguson attempted to wreck the state university by vetoing the appropriation for its support, that he misappropriated state funds for his own use, that he violated the banking laws and favored a bank in which he was interested and that he sought to bribe the Speaker of the House, who has filed charges against him. The Independent dealt with earlier phases of the controversy in its issues of July 7 and August 11.

The Voice of Labor Much significance attaches to the conference of the American Alliance for Labor and Democracy which met in Minneapolis during the first week in September. It was designed in part as a counterblast to the widely advertised "People's Council," and the refusal of Governor Burnquist to permit the meeting of the pacifist conference was a distinct disappointment to the American Alliance, which hoped to show by force of contrast that their own meeting was the larger, better organized and more enthusiastic.

President Wilson, altho unable to attend in person, sent a cordial greeting in which he exprest the fullest sympathy with the aims of American labor. "I have read," he wrote to Samuel Gompers, chief of the American Federation of Labor, "with real pride the names of the men and women who are to take part in the Minneapolis conference. Not one but has a record of devoted service to fundamental democracy; not one but has fought the long, hard fight for equal justice, braving every bitterness that the humblest life might know a larger measure of happiness." The list of labor leaders, Socialists and radicals who were prominent at Minneapolis is full justification of the President's tribute. In addition to Mr. Gompers there were present Frank P. Walsh, chairman of the United States Commission on Industrial Relations; Charles Edward Russell, back from his mission to Russia; John Spargo, the Socialist author; William English Walling; J. G. Phelps Stokes; Henry L. Slobodin, the New York state chairman of the Socialist party, and Lucien Sanial, a veteran of the Paris Commune who bears the nickname of "the Nestor of American Socialists." The sessions of the conference were harmonious and the attitude of Minneapolis most hospitable and friendly. The fact that a very great proportion of the Socialist leaders most widely known to the nation at large have been forced to leave the party within the last few months, and that with them have gone an uncounted number of the rank and file, has given rise to rumors of the creation of a new radical party which will cut the ground from under the disloyalist and pro-German Socialists who seem to have seized the old party organization.

Raiding the I. W. W. On September 5 the Department of Justice began its drive against the enemies of the country who work within. In many parts of the country branch offices of the I. W. W. were simultaneously raided and books, checks, correspondence, newspapers, pamphlets, subscription lists and all kinds of documents having a possible value as evidence were confiscated. Few arrests were made at the time, altho William D. Haywood, National Secretary of the I. W. W., was arrested in Chicago and released after answering a few questions put to him by the authorities. There is no doubt, however, that the evidence secured will be the basis for many prosecutions. It is said that the agents of the Federal Government have proof that a nation-wide strike with wholesale destruction of property had

been planned to hamper the operation of the draft and the mobilization of the army.

Wheat and Meat The Garfield commission has fixed the price of wheat for the present at $2.20 a bushel. With the first of July, 1918, the minimum price guaranteed by Congress goes into effect, but it was considered necessary to establish a rate in the meantime to encourage production and to limit the price of bread to the consumer. The basic price of $2.20 is for No. 1 Northern spring wheat, or its equivalent, at the Chicago market. This is 20 cents higher than the guaranteed price for the 1918 crop. The price varies slightly with the grade of wheat and with the distance of the market in which it is sold from the main wheat distribution centers. In New York, for example, wheat is priced at 10 cents more than in the Chicago market. President Wilson announces that the established price will be rigidly adhered to by the Food Administration and he warns speculators that the food control act "has given large powers for the control of storage and exchange operations, and these powers will be fully exercised." In making public the conclusions of the price commission "representative of all interests and all sections" President Wilson takes occasion to declare that at his own request Mr. Hoover took no part in the deliberations of the commission, which reached its verdict as to a just price by an independent study of conditions surrounding the growing and marketing of grain at the present time. Buyers at the Chicago Board of Trade were promptly informed by an agent of Mr. Hoover that they would not be permitted to pay more than the legally established scale of prices. The Government has now entered the market and is buying wheat thru its agency, the United States Grain Corporation.

Mr. Hoover has refused to extend the principle of price fixing to other foodstuffs than wheat because such power has not been granted in the food control bill and because European experience has convinced him that price fixing in general does not succeed in its object. "There is nothing," he said, "that can be done to stop the rise in meat prices if the shortage continues, but if we stabilize prices the rise will move at a continuous level." He suggested voluntary coöperation as the only means to this end. The reason why fixing prices for wheat is different in principle is because of the war emergency that demanded the exportation of thirty per cent of the American crop and the danger that a sudden end to the war might knock the bottom out of the wheat market by releasing great stores of wheat produced in foreign countries and held up at present by war conditions.

In the Stock Market Prices of stocks in the New York market declined on Tuesday, the 4th. The Exchange was closed on Monday. In the preceding week there had been a continuous downward movement, and this culminated on the 4th, when more than a million shares (1,099,475) were sold. One cause of the decline was an advance of the call loan rate to six per cent, due to a large decrease of the banks' surplus reserve. There was war news of both kinds, depressing from Russia and favorable from Italy and the western front. Rejection of extreme tax propositions in the Senate was apparently ignored. Railroad shares were exceptionally weak. This was unexpected, as for a long time they had shown more firmness than the remainder of the list. A leader of the movement was New York Central stock, because the company's report disclosed a net earnings decrease of $780,000 in July. This must be called exceptional, as a report for 106 roads from the Interstate Commerce Commission shows an average net increase in that month of $13 per mile, or from $451 to $464, while gross revenue per mile has risen in one year from $1244 to $1409. But all the railway stocks went down, some of the day's losses being as follows: New York Central, 4⅞; Union Pacific, 4¼; St. Paul, 3; Reading, 2¾. Industrials followed them, with reductions ranging between 1 and 4 points. Nearly one-third (353,000) of the shares sold were those of the Steel Corporation, and their net loss was 4¾.

The 5th was another million-share day on the Exchange, with more or less recovery thruout the list. There was no additional news to which the change could be ascribed, but the interest rate on call loans had fallen to four per cent, and there was evidence that the preceding day's reductions had attracted new buyers. More than one-third of the day's trading was in Steel, with a net addition of 3⅛. Gains for other industrials were from 1½ to 4. But the railroads lagged behind, altho the prices of all of them moved upward. Tuesday's loss of 4⅞ for New York Central was reduced by only ½; Reading's gain was only ¼, against a loss of 2¾; and 1⅜ was taken from Union Pacific's 4¼. The price movement on the 6th, when the market was narrowed to 656,000 shares, and the net gains of industrials (motors and Steel excepted) were from ½ to 2½, indicated that recovery of railroad stocks from the severe shock of Tuesday would be difficult and slow. Almost without exception there were losses for these stocks, reduction of 1½ for New York Central, 1½ for St. Paul, and ⅞ for Reading making the prices lower than those of the 4th. Shares of prominent motor companies were weak, one losing 5 points and another 3. Steel Corporation stock advanced for a time, but fell again, and at the close could show an addition of only ⅛. In three days 945,000 Steel shares had changed hands.

ITALY STRIKES

THE ITALIAN ARMY IS ADVANCING ON A BROAD FRONT FROM TOLMINO TO MT. HERMADA WHILE THE NAVY IS CLOSELY INVESTING THE WHOLE ADRIATIC COAST. THE IMMEDIATE AIM OF THE ITALIANS IS THE CAPTURE OF TRIESTE, BUT BEFORE THEY COULD SAFELY ADVANCE SOUTHWARD THEY HAVE HAD TO CONQUER THE HIGHLANDS EAST OF GORIZIA. MEANTIME BRITISH AND ITALIAN MONITORS HAVE BEEN BOMBARDING VARIOUS POINTS ALONG THE COAST AND HAVE CONCENTRATED PARTICULARLY ON TRIESTE AND POLA. THE TOTAL AUSTRIAN LOSS DURING THE FIRST FORTNIGHT OF THE CAMPAIGN WAS ESTIMATED AT 120,000

AVANTI SAVOIA!

What Italy Is Fighting For

BY AGOSTINO DE BIASI

EDITOR OF THE ITALIAN REVIEW "IL CARROCCIO"

THE soldiers of the Greater Italy are victoriously advancing in their offensive on the Isonzo and the Carso fronts. Trieste will undoubtedly soon be Italian in any event. But the winning of the unredeemed city is not Cadorna's only object. His is a work of exceptional military importance, for a parallel to which we must go back to the battle of the Marne and the German campaign in Russia and Rumania.

Cadorna is the general of that Italy which fights not only for herself but for her allies, for the magnificent cause which has prompted the United States to go forth and make the world safe for democracy. Cadorna is a wise strategist and leader who, on the field of battle, like the enemy (except only for the ruthless methods of warfare practised by the latter) seeks the true solution of the Italian war and of all wars.

Cadorna is, without a doubt, the most broad-minded strategist and the coolest, the most inflexible soldier revealed by this immense struggle. He strikes at the heart of Germanism; his immediate object is to batter down the barriers of the Alps and to open the road to Vienna, not altogether new to the Italian soldiers whose forefathers gloriously trod it under Napoleon.

Drawn for The Inaependent by Joseph Stella

If the fortune of war smiles on the Italian Army the world will witness Austria-Hungary defeated and humiliated; then no longer will the peace of Erzberger be spoken of, but only that peace which must be the result of this atrocious war, that which must forever crush Teutonic militarism and spell the end of the insane dream of hegemony which, with Austria, Prussianism has dared to attempt by means of the *Drang nach Osten.* At present it is admitted by all that the Allies look to Italy alone to carry out an offensive which may have a tremendous effect upon the outcome of the war, either should the offensive be decidedly successful before the approach of winter, or if Italy should hold the conquered mountain ranges, which can most certainly be done until next spring.

It has been said that at the outset Italy had two foes to conquer, the mountains and the Austrians, the former the more formidable. The mountains now are virtually conquered, and, as for the Austrians, the Viennese *Neue Freie Presse* assures us that the Italian offensive has been and is victorious and that if these successes continue the Austrian defense will be gravely imperiled.

This is the supreme moment for all the Allies to support the Italian campaign over the Isonzo and in the Adriatic, and to assure Italy, which fights for the final great victory, that the legitimate aspirations of her heroic and gallant people will be recognized. Those aspirations cannot be denied to a nation that for her ideals, which are one with the fundamental interests of her national unity and of her maritime and territorial liberty, is willing to be bled to the last drop of blood of her four million armed sons.

It is evident that Cadorna's movements aim at a thoro crushing of Austria. A fallen Austria means the bringing of the Prussian colossus to his knees. The unredeemed Italian territories, gained *manu militari* and not merely thru giftly diplomatic concessions, would cause the shattering of Karl I's empire. Austria is not a nation, it is an autocratic monarchy, an agglomeration of different nationalities bound together by the cunning of a reactionary monarchy, a patrimony of the Hapsburg dynasty and today an evident and positive offense to the most elementary sense of democracy.

It is of no avail to batter down Prussianism. Prussianism must be crushed so completely as to prevent any future return to power. It will grow again and become once more powerful if sustained by the left-over Viennese empire. It is clear, then, that Austria must be dismembered. It is clear that Cadorna's program should be most decidedly adopted by the Allies and that it should meet the approval of all the Americans who have resolved to defeat Germany. *Germania debellanda, Austria delenda.*

It is necessary to explain here what is meant in Italy by the dismemberment of Austria. It does not mean to conquer Vienna and Budapest and erase the entire empire from the map. This would be an absurd and grotesque proposition. To dismember Austria means:

Firstly, to compel her, at her own expense, to give the most legitimate and just satisfactions to the peoples who are fighting to liberate their oppressed brothers from the Austrian subjugation.

Secondly, to restore Serbia to the fulness of her rights and to the just limits of her aspirations. Serbia cannot be sacrificed, or otherwise why have we shed so much blood to defend her from Austrian aggression?

Thirdly, to recognize the rights of Italy and Rumania. These nations joined the cause of civilization because their principles of liberty made them lean toward that side. Obedient to their most generous impulses, they threw in their lot among the defenders of justice despised, of liberty trampled, to assure the world of a better future.

But it is just to state that, besides the cause of justice and liberty, each nation has also its own particular aspirations. Perfect harmony exists between the ideals for which the Entente is fighting and for which the United States have joined the Allies, and the historical rights which they could not well renounce without proving themselves to be unworthy of the task at which they have set their hearts and of the same principles for which four-fifths of the world are fighting against the modern Huns.

Hence the determination of the Italian and Rumanian peoples to bear whatever sacrifice may be necessary until complete victory [*Continued on page 410*

WORKING OUT THE MARRIAGE PROBLEM

THIRD ARTICLE IN "THE GAP BETWEEN TWO GENERATIONS"

BY HARRIET ORNE

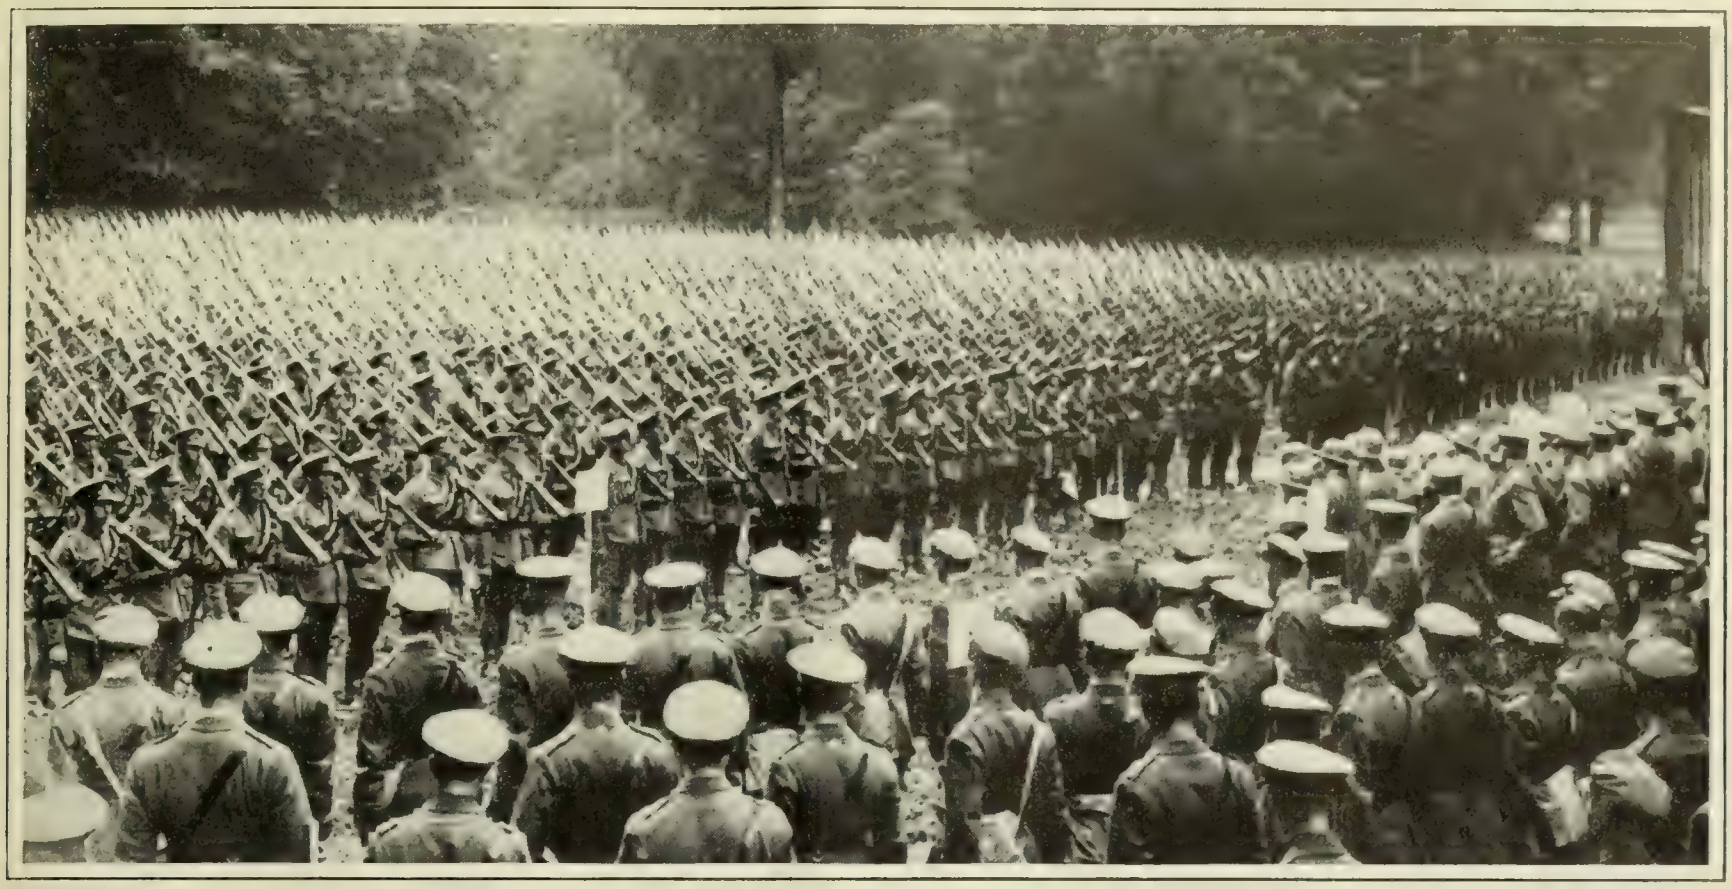
THE gap between the thought of my mother's generation and the thought of my generation is made apparent, even obvious, in our respective attitudes toward two great problems: the problem of labor and the problem of marriage. And because this is true it is important that conservative mothers should be able to understand their radical daughters. For the daughters may need advice and the sympathetic aid that only a knowledge of the world's discipline and a mature experience of life can give. But these daughters, whose value to the world will be incalculable if their energy and idealism be not thwarted and misled, these daughters will never ask advice—will never even take it when it is offered—from parents who do not understand their point of view or who are intolerant of it. Perhaps the story of my girlhood and of my struggles with the great problems of life, problems that my athletic and vigorous education had prepared me to solve in the new way, will enable a few mothers and daughters to understand each other better and help each other more.

Progressive women of my mother's generation had outgrown, I think, the ancient conventional idea that women should be married because there was nothing else to be done with them or because they were not good for anything else. At least I know that my mother, who was a conservative in many ways, never considered marriage an end in itself whether it was happy or unhappy. She, and the other women of her generation who were really thinking, had made one big step upward to the idea that a girl had better earn her living than marry a man without loving him. They supposed that sooner or later most girls would fall in love and that they should wait for the right man. But, having found the right man, my mother and her friends considered it the duty of the woman to forfeit all claim to a personal and individual life with active and purely human interests and to offer herself up as a sacrifice of sweet savor, if possible, but a sacrifice anyway, on the altar of a husband's whims and desires.

THE fact that the women who made the most sacrifices and effaced themselves most effectually for the benefit of their husbands were by no means the women who retained the companionship and affection of their husbands on the most agreeable terms seems never to have been noticed by women of my mother's generation. The world of my mother's generation discounted the value of a woman's fully developed personality, the human value of it to herself and to her husband. If her husband's purse was heavy she was to make bridge whist, calling and pink teas her lifework. If his purse was light her vocation would be general housework. The fact that she might be temperamentally unfit to make the most of either of these economic opportunities and yet possess all the qualities that would make a man happy was not accepted. They did not consider it absurd to demand that every woman should be willing to do one of these things or else forego love and marriage, altho they would have considered it worse than absurd to demand that every benedict become for all time either a farmer or a carpet knight.

THIS was one of the ideas against which I rebelled as I grew up in the world in which my mother lived and learned to know her and her friends not simply as my elders, but as women. I realized, of course, that most women, like most men, cannot choose the kind of work which they will do. They work because they must and they do what they can. We do not live in Utopia. But wherever a choice would be possible it seemed to me to be foolish to demand that for conventional reasons a woman should do distasteful labor all her life and fail to contribute the excellence she might have contributed to life thru the natural exercize of natural ability. Therefore, when I chose my lifework I chose it because I thought I could do it better than I could ever do anything else and with more satisfaction. And I chose it for life. This was very amusing to my mother's friends.

"Why do you take life so seriously, my dear?" they would say. I told them that I wanted to make my life count in the world in my own small way, that I wanted to be the biggest and best kind of a person that I could be. "But what is the use of working so hard?" they queried. "Your father can support you now and later you're sure to marry and give it all up, you know. One cannot be married and accomplish anything, you know." I knew that many of these women, as a result of being married, did not accomplish anything. I knew that most of them had little to show for the long days of leisure that the work of their husbands had paid for. Several of them had never brought children into the world and had done nothing useful at all with their lives unless serving on committees in clubs and contributing their husbands' money to charity can be called useful. Some of them had made sorrowful failures of marriage and others had won from it nothing more than an income and a dull, "provided for" sense of satisfaction. I thought of all these things when these women talked to me. But I did not blame the women overmuch. They had been trained for just this sort of thing and nothing else. They had not been permitted to develop any initiative, which was a pity, for most of them had both good brains and good hearts and would have achieved greater happiness if they had only been allowed to do something with the good gifts that God and Nature had given them. I thought of these things, young as I was, when I answered them.



I said that I did not know that I ever would marry. I had not seen many marriages that made me want to risk it. I said that I would rather work all day than play bridge whist all day and that if a married woman could find time for the one why not for the other? And I added that I would go on with my work whether I married or not. They told me that I should never be able to make a man happy if I carried out my selfish ideas. "Would you ask a man to give up his profession and all of his human and personal interests in order to marry you?" I asked. "That's silly," they said, "women are different, you know." "They are human," I answered, "and they have a right to choose the kind of work they can do best. If marriage makes it necessary for me to give up my work, then my choice is restricted, for I can marry only a man who can 'support' me. But I don't need to be supported. I can earn my own living. I want to be loved, if I marry, and mated to a man who is a partner. I want to be his equal partner. Otherwise I don't want to be married at all. There's nothing in it for me except on such terms. And I don't want to feel that my choice is limited to men with good incomes, men who 'can afford to marry.'" The ladies were bewildered. "No man with self-respect will let his wife work for a living!" they said. "Won't he?" said I. "Well, what about Fred Valentine and Tim Jones? Tim is a splendid chap and everybody likes him, but Mabel works for her living ten hours a day, cooking, sweeping, making clothes, taking care of two babies, and sometimes she is so tired that she falls asleep in the parlor after dinner while Tim is talking to her. And Ethel Valentine does just as much!"

"OH, but it isn't working for a living to work for your husband and family," said the ladies, "it's quite, quite different. Timmy and Fred really support their wives, you know, and would give them more if they could. It is only because they are young that Ethel and Mabel have to do so much. Later the girls won't have to work."

"But the point is," I said, "that they really are earning their livings just as I would be if I married and went on writing. But I should be doing my own work, developing my personality and getting fair returns, while Ethel and Mabel must do as much or as little as is necessary to make up for what their husbands earn or do not earn. As I see it it's all the same thing." They would smile at me knowingly and call me "unfeminine!" Then I would say that I thought it was better to be a real live woman busy and happy in the world than to be always wondering whether a thing was "feminine" or not.

"Wait till you are married," they would say. "You'll find out that a man won't let you do the work you are doing now. Men don't like their women to work." "That may be," I agreed, "but all of them except a very few rich men must let their [*Continued on page 442*

THE STARS AND STRIPES SALUTE KING GEORGE

CONFESSIONS OF A WESTERNER
And What He Sees in New York

ALTHO I lived the eleven most interesting years of my life in a little town which is farther from New York than Paris is from Constantinople or Sweden from the Sahara, I have mastered the folk-ways of the East and find myself quite at home in the most beautiful European city west of the Atlantic. I can cross Fifth Avenue with the ease and dexterity of a submarine passing thru a mine field and I can rime "coin" with "return" as easily as any poet in Gotham. Yet my thoro acclimatization has not caused me to forget "my little gray home in the West" (it was really painted brown, but no matter), and I still recall certain curious contrasts which imprest me rather strongly when our family migrated from Wyoming to New York.

Some of these contrasts were purely physical. It was strange to find a land where there was not only enough water for everybody but sometimes more than enough, where rain was so common that

"WHY, GRANDMOTHER, IS THERE ANY STATE WHERE WOMEN CAN'T VOTE?"

nobody left town for even a week without taking an umbrella, and where the sun did not shine at least three hundred and forty days a year. In our town you could be fined for watering the lawn outside of certain hours of the day, and this was, before the advent of the automobile speed law, the only law which respectable people ever violated. When I came to New York I respected the Hudson as a mighty river because it never ran dry in midsummer. Again, I was somewhat shocked at the frivolous way in which the Easterners regarded their railroads, combining them with trolley car lines and deflecting them to convenience suburban villages. Out West the railroad was a serious matter. It was not built to connect towns; the towns were built as supply stations for the road. Straight as an arrow the thousand mile track lay across the desert, the monster transcontinental locomotives stormed into town at fifty miles an hour, condescended to stop for passengers, hooted

"I RESPECTED THE HUDSON BECAUSE IT NEVER RAN DRY IN MIDSUMMER"

scornfully and thundered on. It was the most romantic thing in the state, meaning more to the imaginative Wyoming boy than the big sailing ships meant to the New England lad of a generation ago. We did not "run away to sea," but I know more than one youngster who succumbed to the lure of the railroad and ran away from home on a freight car.

I was pleased with many of my experiences. It was pleasant to see something grow besides sage brush, cactus and summer wild flowers, and to make the acquaintance of other trees than the pine, the cottonwood and the quaking aspen. I liked the skyscrapers which required two or three glances to view up to the top. They helped relieve my loneliness at the absence of mountains. (These Easterners have things that they call mountains, but many of them—believe me or not—are less than a thousand feet in hight and grow grass clear over their crest!) But I never could get used to the horse cars and the gas lamps. In our town we scorned gas, which was probably unavailable in any case, and used electricity. I also despised the little copper coins called pennies. Out *our* way nothing could be bought for less than a nickel and we kept pennies only as curiosities. I also missed the big silver dollars, common in Wyoming, and found the crumpled, greasy paper bill an unromantic substitute.

BUT, after all, these physical details matter nothing. The real contrast between Wyoming and New York was psychological. For instance, while New York is quite a flourishing town, with a volume of business and a rapid expansion of numbers which even its rival communities must concede, there is here an almost entire absence of the civic vanity which characterizes the Western city. New York is proud, dreadfully proud, but it is quite content to admire itself, it asks no homage of the stranger. "You may admire if you like," says New York, "but whether you do or not is of no interest to me." The local papers do not point with pride to the growing population or send reporters to ask visitors from Boston if they have anything at home to match the town hall and the new railroad station. New York has no name so poetic as "The Gem City of the Plains," which my home town with its eight thousand inhabitants proudly wears. Personally, I think that a little civic vanity would be a good thing for New York; more people might take an interest in clean streets and clean politics if they cared what the neighbor cities thought. This, however, may be mere Western prejudice on my part.

I found Eastern politics a little perplexing. I was prepared for the sodden conservatism of Tammany and the Albany and Philadelphia machines, altho I still wonder at it. Our bosses out West are quite as corrupt, but they do not prevent things from happening; the reluctance of the East to venture upon legislative experiments and bold reforms makes the Westerner wonder why any one troubles to vote at all if nothing is going to be done no matter what party comes into power. But the radicalism peculiar to the East completely bewildered me. It seems to be limited to individuals with strange, foreign-sounding names who hold the curious doctrine that there is some mysterious link between religious disbelief and socialism, and that if you are connected with what they please to call "the Church" you must be a capitalist. In Wyoming there were believers and disbelievers in particular creeds, but a man who said that he believed in miracles because he believed in a protective tariff or that he could not have faith in the Trinity because he was a "radical" would have been returned to the insane asylum whence he came. Yet here at Columbia I know scores of university students who think, or at least talk, in just that way. They thought it a most amusing paradox that I voted the Progressive ticket and yet confest to a belief in personal immortality.

Another thing I could not comprehend was the [*Continued on page 431*

"THE SKYSCRAPERS HELPED RELIEVE MY LONELINESS AT THE ABSENCE OF MOUNTAINS"

NATIONAL EFFICIENCY

A MONTHLY SECTION DEVOTED TO BUSINESS, PERSONAL AND NATIONAL EFFICIENCY, CONDUCTED IN ASSOCIATION WITH THE NATIONAL INSTITUTE OF EFFICIENCY AND THE EFFICIENCY SOCIETY

THE BEST OFFICE I EVER SAW

BY EDWARD EARLE PURINTON

DIRECTOR OF INDEPENDENT EFFICIENCY SERVICE

HOW to become an optimist: Go to school to Big Business. Whoever has done this knows that industrial leadership rests on the purpose to make everything better and everybody greater. Which facts mean optimism applied and supplied.

When a good but ignorant and therefore sour gentleman bemoans the graft, greed and materialism of the business world, I generally conduct the benighted brother to a spot whence he may view the workings of a great, modern office. He is strangely but fortunately smitten with silence, he departs refuted and crestfallen.

The best features of a dozen laudable institutions are combined in the modern office. It is a library, a training school, a health resort, a laboratory, a theater, a transit company, a battle field, a home, a factory, a service bureau, a religious order and a municipal improvement society.

It is a library—the books on technical and personal efficiency that every worker needs are waiting for him and he is taught how to read and utilize them.

It is a training school—production is based primarily on education and increase of knowledge is understood to provide increase of pay.

It is a health resort—the modern principles of diet, exercize, relaxation, sanitation, home hygiene, prevention of disease, are taught and practised.

It is a laboratory—newer and better ways of doing things are being invented continually, results are all put to a scientific test.

It is a theater—every member of the company knows exactly what he is to say and do on time, in conjunction with all the rest.

It is a transit company—the start and stop of motion is scheduled to the minute, and a time table is furnished to every employee.

It is a battlefield—the whole regiment of workers unite to win the daily war against waste, idleness, carelessness, fatigue, delay and discourtesy.

It is a home—everybody from the president to the scrub woman is made to feel like a member of a big family, with real affection and esteem permeating the business relationship.

It is a factory—the current methods of shop management are applied or adapted, the standards of measuring factory costs and output are made the office guide.

It is a service bureau—all the employees work for each other as well as for themselves, and in their day's routine are impelled by a motive at least partially unselfish.

It is a religious order—the ideals and aspirations of every member of the force are thoughtfully considered, and the earnestness of purpose felt by a monk or a crusader is dominant thru the day's work.

It is a municipal improvement society—the results of high grade work, thought and character in the office radiate to the homes of the workers and the whole community is thereby uplifted.

The best office I ever saw proved the statements in the foregoing paragraphs by its own remarkable organization. Some of the points in which it was unique will be named below. This office employed over two hundred helpers and was the management center of a corporation employing thousands of people and endowed with large capital. Some of the methods and plans may not exactly fit your office, but all are worth considering. The way a man *thinks*, for and about his business, finally makes the business—and the man!

THE organization of this office was modeled after a big factory or department store. The following divisions were established and maintained: Planning and Producing, Advertising and Selling, Investigating and Buying, Inspecting and Storekeeping, Routing and Shipping, Managing and Financing, Billing and Filing, Accounting and Collecting, Typing and Mailing, Educating and Promoting. All duties and responsibilities of each department and each employee were differentiated, standardized, scheduled, posted. All matters were thus confined to the department where they belonged—there was no misunderstanding, no evasion of responsibility.

The new methods of scientific management were applied to the office, as they had previously been applied to shops and factories. Only in the past few years have the means of reducing costs, waste motion and squandered time been available for use in office work. The first book that appeared on scientific management in the office was in the hands of department heads a week after its publication. That example of promptness was typical of the office regime.

Every complete operation was recorded on printed blanks, each department using a different color for quick identification; thus the progress of all business was traced, instantly and accurately, and everybody might know if anybody made a mistake or caused a delay. Each desk was confined to a single operation, and placed in the right order for papers or articles to be handed from and to the adjoining desks quickly and finally. The rule of the clean desk was applied to clerks as well as to officials—only documents and implements relating to one particular job were in view at any time. The psychological effect of absolute neatness on the employee more than compensated for the little extra time that neatness took.

EFFICIENCY standards were created for implements and machines, as well as for employees. For example, in all departments where paper clips were used, this question was asked: "What should a perfect paper clip do and be—and is the kind we now have the best possible?" The consensus of opinion over all departments was that the best clip should be neat, inexpensive, durable, reversible, pliable, free of projecting points, capable of holding many papers firmly, light in weight to insure minimum postage. It was found that prior to standardization no clip in the whole office met more than five of the eight points of merit. A similar condition was revealed in practically all the varieties of office equipment. Each department voted on the tools and appliances preferred, and each worker took a personal pride in using the implement he had thus chosen.

Every cost was pared down to the figure known to be minimum. Thus, a cost-finding expert, employed to analyze and improve methods, revealed the fact that certain letters cost from ten cents to twelve cents, whereas letters of their kind should have cost only six cents to seven cents. The source of this particular waste was complex, including failure to charge the right overhead to cost of letters, lack of instruction of certain stenographers in short-cut devices, absence of speed-standards, temperamental unfitness of some of the typists for their work, needless time spent on letters by officials commanding high salary. When the costs in each department were known to a penny and brought down to the estimate, and by the advice, of experts, the profits almost doubled.

The time of the high-salaried man was saved in every possible way. The only letters dictated personally were those that could not be handled by a correspondence clerk with the help of recent books and courses on Business English together with the use of "form" paragraph books recently published for gaining time in dictation. The head typist under each important official was trained to correct letters for him and given power of attorney to sign routine letters. Automatic telephone call systems were provided to save [illegible] waiting for members of desired conference

MODERN OFFICE EFFICIENCY TEST

FOR GAGING THE PROBABLE EFFECTIVENESS OF THE MANUAL AND MENTAL OPERATIONS IN ANY OFFICE

DIRECTIONS: First read Mr. Purinton's article "The Modern Office." Then grade your office by answering the following questions. Where answer is Yes, write numeral 4 in space opposite. Where answer is No, leave space blank. Where answer is partial affirmative, write numeral under 4 that seems to you fair. To determine your percentage (approximate) in office efficiency, add column of numerals. You could set your office force to thinking advantageously by presenting each official with a copy of this article and office efficiency test.

1. Does everybody in your office like his work and the company he works for? ....
2. Are employees chosen, or transferred, by modern vocational guidance tests? ....
3. Do you embody features of the twelve institutions Mr. Purinton mentions in his article? ....
4. Have you applied to your office the principles of scientific management? ....
5. Is your organization modeled after that of a big factory or department store? ....
6. Are efficiency standards maintained for all implements, machines, methods, employees? ....
7. Has a financial expert reduced every cost to the standardized minimum? ....
8. Have personal time-saving methods been worked out for all high-salaried men? ....
9. Are prizes given, or percentages guaranteed, for improvement suggestions by employees? ....
10. Is every employee thinking for the business or profession, some time each week? ....
11. Has every department head gone over the P. and P. check list of The Independent Efficiency Service? ....
12. Do you maintain a Bureau of Standards and teach employees from a book of standards? ....
13. Have you in operation a system of health counsel and instruction? ....
14. Has the lay-off due to illness been lowered to three days or less a year for each worker? ....
15. Do all employees know how to choose and eat an efficiency lunch? ....
16. Does your office library contain at least 100 books on personal and technical efficiency? ....
17. Are employees taught how to read and study for business advancement? ....
18. Does everybody in the office regularly save at least 5 per cent of his salary? ....
19. Have you created a pension plan, or method of stock-sharing for employees? ....
20. Are 80 per cent of your force earning at least 10 per cent more this year than last? ....
21. Do you fill vacancies by promotions, and train employees to be ready for the place higher up? ....
22. Is it a rule of the office to satisfy the employee as thoroly as the customer? ....
23. Does the office learn something from everybody who leaves, or is discharged? ....
24. Can you state two reasons why you personally are not doing better, greater, more profitable work? ....
25. Have you found in Mr. Purinton's article or text at least four ideas that you can and will use? ....

Total equals your approximate grade in efficiency of modern office principle and methods

Copyright, 1917, by Edward Earle Purinton

who might be anywhere in the building but exactly where no one could otherwise tell. Not only were the highly paid officers kept on work that they alone could do, but every employee was taught to separate manual from mental work and delegate the former gradually to a machine or a lower-priced worker. This principle is now operative in most factories, but has yet to be introduced into the average office.

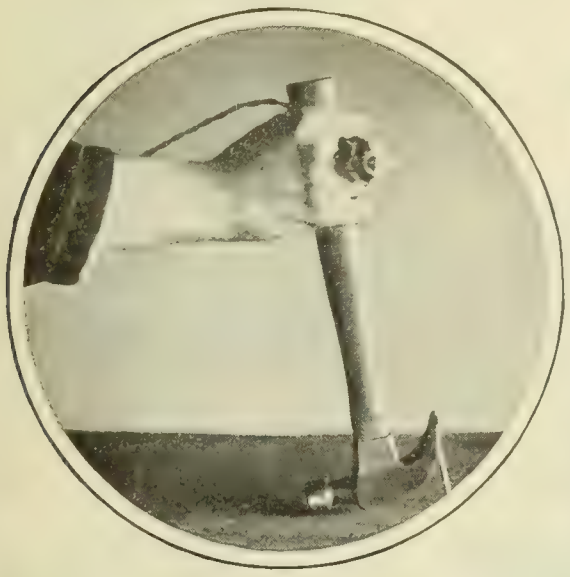
Every worker was given a serial number, and all important work was marked with a rubber stamp for checkup. The office manager said there was no more reason for labeling package goods with the number of the packer, which is done by all good factories, than for designating who did what in a big office; moreover, this saved time, as writing a number on reports and elsewhere took one-fourth as long as writing the average name.

Nothing was left to chance or guess work. The right way to do everything was proved, recorded and announced, in a manner similar to that now characteristic of the best factories. A bureau of standards was founded and maintained, with each department head a member and the whole bureau constituting the final authority on methods of work. A book of standards, containing specifications for the time and manner of every job, large and small, was open to all the workers, after each had been taught from the book his or her standard of performance. This book made impossible disputes concerning methods, mistakes of individuals working haphazard, and loss from errors and delays when experienced operators were absent—the book of standards furnishing duplicate records and specifications which any worker could easily follow. Every process carried on by all departments was completely standardized, as all parts of a high grade machine are now standardized. For example, the manner of typing letters was determined by joint committee for the whole office. The spacing, punctuation, margin, greeting and signature, and other details were made uniform, being based on the principles of economy and psychology now applied to letter writing. Advantages: No waste of time in directing stenographers how to type letters, no waste of money in excess postage, no mistakes or delays from errors of typists thru incorrect or uncertain habits of typing.

A list of the important makes of furniture, tools and facilities relating to each department was kept on file in the department, with tests of new aids to efficiency being made frequently, and prizes offered to the individual whose experiments or ideas produced more and better work. The list was modeled after that originated by the Plan and Purchase Department of the Independent Efficiency Service, and was supplemented by regular reading of the business and professional journals applying to the various departments. These publications were kept on file in the office library, where any employee could conveniently consult them.

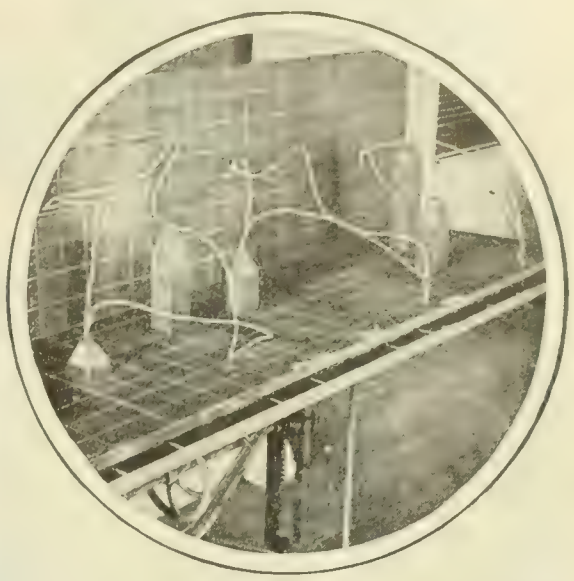
Every office worker, excepting the company officials and department heads, was given a percentage on all savings to the company resulting from a plan or idea suggested by the employee. On this basis, a number of subordinate helpers had increased their income until it almost equaled that of their department heads. One of the young fellows with both mathematical and mechanical ability made his hobby that of collecting all valuable literature about office machines. When a certain type of calculating machine was put on the market he saw its possibilities and arranged for a trial in the office. Under the old calculating method, the average invoice, containing twelve or more items, took about six minutes to check, by men clerks receiving about $18 a week. By the machine method, the average time for checking was reduced to three and a half minutes, by girl operators at $12 a week. In less than two years the entire cost of modern machine equipment, amounting to thousands of dollars, was paid from the savings—and all subsequent savings were clear profit. The young man who first suggested the calculating machine is now receiving what would be in itself a good living from his royalties on the suggestion.

But the smallest economies were equally encouraged. A stenographer who kept her eyes open saw that a number of departments mailed letters frequently that took four cents or six cents postage. She resolved to help cut down this waste. By corresponding with leading paper manufacturers she found that a certain lightweight paper could be well substituted for enclosure publications and also for letters of unusual length. The adoption of this paper eliminated the two cents or four cents needless postage—and the young woman's idea has brought her more than enough to pay carfares regularly.



The comfort of employees was regarded as a commercial [*Continued on page 435*

THE WASTE OF GETTING TIRED



BY FRANK B. GILBRETH AND LILLIAN MOLLER GILBRETH

Monthly Article of the National Institute of Efficiency

Fatigue can be measured by the chronocyclegraph. An electric light worn on the operator's hand records his movements thru a timing device upon a photographic plate

Probably more than one small boy would dispute with Mr. and Mrs. Gilbreth the honor of discovering the use of moving pictures as a means to eliminate fatigue. But moving pictures, used to study manufacturing operations with a view to cutting out waste motions, are a very small cog in the Gilbreth plan for increasing efficiency by reducing fatigue; the "micro-motion" record is supplemented by chronocyclegraph processes of which Mr. Gilbreth is also the inventor, and both are used to determine the methods of industrial education for efficiency. Mr. Gilbreth is the founder of international museums for the elimination of unnecessary fatigue of workers, and the author of "The Bricklaying System."—THE EDITOR.

These chronocyclegraph records modeled in wire were made from the left-hand motions of a drill press operator. They show his actual progress in eliminating waste motions

THE problems of fatigue and its elimination are more important today than ever before, not only because their solution furnishes the best possible means to meet the increased cost of living by greater productivity, but also the most necessary means of preparing ourselves in every way possible for the great conflict in which we are engaged and the international struggle for industrial and commercial supremacy which will surely follow.

Fatigue has, in the past, too often been considered a subject for laboratory investigations. These were supposed to be impractical and "high-brow," and not interesting to the general public. The employer, teacher and housewife considered their duties done if they glanced over the results and recommended to others that they read them.

The time has now come when these investigations by experts must be studied as a patriotic duty as a part of national education in waste elimination, and must be supplemented by investigations that can and should be made by every member of the community. A flag on the front of one's house is an indication of loyalty. An anti-fatigue chair in the kitchen is proof of an attempt to be of national service.

Fatigue is a universal experience, a daily and hourly experience of every one of us; it occurs to us as the result of every kind of activity and even of too little activity; of work and of play. No matter what we do or where or how we do it, fatigue is a byproduct of the activity, and must be considered.

What, then, is this fatigue that is so universal and that is so frequently disregarded? In the popular opinion fatigue is a lessening of the capacity for activity, the feeling of weariness that accompanies or follows bodily or mental activity. To be fatigued is to be tired out, to be incapable of going further.

In observing fatigue, then, or in making fatigue investigations, we look for signs of weariness in the worker. We also look for signs of decrease of some sort in the rate of output of the work or the activity. There may be less work in quantity, or the work may be of a less desirable quality, or there may be a lessening both in quality and quantity.

The world does not realize the enormous waste involved in fatigue. We are coming more and more to realize how to undertake the prevention of material waste. But the whole world, both our country and the nations abroad, are inexcusably ignorant of or unconcerned about the preventable fatigue of the human element daily going on about us. It is to most men an astounding fact when they become aware by actual demonstration that they seldom do in a day one-third of what they *can* do under anti-fatigue conditions and that they almost never do two-thirds of what they *could* do did they but consider the necessities of fatigue. Any one of us would be ashamed to handle any valuable machine with the lack of skill with which we handle our own bodies and minds—our own working equipment.

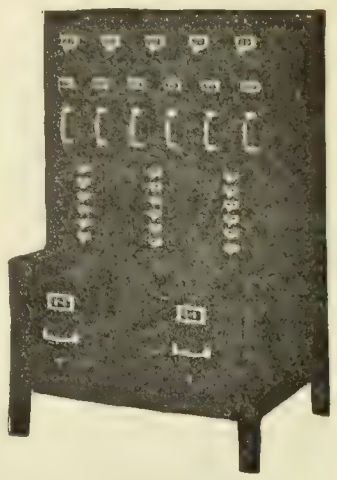
The chart of an efficient stroke in golf

Fatigue elimination in the factory. This workman's cyclegraph shows that he "positions" each piece as he takes it out of the tray and puts it in the machine

We are surprized, also, when we see how many of the stirring issues of today resolve themselves ultimately into fatigue problems. The problem of gaining ultimate efficiency from the worker, that is, of obtaining the largest amount of output possible with the least expenditure of effort and strength, is, in its final analysis, a problem of fatigue. The problem of shortage of labor is closely involved in the problem of fatigue, since in many instances the available labor could handle the required work if provision was made for fatigue elimination. The question of daylight saving, considered so often as involving nothing but the cost of illumination, has, as its more important side, its bearing upon the problem of fatigue. There is scarcely any one who will not agree that night work is more wearing than day work, and this popular opinion is confirmed by the findings of Professor Kent with munitions workers in England. How many of us investigate seriously our relative working capacity at different periods of the day, and so arrange our individual programs as to utilize our greatest capacity with the least amount of concurring fatigue? There are, it is true, many members of the community who "feel assured" that they do their best work "after breakfast," or "at three in the morning," or "after midnight" or "in the middle of the afternoon," but how many of us have ever taken any careful data on this subject?

We all realize that there is a frightful waste thru fatigue:

1. In the consideration of the fatigue of children in school work as well as in the factories where they have been employed. 2. In overtime work, especially for women. 3. In a working day so long as to give a diminishing return. 4. In working under wrong ed conditions. [Continued on page 445



A BETTER DAY'S WORK

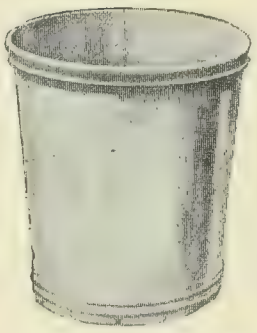
A Shop Window of Standard Business Equipment Selected by the Plan and Purchase Department of The Independent. Write to the Manager of this Service for Information and Special Reports

1. Your safe can be a filing cabinet, too, with fire resistance, burglar protection and all the facilities of compact, efficient arrangement

3. Make up your filing-case of well-chosen units, each one selected to fill a positive need. This one is made of metal

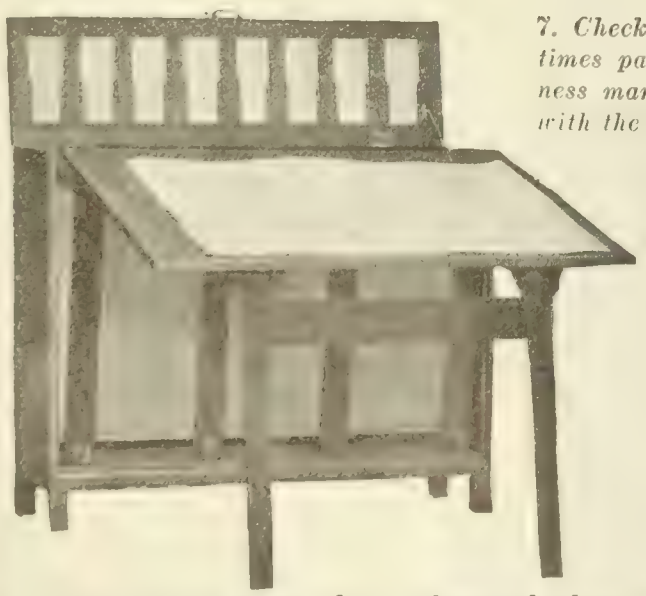
2. Think of the convenience of having the list of your customers' names and addresses arranged so that you can see all the items at once! This device has metal panels hung to a neat, compact holder arranged alphabetically

4. Who opens your letters? If it's done by hand now—try a machine like the one on the left and note the saving of time and labor

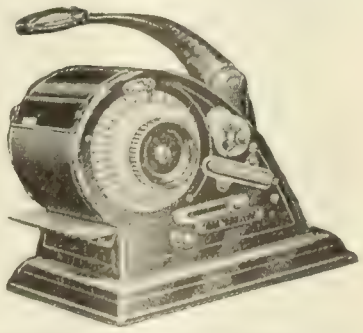


5. The bother and uncertainty of head and pencil calculation are saved by the accurate machine above. Use it for inventory, payroll, cost figuring and trial balances

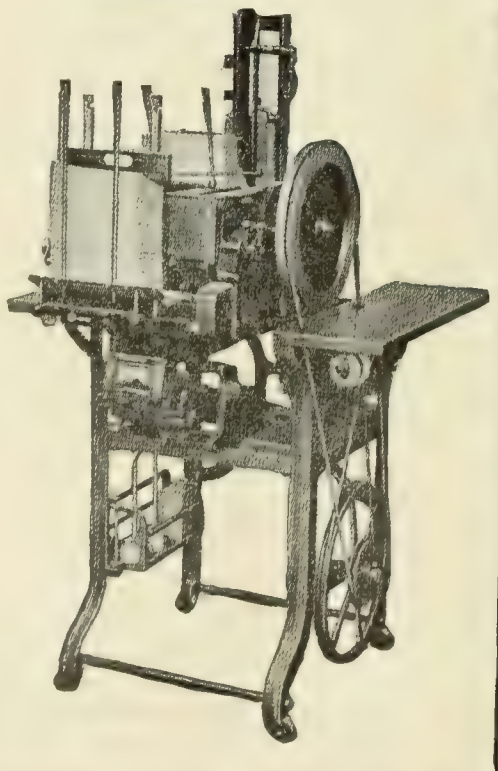
8. This is the last word in typewriter versatility—it has 365 varieties of type—new face inserted instantly



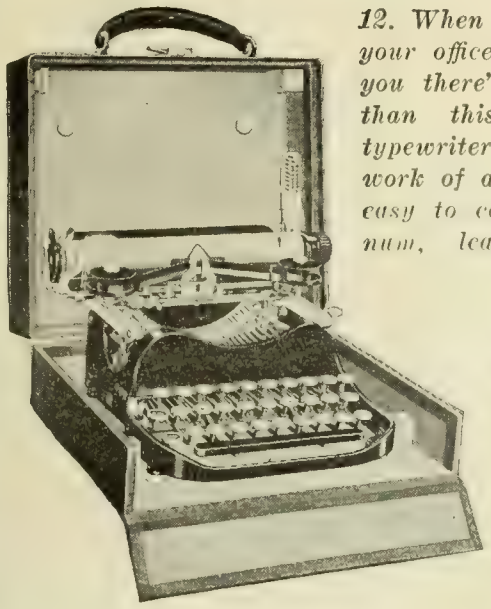
6. Your hand-written message can be instantly and accurately placed before any number of persons, singly or simultaneously, if you use the machine shown above



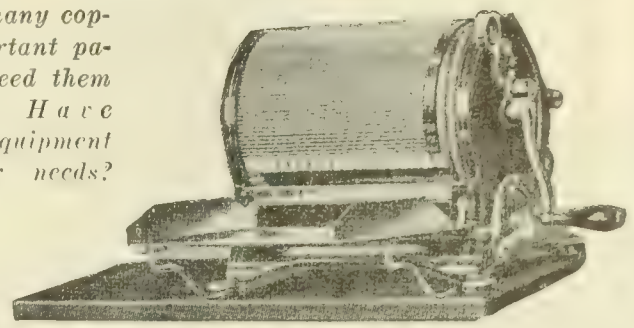
12. Will your waste basket stand up all the time? Is it clean, convenient, safe and indestructible?



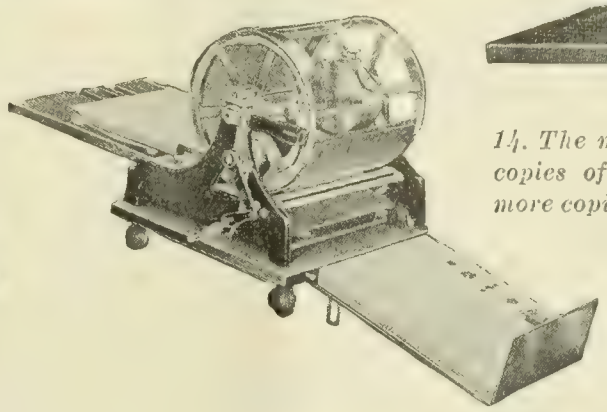
7. Check raising has brought big losses in times past—but today the up-to-date business man knows the value of protection—with the device below you get full insurance

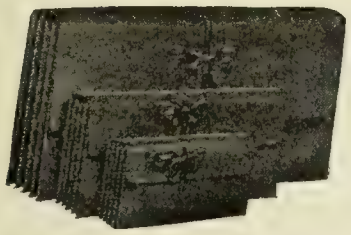


11. Don't roll your maps, charts, plans and other large papers—arrange them for quick reference and speed in finding in a cabinet like this one



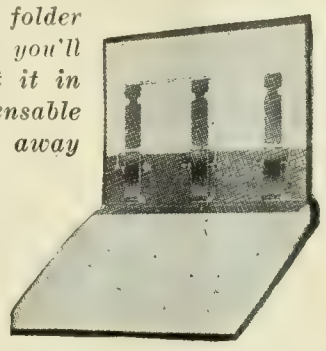
10. At the rate of 7,500 an hour—envelopes or cards automatically fed and addrest by the machine on the right. How many are you addressing now by hand?





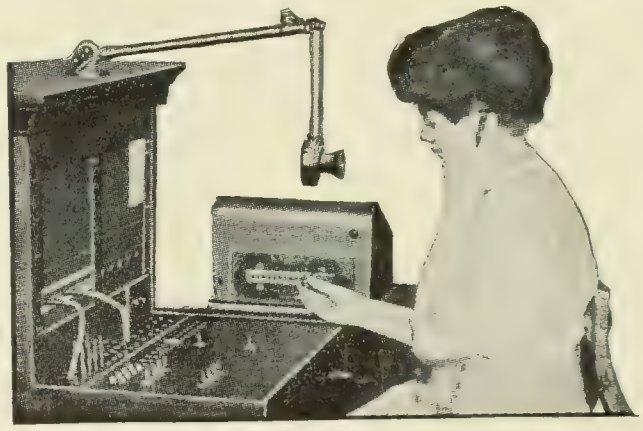
12. When you have to take your office work away with you there's nothing handier than this small portable typewriter. It does all the work of a big one, and it's easy to carry in its aluminum, leather-covered case

13. You need many copies of an important paper and you need them before lunch! Have you this equipment to meet your needs?

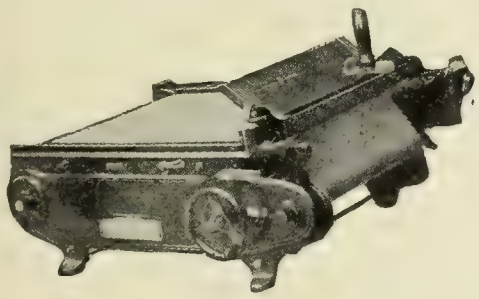


14. The machine on the left will give you 18,000 copies of a paper in four hours. If you want more copies than that in a hurry get two machines

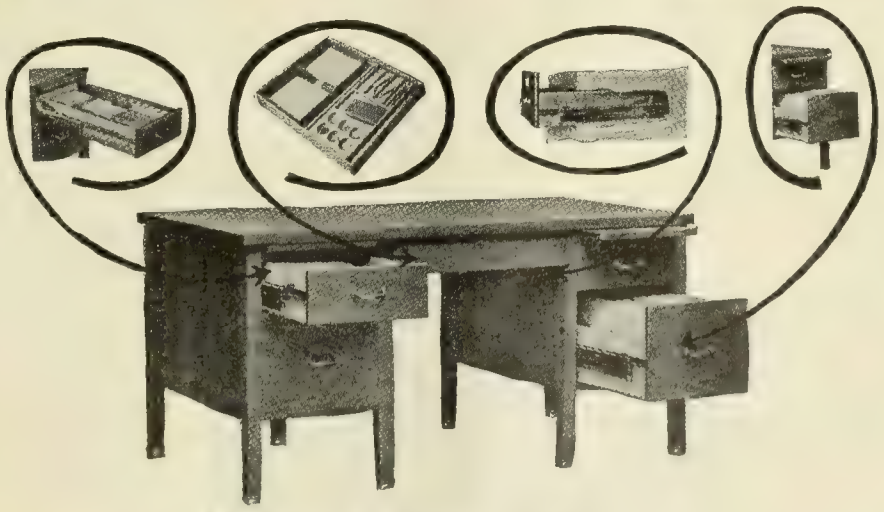
18. The machine below will help you to get speed, accuracy and system in handling orders—and in billing, checking and shipping your goods



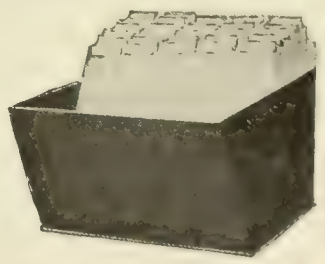
15. There are so many uses for an expanding folder like this that you'll probably put it in the indispensable class right away



17. Smooth writing surface, safe binding and durable stock make a strong appeal to all who use loose-leaf ledgers. The one above is all that a loose-leaf ledger should be

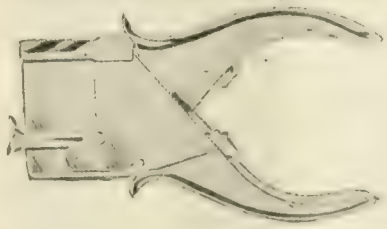


16. Sit right there at your desk and talk to any member of your office force—in another department or in another building of the plant—it's no trouble if you have this telephone equipment

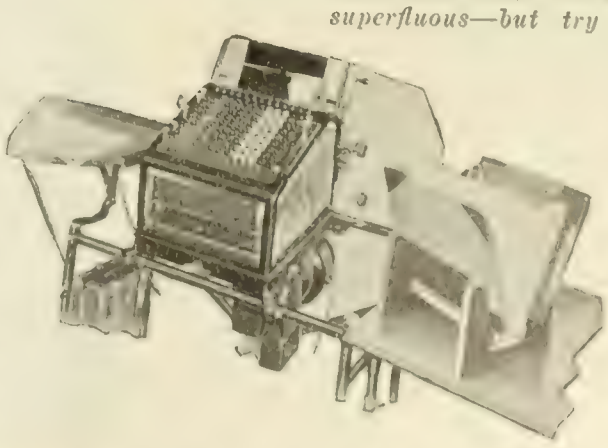


19. Ever try to get your foreman when he was busy somewhere else? To find a man anywhere in your plant, use the device which is shown above

20. This efficiency desk appeals to you doesn't it? You can make it up of just the units that meet your requirements, and nothing else. Made of wood or metal as you prefer



21. If you have not given the sorting box a thoro trial. you may think it superfluous—but try it!



23. There are hundreds of ways to save time and money if you use the adding machine above

24. Below is a binder of papers—from two sheets to six—that uses no wire—a real convenience in many desks

22. Bring your bookkeeping department up to top-notch efficiency with a billing machine like this one on the left

FRANK SCOTT: MASTER OF EFFICIENCY

BY DONALD WILHELM

THE only air currents swirling up Pennsylvania Avenue toward the offices of the Council of National Defense in the hot sultry Washington days at issue here were gusty and discouraging whiffs of criticism and suspicion from Capitol Hill.

On Capitol Hill, in other words, a few Senators and Congressmen in this, the 141st year of the Republic, were still proclaiming, to the discouragement of the big-business volunteers who constituted the Council, the passing idea that all businessmen are created thieves, when Frank A. Scott, chairman of the General Munitions Board, which suffered the worst criticism, got on one of the elevators in the Munsey Building en route home, after a long day with a thousand vexations.

It happened that we found ourselves in his automobile together—a fact worth noting here because it seems possible to gather from the ensuing conversation some phases of the salient character of the man in a way impossible in any amount of description of him.

I suggested that it is strange that in this nation of business a few Congressmen and Senators still hold out for the old order with Congress incriminating business.

"Don't you think," suggested the compact figure in gray, whose vest seemed bursting from his comprest energy, "that we are all impatient for results?"

"Congress is at one extreme fighting business," I argued.

"I wonder if business has ever tried," he questioned, with a certain quiet humor in his gray-blue eyes, "to get around Congress?"

"It seems to me," I insisted, "that instead of enjoying the straight line to national efficiency we've had business at one point, the Government at another and the public held off by both——"

"A kind of sharp-pointed triangle?"

I nodded.

After a bit he resumed: "But I suppose in war, time is the essence of everything——?"

I intimated that I had developed that thought in a magazine article *weeks* before. He smiled, with something of fun in his eyes, and said he had enunciated it in a speech *months* before, and then he laughed: "Good thought, don't *we* think so?"

At this point I counted the proceeds of my interview—and I realized that I had very, very little to count.

So I went back to the old-order triangle of American business vs. Government vs. people: "Congressmen are the worst hecklers," I argued, "after all. I know that many big business men here must get impatient."

"Do you remember those striking lines," he mused after a bit:

> "'Ill fares the land, to hastening ills a prey,
> Where wealth accumulates, and men decay'?"

I took those lines in as we were nearing the Cosmos Club and then I said frankly that he was very refreshing to any man who had been looking lugubriously down his nose all the live-long day. "There are a lot of us, down there in the Munsey Building," I added finally, "who have been keeping noses so close to the grindstone that they're getting pointed and irritable."

He laughed outright—a gay, resonant laugh. "Do you remember," he mused, with sudden earnestness as the car was slowed down, "how Aeneas, sitting on the walls of Troy, said we must look at the tapestry whole to see its beauties at all?"

"You should engrave that on the white keystone over the entrance to the Munsey Building," I said, by way of good-by.

"Hasn't Mr. Gifford practically done that already?" he queried, smiling.

ONLY the next day or so Senator McKellor, who had been making the most of the fact that there is no "cable censorship" for Congress by incriminating the Council all he could, called—it is not improbable that Mr. Scott invited him—to go into the situation and "See the tapestry whole."

Just here it is worth pointing out that it is regrettable that in America as in England "Cabinet" officials and others are not permitted to address the legislators all together.

Doubtless the Senator, with his *a priori* ideas, entered the bare corner office—which is always stripped for action, and has only a desk, a table, a few chairs and a rug—in search of bitter issues, confident that *the* issue was the mental dishonesty of the Council of National Defense, disposed to argue the thing that way.

Mr. Scott greeted the Senator just as he greets everyone—with a quick look that goes intuitively from top to toe—and a cordial hand and word. We can be positively sure of that. And then in a trice we may imagine him saying, "There are a lot of faults in this organization," citing many. "But don't you think, Senator," this persuasively and with a pleasing smile, "that faults like these are to be expected in a provisional organization like ours, which, of course, will have to be changed probably more than once before the war is over?"

One may wonder—and probably the Senator wondered—where in the world is the answer that you can give to a question and attitude, as open-minded as that.

We may *imagine* the Senator saw the "issue" go gustily out of the window.

And certainly we *know* that his record shows he never quite overtook it!

In the weeks ensuing, as in the weeks previous, when the Council and the President were seeking to achieve the reorganization of the Council, which was eventually done, with due regard for the plans ably laid down by Director Gifford, the "big news" in Washington was the story of this reorganization by dint of which the War Industries Board was formed, with Mr. Scott as chairman. Newspaperman after newspaperman—and a few newspaperwomen—knowing well, often, that the only security against admissions and denials is segregation altogether—sought out Mr. Scott, the one man who, it was believed, knew all future plans. Confident, one after another, usually at suggestion of their editors, they went in to chat with this fascinating man only to come out knowing less than when they went in.

Harris & Ewing

MR. SCOTT

I wondered, at last, how this master of efficiency in handling men, "did it." Then along came "A. P." Lambe, who, like Arthur Sweetzer, who is assigned to the State Department, is one of the best of the younger correspondents in Washington—ready, eager, to have "a try." He asked me to see him "do it." And when a long and interesting two-hour chat was over and not a query had, apparently, been "sidestepped" or denied, Mr. Lambe mused, going down the hall to the elevator, "Fascinating man! But do you know, as I think about it, he hasn't told us anything!"

ONE evening, after dinner in a Washington home, Frank Scott stood by the piano and sang!

One day, in his office, inadvertently, he bowled an army officer over, by describing in detail centuries of progress in the making of certain arms.

And another day, rather casually, he drove a group in uniform into desuetude by mentioning the commands and commanders in all the Civil War.

One evening by a hearthstone he "reeled off" verse by the hour.

He took a headlong dive from a houseboat down the Potomac on the Fourth of July.

And came out vigorously, ready for a tennis match!

He can do almost anything, in fact, from buying munitions for half the fighting world to building a camp in the woods.

But the salient lesson he has learned is his simple startling manner of judging, and of "handling men."

Perhaps he has this intuitive faculty because as a newsboy in Cleveland, self-supporting, perforce, at the age of ten, he began his life course in "sizing up" men, by guessing which passersby would buy the *Plain Dealer*, and which the other papers. He saw people, then, from another angle—as a messenger boy; and then as a railroad clerk, then as secretary to the Cleveland Chamber of Commerce, where he went as a freight specialist, then as a banker, treasurer of a trust company, and as receiver and reorganizer of Cleveland's city railroads, then, in all corners of the earth, vice-president of the Warner-Swasey Company.

Back of this efficient faculty of his is a quick and decisive mentality and just the kind of lithe and direct resourcefulness that makes Secretary Baker, and now makes him, fascinating to the President.

He doesn't smoke. Neither does the President. He is never excited. Neither is the President.

His whole makeup is one that cannot deceive of purpose.

That is why, one may guess, especially if the President has anything to do with it, he is destined for wider conquerings.

Washington, D. C.

CONFESSIONS OF A WESTERNER

(Continued from page 424)

attitude of Easterners toward woman suffrage. Here it is a matter of fierce debate, a horrible peril threatening the land or else a daring and brilliant innovation. In Wyoming woman suffrage was so much a matter of course that no one would have called himself (or herself) a suffragist. It would be like referring to oneself as a "nightly sleeper" or "an eater of groceries." Women went to the polls in the same casual and incidental way that they would go to church or market or school. I remember very well when my grandmother was about to return to her home in Texas. She mentioned a few days before her departure the fact that down in Texas she would no longer be able to vote. In those days geography was my favorite school study and I was always curious to hear about the strange customs of distant or barbarous parts of the earth. "Why, grandmother," I said, "is there any state where women can't vote?"

One more contrast I must mention. In Wyoming the Nation was omnipresent. The state was a mere rectangle of territory carved along the lines of latitude and longitude and too young to have traditions, and the city was too small to be thought of as "government" at all; it was just an association of neighbors. Here I find the city and state at every turn, but, except when the postman brings the mail, I have no direct contact with the Federal Government. A large part of Wyoming was included in forest reservations, or national parks; the forest ranger and the regular soldier were as much an everyday sight to the child of Wyoming as the policeman is to the New Yorker (we had no police force, we had only the sheriff); most of the land was still public land, and the State University was largely supported by the federal appropriation for agriculture. For these reasons we were born nationalists and never understood the theory of state sovereignty until we traveled to the East or to the South, where the states, considered as the descendants of the thirteen colonies, are older than the nation.

None of these random remarks should be taken as mere praise or mere reproach. It is not necessary for East and West to resemble each other in all respects, perhaps it is not even desirable. The United States is, if anything, too much alike in its different parts, and San Francisco more closely resembles Baltimore than one Swiss village does its neighbor in the next valley. Yet there are broad differences between the Atlantic coast and the vast continental hinterland, and I, who have lived in both for approximately equal periods, may have felt these contrasts more strongly than most. Some Western views and attitudes still cling to my mind as the rolled R clings to the tip of my tongue, but if I were to revisit the land of my birth I fear that I would fall into the general class of Eastern tenderfoot.

Quaker Oats Loom

Above Your Other Foods In Nutrition and Economy

Consider these facts—you who so keenly feel the rising cost of living.

The oat is a marvelous nutrient. It has twice the food value of round steak, and about five times the minerals. Measured by food units—calories—it is 2½ times greater than eggs.

Equal nutrition in the average mixed diet costs you four times as much. And in some common foods up to ten times as much. Even bread and milk cost twice as much for a half day's need.

Some foods have multiplied in cost. The finest oat food has advanced but little.

The oat has a wealth of flavor. It adds a delight to bread and muffins, to pancakes and cookies, etc. There was never a time when this premier grain food meant so much as now. And it also conserves wheat.

Quaker Oats

Extra Flavor Without Extra Price

You can make oat food often doubly welcome by using Quaker Oats. These flakes are made from queen grains only, from just the big, plump oats. All the little, starved grains are omitted. A bushel of choice oats yields but ten pounds of these luscious Quaker Oats. Yet this luxury grade costs you no extra price.

Among oat lovers all the world over this is the favorite brand. When you order oats see that you get it.

12c and 30c per package in United States and Canada, except in Far West and South where high freights may prohibit

(1695)

IS THE WAR YOUR BUSINESS?

LEADING MANUFACTURERS, DEALERS AND PROFESSIONAL MEN ANSWER THE EFFICIENCY SOCIETY'S QUESTIONNAIRE

A valuable survey of the activities of the members of The Efficiency Society as related to the war needs of the nation, from the point of view of manufacturers, dealers and professional men, and their keen observation on business conditions, is afforded by the returns received in response to the questionnaire recently mailed to all our members. Replies were received from firms and individuals representing many millions of dollars of invested capital and many more millions of annual turnover. Of these, sixty-three per cent are manufacturers, twenty-six per cent are professional men and eleven per cent are dealers.

Seventy per cent of the total are giving direct, active assistance to the Government: the remainder, including those who are aiding indirectly, those who have not yet found a way to serve, and those whose business is not of a kind to be called upon. All these last express a readiness to serve and a willingness to be shown the way; among them are many who have given personal services tho unable to find a way of bringing their business into line. Some who have offered plants and men have not yet received a reply, others have been requested to maintain their organizations as nearly intact as possible. Some are active thru manufacturing organizations and others thru committees representing their special businesses. One firm has purchased new machinery to be ready at short notice to manufacture army and navy underclothing.

The vice-president of one of the companies replying to the questionnaire is a member of the National Council of Defense, two others are members of the Advisory Committee for Airplane Materials, one is a member of the Advisory Committee on Non-Ferrous Metals to the United States Bureau of Standards, another is working with the sub-committee on lumber at Washington, another is serving in an advisory capacity on shipbuilding costs, another is Division Auditor supervising the erection of cantonments, another is with the Division of Valuation of the Interstate Commerce Commission, another is chairman of the sub-committee on Alcoholic Beverages under the Council of National Defense, another is on his County Committee of Civic Relief, another is head of the American Electric Railway Association on National Defense, another is a member of his County Defense Committee on Education, another is a major in the Engineers' Reserve Corps, another is assisting in organization work for the Ordnance Department, another is chairman of his County Committee on Materials, and others are in the Army Medical Corps, the naval service, and the home guard.

GIVING DIRECT ASSISTANCE

Among the businesses represented in the list now working for the Government are auditors, accountants, industrial engineers, sanitary engineers, consulting engineers, educators, lawyers, packers, manufacturers of and dealers in various products of the copper, steel, rubber, leather, cotton and wool industries. Automobiles and automobile accessories, hardware, electrical equipment, waterworks supplies, publishers, real estate agents, founders, bleachers, dyers and concreters, manufacturers of gas and electrical appliances, heaters, lathes, firearms, explosives, army tent duck, electrical protected fuses and transportation are on the list. Expert advice and superintendence is being given at the erection of cantonments, efficient help is being mobilized for various governmental departments, and the problem of soldier insurance is under consideration.

EFFICIENCY QUESTIONNAIRE

1. Is the business organization with which you are connected coöperating with the Government?
2. If so, how?
3. What obstacles, if any, have been met in your firm's efforts to coöperate?
4. In what way is your firm best fitted to aid?
5. What effect, if any, has the war had upon your business?
6. (a) Are you as an individual coöperating with the Government?
   (b) If so, how?

Any manufacturer, dealer or professional man, whose recent business experience is such as will be helpful, or who possesses unused opportunities of service, is invited to answer the above questions, by number, on his own business stationery, and to send his communication to The Independent Efficiency Service, 119 West 40th Street, New York City. This information is gathered with the intention of planning for the efficient use of unused abilities. The National Institute of Efficiency is coöperating in this questionnaire and will present in a later number of The Independent a statement of its war time activities.

WHAT CAN BE DONE

A large number of replies indicate lines of endeavor in which various business and professional men and manufacturing plants are prepared to be of service if called upon, such as cost systematizing and accounting in cantonment work, shipbuilding, munitions plants or general governmental departments; this includes statistical data and tax work, auditing, and supplying efficient men for such work, increase of factory production, general engineering and organization work, reports on health and habits, mailing lists, quantity survey, erection of cantonments, water supply for cantonments, lighting problems, heating and cooking apparatus and road-making machinery. Organizations are ready to supply linings for uniforms, cloth for uniforms, cloth for airplanes, safety razors, x-ray machines, grease, lubricating oils, food containers of glass, signal glasses for naval vessels or for automobiles, photographic material and apparatus, potash and lime. Others are ready to manufacture wooden parts for airplanes or any line of woodworking the Government stands in need of, railway cars, chains, wire, cables, gas for dirigibles (either coal or water gas), tulol, benzol and naphthalene, other coal tar products, and any product of electrolithic processes. Another firm can build dirigible, captive or free balloons or work on the problem of efficient tires for army trucks; another can assist in food products transportation, another can give the use of sewing machines and cutting machines (cloth or leather), another is ready to rust-proof or enamel small or large metal constructions, and several foundries can make castings for airplanes, trucks or tractors.

GOVERNMENTAL COOPERATION

A large percentage of the replies show an interested understanding and acceptance of the difficulties of the Government, thrown suddenly upon its numerous and grave responsibilities, and a feeling that under the circumstances things are going well. One firm says, "troubles are few considering the magnitude of the problems involved." They have one difficulty that is shared with others—delay in placing definite orders. Others note the changes in specifications as a frequent annoyance, others see a lack of decision or of knowledge among those with whom they deal, others find specifications too strict, resulting in the rejection of material on technical grounds (one firm is working with the United States Bureau of Standards to rectify this), others fail to receive specifications in time to make quotations, and some feel that red tape is still in evidence.

It would seem that so far as is possible offers have been cordially met and accepted, but some apparently have not been in touch with the right official. A complaint that seems justified is that information comes thru too many channels and that orders overlap.

WAR'S EFFECT ON BUSINESS

Replies to the question about the condition of business, as affected by the war, fall naturally into three classes—those which have increased, those which feel no appreciable change, and those which experience loss, depression or difficulty. Thirty-six per cent reported an increase of business, thirty-four per cent reported no change (or made no report on this point) and thirty per cent reported either decreased business or listed difficulties tending to lessen profits and to disturb conditions.

In the first class some report that their business has been greatly increased, others feel a slight betterment, while some find business growing larger with help growing scarcer. Some have been helped by the disappearance of foreign competition, others by direct orders from the Government, others indirectly but surely by the increased demand for their products owing to war conditions. Some have found one line of their output increased and another line decreased, notably a firm supplying potash, lime and cement; the first two items show an active increase (for agricultural uses), while the last has decreased because of dull conditions in the building trade. One firm reports that from their point of view the war "saved the whole industry in the United States from bankruptcy"—referring to their own line of manufacture. Larger volume and lower profits are reported by a few. Some report a reduction of civilian business with a greater increase of Government business.

Owing to incomplete reports no generalization can be made of the second class.

In the third class, some report decreased earnings, sales reductions, general decrease of business, curtailment or depression, reduction in volume with an increase in labor turnover. Scarcity of material hampers some, its high cost is troublesome to others, some have difficulties because of transportation delays, others on account of decrease of exports, some find buyers timid, some report a hesitation to start new work and a tendency to restrict that already commenced, some with an increase of costs are not able, because of the laws, to advance their sales prices, some have been much troubled by the I. W. W. strikes, and those who sell on credit feel that that special feature is growing extra hazardous. The universities report a reduction both in teaching force and student body; from one institution 400 students enlisted before registration day.

Pebbles

No, Oswald, even tho the price of paper rises, writing paper will always be stationary.—*Princeton Tiger.*

"Was the dinner cooked to suit you?"
"Yes, all but the bill. Take it back and have them boil it down."—*New York Globe.*

"It is all over," groaned the Kaiser, "the game is up. The American people have decided to put into the war the money which they now spend for chewing gum and penny chocolate!"—*Brooklyn Eagle.*

General—What are you lying here for? Didn't I tell you to stand by my horse till you got further orders from headquarters?
Orderly—I tried to, sir, but I got contradictory orders from hindquarters.—*Cornell Widow.*

Old Convert—I can't understand why the wrist watch is such an object of levity. I'm sure it's a great convenience.
New Convert—Yes. With the old kind, in order to find out the time, I had to unbutton by coat and fish around in my waistcoat pocket for my watch. Now all I have to do is unbutton my coat, fish around in my waistcoat pocket, discover that my watch isn't there and then pull up my sleeve and look at my wrist watch.—*Life.*

Mrs. Simpleton, having been a business girl, was a bit worried over the intricacies of housekeeping.
"I'm having such trouble keeping our food," she confided to her bosom friend. "I bought a real nice looking refrigerator, but it doesn't seem to work well at all."
"Do you keep ice enough in it?"
"Ice!" gasped Mrs. Simpleton. "Ice! I hope you don't think, after spending all that money on a refrigerator, we'd go to the additional expense of buying ice!"—*New York Globe.*

Armand Lavergne in his speeches is laying great stress on his willingness to fight if Canada itself were attacked, but declaims loudly against being asked to go out of the country. He is a volunteer soldier after the fashion of some of those who came in for the contempt of the younger Pitt a little over a century ago. The articles of volunteer enlistment which he was asked to approve of were very precise in their safeguards. The soldiers were not to take the field "except in case of actual invasion," nor put on war rations, "except in case of actual invasion," and so forth. Pitt frowned as he glanced over the articles. Finally he came to that which said that under no circumstances were the soldiers to leave the country. He seized a pen and added: "Except in case of actual invasion."

A story not new, but worth repeating, is once again going the rounds in England. Two bootmakers, whose establishments faced each other in the village high street, were very distinctly rivals. One of them had a son at college, and, in the first week of his vacation, there appeared in the shop window the motto, "Mens Conscia Recti." His rival over the way was for some time a little nonplussed, but, within a few days he rose to the occasion, and there appeared in his window a card bearing the legend, "Men's and Women's Conscia Recti."

This story inevitably reminds one of yet another, equally old, but equally worth repeating. It concerns a man with expanding views, who desired to secure a large home for himself and his family. He accordingly negotiated the purchase of a country mansion, and on being shown over it by the land agent, noticed, over an arch in the hall, the familiar motto which runs, "East, West, Hame's Best." "Yes," he said, at the conclusion of the inspection, "I fancy the house is all right, but Hame's advertisement will have to come down."—*Christian Science Monthly.*

Concrete Highway Bordering Silver Lake, Snohomish County, Wash.
W. C. Bickford, County Engineer.

140 Miles of Concrete Highway in a Single County

The county is Snohomish, Washington. The money was raised by a good roads bond issue. In 1916, 42 miles of concrete roads were completed. This year, 60 miles are building. The remainder of the mileage will be constructed in 1918. Then the county will have a connected system of hard, durable concrete roads built to carry the heaviest kind of traffic. It will save an annual expenditure for repairs amounting to many thousands of dollars.

For a number of years Snohomish County has spent $350,000 annually on roads and bridges. Sixty per cent of this went for upkeep of roads alone—a waste which the people determined to stop. Concrete is now doing away with waste as fast as the mileage can be constructed.

The example of Snohomish County is well worth study by other communities contemplating road improvements. It built roads of solid concrete and laid them out in a connected system to provide county-wide service and eliminated expensive upkeep.

CONCRETE ROADS:
THEIR ADVANTAGES
No Mud—No Dust
No Ruts—No Holes
No Slipping
No Skidding
Easy Hauling
Smooth Riding
Long Life—Safety
Always Ready for Use
Low Maintenance
Moderate Cost

Detailed information about this and other systematic road undertakings will be furnished on request; also, information about cost of building and maintaining concrete roads. Write for Bulletin No. 136. Take this question up with *your* road authorities.

CONCRETE FOR PERMANENCE

THE BIBLE: TEXT-BOOK OF EFFICIENCY

BY M. T. SHELFORD

Dr. Shelford has long preached the gospel of efficiency, both from the pulpit of his own church and in numerous writings and lectures. He sums up here his belief that the great fundamental principles of personal efficiency are the very principles of living which are taught by the Bible; that the mental attitude of the truly religious is exactly the same as that which is demanded by efficiency today.—THE EDITOR.

EFFICIENCY is more than system and personal efficiency is more than being strenuous. Personal efficiency implies an orderly mind and an energetic disposition. It also presupposes knowledge and harmonious personality.

The principles of efficiency are like the principles of music. They are eternal. Musical instinct prompted man to make musical efforts. Slowly a growing knowledge of the theory of music and the laws of harmony, developed a teachable science of music. Wise men have always practised the principles of efficiency. Slowly but surely its ideals are being clearly defined and the fundamental principles arranged into an orderly teachable system.

Religion has a message for the student of personal efficiency. God's great men, whose life stories are told in the Bible, were all practical men. They were human and they made mistakes, but their efforts were well related to the problems of their day. They were men of affairs, and in such instances as they were doing what God wanted them to do they were notably successful.

When God sets his mark of approval on a man we may be sure that he is a real man, a man big enough to fill the place to which he is called. We can study Bible characters in the terms of the modern efficiency movement. We may yet find that the Bible is not only the earliest but the standard efficiency text book. It contains records of success and of failure. A thoughtful student has no difficulty in finding the causes of either one or the other.

WE can not escape the question of the relation of experimental religion to the personal efficiency of men and women of our day. A person who comes to the realization of the realities of his spiritual nature, his true self, enters into a higher realm, filled with new and wonderful possibilities. If he becomes impractical, he has in some way missed the point in the application of his religion to his every day life.

The world has a higher standard for business character than ever before. Ethics and morals are practical subjects today. Religion furnishes the highest ideals and strengthens the moral nature. The personal qualities, so greatly needed in every day affairs, are fostered and developed by a proper exercize of religious instincts. The confidence and energy of efficient personality are the very qualities induced by faith in God and by sincere obedience to his precepts.

In addition to the natural means by which a person may increase his or her efficiency, we would suggest the culture of the spiritual nature. The regular worship of the church, private prayer, and a thoro acquaintance with the Bible will bring rich rewards.

The golden rule is a good business maxim. The fair deal is an efficiency principle. Business gains by honesty. "A pleased customer is the best advertisement." Courtesy and efforts to please bear rich harvests of good will. Good will is important. Religion promotes it. A kind, considerate, friendly disposition promotes prosperity. The spirit of true religion brings it into the hearts of men.

A man who was losing money in the restaurant business asked a friend who was successful in the same line of business how he could get more patrons. The unsuccessful man had an attractive place, he advertised freely, but the people did not come. His friend told him his secret. It was this: "Give your guests a little more than they expect." It was a very simple thing but it was the secret of efficiency. Create a spirit of hospitality. Make each person feel that he is a guest. Then give a little side dish that is not advertised, for good measure. The man did it and found a marked improvement. It reminds us of a sentence from the Bible: "Give and it shall be given unto you."

THE Good Book is full of pointed statements of this kind which have a much wider application than they commonly receive. The person who conforms to the requirements of the Bible is consciously or unconsciously shaping his life according to the principles of the modern efficiency movement.

God is the source of all intelligence and energy. As Sons of God we are made to partake of His nature. We may expect great things of ourselves. Christ promised his disciples: "Greater works than these, shall ye do." Saint Paul felt the force of this when he said: "I can do all things thru Christ who strengtheneth me."

The regenerated man is a veritable power plant. Electricity is not generated in the power house. The dynamo gathers it up and transmits it in usable form. So man, when he is rightly related to God, is able to lay hold on the spiritual dynamics. Intellectual energy is controlled and put at the service of humanity.

Knowledge and skill are not the only elements in personal efficiency. A good character and correct habits are equally necessary. A person must be absolutely trustworthy to attain a lasting success. A good mental and physical condition is also essential to good work.

Religion, properly interpreted, offers definite help along these lines. It was reported in several newspapers and magazines, that the vice-president of a large steel company said that they could have afforded to pay their employees a quarter of a million dollars more than their wages during a period following one of "Billy" Sunday's campaigns. The reason was that so many had changed their habits. The evangelist had induced them to "get on the water wagon." A marked increase in efficiency was the natural result.

RELIGION is not only a corrective agency, it is also a constructive force. It draws out the latent powers and unfolds the personality. Prohibiting things that are harmful, encouraging things that are helpful, and appealing to the finer sensibilities, it is certain to be a powerful factor in the development of an efficient life.

Besides being a corrective agency and a constructive force, it is well to remember that religion is a protective power. To be "converted" implies a change of desires and tendencies that is decidedly to the advantage of any person who has temptations.

Righteousness is compared to a breastplate. It protects. Evil must find some response in the heart or it has no power to tempt. "His strength was as the strength of ten, because his heart was pure."

SUCCESS requires two elements, ability and confidence. Some people have ability but lack confidence. They are like the man who had only one talent and was afraid to use it. He lost his reward. Every man who lacks confidence in his ability to achieve, will likewise lose his reward. He may even do good work but the man of confidence will be apt to receive the fruit of all his labor.

Confidence which grows out of powers that are well trained is commendable. There is no merit in false modesty. To underestimate one's self may be as thoroly unethical as to belittle the ability of some one else.

A vital experience of God's help in the practical affairs of life develops confidence. This is a form of confidence which is above the ordinary. A strong character has been reassured by the oft repeated help, received from the all powerful but unseen source.

Closely related to confidence is the question of faith. "All things are possible to him that believeth." Possibilities multiply in proportion to our faith. On the very lowest plane of experience, we know that the probability of success is far greater to the person who believes that things can be and will be done. As we raise this proposition to higher and higher powers, we reach the very limits of human imagination and still we have not found its final application.

REST and relaxation are necessary to our highest development. Mind and body both require periods of rest. Physical rest is easy to understand and easily practised. Mental and spiritual rest can only be attained by a well placed confidence, either in a person, a system, an organization, or the certain knowledge that we are in perfect control of all the forces and factors which are involved.

Religion offers unusual help just here. "Come unto me all ye that labor and are heavy laden and I will give you rest." It is not a mysterious interpretation, not a reference to some emotion or prick of conscience, which will give one the most comfort from his beautiful promise. It means what it says. A weary person will find help by coming to the Master of the Heart; in worship, prayer and Christian fellowship in sacred surroundings.

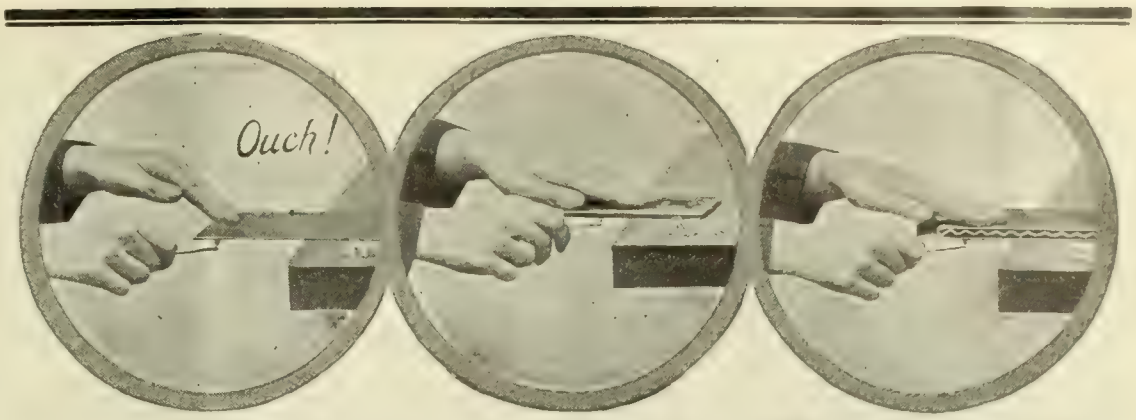
Prayer is a precious privilege. It is not only a comfort to the overburdened heart, but also a powerful factor in practical affairs.

In times of uncertainty we have the positive promise that God will enlighten the understanding. "If any man lack wisdom, let him ask of God, who giveth to all men liberally and upbraideth not, and it shall be given him."

After we have prayed we are in a purer atmosphere. Our minds are clearer. We will reach better conclusions. Often the wisdom comes thru others or in some unlooked for way; but the point is, we are prepared to receive and use it. The eyes of our understanding are opened and we are able to see.

New York City

THE BEST OFFICE I EVER SAW



(*Continued from page 426*)

asset. Noise was reduced to a minimum by the use of felt on walls and ceilings to deaden the sound of machines; typewriter appliances with similar purpose; segregation of all machines apart from the purely mental operations; rubber heels on synthetic soles and heels for shoes of employees; other new devices to save the ears and nerves. A special system of lighting was installed, whereby each desk had perfect illumination by day or night. It was found that a certain combination of the three principal lighting schemes (direct, indirect and semi-direct) would be best for this particular office; the system resulted in saving an hour a day for each employee, and promoted better health and feeling by removing the eye-strain that even slightly poor illumination must produce. The temperature was kept uniform, never going below 62° in winter and rarely above 72° in summer. The initial expense of the heating, ventilating and refrigerating plant was considerable; but scientific tests had shown that the best work was done with the temperature about 65° and that a variation much below 62° or above 72° meant a loss of as much as twenty per cent in quality and quantity of output; the prevention of this loss produced a saving in a few years equaling the price of the automatic temperature plant.

A regular system of health insurance was organized under a corps of hygienists, physicians and psychologists. Every new employee was given thoro physical examination during the preliminary try-out; and reëxamination of everybody in the office was provided without charge once or twice a year. General instructions were given for best daily plans of eating, exercizing, bathing, sleeping and other health-producing habits. Special attention was focused on the efficiency lunch, as experiments showed that the amount and kind of food, the mode of preparation, the time and manner of eating at the noon hour affected the output of the early afternoon as much as twenty-five per cent. The lunch hour was regular for each employee—one of the worst habits of many offices being to send the clerks to lunch anywhere from twelve to two o'clock without regard to the efficiency depending on regularity of meals and consequent good digestion. The office health program of this company cost several thousand dollars a year to maintain, but the saving was much greater than the cost. The average employee loses nine days a year from illness, and the slowing down of activity during several days before and after the illness would mean probably six days more during the year. The average time of employees was worth about $3 a day; hence the annual loss to the company before the health system was organized came to about $9000. Most of this loss was eliminated by the health promotion system.

Daily rest periods of ten minutes each were provided at 10:30 and 3:30—the best factory procedure follows this rule for the increase of efficiency, and the principle obtains equally in office work. The morning period was devoted to an inspiring talk, a thought-provoking plan suggested for improving the work, a report of special advancement or achievement, or some other kind of mental stimulus. The afternoon period was devoted to music or reading or rest or gymnastics.

The desks were all occupied, with work under way, on the stroke of the opening hour in the morning, and no one stopped

Are *all* steel filing cabinets fire*proof?* Not necessarily. Make these tests yourself.

(1) Take any ordinary piece of steel, or even a coin. Apply a lighted match to the under surface, meanwhile touching the top with your other hand. In one instant it is blistering hot. *This is the ordinary cabinet.*

(2) Now apply a similar match beneath a piece of panelled wood—a chair bottom, for example; the match will burn to the end without making the top even so much as lukewarm. *This is the wood cabinet.*

(3) Lastly, apply the same flame to "Y and E" "Fire-Wall" construction. The heat is neutralized by the double steel walls, the air chambers, and the corrugated asbestos. *This is the "Fire-Wall" steel cabinet.*

"Fire-Wall" Filing Cabinets

The only steel cabinets built for real fire protection, with double steel walls, dead air chambers and asbestos—like a safe.

The question of fire-protection is one on which many people are misinformed. If you should blindly purchase steel filing cabinets for your office simply because they were steel, you would be taking unreasonable chances.

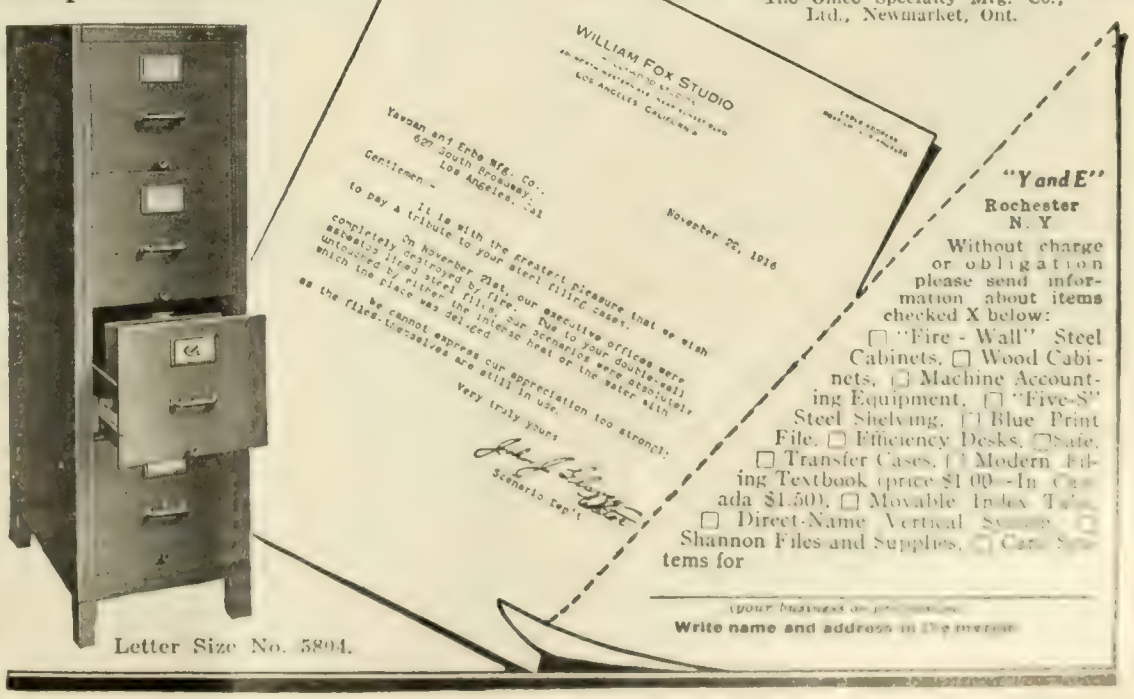
"Y and E" REG. U.S. PAT. OFF.

The construction used almost universally for metal filing cases is *single-wall.* We ourselves make many single-wall products, in addition to our wood and "Fire-Wall" Steel, and are entirely familiar with their relative merits. No single-wall cabinet is equal even to well built *wood* in fire and heat resistance. And *the only kind of steel which is better than wood is "Fire-Wall" Steel*—an exclusive "Y and E" invention found in no other filing cabinets made.

Even a lighted match makes any single-wall cabinet blistering hot in one instant, as shown above. Fire heats the interior like an incinerator, with a blighting heat which chars the contents and withers them to ashes. Wood, on the other hand, is well known as a positive non-conductor of heat. The contents of "Y and E" wood cabinets remain cool and protected until the end, even though the exteriors be all ablaze. If you want files for fire protection you will be safer with wood than with any kind of stock steel cabinets except *"Fire-Wall" Steel.*

The fire and heat resistance of "Fire-Wall" is clearly shown by a test like the third above. "Fire-Wall" construction means *double* steel walls with insulating dead-air chambers and corrugated asbestos between. The principle is the same as in a safe. The protection is supreme and the cost is hardly more than for the better grades of wood.

In addition to this double-wall and asbestos construction, all drawers are equipped with automatic safety latches which lock and unlock *without a key* and keep the drawers shut at all times. Especially valuable as protection when the cabinets are tipped in moving or during a fire. Also the drawers glide in and out on steel "Frictionless" slides. These also are exclusive "Y and E" features. "Fire-Wall" Cabinets in standard sizes for correspondence, bills, legal-cap papers, documents, storage, cards, etc., are offered in olive, oak, mahogany finishes, beautifully executed.



Complete and interesting information regarding this subject is found in our folder No. 2900. Ask for it.

More Space Quickly

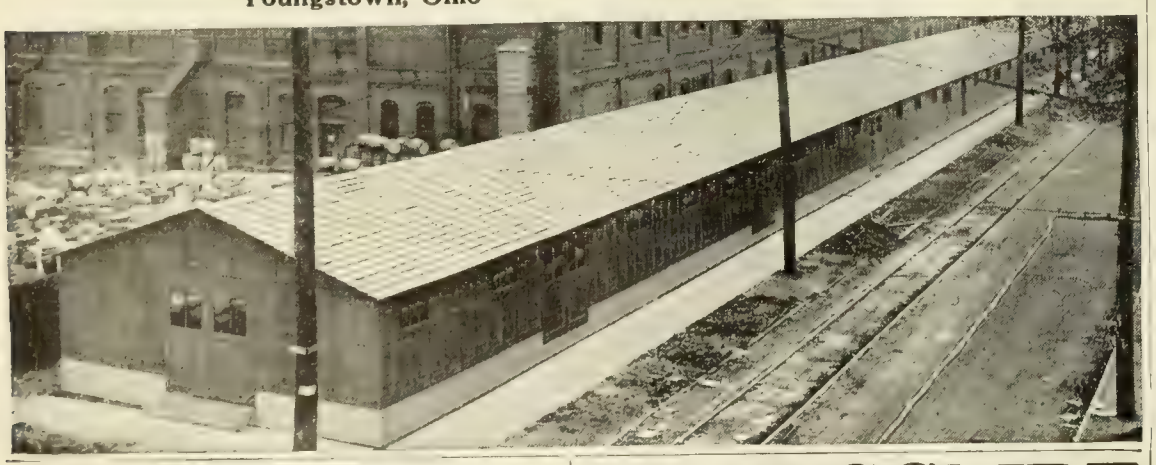
Manufacturers, business men, railroads, cities, and the nation itself, today face the problem of providing *more space quickly.*

Truscon Steel Buildings are being erected everywhere to meet just such emergencies. These are not temporary, make-shift structures, but strong, permanent, *all-steel buildings*—well ventilated, weather-tight, fireproof, and splendidly daylighted.

Truscon STEEL BUILDINGS

PORTABLE PERMANENT

are provided with steel sash, steel doors and steel-tile roof. Easily portable—can be taken down and re-erected in a new location with no loss or depreciation. The interchangeable steel units are quickly assembled by means of a simple locking device. Standard buildings are practically all widths and all lengths.



Truscon Steel Buildings answer all requirements for use as modern factories, offices, machine shops, storehouses, schools, hospitals, boathouses, railroad sheds, etc. Approved by city building departments.

Save time! *Write today* for catalog and estimates—give size and purpose of building. Address Dept. P-24.

Trussed Concrete Steel Company
Youngstown, Ohio

Truscon Steel Warehouse. The Jos. N. Smith Company's plant, Detroit, after fierce fire. Inflammable contents of building uninjured. Note where firemen attempted to cut their way through.

Thermolite
LIGHT AND HEAT INFUSER

brings the means of relieving pain right into your own home. It is ready for instant use. It lasts a lifetime.

Your old-fashioned hot water bottle or poultice gives you heat only. Thermolite gives you *relief*—infusing radiant light in addition to soothing heat deep into the affected tissues and muscles.

Attachable to any electric light fixture. Harmless as sunlight—ask your own doctor. $7.50—money back if not satisfied. *Booklet Free.*

H. G. McFaddin & Co.
51 Warren St., N. Y.

work at night a second before the clock struck five. In many offices the laxness prevailing here means a large annual waste seldom accounted for. It takes a minute or two after the opening time for the workers to lay aside wraps, arrange work, secure implements and be actually under way. Also at closing time a few moments are consumed without effect if employees allow themselves to *leave* the office on the stroke of the hour. Three minutes a day was the average time lost in this office. That meant a loss of nearly $1200 a year to the company. When this matter was explained, the workers volunteered to come three minutes before the opening hour and stay three minutes after the closing hour, to be sure of preventing this loss.

The heads of most departments began work an hour earlier than their employees, and were free to quit work also an hour earlier. The daily schedule was based on the function of the brain rather than the revolution of the clock. It is a well known physiological fact that the brain is clearest, strongest and best early in the morning; furthermore, the silence and comparative solitude of the office before the arrival of employees added to the effectiveness of mental operations. Not only was the law of concentration thus observed, but the men who did the thinking had the opportunity of spending an extra hour in the open air every afternoon—and mental workers need to absorb more of the great out-of-doors than physical or clerical workers do.

Every new or merely mechanical employee was given some kind of daily work in which he or she was able to excel supremely. The sense of pride and pleasure thus gratified slowly permeated the whole working day; and in order to sustain the interest during hours that might otherwise have been filled with drudgery, the period of exercizing the special talents of employees was fixed, wherever possible, late in the afternoon. If a young fellow had a special knack with his pen, he was put to lettering show cards or designing plans for a half hour each day; if a typewriter girl enjoyed cookery she was taught the science of nutrition and encouraged to help arrange menus for the noon efficiency lunch of the employees; if anybody showed special aptitude or inclination, this fact was grasped and utilized. Better work resulted, because of a personal heart interest in the company.

THE office library, containing all sorts of books on technical, personal and professional advancement, was open to all employees on Monday, Wednesday and Friday evenings, from seven to ten o'clock. A trained librarian was in charge, to help the workers choose and use the best books in the best way. No employee was required to visit the library, but each was expected to read not less than one evening a week for his own betterment and that of his work. Brief examinations on the books read were given periodically to those who desired them, and the result of this examination had something to do with promotions of employees. Each department voted at certain times on the efficiency books desired by members of that department; these books were then ordered, from the regular library appropriation of the company.

The study of correspondence courses aiming at better workmanship or a higher position was encouraged by the offer of the company to pay half the tuition cost of any mail course bearing on his work that any employee might care to take.

A cardinal principle of the company was that every employee should be satisfied in case of misunderstanding or dispute. This

good rule is now applied in most large factories and stores, but to the *customer* only, whereas it should apply just as much to the employee. This office had organized an adjustment committee whose business it was to satisfy complaints. The decision of no department head was final—every employee had the right to appeal. But the appeal must be made in writing and the truth of it shown by affidavit and seal of a notary. The worker who entered the complaint had to pay the fee of the notary; this was only twenty-five cents but the cost was enough to insure the absence of needless complaints, and the rule to put the matter in writing made the dissatisfied person properly cautious in stating the facts of the case.

BOTH good work and fast work resulted from a system of rewards combining the bonus and the fine. Where the fine is largely employed without the bonus, discouragement results; where the bonus is employed without the fine, slipshod work results; the methods should always be operated as one. This office made a comparative study of the special reward features adopted by many different corporations thruout the United States, and from this study prepared a reward scheme particularly suited to this office. The efficiency gain was remarkable. For example, in the addressing department 8500 names per day increased 3200 names per day after the bonus plan was in operation six weeks, the bonus being a dollar a month for each additional 100 names a day over 1000, and the fine being one cent for each mistake.

The committee on savings, formed of higher members of the firm who were financial experts, gave any employee, without charge, advice on the best ways to invest surplus earnings. Every employee was urged, tho not required, to save at least a small portion of the weekly salary; and a fixed rule of the company was that before a worker was in line for promotion he had to have money in the bank or in approved securities.

Employees were chosen by science, not chance. Each prospective member of the force was given a series of tests for the general qualifications and characteristics of a good office worker, and another for the special traits and talents needed in the work of his own department. The tests were combined from the different methods of employment experts, industrial psychologists, character analysts, business and efficiency engineers. Most concerns make one or two mistakes when hiring new helpers; that of neglecting all vocation guidance principles, or that of using only one of the various methods. No one method is complete or infallible. As much as forty per cent increase of efficiency was gained in certain cases by this office, thru putting the worker just where he belonged, physically, mentally, temperamentally and spiritually.

About ninety per cent of all vacancies were filled by promotions, new men being employed in lower grades of work only. The cost of breaking in a new employee runs from $40 to $150. This needless charge was avoided thru training every worker, in spare moments, to take some other worker's place, and to prepare scientifically for the place higher up. During slack season (which occurs in almost every office) the members of each department were taught how to become emergency helpers for other departments in the rush season. Thus the force was kept uniform, each worker had more pay in the rush season and each was ready to take somebody's place when a vacancy occurred.

The educational committee was always on the lookout for new ways of rendering

With Workers Scarce—

In Ordering and Billing

It speeds up delivery from 35 to 40%. Does away with rewriting and eliminates errors.

In the Sales Department

The sales manager can keep the sales force informed by means of daily letters and price change sheets.

All Through Your Business

It reduces labor and expense by developing economical management. It increases the earnings and simplifies details.

You Owe it to Your Business to Investigate How Labor May be Saved Through Use of the

Commercial DUPLICATOR

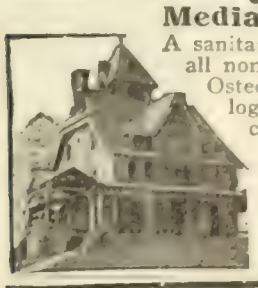
Departing employees in khaki need not mean impaired production. Better methods—efficiency increasing machines must replace enlisted men in the present national emergency. And in the handling of office details in 197 lines of business the Commercial Duplicator is ready "to do its bit"—to show how through its use one worker can do the tasks of several—how waste may be eliminated—operations speeded up—production maintained and profits protected.

Meeting the need of the hour for increased efficiency

As Mr. Silverman, Manager of the Chicago Ferrotype, says: "With the Commercial Duplicator method of handling orders we are now saving $13,000 annually—also reducing errors, shipping quicker, using less floor space and *fewer employees.*"

The Simmons Hardware Company were able to release 22 typists and 8 stenographers for other work and fill orders in two-thirds of the time required formerly—thanks to "Commercial" methods. No rewriting by hand or machine is required—no carbon manifolding. One boy and a "Commercial Duplicator" can accomplish as much as a dozen typists—and you know that the work is so accurate that it need not be checked back.

Facts submitted for your particular work



Let us show how this remarkable machine will save its entire cost many times over—*in your business.*

the work of each department more productive and scientific. Take filing, for example. A number of recent books describing the many filing systems, and the best use for each, were obtained as soon as published, and each clerk in the various filing departments was asked to read a little while each week, on the company's time, and to suggest ways of improvement. The most practical and economical suggestion was rewarded suitably. And so with other departments.

Vacations were scattered thru the year. Psychologists know that extremely hot weather does not refresh a person on vacation as much as a milder season of the year. Furthermore, the effort to crowd all vacations into the summer produces overwork, irritation, confusion and fatigue. About one third of the employees had no choice as to vacation time. They were sent off during the autumn, winter, or spring, with an extra day as a bonus.

Whenever an official or employee left the company he was asked to state in writing all his reasons for departure, with specific suggestions or criticisms regarding anybody or anything in the business. He was given a day, salary continuing, to prepare the statement. These records of approval or disapproval, which were franker than those which would have been made by men still on the payroll, were used as a means of detecting the blunders, weaknesses and faults in the work plan or method.

The most vivid and unvarying policy regarding employees was to get and keep their *heart* interest, by fair dealing and real coöperation. A few means toward this end were: Limited shares of the company stock sold to employees after a year of service, on easy terms but with advantages equal to those given the large stockholders; modification of the pension system, guaranteeing an old age free from want if the employee had risen to the hight of his possibilities; weeding out of inferior people, thus making the office force an industrial aristocracy, congenial, mutually respectful and helpful; hygienic, economic and sympathetic aid in home life as it was needed; wise elevation of personality, shown by printing the name of each employee on his desk or cabinet in type like that on the glass doors of high officials, no man being a "headliner" because of drawing more pay; minority membership of employees on the advisory board of the company, these worker members being elected by the employees themselves, and urged to get up and speak in meeting as frankly and promptly as the president of the company; analysis of the greatest ambition and highest aspiration of employees, with expert counsel and systematic aid for the ultimate accomplishment of life's big purpose for even the humblest worker.

Would not some of these ideas, or better ones they might suggest, make *your* office a place for happier and finer work, a source of larger and easier revenue, a help to higher service and more satisfying progress?

Speaking of Russia, it is in order to suggest to her next-door neighbor that one good revolution deserves another.—*Judge.*

"Matt sure has got nerve, hasn't he?"

"I guess yes. The other day he asked an automobile salesman for a sample.—*The Lamb.*

"What are you worrying about?"

"If I eat eggs I think about the chickens they would have produced, and if I eat chickens I think about the eggs they might have laid; and it's becoming difficult for me to enjoy anything."—*New York Globe.*

AVANTI SAVOIA !

(*Continued from page 419.*)

is assured. The Allies explicitly recognized these rights and pledged to respect the written pacts which are not mere scraps of paper. It would be bitter ingratitude not to take into account the sacrifices of the two nations.

Italy cannot at any cost tolerate that her rights, whatever the outcome of the war, should be denied or minimized. This determination is fully demonstrated by the iron-willed Cadorna who chooses to accomplish by force of arms that which tomorrow may prove to be an object of discussion in the chancelleries of the Allies. Therefore, it is impossible to harmonize the aims of Italy and Rumania with the integrity of the Austrian Empire.

President Wilson, in his reply to the Pope's peace proposal, recognizes that no part of the program proposed by Benedict XV. that the territorial claims of France and Italy and the perplexing problems of the Balkan states should be left to conciliatory adjustments, can be successfully carried out.

Evidently, when the President in his reply deems inexpedient the dismemberment of empires, it must be understood that he starts from the same principle which guides Italy to ask for the dismemberment of the Austrian Empire, and this involves first, the settlement of territorial claims and of the perplexing problems of the Balkan states, and secondly, the fate of the empire. That is, let the empire remain whole if it can, if it has the strength to exist by itself after the rights of peoples great or small, weak or powerful, have been recognized—"their equal rights to freedom and security and self-government and to a participation upon fair terms in the economic opportunities of the world." If when the oppressed peoples are liberated the empire will have no reason for existence, the United States will certainly not worry over the survival of a monarchy whose situation was denounced in unequivocal terms by the President in his Flag Day address delivered under the shadow of the Washington Monument on June 14:

"These men (the military masters of Germany, who proved to be also the masters of Austria-Hungary) have never regarded nations as peoples, men, women and children of like blood and frame as themselves, for whom governments existed and in whom governments had their life. They have regarded them merely as serviceable organizations which they could by force or intrigue bend or corrupt to their own purpose. They have regarded the smaller states, in particular, and the peoples who could be overwhelmed by force as their natural tools and instruments of domination."

"Italy," stated King Victor's message to President Wilson conveyed by the Prince of Udine, "acclaiming the same principles proclaimed by the United States, joined the war in defense of the violated national right and of the outraged humanity. Italy has been prompted by her faith in the rights of mankind and by her duty to redeem the Italians oppressed by the foreign dominion which for a long, long time has implacably sought to smother every breath of Italian life; Italy has donned her armor to avenge, and to reëstablish the conditions necessary to her certain unified existence."

If it is just to deprive Germany of Alsace-Lorraine how may the vital aspirations of Italy be left unsatisfied?

Italy demands the unconditional recognition of the ancient Italian rights in the Trentino, High Adige, Friuli, Istria with Trieste and Fiume and Dalmatia. Italy's

How to Get Rid of Rheumatism

R. L. ALSAKER, M. D.

By R. L. Alsaker, M. D.

DEAR DOCTOR ALSAKER: I am 43 years old. Have hardly had a sick day in my life, except the usual diseases of childhood and an occasional cold in the fall or spring, when most people seem to catch cold. For the past three years I have had occasional pains in the shoulder, the knee joints, and in the little finger of the left hand.

My doctor tells me that I have rheumatism and that I must stop eating meat—especially red meat—beef, lamb, etc. I eat very little meat. My breakfast consists of bacon and eggs or one mutton chop, rolls and occasionally wheat cakes (never more than three), or toast and a cup of coffee. And I eat a little fruit and oatmeal with cream and sugar. For lunch a couple of soft boiled eggs and a piece of pie or cake and a glass of milk. Sometimes I take Boston baked beans instead of eggs and tea instead of milk. For dinner we have soup, a roast of some kind, or broiled or baked fish, with potatoes and other vegetables, and occasionally a salad, but I don't care much for raw food, and always a dessert—ice cream, stewed fruit, pie or cake—and after dinner coffee.

If red meat causes rheumatism, why should I have it and the other members of the family, who eat meat as frequently as I do, be free?

W. J. L.

THIS gentleman seems to think that he has been quite well, though he and real health have not been on speaking terms for some years. Those who are well do not have colds. Colds are a warning, a danger signal, showing that the body is full of impurities and waste.

Pains that travel from joint to joint, usually called rheumatic pains, are another sign that the blood is charged with impurities.

This gentleman seems to think that he has been prudent about his eating, when in fact he has been careless. At 43 everybody owes it to himself and family to know how to eat so as to have health. Eggs, meat, fish and milk are proteids (albuminous foods). The body needs a limited amount of these foods, but if they are taken in excess, as they are when eaten at every meal, they build rheumatism, catarrh, bronchitis, asthma, colds, Bright's disease and other ills.

Why does not every member in this family have rheumatism? Because individuals differ, and what will express itself as rheumatism in one may take the form of a different disease in another individual. I do not know this family, but without knowing them, I am sure that there is not a healthy member in the household. Each and every one who lives in this manner must from time to time have some kind of physical trouble.

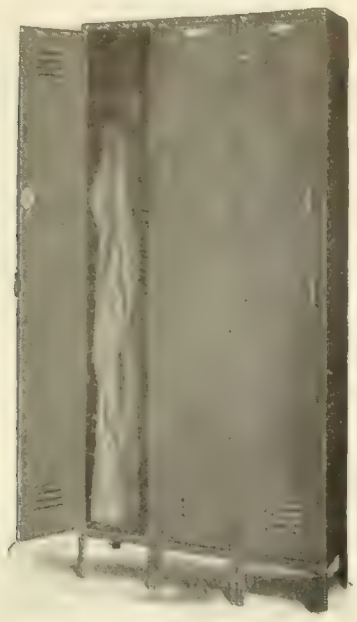
Red meat does not in itself cause rheumatism, though overeating of meat often helps to build the trouble. I have to fall back on experience and say that I have had numerous cases of rheumatism of all kinds—gout, lumbago, muscular rheumatism, rheumatism of the joints, chronic and acute—and every case, without exception, has recovered, when they followed directions. Many of these patients had had rheumatism from ten to thirty years, during which time they had consumed vast quantities of drugs and had gone to springs and had been boiled out, without special benefit.

In only one case was meat taken away temporarily, yet all the rest recovered, *so red meat does not cause rheumatism.*

These sufferers recovered through proper living, especially through correct eating. If this gentleman will eat and drink as he should, he will recover, as all the rest did. There are no *ifs* and *buts* about it—he will get well and stay well. What is more, right eating will make his whole family well. And they won't need any drugs or operations. It is natural to be well, and those who follow Nature's laws will always have health. Proper eating is the most important, in fact the dominating, health factor. Everyone who has rheumatism can eat his way out of it and into health. No one need be sick. Mother Nature has given us hundreds of good things to eat and you can eat every one of them and enjoy good health and long life—if you eat right.

Rheumatism is a luxury, not a necessity. Those who get it, can keep it indefinitely. They can also get rid of it and stay rid of it. Those who have rheumatism should not complain about it, for they have the knowledge at hand that will show them how to get out of the aches and pains of rheumatism and back to health.

Realizing the universal need of clearly defined instruction on the cause and cure of Rheumatism I have outlined in a small volume a plan of living that has proved successful in getting rid of all kinds of acute and chronic rheumatism. My instructions are easy to understand and pleasant to follow.



The plan shows how to live so as to have health. It tells you in plain English the true cause of rheumatism, and it gives you the true cure—a cure that works. There is nothing mysterious about it. It is simple, good, workable common sense that you can apply *right in your home.* You need not go to health resorts or so-called healing springs. You need not take drugs, or waters bearing fancy or unpronounceable names. You know as well as I do that *drugs do not cure* rheumatism—or anything else. Don't fool with them, but learn how to live so that your system will be so sweet and clean that you can have no aches and pains. A cure consists in living according to the natural demands of your body, in giving the body the proper care, and *especially in eating correctly.* This book of health plans will teach you how to get well and stay well, if you are a careful, observant reader.

The price of "Getting Rid of Rheumatism" (the title of this new book) is one dollar, with ten cents additional to pay for postage. Send $1.10 to my publisher, Frank E. Morrison, Dept. 63, 1133 Broadway, New York City, and get your copy. Follow my plan of treating rheumatism for one month; then if you are not entirely satisfied with the improvement in your health, return the book and your dollar will be refunded to you.

Remember this: If you want health you can have it. You have your choice of living right or living wrong. This book teaches you the truth and nothing but the truth. Do you want it?

wish is that every national element oppressed by the Hapsburg monarchy be liberated and rendered independent. Italy reaffirms that her return to her Alpine and maritime frontiers, consecrated by universal and time-honored tradition, far from being imperialistic is but a part of the National Risorgimento. It is a necessity of defense for the very existence of Italy and, today more than ever, constitutes, with the conquest of Trieste and Fiume and with the dominion of the Dalmatian coasts and waters, a fundamental interest of anti-Germanic Europe.

There is a certain movement in the United States which also opposes itself to Italy's claims in the Adriatic. It is prompted by the Jugo-Slav propaganda, that is, of the southern Slavs, who with the pretext of a so-called Serbian restoration wish to create opposite Italy, on the coast where today Italians are oppressed by Austria, a nation, Jugo-Slavia, in which would continue the same reasons for agitations of races which made the Balkans the cradle of the bloody conflict of today; in which would be renewed the same difficulties which caused the present war; from which Italy, leaving her territories still unredeemed, would forever witness her coast menaced by the new-born nation.

A Jugo-Slavia created to oppose Italian aspirations in the Adriatic would mean new struggles, new wars; it would be the worst solution of the present war. As Serbia cannot reasonably refuse Italy whose strategic and economic positions in the Adriatic which are hers by inherent right, and by the right of her sacrifices in the war, neither has Italy any intention to deny the right of Serbia to positions on the Adriatic corresponding to her economic needs, and has no reason to withdraw from Serbia the benevolent interest she has always manifested toward her. A Jugo-Slavia founded in agreement with Italy would, instead, prove to be a secure solution, according to President Wilson's wishes, of the perplexing problems of the Balkan states.

Without guarantee of an accord with Italy we would see an Austria-Hungary more powerful on the Adriatic, and much more menacing, a dominator of restless, discordant peoples which compose the Jugo-Slavia proposed by the Corfu conference, a camouflage of the trialism which is the last hope of life for the Viennese Empire, finally a solidification of the Mitteleuropa, which means a greater Germany, a dominion much more extended than the one which has already been obtained with the ruthless war from Antwerp to Constantinople and beyond.

Italy in the Adriatic fights the enemy of the United States, Austria-Hungary, which gives Germany the compact strength of Mitteleuropa. To win the war and make the world safe for democracy the Mitteleuropa formed by the Prussian despotism imposed on Austria, Serbia, Rumania, Bulgaria and Turkey must be dismembered. This is to be done by aiming a knockout blow at Austria.

This is Cadorna's task. He will most assuredly accomplish it. He is avenging the United States, which is not as yet at war with Austria but has already felt the sting of the Austrian serpent: for Austrian submarines have undertaken the cowardly work of murdering peaceful and helpless civilians, women and children, in the Adriatic and Mediterranean, in order to relieve her accomplice Germany that she may better be prepared, more powerful, more cruel on the Atlantic and more of a menace to the soldiers of the glorious republic who are crossing the ocean to fight for justice and the common rights of mankind. *Germania debellanda, Austria delenda.*

INSURANCE
Service of The Independent

W. E. Underwood, Director

This department of The Independent will undertake to furnish on the request of readers any information respecting the business of insurance and the companies transacting it which we have or can procure. We cannot, however, pass upon the debatable comparative differences between companies that conform to the requisite legal standards set up for all, except in so far as the claims made by any of them seem to be inconsistent with the principles of sound underwriting. Address all communications on insurance subjects to the Director of The Independent Insurance Service.

The New Books

For the Man of Business

IT is time for American trade to ask the classic question, "Whither are we drifting?" With the present flood of books dealing with scientific methods in business, the science of efficiency, and so forth, the old-fashioned merchant who relied upon intuition and rule of thumb may well be frightened into devoting his remaining days to something simpler, such as golf or politics. He has, perhaps, become used to manuals of advertising, but devoting a large and much illustrated volume wholly to *The Typography of Advertisements That Pay*, suggests an almost Teutonic degree of specialization. Yet there are few firms that could not improve their advertising—and their sales—by observing some of the principles of lettering and type set forth in Gilbert P. Farrar's useful book. The manual of *Office Practice*, by Mary F. Cahill and Agnes C. Ruggeri, deals with efficient management in such matters as the handling of mail, filing records, the use of the telephone, special machines for time saving, cable codes and many handy reference works.

Clifton C. Field, recently instructor in merchandizing in the University of Wisconsin, devotes a careful volume to *Retail Buying*. Buying has received less general study than salesmanship and yet it is the other half of all business. Mr. Field gives not only general rules applicable to all buying, but many convenient hints as to kinds and qualities of commodities, especially in the clothing trades.

Saving and Investing Money, by Thomas E. Sanders, is a convenient manual of advice to investors, and treats of the relative advantages of real property, life insurance, municipal bonds, industrial stocks and other methods of utilizing the contents of the stocking in a safe and sane way.

Nor can the business man of today afford to be indifferent to questions of public finance, particularly in view of the recent increases in national expenditure. *Inheritance Taxes for Investors*, by Hugh Bancroft, is a comparative study of inheritance tax laws in the forty-three states which have enacted them, with special reference to the questions of double taxation and the inclusion or exemption of non-residents. The real estate owner and the student of municipal government will be equally interested in the full discussion of *Excess Condemnation*, by Robert E. Cushman, of the University of Illinois. *The National Budget System and American Finance*, by Charles Wallace Collins, points the way to the introduction of sound business principles where they are most needed; the Federal Government.

The Typography of Advertisements That Pay, by Gilbert P. Farrar. D. Appleton & Co. $2.25. *Office Practice*, by Mary F. Cahill and Agnes C. Ruggeri. The Macmillan Company. 90 cents. *Retail Buying*, by Clifton C. Field. Harper & Bros. $1.25. *Saving and Investing Money or Ten Lessons in Thrift*, by Thomas E. Sanders. The Thrift Publishers, Racine, Wisconsin. $1. *Inheritance Taxes for Investors*, by Hugh Bancroft. Houghton Mifflin Company. $1. *Excess Condemnation*, by Robert E. Cushman. D. Appleton & Co. $2. *The National Budget System and American Finance*, by Chas. Wallace Collins. The Macmillan Company. $1.25.

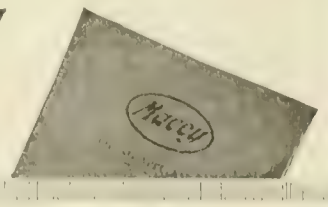
—Standard for Busy Big Business

Busy big business needs equipment that will economize the time of filing workers—that will make the finding of needed papers quick and sure. Macey Filing Appliances are built to meet just such extra demands. The Macey trade mark will be found on the files of many of America's business leaders—chosen because of known serviceability—dependability—dignified beauty—and because of the proven economy of the Macey purchase.

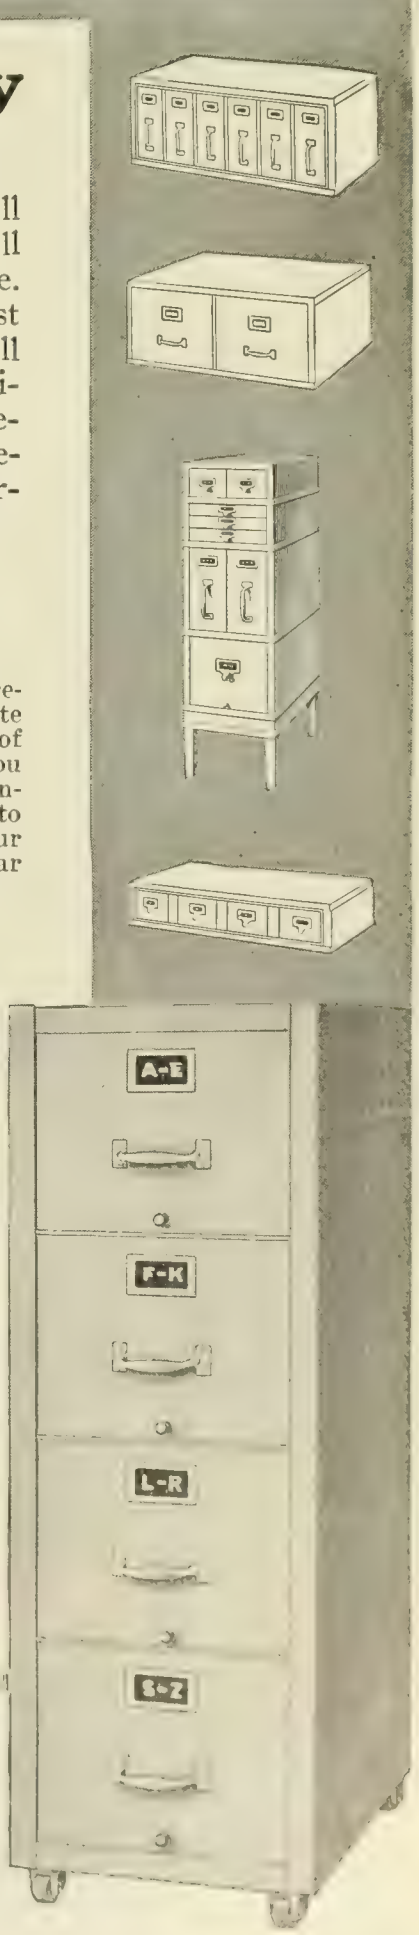
—for Every Filing Requirement

No matter how "out of the ordinary" your filing requirements may be, they can be met in the big complete line of Macey Filing Appliances. The great variety of styles and sizes from which you may select enables you to satisfy all your needs—and with Macey Standard construction and finish you are assured of being able to standardize all your filing equipment throughout your office. Additional equipment may be secured next year or ten years from now to match.

The Best That's Made In Wood and Steel



Macey Wood Filing Cabinets assure large filing capacity, economy of floor space, and dignified beauty combined with low cost. The sectional idea finds its most ideal expression in the Macey Upright, Horizontal and Inter-Inter Cabinets.



Macey Metal Filing Cabinets are well known for their superior construction—protection against fire, and beauty of appearance. A special feature is the strong side suspension slides—permitting drawers to move at a touch of the finger.

WORKING OUT THE MARRIAGE PROBLEM

(*Continued from page 420*)

women work whether they like it or not and if they don't let their women choose their own work it is false pride that prevents it." "You mustn't ask too much of a man," they would answer. "Life is a series of compromises. And you'll be very lonely in your old age if you live all your life alone." "I can't compromise about love," I said. "If I can't find the right kind of a man I won't marry at all."

I have no doubt at all that the dear ladies who used to talk with me would amuse themselves after such conversations by picturing my future as an unpleasantly withered spinster with a high-brow degree or else as an inactive partner in a neglected home where a miserable nonentity of man, much henpecked by me, would have to look after eight infants while I earned the living for the ten of us! Neither of these pictures would approximate the truth. But in this one answer that I made to the world, the answer of work, self-chosen and vigorous as the first solution of my life's moral problems, I had the comfort of knowing that my mother was with me, heart and hand, even if her friends were not. Mother supposed that I would "give it all up" when I married, of course, and take over the domestic occupations instead. But she wanted me to be able to earn a living, in case of need, and she believed in work as the normal functioning of all adults in the adult world. I have always been glad of this thing in my mother and in me which, more than anything else, makes for clean living and sound thinking. But I never understood it all until I read Oliver Schreiner's wonderful book, "Woman and Labor," which all women should read.

Nevertheless, I must admit that, in spite of my declaration of independence with regard to matrimony, in spite of my education and my interest in my work, I wanted to marry. I would pray the Lord nightly to send me the possible man. I would not have been my mother's daughter, my father's daughter, if I had not wanted all the human experience of normal human life, all the warm and glorious things that can only be had thru mating, motherhood and home. Therefore I did not give up hope of the men and I watched them carefully. Sometimes, in a generous mood, I would begin to think that perhaps one or another of them would "do." But always, until I really met the right one, something would happen to show me that the others were only half-gods for me. I comforted myself with Emerson's noble lines,

> "Heartily know,
> When half-gods go
> The gods arrive."

And I came to believe what I have since had no reason to doubt, that women of strong racial type can demand of men such things as they honorably need, just as women who are little and petty can demand trinkets and candy. Men are the world's great-hearted children groping after beauty and will eventually give what women rightly ask. They can give little gifts, idleness, luxury, protection that weakens. They would rather grow to be greatly generous to full-fledged human partners whom they can honor. And women, whether they are workers in the outside world, or partners laboring faithfully in the home, can, little by little, turn the race toward racial greatness, with a power that feels the spirit of the race more profoundly than men feel it, that knows individuals as

little rivulets pouring themselves into the great stream of life. Women can do this if they will.

In me the sense of the race was very strong and has grown stronger with the years. I never undertake anything important without feeling that the ages have contributed to the deed. I never plan anything important without asking myself what effect it may have on ages yet to be. This feeling of the grand march of the ages, the continuity of life, was very strong in me in my college days when I was trying and testing ideas and men. When I estimated the value of an idea I would ask myself how it would be likely to affect humanity if it should be applied to life in a large way. And since those days I have often wondered why preachers and teachers and parents should often make the mistake of presenting to youth the arguments of weakness and expediency when they might set before us an ideal of racial beauty and excellence to which beauty and excellence it would be the desire of young men and women to contribute their best. I know that this racial feeling in me enabled me to see the shallowness, the unsoundness, the callow selfishness of certain ultra-radical and unsocial schemes of life by which I might otherwise have been temporarily deluded. I know that this feeling of the race behind me and beyond me prompted my answer when some of my mother's friends asked me what kind of a man I would marry anyway and when I answered, "A good, clean fellow."

They laughed and teased me about my "good, clean fellow" for a long time. But a few women with lines around their mouths and sad, shining eyes, told me that I was right. I remember, however, that one woman told me that men were all alike in morals and that it was best to choose a congenial one and ask no questions. I was still innocent enough to wonder how one could ask too many questions about the person with whom one must spend a life time. But I did not believe that men were all alike in their behavior even if they might be said to resemble each other in their tendencies. A girl's intuition had enabled me to see their lives in their faces sometimes. I had seen young sons of well-to-do fathers and mothers whose faces were full of satiety and unrest, others whose faces could not conceal their weaknesses, their self-indulgences, their cynicism and ennui. But I had seen other men. I had seen men on the college campus and elsewhere whose faces showed health and power of spiritual combat. I had seen faces where the lines revealed a fine struggle to wrest the best from life. I had seen faces where merry, wholesome boyishness still lingered, brightening the sternness of acquired manhood, and where it would always remain, probably, even into old age, like a bunch of wintergreen glowing in the snows of winter. I knew that men were not all alike.

By their refusal to discuss and explain questions of morality and propriety the women of my mother's generation often made life unnecessarily difficult for the daughters of my generation. Instead of showing us why certain conventions were right and desirable in decent society they made the proprieties a fetish without explaining them. The girls always felt that it was not fair to tell them not to do certain things or say certain things without explaining why. For how could they know that other things, little things innocently said or done, might not be just as bad? My generation demanded reasons. Always and everywhere we asked why. And nearly always our mothers gave us only what has been called the woman's reason, "Because."

Filing Problems Solved

DO your file folders slip down in the drawer?
Do they wear out quickly?
Do they give out at the bottom?
Do you lose time looking for correspondence?
Are your letters dog-eared, mussed, and in bad shape because the folder becomes overcrowded, slips down, bulges in the center and is difficult to locate?
Can you take it out and replace it readily?

Can you instantly locate a folder, file a letter in its proper place, *and know you've done it right?* Will that letter be found when you need it?

Bushnell's Style "C" Paperoid Vertical File Pockets

solve all these filing problems—efficiently, satisfactorily, economically—and solve them as no other folder will.

Think of these advantages: Durable. Expansible. Will not buckle, but stand upright on own base. *Names and indexes always visible.* Make filing easier, save time, overcome the crowded folder nuisance, preserve papers better. Half-enclosed ends prevent small letters and cards from slipping out. Tabbed any way you desire. May be put in as a new system or incorporated as part of present system. Alphabetical or Numerical. Will fit any system. And above all, they last almost like leather, because made of long fibre red rope stock.

Use your present folders for the lighter correspondence, and give the heavy work—that one tenth portion which stands the brunt of handling—to Bushnell's Style "C" Vertical File Pockets. *This is the real way to test them out.*

We will send you free sample so you may judge. Made in standard Letter or Legal sizes. Special sizes whenever needed.

POLAR MFG. CO. 100-108 N. Marshall St. Philadelphia, Pa.

Moreover we thought a good deal about marriage. Why could we not talk about it to our mothers except in a superficial way? Why was it wrong to ask questions? Either marriage was right or it was wrong, either it was good or it was bad. If it was right and good why were our mothers reticent about the problems of marriage. If marriage was bad and wrong why did people marry? Such was the crude logic of youth. And it seemed strange that mothers who would let their daughters go to college and learn much of the begetting and bearing of life in large biology classes should refuse to discuss the matter in the family.

I remember coming home from the biology class one day with a notebook full of drawings of the embryology of the chick. Those pictures, in my opinion, represented a glorious history, the history of food wrought into life by the twin powers of life meeting and working together within the walls of a cell. One of my young sisters picked up the notebook and began to ask me questions about the pictures. I explained them as well as I could. I told her how every animal, even man, repeats the old, old story from its beginning. I talked simply, naturally, reverently. But my mother was listening and asked me not to tell my sister things like that. I asked why. Her reason, as I understood it, was that the theory of evolution made us seem too much like animals. She did not like the idea of an animal ancestry for man. Then I told my mother many things that she had never known about the history of man, wondering how it could be true that my mother, who had borne and tended me and brought me up to be clean and strong, could know less of the history of life on this planet, less of the process that made us human, than her little, immature daughter. I tried to show her that the theory of evolution made mankind seem like a great marching army that would "never sound retreat," that would go on fighting from victory to victory, from flesh to mind, from mind to divinity, forever. I tried to tell her of my dream of becoming a conscious force in evolution. But her reticence made it very difficult. Many girls were far less fortunate than I and far more troubled about it all. It seemed strange that women of our acquaintance who would regale one another with stories that shocked their daughters were unwilling to discuss with those daughters the big truths of life.

After a time my struggle bore its own good fruit. I found my work, my mate, my home, my place in life, on my own terms, in accordance with my own philosophy. I have faced difficulties and problems that I did not expect. But I have come to believe that if I fail to live the life I have planned it will not be because the plan was poor, but because I am not strong enough and wise enough to apply my principles.

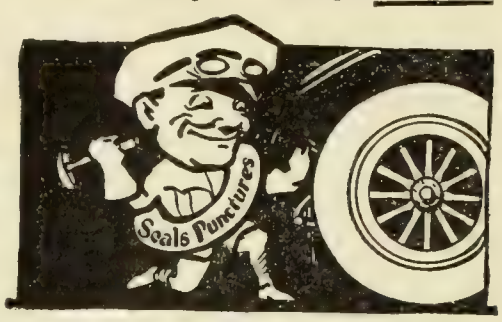
The captain and the mate on board the "Pretty Polly" were at loggerheads. They scowled whenever they met, and seized opportunities of scoring off each other with fearful glee. Each took a turn at making the day's entries in the log book, and the mate when making his entries was very surprized to find in the captain's handwriting the words:

"June 2, 1917—Mate drunk."

He stared at it wrathfully a moment; then a slow grin broke over his face. He took his pen and wrote:

"June 3, 1917—Captain sober."—*New York Globe.*

Teacher—What is a coat of mail?



Bright Guy—I know.

Teacher—Well, tell us, Percival.

Bright Guy—It's a knight shirt.—*Cornell Widow.*

THE WASTE OF GETTING TIRED

(*Continued from page 427*)

We naturally think that all of these things are far outside our own lines of activity. They exist in some mythical shop, among so called "dangerous trades"; where foreign labor is used; where government inspection is lax; where factory laws need revision; and so forth. They do exist there, but not only there. They are to be found every where, without excuse, resulting in loss instead of the profit that could be had —to remain till special education and example destroys them.

Now these wastes are serious, but a more important waste because more universal, is a waste that takes place in the average work done under so called "healthful conditions," under excellent inspection, by well fed and educated workers and under the average methods. It is your work and my work, and the work of the man next door and of the people in our town that demands investigation today, if we are to eliminate the greatest amount of waste in the shortest amount of time possible.

The time to look for fatigues, then, is immediately and all the time, beginning where we are, and continuing wherever we happen to go during the ordinary daily routine. It cannot be too strongly emphasized that the important places to investigate are the homes and the work places of the average members of the community.

For purposes of investigations such as this, we have found no better classification of fatigue than that of, first, necessary fatigue and second, unnecessary fatigue. This classification allows us at once to know whether we have a problem of providing a definite program for the periodicity of rest intervals or of eliminating the fatigue entirely.

In order to determine accurately whether fatigue is necessary or unnecessary, a measured investigation of the activity is essential. We shall describe later how this measured investigation is made, but, even without this, it is possible to classify roughly the existing fatigue.

Unnecessary fatigue exists,

1. If the worker is obviously unfitted to the work, either physically or mentally.

2. If the work is of a class that is naturally uninteresting or unsatisfactory to the worker himself.

3. If the work could be done seated and is being done standing.

4. If the work is done all day long without change of posture where some change is possible. Any standing job that will not permit arrangement for sitting twenty minutes in most of the hours needs an investigation by methods of motion study.

5. If the working conditions are in any way unhealthful or if the workers think that they are unhealthful; if there is poor lighting, poor ventilating, too little or too much heat or an insufficient variation in the range of heating. This last is a large, important subject in itself, the proved findings in which are little known. An even temperature constantly maintained is enervating and causes unnecessary fatigue.

6. If the working equipment is not comfortable.

7. If there is no provision for rest intervals.

8. If the output decreases in quantity, in quality, or in both, with no other apparent cause.

9. If the worker shows obvious signs of fatigue, increasing as the work periods go on, or comes to work each morning more tired than he was the day before, this decrease in strength being caused by the work itself and not by some irrelevant outside influence.

It must never be forgotten that *unnecessary fatigue* is the crying evil to be attacked. It is worse than loafing. Loafing is fun for some people. Unnecessary fatigue does nobody any good.

When we come to necessary fatigue, we cannot proceed so far without the careful measured investigations. These always show that less fatigue is necessary to do the work than has been anticipated.

Naturally no one who investigates fatigue problems sympathetically can resist trying to apply the remedies as soon as the ills are called to his attention. There is but one safe and sure way in fatigue elimination. This is to begin to supply the rest intervals, and to endeavor to eliminate the fatigue, *before* spending much time on deciding whether fatigue is unnecessary or not. In the final analysis, whether the fatigue does prove to be necessary or not it must be either eliminated or cured—that is, recovery periods for it must be provided. This is really stating two different methods of fatigue elimination—one being the short method of eliminating or lessening the fatigue by removing the cause, the other being the method of eliminating the fatigue, or the effects of it, by supplying the remedy.

Those individuals, institutions, companies, and communities who have gone farthest in fatigue elimination without careful investigation, have done so by applying this remedy to the most widespread extent possible.

The shop hospital, with doctor and nurse operating with reversed incentives, the rest room, the recovery room, the lunch room with its scientifically determined menu, the recreation room—these have all become well known thruout the entire community, and too much cannot be said in praise of all these institutions and of the splendid results that they are obtaining in preparing the nation's workers for the unexpected call. Our campaign does not aim in any way to supplant these, but rather to supplement them, and to make their possibilities better known and their use more intelligent.

There has been no lack of coöperation among manufacturers and among merchants and in fact in all other lines toward establishing these helps to the worker, to the industries and to the community in general. Now let some of this money, and these brains, and this energy go toward the "preventive medicine," that is, the elimination of the fatigue itself. To do this, as a starting point take one day off and walk thru your factory, department, office, store, school or kitchen with no other thought than fatigue elimination and make an intensive and intelligent study of the workplace and of the worker and of the work itself. To bring these investigations into line with investigations in other lines, that results may be exchanged and be mutually helpful, we call this part of the work the "Survey." It consists of certain preliminaries such as setting down in writing, supplemented by drawings, photographs or any other devices possible, *exactly what exists*. Record exactly what you actually see before you, as you walk or as you sit down to study the situation. Then glance over the records, as far as such are kept, to see how the output varies during the day; finally, state as far as possible the reasons for all of these things. If you seriously carry investigations yourself, in even a few instances, up to this

The Reason Why a
MULTIPLEX
HAMMOND

appeals so strongly to the individual writer is that it has marvelous versatility; its flexibility is beyond compare.

Those who can obtain exclusive benefits from the "Hammond" are

BUSINESS EXECUTIVES, AUTHORS AND LITERARY PEOPLE, SOCIAL AND BUSINESS SECRETARIES, DOCTORS, SURGEONS AND CHEMISTS, MATHEMATICIANS, ENGINEERS, COLLEGE PROFESSORS AND STUDENTS, CLERGYMEN, LECTURERS

If you are in these classes be assured that you would obtain unimaginable information if you asked us for our catalog and data upon your particular branch of work.

A Few Samples of Multiplex types

Petite - for extra condensing
Miniature-private, refined letters.
Small Roman-neat business
Vertical Script - private letters.
Medium Roman-general letters.
Italic - emphasizing.
SPECIAL GOTHIC - CLEAN CUT
Large Gothic - sermons, lectures.
Large Roman - sermons, lectures.
Print-type - new, attractive.

All Languages
Changed Instantly

Some of the points of construction which the "Hammond" possesses exclusively are:

TWO COMPLETE and different TYPE SETS ON EVERY MACHINE. Hundreds to select from, including the world's languages. All usable on the one machine.

INSTANTLY INTERCHANGEABLE TYPE SETS.

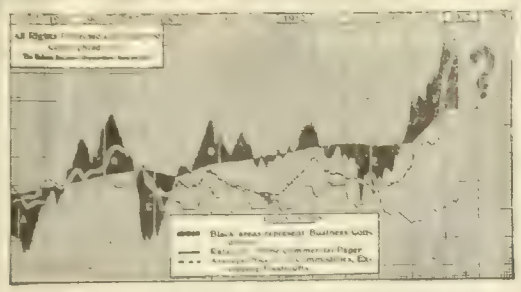
EVERY KIND OF WRITING on the one machine: Fraction type sets; special character sets, for technical business, and also for professional symbols.

OCCIDENTAL AND ORIENTAL LANGUAGES; all of them possible on one machine.

VARIABLE SPACING:—for very large or tiny type at instant will.

CONDENSING to the extent of saving 75% of ordinary typewriter space.

BEAUTIFUL WORK beyond compare: perfect alignment and automatic type impression.



CLERGYMEN'S "OUTLINES," PHYSICIANS' "Histories"; EXECUTIVES and SALESMEN'S loose-leaf "MANUALS"; Statistical statements; authors' emphasis and reference notes; Mathematical statements: and all other special work;—this is the Hammond field.

PORTABILITY: The condensed aluminum weighs but 11 pounds, yet has full capacity for all work.

Factory Rebuilt Machines at a wide range of prices. Monthly payments. Discounts for cash. Catalog gladly sent for the asking. Special professional terms.

A quarterly dividend of one per cent. (1%) and an extra dividend of one per cent. (1%) on the Common Stock of this Company has this day been declared, payable Monday, October 1, 1917, to stockholders of record at the close of business Friday, September 14, 1917.

Checks will be mailed by the Guaranty Trust Company of New York.

S. S. DeLANO, Treasurer.
H. C. WICK, Secretary.

THE ELECTRIC STORAGE BATTERY COMPANY
Allegheny Avenue and 19th Street
Philadelphia, September 5, 1917.

The Directors have declared a dividend of one dollar ($1.00) per share from the net earnings of the Company on both Common and Preferred Stocks, payable October 1, 1917, to stockholders of record at the close of business on September 17, 1917. Checks will be mailed.

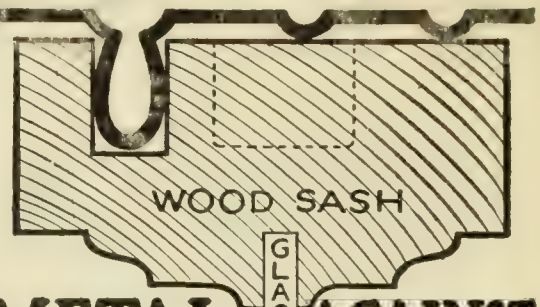
WALTER G. HENDERSON, Treasurer.

point, you will become strongly interested in the whole subject. Add to your findings by starting a Fatigue Museum, consisting of whatever fatigue eliminating devices you have been able to find.

In order to make rapid, cumulative and permanent progress in fatigue elimination, as in any other kind of activity, it is necessary to use accurate measurement. For example, you would not attempt to give an accurate estimate of how much time it took to do anything without using some sort of a timing instrument, the more precise the better. The reason that more progress has not thus far been made in fatigue elimination is the same reason that applies to any line of investigation. Progress that is rapid and permanent cannot be made until there exists three things: 1. A determination of the units that are to be measured. 2. Methods of measurement. 3. Such inexpensive and accurate devices that it is possible that the measurements be generally made.

We shall describe here our own method of investigating an activity as furnishing a practical method of attacking the fatigue problem scientifically. It must be understood that, for greatest success in this work an entire activity in all its bearings must be thoroly standardized and operated according to the best findings of measurement. For example, to succeed best in fatigue elimination in a plant, it is necessary that the entire plant be operated under Measured Functional Management, at least to the extent that those who are working in the plant have, before starting the work, passed thru a modern intelligently conducted employment bureau, that really investigates and helps the workers, and that secures an adequate placement; that is to say, that sees that each worker is put at that type of work that he is best fitted to do.

Of course it is not always that we find things in such a high state of development, but our method of procedure is the same in any case that is, first of all, we report working conditions in the greatest detail possible. With the willing coöperation of the worker always, when our methods and the reasons for them are explained, we install our measuring devices; in order that there may be no detail lacking in the record itself, we make the record thru the micromotion method, and the chronocyclegraph method and from the charts that we are enabled to make from the preliminary records.



The micromotion method of measuring consists of placing a microchronometer or specially constructed rapid time measuring device with a capacity of twenty revolutions per minute or more in the field where the worker is working, and recording thru the use of a cinematograph, 1, what the worker is doing, motion by motion; 2, the elapsed time it takes to do the work and the time of each component element of the work. To secure greater accuracy in the recording of the elements of the motions we incorporate cross-sectioning into this record in one way or another.

It may seem that such investigation as this is getting far away from fatigue, but it must be understood that fatigue and activity are produced simultaneously, and that scientific fatigue records and fatigue elimination may not be secured until the activity has been scientifically recorded.

Where the work is very rapid, such as typewriting, it has been necessary to take more than one hundred pictures per second, in order to show adequately what is taking place in training world champion typists.

The chronocyclegraph method of record-

CHAMBERLIN METAL WEATHER STRIP

KEEP YOUR DOLLARS BUSY

Now, as never before, it is important that your money be kept at work in legitimate enterprises. You will benefit by consulting The Independent Investor's Service before buying securities of whose merit you are uncertain.

ing activity consists of fastening small electric lights to the hands or other moving parts of the operator or of the operation, and, thru a timing device such as a special commutator or tuning fork, controlling the intervals, causing to appear upon the record photographic plate projectile shaped time spots that show not only the path of the motion and the direction of the motion but relative speed, exact speed, relative time and exact time as well. In these records we see plainly not only what occurs, but, also evidences of the mental conditions such as habit of automaticity, of hesitation, and besides these, indications of fatigue. From these records we make the Simultaneous Motion Cycle Charts which show plainly what parts of the body are active simultaneously and consecutively.

It is not for a moment to be supposed that every one in this country who could, will take up investigations thus seriously, nor is it necessary, because as the need for such measured investigation becomes more evident, the larger industries and shops will take up the work, finally the work will probably be taken up by the Government, and the findings in all lines placed at the public's disposal. The subject is important enough to warrant a department at Washington. It is only necessary that the public take up the matter, as we have before said, from the other side, working up toward these measured investigations.

Not only is it necessary that this investigation be taken up now for the general good, and for the general elimination of waste, but in order that we may be prepared to utilize our capacities to the utmost, and also to handle adequately the crippled men who are certain to return to us from the conflict on the other side.

If we are to avoid the mistakes that have been made on the other side (and that no one is quicker to acknowledge than the great men who have been interested and instrumental in the work of reëducation there), it is necessary that we prepare ourselves by investigating all of our opportunities, not only from the *activity* standpoint, to see where cripples can best be placed, but also from the *fatigue* standpoint, that we may make more opportunities available to cripples, and may make all kinds of work less fatiguing and more profitable to them.

Something has already been done along this line of providing occupation for crippled soldiers. It is possible, thru supplying mechanical appliances as do Professor Amar and the workers in France, to allow many cripples to go back to their old work, or to take up other work which would not otherwise become available. It is also possible thru adaptation of existing machines, such as adapting the typewriter by using one with the double keyboard and with multiple roll supplies of paper, to render occupations that would not otherwise be adaptable to cripples, suitable for them.

Still other occupations are in the selling line, the handling of small stores, the telephone, dictaphone, telautograph and so forth. But these occupations, few comparatively in number that have so far been discovered and marked as preëminently fit for cripples, must be supplemented by opportunities in all lines of industries that needs shall be supplied by those interested in those lines. It is along this line that special preparedness must take place, and fatigue investigations on the part of every member of the community will go a long way toward showing what these occupations are, and toward making the necessary adaptations.

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. ORAL AND WRITTEN COMPOSITION.

The Story of the Week.

1. Write a short speech in which you explain the Italian advance on Trieste. Use the map on page 418 to illustrate your points.
2. Write a short composition in which you discuss the recent revelations concerning the Swedish legation at Buenos Aires. Read the editorial "Spurlos Versenkt" and comment on it.
3. Write a composition in which you show why all lawyers would naturally oppose the acts of the German Government.
4. Show in what ways the attitude of American labor is worthy of praise.
5. Imagine that you are the editor of a Chicago newspaper. Write a strong editorial article concerning the recent action of the Mayor of Chicago.
6. Write a contrast on the character of the English people and government, and the character of the German people and government as indicated by recent air raids.
7. Write a composition in which you show the various secret plots and machinations of the German Government that have thus far come to light.
8. Write an editorial article in which you show why the present German Government can not be permitted to endure.

Editorial Articles.

1. Write an outline of the leading editorial article. Give an oral explanation of your outline, showing whether or not the article has been well planned.
2. Give an address to your class, showing that all anti-war meetings in the United States should be stopped absolutely.
3. Give orally your reasons for agreeing, or disagreeing, with President Wilson in his distinction between the German Government and the German people.
4. Which editorial article do you consider best written? Give your reasons in full.
5. Point out the best titles in The Story of the Week and the editorial articles. Give directions for the writing of good titles.

Avanti Savoia! By Agostino de Biasi.

1. Translate, or ask some one to translate for you, the expression: "Germania debellanda, Austria delenda." Show how the expression is the central thought of the article.

Is the War Your Business?

1. Study the article. Then tell your class what you and your friends are doing, or can do, to make the war "your business."

Frank Scott: Master of Efficiency. By Donald Wilhelm.

1. What methods has the author taken to make his article original and interesting? Write a similar article concerning one of your teachers, or a business man whom you know intimately.

The Waste of Getting Tired. By F. B. and L. M. Gilbreth.

1. This is a popular article on a technical subject. Draw from it several rules for the writing of popular technical articles. Write a somewhat similar article concerning some technical work that you can do.

The Best Office I Ever Saw. By Edward Earle Purinton.

1. Make an outline of the article, making the outline in such a way that it will emphasize Mr. Purinton's conception of an ideal office.

SECTION II. LITERATURE.

Confessions of a Westerner.

1. How does this article differ from Irving's essays concerning life in England?

SECTION III. WORD STUDY.

1. Give the meaning and the derivation of every one of the following words prominent in the news of the week: appalling, revelations, corroborating, formulating, radicals, project, propaganda, repudiation, aggressive, punitive, sedition, paramount, artizans, overt, impromptu.

SECTION IV. GRAMMAR.

The Bible: Textbook of Efficiency. By M. T. Shelford.

1. Point out several examples of simple, of compound, and of complex sentences. Which type of sentence is most used in this article?
2. Give the syntax of the nouns in the first paragraph.

Working Out the Marriage Problem. By Harriet Orne.

1. Give the syntax of the phrases in the first paragraph.
2. Give the syntax of the clauses in the second paragraph.
3. Give the syntax of the infinitives in the third paragraph.

Teachers of English are requested to write to Dr. Law, giving constructive suggestions for the use of The Independent in the teaching of English.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Public Opinion and the War—"Time to Stop It," "Loyal Lawyers," "The Voice of Labor," "The Flight of the Doves," "Stockholm Conference Postponed."

1. Upon the basis of the editorial, differentiate between the right of free speech (Constitution, Amendment I) in time of peace and in time of war.
2. What, according to the lawyers, are the German violations of international law. Investigate these subjects further by consulting a standard textbook on international law.
3. Compare the present augmentation of the President's war powers with conditions during the administration of President Lincoln.
4. Contrast the action of the labor meeting in Minneapolis with the action of the People's Council in Chicago. What conclusions do you draw?

II. Preparing for War—"War as an Industry."

1. "Krupp factories . . . won the first Belgian campaign." Explain this sentence.
2. "We must make universal training a reality," etc. How?
3. "The needs of wartime may be reduced to five," etc. How is each of these five to be taken care of?
4. "An objection may be raised to this universal conscription," etc. What answer, if any, have you to this objection?

III. Italy and the War—"Avanti Savoia!"

1. What is the significance of the title of the article? Describe the steps by which Savoy has risen to its present position in Italy.
2. What, according to the article, are Italy's purposes in the war? Is Italy justified in desiring further extension of territory?
3. What is meant by the Prussian "*Drang nach Osten*"? How will Italy prevent this movement?
4. What effect will a successful Italian campaign have upon the fate of the Austrian Empire?
5. How does the author propose to reconcile the rival claims of Italy and the Balkan states to the eastern shores of the Adriatic?

IV. The Government of Germany—"The German Government and the German People."

1. Discuss the governmental relations between the German people, the Reichstag, the Bundesrath, the Imperial Chancellor and the Emperor. How far does the government express the popular will?
2. Name the chief political parties in Germany at present and discuss the attitude of each of these parties toward the war.

V. The Partition of Poland—"A New Polish Partition."

1. Look up the history of the partition of Poland in 1772, 1793 and 1795. What was the political status of Russian, Austrian and Prussian Poland at the beginning of the present war?
2. How has the war affected the political and social conditions in each of the three regions?
3. What is the political status of Russian Poland at present? According to the news item, what change is proposed?

VI. A Study in Commercial and Political Geography—"Confessions of a Westerner."

1. In this article New York is called "the most beautiful European city west of the Atlantic." Why?
2. Account for the difference in climatic conditions referred to in the article.
3. "Out West the railroad was a serious matter." Explain.
4. What is the economic significance of the sentences: (a) "I also despised the little copper coins called pennies." (b) "I also missed the big silver dollars," etc.
5. Comment on the "almost entire absence of civic vanity" in New York.
6. "I found Eastern politics a little perplexing." Why?
7. "In Wyoming the Nation was omnipresent." "Here I find the city and state at every turn." Account for the difference.

VII. Industrial Efficiency—"The Waste of Getting Tired," "The Best Office I Ever Saw."

1. What are the proofs that there is a direct relation between fatigue and industrial efficiency? What means can we employ to lessen this fatigue?
2. "The modern office is a library, a training school, a health resort," etc. Discuss one or more of these functions and show its relations to efficient business methods.
3. What are some of the schemes offered by Mr. Purinton for improving office conditions? Can you add any schemes of your own?
4. From a study of these two articles what conclusions do you draw concerning the changing relations between capital and labor?

MORITURI SALUTAMUS

June 5, 1917

BY WILLIAM HERBERT CARRUTH

Not as go felons blindfold to the block,
Hearts choked with rage and feet irresolute;
Not like dumb beasts that crowd the deathward chute,
Snuffing the blood of their own slaughtered flock;
But clear-eyed, lifted up upon a rock,
Would we this day enter the grim dispute.
We being about to die, our Chief salute,
Highly prepared to meet the ultimate shock.
Ten million men, we answer to the call;
Three million lives—our lives—we offer and
We ask but this, our leader, once for all:
Since we must pay the cost, to understand
Ere the full tempest from the heavens fall,
The concrete terms on which we stay our hand.

—*San Francisco Bulletin.*

THE NEW PLAYS

Over the Phone, by George Broadhurst. Sex comedy "founded on the Hungarian of Imre Foeldes." Well played, clever, neurotic, exotic. (Forty-eighth Street Theater.)

This Way Out shows what happened when a would-be practical joker signed his friend's name to an answer to a matrimonial "ad." Funny, good natured light comedy. (George M. Cohan's Theater.)

THE FOOD FIGHT

Under this head, every week, The Independent will print some vital part of the information which is being circulated by the Department of Agriculture to aid American housekeepers in their patriotic and intensely necessary work of conserving food.

DON'T throw away the pulp left in the jelly bags after the clear juice has drained out, says the United States Department of Agriculture. Altho federal laws prohibit the use of this substance for commercial purposes, because it might masquerade as a whole-fruit product, it is thoroly wholesome, and there is no reason why it should not be put to family use. Fruit paste, for instance, is a most satisfactory product that can be made from the fruit pulp.

Fruit paste is a type of confection or dessert and may be made from apricot, quince, gooseberry apple, cherry, plum, kumquat, guava and other fruits. For apricots, gooseberries and other acid fruits use 1 pound of powdered sugar to 1 pound of fruit pulp; for quince use ¾ pound powdered sugar to each pound of pulp; and for apples ½ pound powdered sugar for each pound of fruit pulp. If desired, pulp from several kinds of fruits may be mixt. If acid fruits predominate in this mixture, use approximately 1 pound of sugar to 1 pound of fruit mixture; if sweet fruits predominate, use less sugar.

Rub the fruit pulp thru a purée strainer and weigh it. Add the sugar, put the mixture over a slow fire, and cook until it is very thick, so that when a spoon has been passed thru it the mass does not run together immediately. Pour the paste in a half-inch layer on flat dishes, marble or glass slabs, which have been rubbed with a cloth dipped in a good salad oil. Expose the dishes to draft for a couple of days and then cut the paste into figures. If the paste is well boiled down, it is dried more easily. The paste also can be cut with a common knife or with a fluted vegetable knife, or it can be cut in round cakes, the center of which is again cut with a smaller circular cutter; there will thus be both rings and small round cakes.

Place the cut fruit paste on paper and sprinkle it with crystallized sugar or common granulated sugar. Allow it to stand again for a couple of days exposed to draft, dip it in crystallized sugar, and pack in a tin or wooden box lined with parchment paper and with layers of the same paper placed between the layers of paste. The paste can be kept thus and served as dessert, or as garnishing on creams and custards, frozen creams, large cakes, etc.

REMARKABLE REMARKS

JOHN D. ROCKEFELLER—I hate to move.

BILLY SUNDAY—God likes to have a little fun.

ORVILLE WRIGHT—There is no sense of dizziness in the air.

GERTRUDE ATHERTON—I want $50,000 and I want it quick.

MAYOR THOMPSON OF CHIAGO—The Pope is some neutral.

WOODROW WILSON—This Great War makes us all brothers.

GENERAL PERSHING—We are making giant strides day by day.

EMPEROR WILLIAM—The Lord of creation has granted our prayers.

ELIHU ROOT—If you maintain democracy, you must kill autocracy.

LAURA JEAN LIBBY—Have one pocketbook between husband and wife.

MARY PICKFORD—I could look fifty black cats in the eye and smile at them all.

DAVID LLOYD GEORGE—I believe in the nation which can sing about its defeats.

EDWIN MARKHAM—There have never been but two nations; the rich and the poor.

J. OGDEN ARMOUR—If I had been a poor lad I might never have got beyond a clerkship.

BISHOP T. F. GAYLOR—Economy is being preached in the South with a seriousness amounting almost to solemnity.

PAUL LENSCH—If England does not win the war, she has lost it. If Germany does not lose the war, she has won it.

GERMAN FOREIGN MINISTER KUHLMANN—We are probably beginning the last year of this gigantic war of nations.

DR. W. S. ROBIE—No sane man can advise any course for young people except moderately early, well-assorted marriages.

OTTO H. KAHN—It is absurd to preach that no one should be allowed to make more money during the war than his bare living expenses.

THEODORE ROOSEVELT—The war I was in wasn't much of a war, but it was all there was, and it was not our fault if there was not enough to go round.

THE POETS' GIFT TO ITALY

UNDER the leadership of Robert Underwood Johnson, the Poets' Committee for the American Ambulance in Italy is making a nation wide appeal for contributions with the hope of placing at least fifty ambulances, costing $2000 apiece, on the Italian front. Arrangements have been made to obtain also the coöperation of the women's clubs, the Players, the National Institute of Arts and Letters, the Authors' League, and many other organizations devoted to the promotion in this country of art and literature. The American people have placed over a thousand ambulances on the French front but the American ambulance is as yet hardly known in the Italian theater of war, and it was felt to be right and proper that the poets, who of all Americans owe most to the inspiration of Italy, should be pioneers in this field. Contributions should be sent to the Poets' Committee at 70 Fifth Avenue, New York.

EFFICIENCY SOCIETY

The ratio of achievement to effort is the true measure of efficiency

MAKING THE WAR OUR BUSINESS

LAST week The Efficiency Society published in its regular department of The Independent the first results of its War Canvass, presenting a condensed résumé of the replies to the Society's questionnaire recently sent to all its members. In that résumé it was clearly shown that a large percentage of our membership, both as individuals and by the actual employment of their plants and help, are coöperating with the Government in its purpose and work of carrying on the war, and of influencing the business of the country to be carried on, efficiently, with a view to conserving effort, material and time, and to practise thru it all the best economies.

It was shown also that there are business and professional men and manufacturing plants capable of serving, but not yet doing so, mainly thru a lack of information as to how to proceed. It is clear that the Council of National Defense can accept our services when the results of this canvass are fully classified and tabulated.

Our purpose was to interest business and professional men, manufacturers and distributors, in this effort. The response of our members has been most gratifying, and also the response from the National Institute of Efficiency, whose coöperation we secured. To carry this work further we now hope we may enlist the interest of all executives of important business who are readers of The Independent. We are printing the Questionnaire Coupon on this page to serve as an easy means of making prompt replies.

The Efficiency Society now invites all business and professional men, all manufacturers and distributors, who are interested in this common work for the general good to make reply, if they will, to the questions below, filling out the blank and mailing it to The Efficiency Society, 119 West 40th Street, New York City.

The war is now our business: we can do much to advance the betterment of business organization and administration thruout the country. There are ways in which, directly and indirectly, the thought and activities of alert executives, with or without plants and working forces to offer, should be used.

By this survey The Efficiency Society hopes to contribute toward a more general coöperation in governmental needs and plans, based on a knowledge of what is being done now, on what can be done, on how the Government will do its part, and on how business generally is affected by the war.

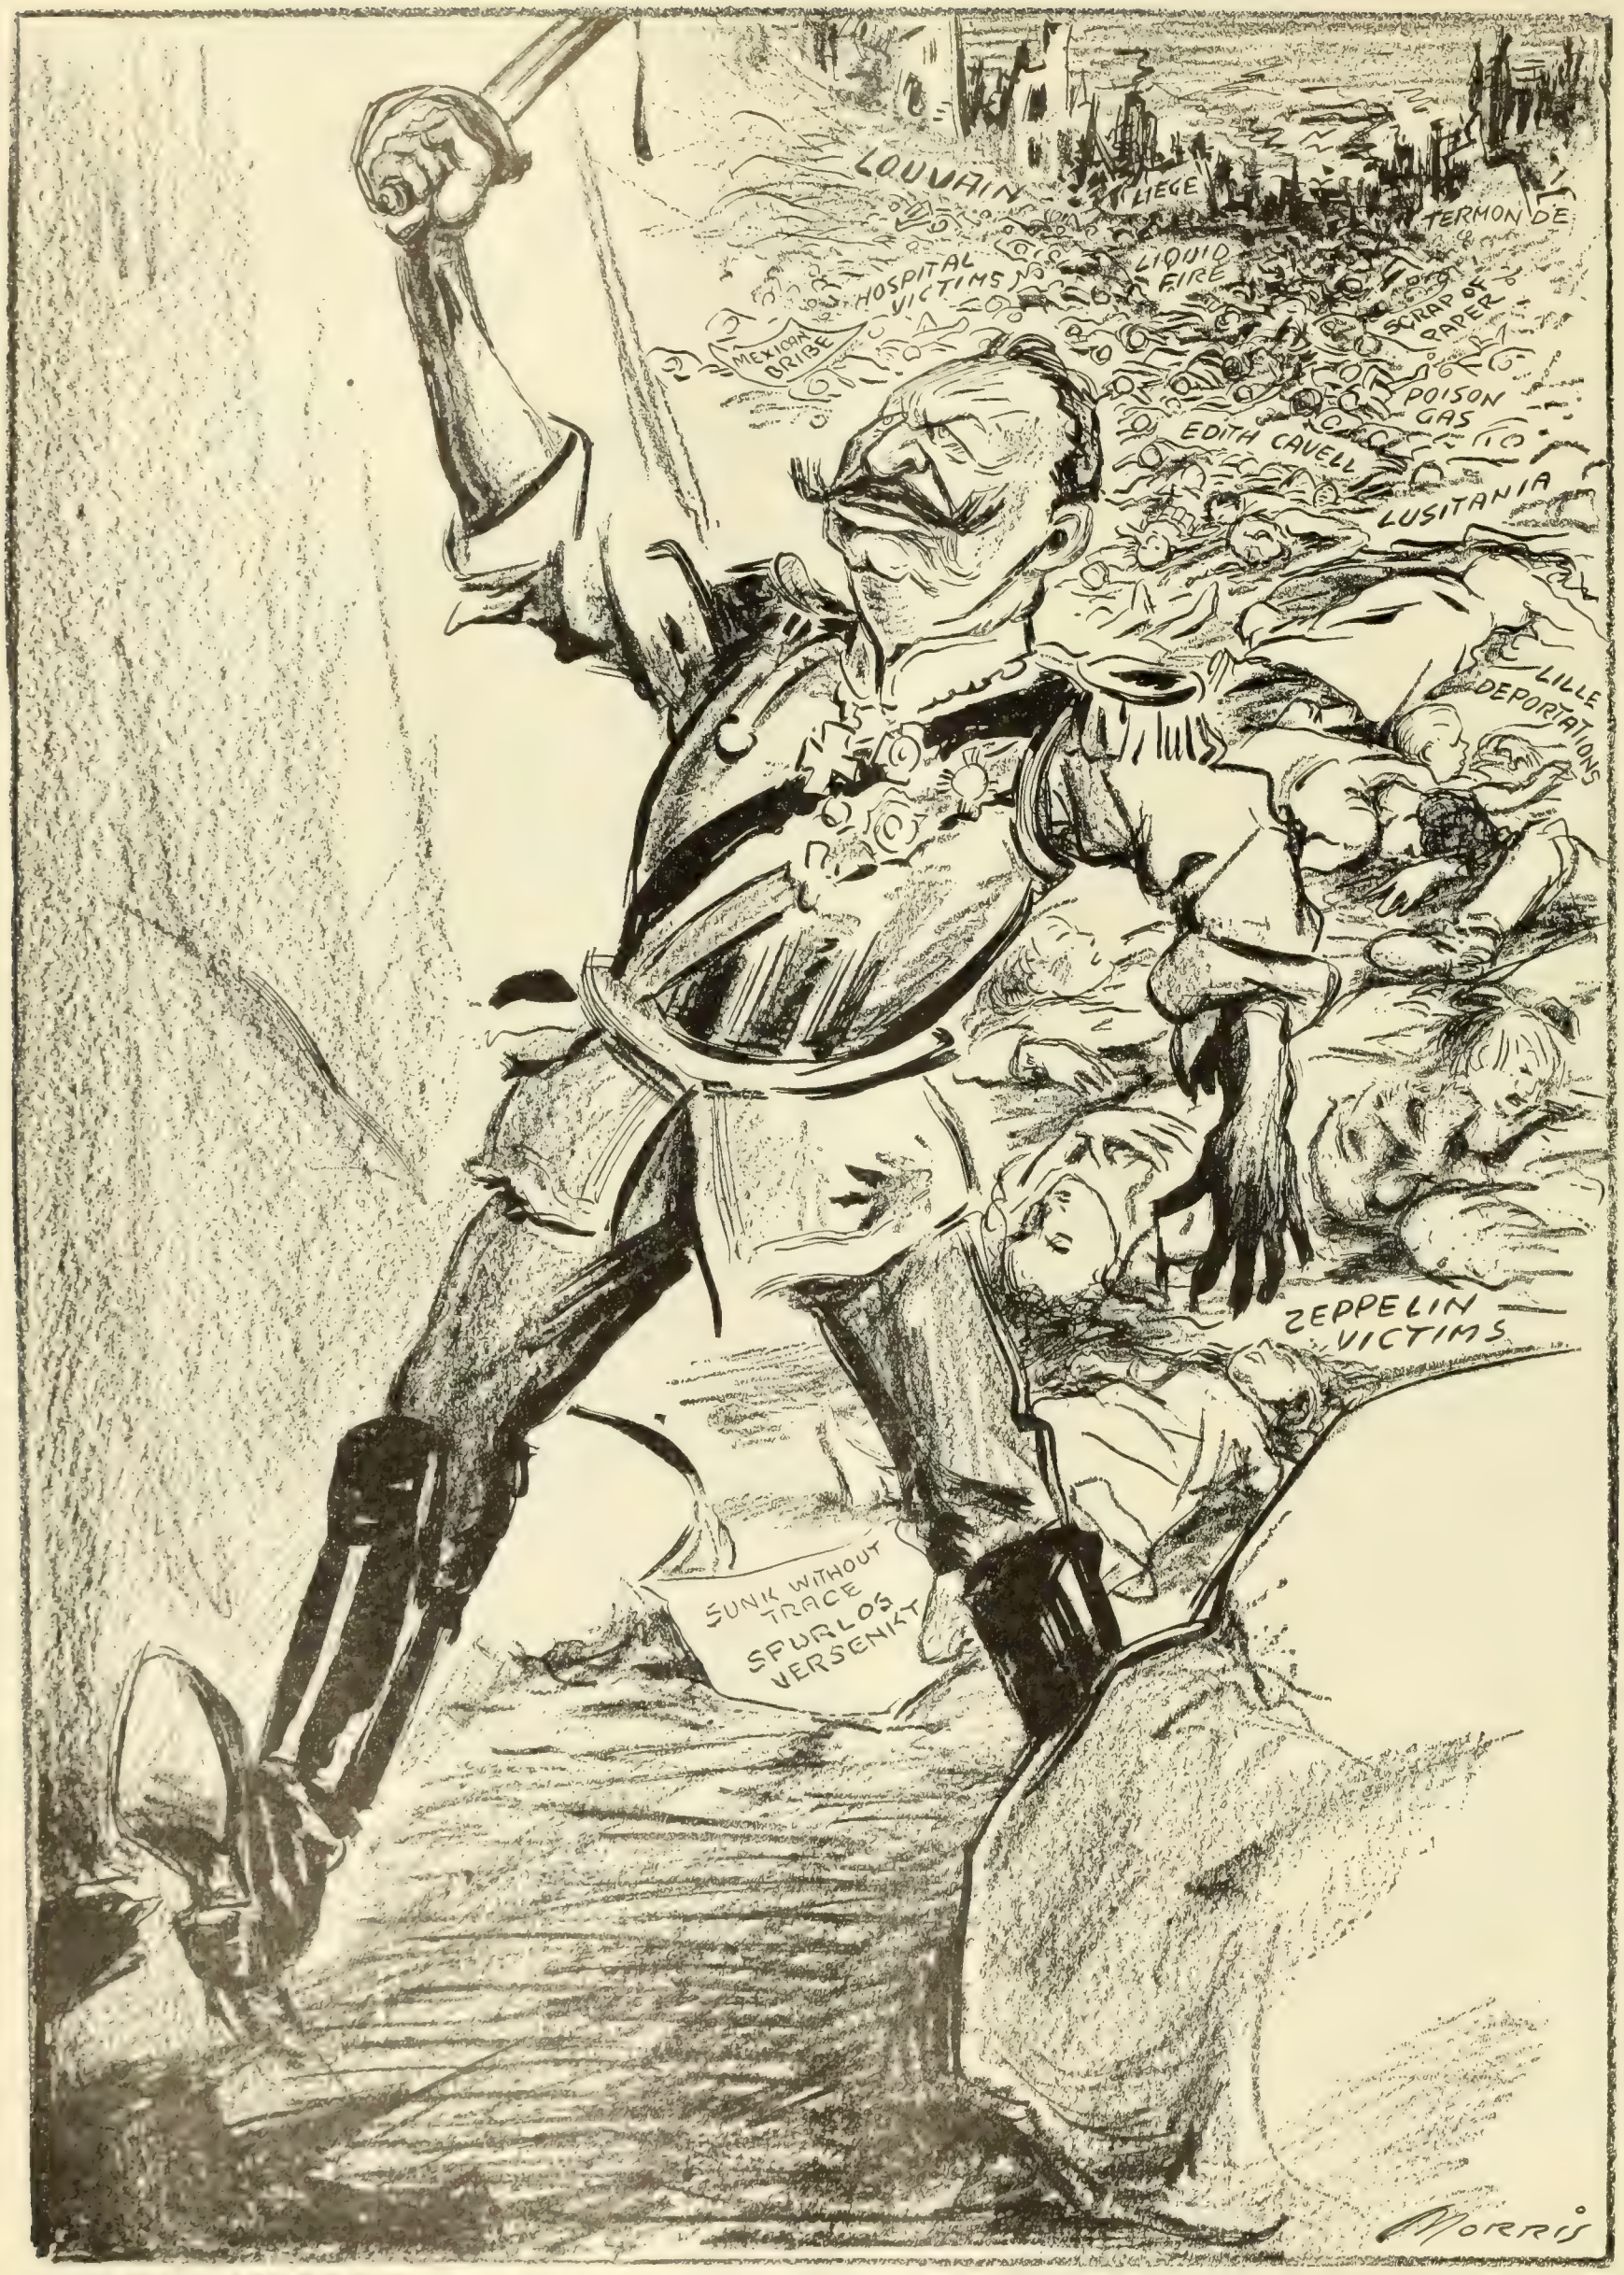
WITH WHICH IS INCORPORATED
HARPER'S WEEKLY

A BIRDSEYE VIEW OF THE BATTLEFIELD

THE fourth campaign season is drawing to a close with no apparent prospect of a decision in the field this year, so we may well take a general survey of the military situation. It is curiously like that of the preceding years. Each fall of the four has shown Germany gaining in territory and losing friends. On the map her position looks better than ever, yet the chances of her victory grow ever less. Her military prowess compels admiration, while her ruthlessness and arrogance arouse enmity on every side. New foes arise and friends are alienated. The last few weeks have added Greece, China, Liberia, Cuba, Siam and Brazil to the list of her enemies. Seventeen nations, including the greatest and the smallest, are now arrayed against the four Central Powers. In population the odds in our favor are ten to one; in area more than thirty to one. In fact the situation is much more favorable than these figures show, for even those countries that remain nominally neutral, like Argentina, are becoming daily more hostile and at any rate their resources are at the disposal of the Allies, since these have command of the sea. The Germans then can hardly be accused of exaggerating when they say that the whole world is in arms against them.

Why, then, are they not yet beaten? Because modern methods and weapons of war have so strengthened the defensive that an entrenched force ably commanded and amply armed can hold out against a much greater force until the defenders are killed or blasted out of their positions. The Allies may have ten men to the enemy's one, but even assuming that Hindus, Siamese and Hottentots are individually a match for Germans or Austrians it is impossible to pit ten men against one on any front in Europe. Only a limited number of men can be used in a mile of trenches and so long as Germany has enough men to hold the front line she can meet her foes on equal terms and maintain the appearance of invincibility regardless of the odds against her.



That is why the battle line in France and Belgium has shifted so slightly in the last three years in spite of the piling up of men and munitions at various points by one side or the other. It is hard to see how the Allies, whatever their future resources, can prepare and deliver a stronger attack than that which they launched on April 6 last. They had all the troops that could be put on the front and all the arms they needed, yet they accomplished but little more than they did in the similar attacks of 1914, 1915 and 1916. The French offensive was a frank failure for which General Nivelle was removed from command. The British did better, but not what they or their enemies expected. The Germans expected to lose Lens and orders to evacuate it on April 19 were found on German prisoners captured by the British, yet now, five months later, the Germans are still in possession of this important mining center. By secretly withdrawing in March to a new line ten or fifteen miles behind and devastating the country in between Hindenburg secured a new position which is so far intact. At Verdun the French have regained most of the ground they lost in February, 1916. About Ypres the British have pushed the Germans back two or three miles.

Elsewhere in Europe the Allies have fared worse. The Italians took Gorizia a year ago last August, but were not able to push beyond until recently when with the help of British artillery they gained a couple of miles of the Carso plateau on a thirty-mile front. The Austrians as usual showed great weakness and surrendered by the wholesale, but since their line has been strengthened by reinforcements of Germans and Turks the Italian drive has been checked—with Triest twelve miles away. Nevertheless this seems to be the most vulnerable point in the enemy's line.

The Germans have taken advantage of the Russian chaos to capture Riga and to regain nearly all of the 12,000 square miles of Austrian territory that had been lost in 1916. Riga the Germans will probably desire to hold, for they claim it as a German city on the same ground as the Italians claim Triest. But if they extend their conquests beyond the "German provinces" in the direction of Petrograd they would be taking territory to which they have no shadow of a claim and which they cannot expect to keep. The capture of Petrograd would be a spectacular success and make good bargaining material, but the vast, amorphous mass of Russia would remain unconquered and the real strength of the Allies would not be impaired. Petrograd is over three hundred miles beyond Riga. Swampy land lies between and winter is coming on. However demoralized the Russian army may be, the conquest of the capital would be a toilsome and painful process. It would involve the extension of the German lines by five hundred miles or more, and this is just what the Germans cannot afford to do.

The German line on the east is now about as short as it can well be. It drops like a plummet from Riga to Rumania. But it would be possible to swing the southern end of the line eastward to Odessa without lengthening it. This would give the Germans possession of the rest of Rumania and of the grain fields of Bessarabia. A raid in this direction would gather in the harvests of the richest region of Russia, while the seizure of Petrograd would add two million mouths to feed. A fall or winter campaign could be carried on in the south of Russia to better advantage than in the Baltic region, so it seems more likely that the Germans will strike toward Odessa if they have the strength to strike anywhere.

One other frontier in Europe remains to be considered, that is the Macedonian. For two years the Allies have had a force of several hundred thousand men stationed at Salonica, "eating their heads off" as the saying is, and shaking with fever, and accomplishing nothing. They failed to save Serbia, they made no effort to save Rumania, and they have

Drawn for The Independent by W. C. Morris

"ONWARD WITH GOD!"

not even protected Greece. They permitted the Bulgars to come over the mountains and coolly appropriate Greek forts and ports a few miles away without interference. Now that Greece has declared for the Allies, it would seem that they have no further excuse for inactivity, but we cannot tell. The Salonica expedition has been shrouded in mystery from the beginning. We may not know for a long time yet what it was designed to do and why it did not do it.

In Asia also the collapse of Russia has paralyzed the Allied offensive. Last April the British, pushing up the Tigris to Samara, had formed a junction with the Russian forces from the Caucasus. Turkey was cut in two, and if the combined armies could have continued their westward movement it would have been cut in three. But now it is rumored that Russian troops have been withdrawn from northern Persia and have retired in Turkey, leaving the Armenians exposed to the tender mercies of the Turk. In April also it was reported that the British expedition from Egypt had overwhelmingly defeated the Turks at Gaza and were rapidly advancing on Jerusalem. We do not know just what did happen or is happening there, but it is evident that the British are still knocking at the gates of Gaza and have not yet penetrated Palestine.

In Africa all the German colonies have fallen into the hands of the Allies except East Africa, where very strangely a little band of Germans with negro auxiliaries still holds out after three years of fighting against the English, Boers, Belgians and Portuguese, who beset them on all sides.

This, then, is the situation in the fall of the fourth campaign. The Allies are now in control of about four-fifths of the German and Ottoman empires, but the conquered territory lies in Africa and Asia. In Europe the Allies hold only strips from five to ten miles wide in Alsace, Carniola and Galicia. Everywhere else the Central Powers are fighting on the soil of their enemies. Russia appears to be powerless to offer resistance, but Germany appears to be powerless to conquer her.

Meantime "nothing is certain but death and taxes." All the belligerents are bleeding to death and the decision depends upon which can hold out longest. It seems that Austria-Hungary must be weakened the most, next France, and third Germany, but how near any of them are to the breaking point it is impossible to say and useless to surmize.

WAR AS JUDGMENT DAY

He is searching out the hearts of men before His judgment seat.

SO runs the noblest battle hymn of all the nations. Every great war has been a judgment day, and this war is the great judgment day of human history.

Nations and institutions; programs and efficiencies; men and their deeds, are being weighed in the scales of fate; and many are found wanting.

The fool has been judged. The man who can't tell a red light from a white one is as dangerous as any other train wrecker, and will henceforth be so regarded.

The coward and the slacker have been judged. They expected to sneak thru life as respectable citizens. The war caught them. In all their baseness they stand exposed.

William II has been judged, and the judgment will stand. He personally willed the war, and began it. He had that power, and he used it, and his authoritatively published speeches are proof that he intended to use it to make war.

The German Empire has been judged, and the judgment will stand. It is well to discriminate between the German people and their Government. There are good and sane people in Germany. We share the President's hope that the good and the sane will wish and be able to establish a democratic and responsible German state; but the fact that stands forth now, and that will stand in history forever, is that the German Empire has gloried in its Kaiser, and has permitted him to exercize the power of life and death.

German education has been judged, and it will not again draw admiring students from the world beyond German frontiers. It has produced not men, but creatures, obedient automata, technically clever, but incapable of intelligent responsibility; and the seats of learning it has filled with what? With beings capable of research, and set apart for the pursuit of truth, who yet were willing to be remembered as the hireling liars of a king!

A POLISH REPUBLIC

THE reported German plans for the re-partition of Poland have again brought to the fore the greatest of all the national questions whose solution will be the task of the coming peace conference. The original German policy was to leave Poland divided into three parts as at the present time, with the sole change that Russian Poland was to become an independent "buffer state" with some German or Austrian younger son placed over it as a constitutional king. Altho the genius of Hindenburg and the treachery or gross incompetence of the Russian Government gave Russian Poland to the Central Powers this program was never carried into effect. A temporary military administration was set up and a Polish "national army" created to fight the Russians, but the Poles remained unreconciled and no provision for civil rule after the war was made. And now the Central Powers put forth a new program which abandons entirely the idea of an independent Polish kingdom, enlarges somewhat the boundaries of Prussia, and gives the greater part of Russian Poland to the Austrian crown.

We do not know which plan the Poles themselves would prefer. If Russian Poland is divided between Prussia and Austria and the Austrian slice united with Galicia the dream of an independent Polish state is gone. On the other hand, it is a step in the direction of unification that the Polish population should be under two governments instead of three, and if the enlarged Austrian Poland is given a sufficient measure of home rule its status may become as tolerable as that of Hungary. With the fall of Riga, the hope of emancipation from the east has grown dim and distant and the Poles may turn to Austrian overlordship as at least preferable to Prussian.

The Allies cannot consent, short of utter defeat, to either the earlier or the later proposal of the Central Powers. Whether the Hapsburg Emperor or a German princeling rules the Kingdom of Poland it will equally be a tool of German *Weltpolitik*. We want no more King Constantines to govern their nations on orders from Berlin. But we should frankly recognize that the Polish program laid down in the note of the Entente Allies replying to President Wilson's request for a statement of terms of peace has also become impossible. A reunited and self-governing Poland joined to Russia by the person of the Czar was a feasible plan (tho not an ideal one) so long as the Czar retained his throne, but no longer. If there is to be any sort of future union between Poles and Russians it must be republican. If not; if there is to be an independent Polish state, where can the Entente Allies find their king? And why should they look for one?

Suppose that the Allies pick out the most bitterly anti-German ruler whom they can find in all Europe and place him on the throne, then, even if he himself resists Teutonic intrigue, his court will soon become honeycombed by German influence, his nobility will look to the great feudal structure of Central Europe as a natural ally against Polish and Russian democracy, his caste of army officers and civil officials will go to school to Prussia, and his son will marry a German princess. There is hardly a monarchical nation in the world today where the group of parasites that cluster around the throne are not openly or secretly pro-German. Whether a court be Spanish, Swedish, Dutch or Russian, the revelations of the present war have shown that it is always really German; even if in defiance of both ruler and people. How much more would this be the case in a newly

created kingdom encircled on three sides by Hapsburg and Hohenzollern lands!

President Wilson has already spoken in the name of the American people for an independent and reunited Poland. We may assume from his recent reply to the Pope that he would prefer that the German system of government should find no more imitators. Let this, then, be henceforth the American formula: Poland, united, independent, republican. It might long ago have been the program of the Entente Allies as well, if part of Poland had not belonged to the Russian crown. The German occupation of Poland has since put an end to any thought of the Russification of the country; today, all Russians would be glad to see a really independent nation on the west. The Russian revolution has removed the last objection to a Polish republic. The Czar, very naturally, preferred that his neighbors should be also monarchies, as do the Central Powers today. The Russian republic would rather have republics on its frontier, for the same reason that President Monroe preferred them in Latin America. All nations feel more secure when their own form of government is buttressed by the example of their immediate neighbors. The Poles, too, even the small minority of royalists among them, would rather have the independence of a self-governing commonwealth than the rule of a puppet king, the tool of stronger powers. Only the ruling castes of Central Europe would feel aggrieved, and their good pleasure we will not consult.

A DEFEATED WOMAN

A most extraordinary confession appears in the current issue of *The New East*, a monthly magazine of dignity and responsibility published in Tokyo. It is written by an American girl who married a Japanese. She asserts her father is a graduate of Harvard and a professor of physics in an American university. Her mother was a daughter of a United States senator from Massachusetts and a direct descendant from Peregrine White, the baby that was born on the "Mayflower" on its voyage over from England. She herself graduated from the Massachusetts Agricultural College and Cornell, and then went to California and started an apple ranch which was very successful financially. She made one year an income of $15,000. She was accustomed to employ Japanese on the ranch and found them superior to white help. She finally married a Japanese. This excited so much race hatred that on two occasions her husband was nearly murdered. She thus concludes:

> I tried my best to make my neighbors in California appreciate the good qualities of the Japanese, and I failed absolutely. I brought the best that is in me to the fight, but I was defeated, and left with heart wounds that will never heal. I left my California home, my long-dreamed of farm, not to escape persecution and personal anguish—I had long endured both—but I came away to save my husband's life.

Apparently the Germans are not the only people who do not apply Christian ethics to their treatment of other races.

ARE WE FIGHTING SHADOWS?

FROM two quarters we find hostile criticism of President Wilson's decision that a reform of the German Government is a needful guarantee of future peace. That portion of the American press which is as pro-German as it dares to be argues thus: "We admit that Germany is a monarchy, but so are most European nations. If we are to start in reforming constitutions why should we confine our attention to the German? Why not reform the British monarchy and the Italian? Even the president of a republic is sometimes autocratic and President Wilson has far more power than Kaiser Wilhelm." Then the writer draws the moral that we can conclude peace right away on the basis of "no annexations, no indemnities and the freedom of the seas"; the purpose of President Wilson's note being sufficiently answered by some Reichstag resolution approving the peace treaty.

On the other hand, especially in England, there are many who say: "Why this distinction between the German Government and the German people? The Kaiser is popular; the war is popular; frightfulness is popular. A German democracy would be just as dangerous to its neighbors as the present German Empire. We demand something more substantial in the way of guarantees than paper constitutions." Altho the man who argues thus can hardly be called a pro-German, he reaches the same conclusion as the hyphenated journalist and the copperhead congressman, that the internal politics of Germany are none of our business. Is there, then, no relation between German autocracy and German militarism?

But the fallacy in all such arguments is that it ignores Germany history and tradition. Germany is not only an aristocracy, it is a particular kind of aristocracy. It is not rule by the scholar as in China, or rule by the priest as in India and ancient Egypt, or rule by the merchant as in Venice and seventeenth century Holland. It is rule by an army. At the head of the system stands an individual whose German title (Kaiser) is copied from the name of a Roman general and whose English title (Emperor) is derived from a Latin word meaning commander-in-chief. His court dress is an army uniform. He spends a large part of his time studying military science and reviewing troops. He is the proud descendant of a line of conquerors who in almost every generation added new lands to the Prussian realm. No one could possibly mistake him for a civilian, as they might easily take President Wilson, President Poincaré or King George, altho these men, too, are the commanders-in-chief of the armies of their respective nations.

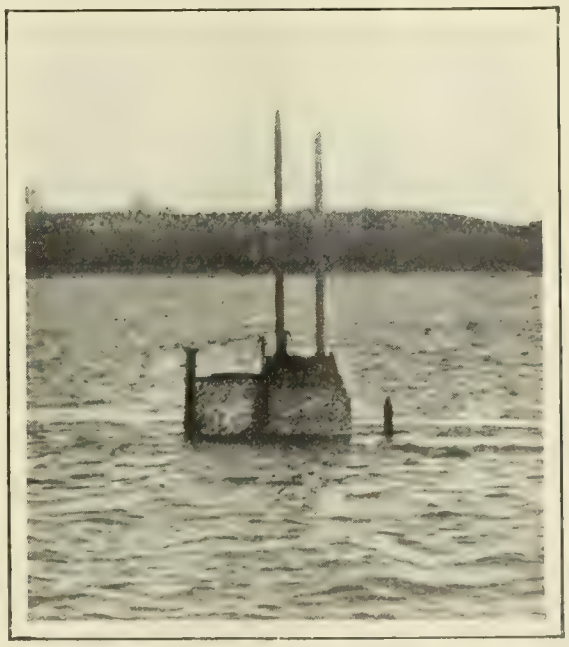
Next in rank and influence come the German princes; the rulers of the lesser German states, and the kin of the Hapsburg and Hohenzollern dynasties. All are military men, trained as army officers in their youth, and many of them are at the present time in actual command of army units. There is probably no member of a ruling German house who has not a string of military titles to his name and another string of honorary military medals across his coat.

Then, the nobility. The nobility of every country in Europe finds its origin in the days when rulers paid their most valiant warriors in lands and titles instead of cash. A "duke" is a leader, a "marquis" a guardian of the frontier, and "chivalry" comes from the same root as "cavalry." But in most countries this has become mere ancient tradition. The English nobility, for example, is largely recruited from the ranks of successful politicians or wealthy business men. In Germany the nobility has never lost its military character.

Finally, we have the public service or bureaucracy. The chiefs of the army and navy are a class apart; they are independent of all elective bodies and even, in practise, of the Chancellor. No one in Germany can control the actions of Hindenburg or Ludendorff except the Kaiser himself. But even the purely civilian branches of the Government are organized in military fashion; the famous Prussian civil service has the centralization, the remoteness from the people and wide range of power to interfere with individual liberties which we are accustomed to associate only with military rule. The effect is strengthened by the profusion of titles, honors, uniforms and elaborate rules of etiquet which characterize the grades of public office in Germany.

Uprooting German militarism is no simple and easy thing. It is not a question of a Kaiser more or less or of a passing jingo phase of public opinion. The whole structure of the constitution must be shattered, preferably from within, before Germany ceases to be a country which is under martial law even in time of peace, which subordinates the civil power to the military at all times and places, and which puts in all positions of real authority either an actual army officer or a man whose qualification is that his ancestors were famous men of war. How could such a country not be militarist and how could a people so ruled view war as does the rest of civilized mankind?

THE STORY OF THE WEEK



Labor and the War

The American Alliance for Labor and Democracy did not conclude its activities with the end of the Minneapolis conference. On the contrary, it then began a nation-wide propaganda for the American cause which aimed to crush out all trace of disloyalty from the labor movement. The declaration adopted by the conference announced "unswerving adherence to the cause of democracy, now assailed by the forces of autocracy and militarism" and strongly denounced "the words and actions of those enemies of the republic who, falsely assuming to speak in the name of labor and democracy, are now ceaselessly striving to obstruct the operations of the Government." The conference acknowledged the intention of the national administration to maintain favorable conditions of labor even under the stress of war, indorsed the soldiers and sailors' insurance bill and declared for universal equal suffrage. Samuel Gompers was elected president of the alliance and also placed on a committee to extend aid and encouragement to the Russian democracy. Charles Edward Russell, who was one of this committee and was recently a member of the American diplomatic mission to Russia, discussed the Russian situation at a public meeting in New York. He declared that not German prowess, but the influence of American pacifists, had brought about the military collapse of the Russian republic, because German agents used the words and actions of the anti-war faction in the United States to give the Russian people the impression that the war was unpopular on this side of the Atlantic. This naturally discouraged and demoralized the Russian soldiers who were thus led to believe that an immediate peace was their wisest course.

While the American Federation of Labor under the leadership of Samuel Gompers is proving one of the greatest of our national assets, its chief rival in the field of labor organization, the Industrial Workers of the World, is organizing the forces of sedition under its banner. Evidence secured in recent raids on I. W. W. headquarters and Socialist or pro-German newspapers shows that within three years the I. W. W. has increased its membership by ten fold and now numbers fully 90,000. Federal authorities are carefully examining the records of this organization to discover traces of German influence if such exist. A number of investigations of newspapers alleged to be disloyal have also been undertaken and in various municipalities stringent limits have been placed on the freedom of speech of the soap-box agitator.

Food and Fuel Conservation

Fuel Administrator Garfield announces that the small consumer need not worry about the winter's coal supply. In many instances it has been reported to Dr. Garfield that coal operators had declined the orders of customers who asked for small quantities of the mine output on the ground that all the coal that could be mined had been contracted for several months ahead. Among those who were affected by this unfortunate situation were retail dealers, public service corporations in small towns, schools and other public institutions with a winter heating problem and various manufacturers doing business on a small scale. To meet their needs the Fuel Administration will compel coal operators to set aside a certain percentage of their output for the disposal of the Government. This coal will be distributed to various classes of consumers at a reasonable price and in such quantities as will meet their immediate needs. Since retail coal prices will be fixed in October, and the present administratively established wholesale rates readjusted at that time in the light of experience, consumers are advised not to lay in their winter's supply before October.

By the proclamation of the President, under the provisions of the food control bill, sugar has been added to the list of foodstuffs subject to the control of Mr. Hoover. Under the terms of the proclamation all persons or corporations engaged in the importing, manufacturing or refining of sugar, or the production of syrups and molasses, are required to secure before the first of October a license which will permit them to carry on the work of production and facilitate supervision on the part of the Food Administrator. A voluntary agreement between Mr. Hoover and the sugar producers has established a price of $7.25 a hundredweight for beet sugar at refining points.

The September forecast of the Department of Agriculture for the yield of the 1917 crops is an optimistic one. The winter wheat yield is, as had been anticipated, less than in 1916, but the spring wheat crop shows marked improvement over that of the previous year and other grains and vegetables promise well. The indicated corn crop is an enormous one, 3,248,000,000 bushels; establishing a world's record. Potatoes also will be very abundant, exceeding last year's total by nearly two hundred million bushels. There will probably be no potato riots in New York this winter, as there were several months ago. The aggregate increase in all the cereal crops over the grain output of 1916 is over a billion bushels.

PUZZLE PICTURE: FIND THE SUBMARINES

The photographs show up these "camouflaged" German U-boats plainly enough, but imagine the effect of color and light and motion on their curiously streaked and spotted surfaces. Even when they must come up to breathe they can remain practically invisible and only at the moment does they launch need they report their whereabouts

The Italian Campaign The only important offensive during the week upon the part of any belligerent was the successful Italian assault upon Monte San Gabriele. This peak is one of a chain of mountains northeast of Gorizia; not quite as high as Monte Santo, but forming with it and other neighboring peaks a highland region which the Italians must completely master before they can press directly forward on the road to Laibach or venture to extend their lines south toward Triest. Many military experts assert that Laibach is more important in the eyes of General Cadorna than Triest; for the capture of Triest would only give Italy a commanding position on the seacoast, whereas an advance to Laibach would mean the overcoming of the highland barrier which has hitherto protected the great inland plains of Austria-Hungary from Italian invasion. Once on the lowlands the superior numbers of the Italians would tell for more than at present amid the mountain strongholds of Austria. But there still remains a part of the mountain barrier unconquered and the capture of the summit of Monte San Gabriele is rather the first step than the last on the road to the open country east of the Julian Alps.

The most encouraging feature of the situation is that the people of Austria-Hungary are so alarmed over the military position. The stubborn courage which the Austrians have shown in their long defense of the Carso and the Julian Alps is worthy of all praise, but the Austrian army is so obviously unequal to its task that German and even Turkish troops have been sent in large numbers to repel the victorious Italians. Italy is said to have no less than forty-eight divisions actively employed on a front of some thirty-two miles. To aid their supreme effort the Italians are urging their allies to send more cannon to the front and more coal to the factories. Italy has had to rely somewhat on the British for artillery and almost altogether upon England and the United States for fuel and for many kinds of machinery. This appeal will certainly not go unheeded in view of the fact that the Austro-Italian front is the only one at present which is "moving" and that peace sentiment in Austria-Hungary has already reached formidable proportions.

The Korniloff Rebellion For a few days it appeared that the disintegration of the Russian commonwealth would be completed by a civil war between Premier Kerensky and General Korniloff. Premier Kerensky had, indeed, the authority of the existing Government behind him, but that authority itself was based on neither law nor custom and depended for its existence upon the shifts and changes of the popular will. On the one hand, the "Bolsheviki" (the extreme Socialists) in Petrograd and the neighboring parts of northern Russia clamored against the Government for restoring capital punishment in the army and for opposing an immediate peace. On the other hand, many of the Constitutional Democrats and other moderate Republicans had lost all faith in Kerensky because he had permitted the Council of Workmen's and Soldiers' Delegates to dictate national policies.

The conservative republican faction turned to General Korniloff, the hero of the Galician campaign, as the man to free Russia from rule by the Socialists of Petrograd and to concentrate all the national energies in the single task of victory over the Germans. General Korniloff, who shared the opinion of his backers that he alone could save Russia, demanded that he be given the powers of a dictator to restore order. Premier Kerensky refused and ordered Korniloff to hand over his military duties to General Klembovsky. At the same time, he established martial law in the Russian capital.

General Korniloff did not submit to his deposition from office. He raised the standard of rebellion and began a march on Petrograd with all the forces which he could rally to his cause.

The bulk of the army and also the Baltic fleet declared at once for the Government of Premier Kerensky. The radical factions of Petrograd forgot for the moment their quarrel with Kerensky and joined forces with him against the rebellion. Even conservative Moscow and the Constitutional Democrats came to the conclusion that it was not the time to overthrow the existing Government, however weak it might be, nor was General Korniloff the right man to do it. The "Savage" regiments dispersed upon the promise that they could return to the Caucasus and would not be compelled to fight their fellow Mohammedans in Turkey.

THE GREAT WAR

September 10—Senate passes war tax bill. General Korniloff deposed from office. Eighteen British ships sunk during the previous week.

September 11—Korniloff marches on Petrograd. British advance in the Somme Valley.

September 12—Argentina dismisses German Ambassador Karl von Luxburg. Kerensky assumes command of the Russian army.

September 13—Korniloff's army surrenders, ending Russian rebellion. German advance checked in the north. House of Representatives passes war insurance bill.

September 14—Italians occupy hights of Monte San Gabriele. Sweden dismisses Secretary Ewerloef from the Foreign Office.

September 15—Senate passes war credits bill. Canadian House of Commons passes war franchise bill.

September 16—Kerensky proclaims Russian Republic. Argentina cuts off wireless communication with Germany.

Press Illustrating

THE PROFESSOR PREMIER OF FRANCE

The failure of Premier Ribot to form a cabinet brings to the head of the French Government a man known before the war solely as an authority on higher mathematics. However, Mr. Paul Painleve has proved his administrative ability during the last three years, first as Minister of Inventions and later as Minister of War, a position which he still retains

The Russian Situation The collapse of the rebellion and the arrest of General Korniloff left Kerensky for the moment master of the situation. He conceded a part of the army reforms which Korniloff had rebelled to attain, declaring that henceforth soldiers' committees would not be permitted to interfere in questions of military strategy. But the Constitutional Democrats were not satisfied with these concessions and withdrew their party representatives from the ministry. Thereupon the Bolsheviki and many of the more moderate Socialists who supported Kerensky demanded that a purely revolutionary ministry be established which would contain no representatives of any non-Socialist party or group. The Bolsheviki demanded not only immediate peace but the instant establishment of a Socialist republic with the abolition of private property. Kerensky did not listen to these extremists among his supporters and, while he consented to reorganize the ministry, in doing so he placed it on a non-partizan basis. A "war cabinet" of five members was constituted, following the example set by France and England, and in it were included Kerensky as President of the Ministry; M. Terestchenko as Minister of Foreign Affairs; M. Nikitin, Minister of Posts and Telegraphs; General Verkhovski, Minister of War, and Admiral Verderevski, Minister of the Marine.

Polish Regency Established As a first step to the establishment of a permanent Polish government the Central Powers have created a Regency Council to consist of three members appointed by the German and Austro-Hungarian governments. A decree to this effect was published at Lublin and Warsaw on September 12. The Council will in turn choose a Premier and the various ministries of state will then be turned over to Polish management.

A Mathematical Premier

There has been another cabinet crisis in France. The ministry headed by Premier Ribot resigned office on September 7, not because of any disagreement with the majority in the Chamber of Deputies on specific questions of policy, but because of a vague, general dissatisfaction with its members. The Socialists objected to the hostile attitude taken by the ministry to the Stockholm conference, and the conservatives were scandalized at the friendship which had existed between M. Malvy, one of the cabinet, and M. Almereyda, an anarchist accused of intrigues with Germany. M. Ribot tried to form a new cabinet, but he was unable to do so, as the Socialists refused their support. Not wishing to assume office again without any representation of the Socialist Party in his ministry, M. Ribot gave up his attempt to reorganize the government and permitted his associate in the cabinet, M. Paul Painlevé, to take office.

The new Premier first attained fame as a professor of mathematics. He and the late Lucien Poincaré, brother of the French President, were known to scientists all over the world as two of the most eminent mathematicians that France had ever produced. Early in the war he entered the cabinet of M. Briand as Minister of Inventions, and in the Ribot cabinet he was Minister of War. In this office he was responsible for putting General Pétain in command of the French Army in place of General Nivelle. As Premier he also retains his post of Minister of War, in which he had given general satisfaction.

Results of the Luxburg Incident

The code messages transmitted by the Swedish legation in Buenos Aires to the German Government, recommending a policy of ruthless submarine warfare against Argentine shipping, have brought about an international crisis of the first order. Argentina dismissed the German Ambassador, Count Karl von Luxburg, for sending these messages and the action of the Government was more than sanctioned by the anger of the Argentine people. Several blocks of business houses owned by German residents of Buenos Aires were wrecked and burned by the mob, and the firemen and police had all they could do to prevent further depredations. Ambassador Luxburg traveled to the frontier under the escort of an armed guard. The tone taken by the Argentine press shows that all the good feeling toward Germany which was created by the recent promise of the German Government to refrain henceforth from preying on the Argentine merchant marine has been wiped out by the incident. The press of the Allied and neutral nations have without exception denounced the conduct of the German diplomat. The German newspapers ignore entirely the contents of the code messages and confine their comment to criticism of the United States for "stealing" these documents.

Greatest interest attaches to the attitude of the Swedish Government and people. Foreign Minister Lindman has given to the press the official explanation of the Swedish Government. He stated that Sweden as a neutral had frequently acted as intermediary in making communications on behalf of belligerent nations; for example, in transmitting information concerning German civilians in Kiao-Chau after its siege by the Japanese. He admitted that the messages in question were written in code and that the Swedish legation had transmitted them without making inquiry into their contents, but promised to inquire further into the question and to see that hereafter such messages as were transmitted thru Swedish channels would be of a less objectionable character.

Bain

RUSSIA'S NEW ARMY LEADER

General Alexeieff, "the best brain in the Russian army," has emerged from the chaos of revolution as the one man who may bring military success to Russia. With the Korniloff rebellion quelled, Premier Kerensky has restored General Alexeieff to the position he formerly held under the Czar as chief of staff of the Russian army

The Swedish newspapers all condemn Germany's action, but some of them are inclined to defend the Swedish Foreign Office from all blame. The matter has entered the domestic politics of the country, for there is a campaign in progress to elect a new Parliament, and the Liberal and Socialist parties, which are in any case inclined to favor the Allies, are making much capital of the blunder of the Swedish Government. Hjalmar Branting, the Swedish Socialist leader, has strongly denounced the Government for permitting itself to be made a catspaw of Germany. The Conservatives, on the other hand, rally to the support of the Government, partly with a view to keeping their political opponents out of office and partly from pro-German tendencies. Before the Russian revolution the majority of Swedes were in sympathy with Germany, tho resolved on neutrality, and the wealthier classes still retain this sentiment; the merchants because of the Baltic trade and the nobility because of many social and intellectual ties with the German aristocracy. The old fear of Russia has largely disappeared with the passing of Czardom, but there are many in the military circles of the country who remember that Finland was once part of the Swedish dominion, and might be again if Sweden should help Germany to victory. All classes of Swedes, however, fear to antagonize the Entente Allies, who could bring acute distress upon the country by shutting off the imports upon which the economic life of the nation largely depends.

THE MORAL

And the boys around the monkey cage had better keep out of the way

Another Swedish Misstep

Immediately after the revelations of the German-Swedish intrigue against the Argentine merchant marine had stirred diplomatic circles came new disclosures of an even more compromising character. The American Department of State made public the translation of a letter from Herr von Eckhardt, German Minister to Mexico, to the German Chancellor commending the friendly interest shown in the German cause by the representative of Sweden in Mexico. Says Herr von Eckhardt:

> Herr Folke Cronholm, the Swedish Chargé d'Affaires here, since his arrival here has not disguised his sympathy for Germany, and has entered into close relations with this legation. He is the only diplomat thru whom information from a hostile camp can be obtained. Moreover, he acts as intermediary for official diplomatic intercourse between this legation and your Excellency.

The German Minister suggested that the neutral diplomat who had rendered such signal services to Germany should not go unrewarded. He advised that this matter be kept secret till the end of the war "in order not to excite the enemy's suspicion." The letter was dated March 8, 1916, and thus reveals, among other points of interest, the length of time that the Swedish diplomatic service has been employed in Germany's behalf.

American Gunners in France

Official Washington permits it to be known that there is a large artillery force now studying the latest wrinkles in gunnery under the command of General Pershing. They are devoting especial attention to the French 75-millimeter gun, which has long held the reputation of being the best piece of light field artillery in the world. Instruction in

the use of the French cannon is given by officers from the French army, and airplanes are used in conjunction with artillery practise as on the actual field of battle. President Poincaré has reviewed the infantry contingent which is now in French training camps.

In the meantime the shaping of the National Army of drafted men is going forward on this side of the water. The cantonments are already in full operation with tens of thousands of recruits in training, tho a part of the first draft still remains to be called, as it was not thought wise to burden the railroads and the camp equipment by mobilizing the whole 687,000 at once. By the end of the first week in September the total number of Americans enlisted in the various military services of the nation, including the old regular army with its volunteer recruits, the National Guard, and the drafted men actually in training, reached the grand total of 1,010,522. With the full mobilization of the National Army, the total will be over 1,500,000. For purposes of comparison, it may be mentioned that in June, 1916, the American army had in the federal service 107,641 officers and men.

The ten-fold expansion of the army, the increases expected in the immediate future, and the cost and difficulty of changing from an inadequate peace time equipment to an effective war basis, has, of course, revolutionized the military appropriations of the Government. The House of Representatives is considering a war appropriation bill of $4,810,979,370 for the present needs of the army and navy. The most costly item is the artillery expenditure; with more than $676,000,000 for large cannon, $120,000,000 for machine guns, and $818,000,000 for artillery ammunition and maintenance.

On September 13, the House of Representatives passed without a dissenting vote the Soldiers' and Sailors' Insurance Bill, which aims to do away with pension litigation by authorizing national insurance of officers and enlisted men and standardizing rates of compensation for partial or total disability. Two Representatives opposed the bill, but they changed their votes in order to make the action of the House unanimous. Before the bill went to the Senate it was modified to place officers and men on the same footing in respect to disability compensation and also allowances to dependents in case of death. When the bill was first reported to the House it based the scale of compensation on the pay of the individual concerned.

Behind the Kaiser's Lines

All the reports which we are now getting from the Central Powers show a longing for peace that might, but for the encouragement derived from the Russian collapse, have already precipitated a political crisis. Most of the German newspapers, it is true, denounce President Wilson's reply to the Pope with the greatest bitterness and profess their absolute loyalty to the ruling dynasty, but the Socialist organ *Vorwärts* declares that the preservation of the present German Government ought not to be one of the war aims of the nation. It sees no obstacle to negotiations in President Wilson's insistence upon internal reforms within the German Empire. While in Germany the *Vorwärts* stands practically alone, in Austria-Hungary the press and people are divided. Several Hungarian papers express their willingness to support any peace which will keep the national frontiers intact, and profess no interest in the fate of the Hohenzollerns.

The stress of the blockade has been much increased by the American partial embargo on exports to neutrals adjoining Germany. In Berlin the coal shortage has induced the local authorities to limit the use of fuel as a source for illumination, the heating of public buildings, and for heating bath water. There is an abundant supply of coal in Germany, but there are not enough men to work the mines and railroads to capacity. In Austria-Hungary conditions are much worse, and there is danger of a serious shortage of foodstuffs this coming winter. The wet weather has injured some of the Hungarian crops upon which the nation relied, and the difficulty of securing adequate transportation is felt even more than in Germany.

The main committee of the German Reichstag has approved resolutions demanding the abrogation of the political censorship. There is a certain amount of sentiment in the Reichstag in favor of making the Imperial Government responsible to the people's representatives; and it is thought that the popular feeling toward an immediate peace on a basis of compromise and toward internal political reforms may soon be tested in a general election. If this is the case, the recent spectacular advance on Riga may have had a political motive behind it; to reawaken the flagging zeal of the nation and thus insure the election of a Reichstag determined on the prosecution of the war to a final victory.

The Liberty Motor

Secretary of War Baker announces that the aircraft engine designed for the aerial fleet which this country is building has passed its final tests. The signal service has already christened the new engine the "Liberty motor." In lightness, power and convenience the new American engine is said to be equal to the best European models and it is better adapted to building on a large scale. The British and French machines require much hand work from skilled mechanics for their construction, but the American motor is so standardized that its cylinders, pistons and other parts may be made in factories in widely separated parts of the country and assembled at a central plant. The parts of the engines are so readily interchangeable that it is said that new engines can be assembled from the parts of wrecked machines, thus greatly simplifying the problem of repairs.

The invention of the Liberty motor was not accident but the result of deliberate purpose. In June two engineers of national reputation were summoned to Washington to design an engine. In order to give them every possible assistance a considerable force of consulting engineers and draftsmen were brought together under their direction and motor manufacturers were invited to place their secret patents at the disposal of the Government. Parts of the first engine were turned out at twelve different factories located all the way from Connecticut to California. On July 3 the motor was first set up. Since then the motors have been subjected to every test, including actual use in aviation. One of the engines in an airplane broke the American altitude record in a flight test.

Pictorial Press

THE FRENCH AND AMERICAN COMMANDERS GET TOGETHER

General Pershing (third from the left) and General Pétain (just left of the center with his back to the camera) are holding a consultation with their staff officers concerning the merits of the United States army kit

The Shark Hunters

The Navy Department has had some more trouble with "elaboration." It made public a "report from Paris which states that the American steamship 'Westwego' reported that while cruising with several other ships they were attacked by a massed force of six submarines off the coast of France on the

5th of September, the result of this attack being that two steamers were sunk and probably all of the submarines were lost." Later it appeared that the word "all" was a clerical error for "one," which entirely altered the perspective of the battle, since while the destruction of six submarines is a good counterweight to the loss of two steamers, one submarine can hardly be so considered. Rumors have come thru private letters of American soldiers and sailors of a battle late in August between German submarines and American transports and destroyers which ended in the destruction of five of the U-boats. This encounter was not reported by the authorities. The Atlantic transport liner "Minnehaha," a steamship of 13,714 tons, was sunk on September 7 near the Irish coast. Fifty of the officers and crew were killed.

During the week ending September 9 twelve British ships of more than 1600 tons each and six smaller vessels were sunk. This is greatly below the average for the period of unrestricted submarine warfare; in fact, no week since June has exceeded the average. The number of large vessels torpedoed or wrecked by mines reached the lowest point for the entire period. During the same week the French lost one large vessel and five smaller ones and the Italians denied any losses whatever. Reports from London place the total destruction of Allied and neutral shipping from the first of January to the end of August at 4,561,000 tons. Perhaps a million tons of this loss has been made good by new construction. For a similar period the Germans claim to have destroyed over 6,000,000 tons of shipping, even making allowance for new construction.

Senate Approves War Taxes

On September 10 the much debated war taxation bill came to a vote in the Senate. No other revenue bill in American history has provided for a levy comparable to the $2,416,670,000 covered in the present measure, and few have been so long and so warmly contested. Yet the final vote by which it was approved was the decisive majority of 69 votes to 4. The four negative votes were cast by Senators Borah, Gronna, La Follette and Norris. All of these Senators are Republicans from Western or Middle Western states, and the decisive factor in determining their opposition to the bill was the rate of taxation on excess war profits. The four men were part of a larger group, comprizing somewhat less than a quarter of the Senate, who strove for days to increase the tax rate on excess war profits to what they considered an adequate figure. After a large number of amendments introduced with this aim had been rejected, Senator La Follette offered a substitute for the entire bill based wholly upon excess profits tax, income tax and levies on liquor and tobacco. This was rejected by 65 votes to 15.

The bill that passed the Senate will, it is estimated, bring in $842,000,000 in income taxes; $1,060,000 in war profits tax, and $218,000,000 from the levy on distilled spirits. There are also a considerable number of special taxes on luxuries, stamp taxes, and so on. The increased postal rates on periodicals were eliminated from the bill shortly before its passage. The consumption taxes on coffee, tea, cocoa and sugar were all rejected by the Senate. An amendment introduced by Senator Hardwick to place a special tax on individual incomes of more than $25,000 a year and to devote the proceeds to increasing the pay of soldiers serving abroad was defeated after a hot debate. After its passage in the Senate the war taxation bill went into conference between House and Senate leaders with a view to smoothing out the differences between the measure as it passed the House and the very different bill that has now been sent back to it. The Senate members of the joint conference were Senators Simmons, Stone and Williams, Democrats, and Penrose and Lodge, Republicans.

Central News

THE POWERS OF THE SEA AND AIR

Hydroplanes are being successfully used to increase the fighting strength of the United States navy. This warship, for instance, carries four. Two of them are plainly visible on the deck in this photograph. A third is just being raised from the water after a scouting expedition

The Second Liberty Loan

Secretary McAdoo has announced a second Liberty Loan campaign during the month of October. He did not make public any of the details of the sales campaign, but a larger subscription will be expected than on the first loan. On September 6, the House of Representatives passed the bond bill proposed by the Administration without a dissenting vote, altho its passage was preceded by a debate on the general question of what should be the ratio of bond issues to tax levies in the financing of the war. Speaker Champ Clark advocated meeting fully half the expenses of the war by taxation. The bill authorizes an issue of $7,538,945,460 of 4 per cent bonds, subject to taxation for war purposes if held by any one person in amounts exceeding $5000, and an issue of $2,000,000 of certificates of indebtedness and an equally large issue of war savings certificates. The rates of interest will be fixed by the Secretary of the Treasury.

Race Rioters Indicted

The grand jury which is making inquiry into the July race riots in East St. Louis has recently returned indictments against thirty-nine persons for their share in the disturbances. One hundred and five men were named in the indictments returned several weeks ago, making the total 144. Among those most recently brought to the bar of justice are Mayor Fred Mollman and his private secretary Maurice Ahearn. Ahearn is accused of aiding the rioters by preventing photographers from securing evidence by taking pictures of the mob. The charges against Mayor Mollman are of a negative character and extend only to neglect of duty in failing to enforce the law. Says the report:

> If his failure to give directions to the militia and if his failure to call upon the sheriff and to deputize citizens who offered their services were the result of a lack of ability or of fright, the office should be taken from him and given to an efficient person.
>
> If his failure to act was because his sympathies were with those who sought to drive the negroes out of East St. Louis, he should make room for a chief executive who is in favor of enforcing one hundred per cent of the laws. The law-abiding citizens and industries and the respectable laboring men should unite and demand the resignation of the mayor as the greatest good he can do his city.

The Senate and the Alien

On September 12 the Senate adopted without a vote Senator Chamberlain's resolution for the drafting of friendly aliens resident in the United States into military service. Under the terms of the resolution alien enemies, that is, subjects of Germany and its allies, could be enlisted for non-combatant service but not for actual fighting. Exempt from the provisions of the resolution are the citizens or subjects of nations which have treaties with the United States forbidding such conscription or nations whose alien residents are not allowed to acquire American citizenship. This last clause [illegible] the Japanese and Chinese in the United

States from military duty. Those who claim exemption thru treaty may be required to leave the United States within ninety days. Senator Stone spoke against the resolution, but he did not venture to press the matter to a division. The drafting of friendly aliens will, it is estimated, make 1,275,000 men liable to military service who are now exempt on the ground of not being American citizens.

The Senate has also passed the so-called "trading with the enemy act," which defines and regulates trading with the enemy and establishes penalties for unauthorized trading in war time. An amendment introduced into the bill by Senator King forbids papers printed in the German language to publish any comment on the acts of the United States in relation to the war unless such comment is paralleled by a correct English translation. The Government is authorized by the bill to take over patent rights held by enemy subjects under certain safeguards for the financial interests of the latter after the war. The Senate passed the bill, as it passed the alien draft resolution, without a division. Both measures then went to the House of Representatives.

Maine Refuses

On Monday, September 10, woman suffrage was placed before the men of Maine on referendum. The voters rejected it by a majority of nearly two to one. Almost every city and county in the state voted adversely. For this result a number of explanations have been given. Maine is one of the most conservative states in conservative New England, and the issue had never been presented to the electorate of the state before. Therefore, the suffragists claim, this election must be regarded as educational propaganda, "breaking ground" in a new field. The anti-suffragists ascribe the result partly to popular disgust at the militant suffragets who picketed the White House in Washington and partly to the emphasis which a state of war places upon the need of backing the ballot by the personal military service of the voter. No doubt the ever present prohibition issue played its part; the anti-prohibition vote being almost solidly anti-suffrage as well. President Wilson sent his good wishes to the women of Maine before the election, and ex-President Roosevelt made a long suffrage speech, in the course of which he denied that an equal suffrage electorate would be more inclined to pacifism than a community in which only men voted. In November the men of New York state will have a chance to follow the Maine example or to reverse it.

Dudley Field Malone, Customs Collector of the Port of New York, has resigned from office to aid in the woman suffrage propaganda. In his letter of resignation he recounted his services to the Administration as a party worker, an office holder and a patriotic citizen, and criticized President Wilson severely for his refusal to ask Congress to pass the federal suffrage amendment to the Constitution. He objected also to the arrest of the militant suffraget pickets. President Wilson has on several occasions spoken in favor of suffrage in the state campaigns, but he has never stated his position on the issue raised by Mr. Malone of equal suffrage by Constitutional amendment.

Probably the most unique of war pictures—this photograph taken by a French airman, Lieutenant Louis Charles Staehle, from a parachute in which he dropped safely to earth after his balloon was set on fire

The New Canadian Franchise

The Canadian Government has come to the conclusion that a general election in the Dominion is inevitable and has therefore introduced a franchise bill into the Canadian Parliament which, however, applies only to elections held during war time. The bill is a very curious and interesting one; hardly any franchise in the world is so closely related to military service. Mothers, wives, sisters and daughters of Canadian soldiers and officers are enfranchised. This provision marks the introduction of woman suffrage in Canada on a Dominion-wide scale and will probably have much influence on the woman suffrage movement in British America after the war. Several of the provinces, especially in western Canada, already have given women the vote. Persons born in enemy countries and naturalized since March 31, 1902, are excluded from the franchise on the plea that they are not required to perform military service. It was also proposed to debar the "conscientious objector" from voting, because it was considered illogical to permit those to share in the government who repudiated their duty of defending it, but this provision was abandoned as liable to injure the chances of passing the bill.

Party lines are rather closely drawn on the franchise bill. The Conservative Party is fairly united in its support. The Liberals for the most part approve of the grant of woman suffrage, but object to the disfranchisement of German and Austrian-born Canadians. The French Nationalists of Quebec profess to see in the measure a trick to continue the present Government in power by enfranchising those who might be expected to favor compulsory military service and disfranchising those who naturally oppose it. The draft is already law but has yet to come into full operation, and a hostile Parliament might hamper its operation or even venture to restore the old system of voluntary enlistment.

A regular Guy Fawkes conspiracy to dynamite the Parliament buildings at Ottawa and assassinate Premier Borden has been unearthed by the Canadian police. Only one item in a long series of criminal outrages planned by the conspirators was actually carried out; the blowing up of the home of Lord Athelstan, publisher of *The Montreal Star*. Anti-conscriptionist agitators are now busy explaining that they had no connection with the plot; which in most cases is probable enough, altho they have frequently mingled their denunciations of the compulsory service law with threats of revolution and assassination if it were put into effect.

Child Labor Law Called Invalid

Federal Judge Boyd of the Western District of North Carolina has declared the federal child labor law unconstitutional. The decision is, of course, immediately effective only in the North Carolina district subject to the jurisdiction of the court, but it will doubtless be quoted as a precedent in future test cases and will probably make inevitable an appeal to the Supreme Court. The Keating-Owen law, the validity of which was in question, forbade the employment of any child under fourteen in any factory, mill, workshop or cannery, whose products are to be shipped in interstate commerce and limited the working day of children under sixteen to eight hours. The state law of North Carolina does not contain these restrictions and therefore a test case arose involving the right of Congress to establish labor standards within the states by means of its control over interstate commerce. Judge Boyd declared that it was admittedly impossible for Congress to legislate directly on the conditions of labor within the states and contended that it was therefore unconstitutional to attempt to reach this aim by indirection.

WHEN MODERN HISTORY BEGAN

BY JUNIUS B. REMENSNYDER

PASTOR OF ST. JAMES LUTHERAN CHURCH, NEW YORK

THE 400th anniversary of the birth of Luther in the year 1883 was observed with extraordinary enthusiasm thruout the Protestant world. In New York City, the chief observance was by the Evangelical Alliance, and the principal addresses were by Bishop Phillips Brooks and Dr. W. M. Taylor. A very interesting and scholarly symposium was held by the professors of Union Theological Seminary, in which each professor treated of some phase of the myriad-minded reformer.

But the present quadricentennial promises to be a far more universal and impressive observance. And, serious as is the hindrance up to the present, the world-wide war does not seem to have greatly interfered with it. It is in commemoration of Luther's nailing up the ninety-five theses on the door of the Wittenberg Cathedral, on All Saints' Eve, October 31, 1517. While the Evangelical Lutheran Church takes the lead in this observance and Germany and Scandinavia are united with the Lutheran churches in the United States in its energetic prosecution, nevertheless, all the Protestant churches are joining heartily in it, by the action of their general bodies, by the appointment of committees and by addresses on the Reformation. This is as it should be, for the anniversary is not that of the founding of any particular church, but of the birth of that great movement which history terms the Reformation. It is a commemoration common to Protestantism. The idea of the observance is to study the causes, the necessity and the generic truths of that epochal event so as to emphasize anew their vital significance. And this is not done in any spirit of hostility to the Roman Catholic Church, but with a cheerful recognition of its conscientious devotion and labor of love and sacrifice for the cause of Christ. But it is done out of fealty to the word of God, and with the conviction that the principles enunciated by the reformers are essential to a true church, and to a scriptural Christianity.

The act of the posting of the theses was a most remarkable one. Remarkable in that it was done without consultation with any person and in the face of the wide range and challenge of existing ecclesiastical corruptions; remarkable in the far-reaching consequences involved, as well as in the moral courage and daring of the deed, which pointed to what afterward became a potent factor in the movement, the unique personality of the unknown monk, Martin Luther, their author.

The intent of the theses was to denounce the trade in papal indulgences, which was brought near to Wittenberg by the papal emissary, Tetzel, who was selling indulgences to the multitudes gathered to observe the festival of All Saints. The chief purpose of the sale was not so much to comfort troubled consciences as to raise money of which the Pope was sorely in need to complete the cathedral of St. Peter at Rome. The inscription on Tetzel's huge iron chest was: "As soon as the money clinks in the chest, the soul leaps from Purgatory into Paradise."

LET us look at some of these theses: The first ran: "When our Lord and Master, Jesus Christ, said, 'Repent ye,' etc., he meaneth that the whole life of believers should be a repentance."

The 36th: "Every Christian, truly repenting, hath perfect forgiveness of punishment and sin granted him, even without letters of indulgence."

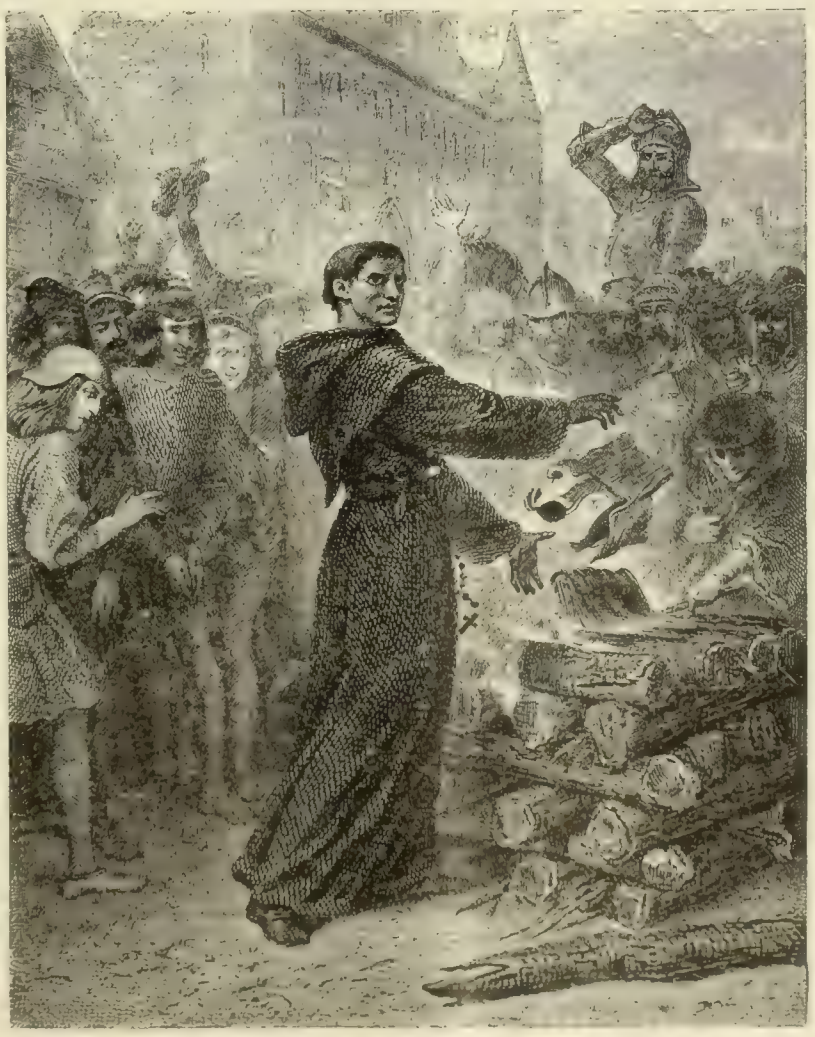
Here we see how thoroly Luther had grasped the central idea of the Gospel; that remission of sins was to be obtained alone by heart repentance and by faith in the sacrifice of Christ, instead of being procurable by external, formal acts, penances, *Ave Marias*, etc., and still less to be purchasable with money.

The 62nd thesis declared: "The true treasure of the Church is the most holy Gospel of God's glory and grace." This is a direct challenge to that Roman conception of the Church, which clothed it with an authority like that of the Word of God. Luther here sets over against that ecclesiastical dogma the divine authority and supremacy of the Scriptures alone. This was the colossal weapon with which he was to break in pieces that false assumption which had built up a system that enslaved the minds and consciences of men in a tyranny which brooded as a nightmare over human progress and happiness.

But let us see how these theses looked to the Pope.

The 6th thesis straitly declared: "The Pope *cannot forgive any sin*, except so far as he doth declare and confirm God's forgiveness."

And the 82nd: "Such as why the Pope does not clear purgatory for the sake of the extreme suffering of souls, while he nevertheless releaseth countless souls for the sake of perishable money, contributed to the building of the cathedral, which is a most trifling matter?"



In these two theses we observe that Luther, contrary to the current slavish deference to papal authority and infallibility, had discerned that the Pope was really invested with no extra Scriptural authority. We also note an outgiving of that scathing humor and ridicule which were Luther's gift in so keen a degree, when he ironically asks the Pope why he does not make a non-commercial use of his pardoning.

Such is a brief epitome of the substance of these theses. They were the outcome of long and close study in the monastery of the Word of God, the teachings of the fathers and the history of the Church. And it is easy to see how in them lay the germs of all those essential doctrines which came to be the vital truths of Protestantism.

No one, however, at the time dreamed of such an outcome. Luther had posted these theses as a protest, and a challenge to a public, scholarly disputation of them. But when read by multitudes the next day, they produced an unexpected commotion. They were the talk in every mouth. And, soon disseminated by the newly discovered art of printing, they spread like wildfire.

Luther did not then know his own powers. But, as the discussion went on and assumed larger proportions, he soon found himself, Gifted with

That sweater of yours at the front—also the trench helmet, wristlets and socks. This soldier has the whole Red Cross knitted outfit

YOUR SERVANT—THE RED CROSS

BY GEDDES SMITH

A cablegram was sent from one of the half-dozen most important financiers in the United States to the vice-president of the Guaranty Trust Company one day in July. One was in Washington, the other in Paris. It read:

What dark colors are acceptable? Should sweaters have sleeves? Should they have high necks or be without necks?—DAVISON.

Davison, of course, is Henry P. Davison of J. P. Morgan & Company. The recipient was Major Grayson M. P. Murphy.

The story of the way in which Henry P. Davison and men of that stamp became interested in the necks of sweaters is worth telling. The sweaters in question—a million and a half—had been cabled for by Major Murphy a few days before, together with a million comfort kits, a million and a half mufflers, and wristlets and socks. They were, he reported, "urgently required" to keep the fighting men in France comfortable.

"Last winter broke the record for cold and misery among the people here," the message ran. "They inexpressibly dread lest the coming winter find us without supplies to meet the situation."

You can't ignore such an appeal. Needless to say, Henry P. Davison was not paying individual attention to the work of two or three thousand knitting circles scattered over the country. But the machinery which made the message possible, and the broad constructive program of which it was a detail, were the creation of Mr. Davison's War Council.

The United States entered the war on April 6, 1917. The work of the Red Cross was then being rapidly expanded along carefully prepared lines. It had increased its membership tenfold during the preceding year. It had recruited, organized and equipt thirty-five base hospital units, each capable of taking over a 500-bed hospital. Within five weeks of our entry into the war two of these were on their way to France; others followed, and more have been organized and are ready for mobilization.

But the big new situation demanded a new organization. On May 10 President Wilson, president of the Red Cross, announced the appointment of a War Council of seven members, headed by Henry P. Davison, and including Charles D. Norton, vice-president of the First National Bank of New York and formerly Assistant Secretary of the Treasury and secretary to President Taft; Grayson M. P. Murphy, senior vice-president of the Guaranty Trust Company of New York, a West Point graduate and Spanish War veteran; Cornelius N. Bliss, Jr., of Bliss, Fabyan & Company, of New York; and Edward N. Hurley, former chairman of the Federal Trade Commission, with former President Taft, chairman, and Eliot Wadsworth, vice-chairman of the existing Executive Committee of the Red Cross, *ex-officio*. Subsequently Mr. Hurley resigned to become chairman of the Shipping Board, and John D. Ryan, president of the Ana-

The head of the Red Cross War Council—Mr. Henry P. Davison

conda Copper Company, of Butte, Montana, succeeded him.

This group of big men assembled, the next step was to raise a big fund to pay for the big work which had to be done. The campaign which followed proved that the American people would back their Red Cross, at the very least, with $100,000,000.

Given the big men and the big fund, the essential thing was to meet the need in a big way. So the War Council decided to base its whole service to the countries torn by war on the reports of experts who should see with their own eyes the destruction, the suffering and deprivation which demanded relief, who were capable of deciding how American aid could be applied most effectively, and who should remain in the field to direct the expenditure of American money and energy.

Major Murphy himself was placed in charge of the commission to France. With him went a dozen men of large personal force—specialists in medicine, engineering, industrial organization, relief work of all sorts, large-scale administration. Constant communication between the Red Cross headquarters at Washington and Paris keeps the home office and its field representatives intimately in touch. The commission calls for the men and supplies it needs, and each call is considered and answered at this end by executives trained by large experience to decide matters of detail in the light of a far-reaching program.

These messages tell a vivid story of destitution and relief, equally homely and tragic, in many cases. "We must begin to prepare for the coming hard winter," says one, which continues

You cannot possibly send us more than we need of the following list, except where definite amounts are specified:

Twenty 4-ton motor trucks; 50,000 yards of flannel; condensed milk; flour; dried preserved vegetables; corned beef; rice; beans; canned beef; preserved fruits; sugar; heavy shoes; blankets; knitting wool; heavy white cotton sheeting.

Major Murphy, in charge of the Red Cross in France. He is attached to General Pershing's staff, and has under him a commission of specialists in relief work of all sorts

And here is a hint of the way in which French villages are being recalled to life by the joint aid of the French Government and the American Red Cross:

Representatives of the Red Cross returned recently from a study of conditions in the devastated areas, having selected three villages in which provisional reconstruction will be begun within a fortnight. Fifty villages were visited. In some the destruction of buildings was complete. In others, a portion of the buildings can be repaired. Nearly all the houses are without roofs, without windows and door frames, and with absolutely no furniture or utensils.

The Red Cross plans to do provisional reconstruction of buildings in several of

Makeshift headquarters at Washington, where temporary partitions bisect the great stained glass windows of Assembly Hall and the desks spill over into the corridors

these villages, and also, as the refugees return to the villages, to assist in their economic and social rehabilitation. In the light of the experience gained in these villages, it plans to undertake provisional reconstruction on a larger scale.

In these particular villages, the total population before the war was 3387. Now it is 235.

The villages first selected are those in the best wheat-growing areas, and the Government will plow the land with tractors. The repair of the houses will permit the return of the refugees, who can do a large part of getting the land sown to wheat this autumn. In order to encroach as little as possible on the limited supply of lumber, the Red Cross is selecting villages in which the work will be largely that of provisional repair rather than of new construction. It plans to make on the spot its own brick and lime.

One of the gravest perils that France faces is depopulation. Her birthrate, sufficiently low to cause alarm before the war, has fallen to a point where, per thousand of population per year, only eight babies are born to replace more than twenty persons who die. The answer of the Red Cross is the dispatch of a commission of specialists, headed by Dr. William P. Lucas of the University of California, to study the means by which American aid can save more of the babies for France.

Other commissions have been sent to Russia, Italy, Rumania, Serbia. Dr. Frank Billings of Chicago and his colleagues have already been received by Premier Kerensky and are working in close coöperation with the new administration. In each case the commissioners took with them medical and surgical supplies, serums, and perhaps food, for immediate relief, and will call for further shipments as they are needed. Most of the commissioners go as volunteers and the expenses of the commissions to France and Russia are borne by private subscription.

And what is coming of it all?

The Red Cross is taking good care of Pershing's army. "No need of our army which we can possibly foresee will be left uncovered," cables Major Murphy, who has been attached to General Pershing's staff in order to assure the fullest coöperation. Base hospitals (now part of the army medical service, of course), which were manned and equipt by the Red Cross with the finest men, women and material the United States could provide, are ready to care for American wounded. Other hospitals, including the one in Paris where Dr. Blake has been putting shattered limbs together in ways that are hardly short of miraculous, are now wholly or partly maintained by the Red Cross, and will serve the army when it has need. Six infirmaries and rest-stations line the route from reception camp to training camp in France, where soldiers who fall out are cared for till they can rejoin their units. Red Cross chapters are knitting a million pounds of wool into warm garments for the American troops and their allies. Comfort kits containing handy things and amusing things were sent over with the first detachments; more will go at Christmas.

A prisoner's bureau is already established at Berne to keep the Americans now in German prison camps, and those who may be there later, well fed and clothed and in communication with their homes. Thirteen thousand thoroly trained nurses are enrolled for such service as they may be called on to do; nearly two thousand have gone to France already.

The Red Cross is serving France. The War Council, thru its commissioners, asked France what immediate service was most [*Continued on page 478*

Miss Florence Marshall has organized the women of the country to make dressings and knit a million and a half sweaters, mufflers and pairs of wristlets and socks

THE GREAT AMERICAN LIAR

BY CHARLES M. SHELDON

AUTHOR OF "IN HIS STEPS"

I have just had my annual spring visit from my friend, the Tax Assessor, and a very interesting visit as usual. It is also the most personal call I receive in the course of the year, tho this is the first time I have ever recorded it for the public.

The Assessor is an agreeable and judicious man, the only one of all my acquaintances who knows more about my affairs than even my family physician. Unfortunately, like all ministers, I have no pastor in whom to confide my troubles and to whom I can go for advice. So when the Tax Assessor makes his yearly visit, I find myself breathing almost a sigh of relief, like a penitent soul approaching the confessional after a long and compulsory absence from such a privilege.

The Assessor spreads out on his wide book a sheet of paper as large as one side of a daily, and in the august name of the "State," of which he is a sworn and paid official, he proceeds to interrogate me concerning the most intimate secrets of my inner property life.

Then it is that I catch my annual glimpse of my "possessions," of that world concerning which the Master said, "A man's life does not consist in the superfluity thereof." Then I am made aware also of the fact that the minister is not one who generally hath many of this world's goods in the shape of "mules," "twine-binders," "threshing machines," "mining tools," "government bonds," and so forth.

"Blest be nothing!" says the preacher as he looks the Assessor in the eye and cries "No!" in a full, round tone, and the Assessor knows that he is hearing the real truth, which is a rare thing for him, for he knows full well that I have no "cattle," "hogs," "sheep," "mortgages," "farm machinery," "wind mills," "air ships," or "submarines" concealed about my person or hidden in my writing desk.

BUT after he has conscientiously and as in state duty bound put to me all the questions on the paper, and we have mutually eliminated all the things I do *not* possess, then we come to the most interesting part of his visit, namely, the consideration of that which in the course of the years I have been calling "mine own" to distinguish it from some other man's. Then follows some such dialog as this:

The Assessor: "Any gold watches?"

I: "One."

The Assessor: "Solid?"

I: "No. Filled."

The Assessor: "What is it worth?"

I: "Do you mean what I paid for it, or what I could get for it?"

The Assessor, hesitating: "Well—what do you—that is—er—what did it cost?"

I: "My wife paid twenty-five dollars for it twenty-five years ago. It was" (The Assessor never tells anything, so I go on) "it was a wedding gift from the bride."

The Assessor, after a pause: "What do you value it at?"

I: "Do you mean its real value?"

The Assessor: "Shall we put it at fifteen?"

I, slowly: "It has a picture of her on the inner case, taken the day before she married me. It could not be removed without destroying it."

The Assessor, pensively: "You will have to put it at some figure."

I: "What does the state mean when it asks me what my watch is 'worth'?"

The Assessor, after some pause: "I do not know."

I: "Then how can I tell?"

The Assessor: "Shall we put it at ten?"

I: "I would not sell the watch for any amount of money. But no one would pay over five."

The Assessor: "Shall we put it at five?"

I: "But the state asks me to swear to its actual value. And I am trying to tell the state 'the truth, the whole truth, and nothing but the truth, so help me God.'"

The Assessor: "It beats me. Whatever you say, goes."

I: "But what does the state mean when it asks, 'What is your watch worth'?"

THE Assessor, putting down something: "Let's pass on to your library; what do you value that at?"

I: "Do you mean what the books cost when I bought them, what I would have to pay now, or what they would fetch if sold at the present price of old paper?"

The Assessor: "I mean—I mean—what is your library worth?"

I: "Well, let the state tell me; there are books here" (my eyes go over the shelves affectionately) "books that no money could buy. Gifts from friends; autograph copies; names I cherish; Phillips Brooks, John Greenleaf Whittier, Henry Ward Beecher, Joseph Parker, William T. Stead, Gilbert Parker, H. G. Wells. Did you ask me how much my library was worth?"

The Assessor, with a sigh of weariness: "Yes, what do you put it at?"

I: "The state asks me as a truth-telling citizen to declare on oath what these companions of my thought, these close friends of my imagination and memory are actually worth. What if my answer is, 'I do not know.'"

The Assessor: "I shall have to put down something. What do you call your library worth?"

I: "I can't, of course, remember what all the books cost. I don't suppose I could get at a forced sale over two hundred dollars for the lot."

The Assessor, brightening up: "You are allowed fifty dollars on your library. Shall we say one hundred and fifty is the value?"

I: "But if the state asks me to declare the real value of my books, I shall have to decline to answer."

The Assessor: "Call it one hundred and fifty. Pass on to the household goods. How much are they worth?"

I: "Do you mean what I paid or what I could replace the lot for?"

THE Assessor, cautiously: "I suppose the state means what you—er—consider your household goods—er—worth. That is, what do you value them at. Chairs, carpets, beds, tables, dishes, rugs, and so forth."

I: "Does the state mean what I paid for them or what I could get? Most of our household goods are worn smooth from long use. They would be called second hand. But there is an old rocking chair my wife rocked our first baby in. I can see them now. And the table around which our friends have sat as the years sped, and the old rug in front of the fireplace, and my mother's old silver teaspoons with her wedding initials—and a few things like those—you see it's not easy to put a value—"

The Assessor, interrupting, somewhat rudely: "Would three hundred cover it?"

I: "Three hundred? You mean three hundred thousand?"

The Assessor, with a sigh: "Put it at that."

I: "Make it three hundred million while you are about it; for that amount wouldn't buy the rocking chair alone."

The Assessor, putting down something: "All right. Now for jewelry. Any diamonds, rings, precious stones, heirlooms, and so on?"

I: "Ah! The old state does have some sentiment, doesn't it, when it prints 'heirlooms' in its tax inventory? But do you mean—does the state mean—what the few bits of gold and silver we possess would bring at the mint if melted down into bullion? What does it mean?"

The Assessor, doggedly: "What do you value them at?"

I: "There is my wife's wedding ring. I remember what I paid for that. Five dollars. And she showed me only the other day her engagement bracelet, a slight band for a little white wrist, solid gold links with a heart of pearls, the money to buy it made by writing verses for—ha! ha! the *Youth's Companion!* And the State of Kansas asks me to say what those bits of jewelry are worth. I decline to answer. I would rather be sentenced for contempt of court."

The Assessor: "Guess at it."

I: "Let the State of Kansas do the guessing."

The Assessor, perplexed: "We have got to put down something. What do you say to twenty-five dollars?"

I: "As good as anything."

The Assessor, cheering up: "Ah! You are getting more sensible."

I: "No. It's the state, making me a bigger liar every year."

MUSICAL MEDIOCRITY

BY CHARLES L. BUCHANAN

AUTHOR OF "FUTURIST MUSIC"

ONE of the greatest living musicians recently exprest the opinion that New York was no longer the representative musical center of this country. On the surface, such a point of view appears an astounding and ridiculous distortion of fact. If, however, we look beneath the surface and critically consider the *spirit* back of New York's superabundant musical activities, we begin to wonder if there is not something to be said for the point of view. Obviously, the intangible matter of public taste cannot be gaged by the concrete infallibility of statistics. We cannot scientifically demonstrate in just what degree the sincerity of this musical public differs from the sincerity of the Philadelphia or the Chicago or the San Francisco musical public. We have heard musicians contend that the standard of appreciation in these cities is of a more valid, vital kind than the standards obtaining in this city. One thing is generally agreed upon—the fact that there is today in New York no revelation of an organized musical significance commensurate with our prestige and our potentialities.

IT has been dishearteningly apparent to any one of an alert and cultivated sensibility that the trend of New York's musical activities has been for some years now steadily in the direction of a lower level of excellence. We find much pleasing effort, much external efficiency, but we do not find that indescribable something, that spiritual force, that inner ferventness of appeal that means Genius. The record presented us year after year by the Philharmonic, the Symphony Society, the Boston Symphony and the Metropolitan Opera House is a record of respectable routine from which the glowing and vivifying revelation of individual talent is unmistakably absent. Taking the Philharmonic as an example, we may well ask how a city that has known a Seidl, a Safonoff, a Nikisch, a Toscanini and a dozen other fascinating and compelling musical personalities can accept with equanimity and with apparent relish, the amiable but far from extraordinary efforts of Mr. Stransky! It must be emphatically recorded that Mr. Stransky is not the negligible conductor his severest critics would have him appear. As a matter of fact, there is much that Mr. Stransky does that is admirable. From a technical standpoint, it is probable that the Philharmonic has never played as well as it is playing today under his leadership. Its performances are often splendidly energetic, entertaining and interesting.

The point that should be made is simply this: Mr. Stransky occupies a position of supreme significance; he is the leader of the premier orchestra of the first city of the world. The standards that he must measure up to are, in the very nature of the case, stupendous. One may appreciate Mr. Stransky without committing the fatuous inconsistency of judgment that would rank him a great conductor. How does it happen that a musician of Mr. Stransky's obvious limitations can succeed in maintaining a position that a Safonoff or a Mahler could not maintain? How does it happen that a city that has known the incomparable genius of a Nikisch and a Toscanini—a kind of genius amounting to a veritable clairvoyance—can content itself with musical renderings that are, by comparison, uninspired, perfunctory and prosaic? In his handling of those aspects of a musical composition that are more or less elementary, Mr. Stransky is often satisfyingly effective. For example, it would be difficult to secure a finer treatment of the last movements of Tschaikovsky's Fourth and Fifth Symphonies than the treatment accorded them by this conductor. Mr. Stransky's defects are the defects imposed upon him by his temperament; he is not a conductor of any large amount of imagination, of any very particular fineness of feeling.

Obviously, however, Mr. Stransky has secured himself in the favor of an element in control of the Philharmonic's affairs that approaches the matter more from the social than from the esthetic standpoint. It is open to question whether the directors of this organization are sufficiently educated musically to appreciate the finer values of a valid artistic worth. Certainly a consistent continuity of purpose has never been in evidence in the affairs of this organization. With characteristic inefficiency, we entrust the control of the most important musical organization in New York to those persons that are least qualified by education to administer them. No one would dream of placing an Ornstein or a Schonberg at the head of Morgan & Co., but we see nothing incongruous in placing a banker, a manufacturer, or an editor at the head of an artistic organization.

ON the other hand, there is an aspect of the matter that has been practically ignored by the participants in the recent controversy. Incidentally, its importance cannot be sufficiently emphasized. For the last couple of years the Philharmonic has been performing to sold-out houses. Its receipts for the season just concluded have been $14,000 ahead of last season and last season they were $11,000 ahead of the previous season. The Philharmonic has never done so well. Whether we can attribute any part of this signal achievement to the unprecedented conditions brought about by the war and the consequent convening in New York of an alien and transient population, it is, of course, impossible to determine. One fact of an incalculable significance arrests our consideration—the fact that the most uninspired and deplorable opera that we have known in over a score or more of years, and the most mundane and mediocre concerts that the Philharmonic has perhaps ever given are overflowingly and complacently encouraged by the public.

Just here we touch the quick of the entire matter. Any consideration of contemporary conditions leads us, in the last analysis, to conclusions of an unhappy and discouraging nature regarding the attitude of the people toward the musical and artistic life of the community. We know that art is mostly supported by the munificence of various individuals. One man, Colonel Higginson, [*Continued on page 471*]

Rules For Successful Work

By Edward A. Filene

President of William Filene's Sons Company of Boston

I. Make your plan in writing.

II. Compare it with the methods of the most successful men.

III. Most important. Have it criticized in advance by those it will affect and any one else who can be helpful. Our plans are bound to be criticized either before or after they are put in operation. If we have them criticized in advance, the chances are that they will be more favorably received and even defended as their own plans by those upon whom they depend for success.

IV. Put it into operation.

V. See that it keeps itself in operation until rescinded. Until your plan keeps in operation automatically you have not organized it. This can be done by simple firm rules that are difficult to evade. Distinguish between the main rules and the secondary explanatory rules called for to carry out the main rule.

VI. Keep the plan open to revision, but do not allow it to be changed except after the most careful reasoning. The value of these rules lies in their being firmly carried out in the order and exactly as they are written. I believe, from my experience. that any man who uses the above method—other things being equal—will succeed far better than the man who does not use this method.

MANNING OUR MERCHANT MARINE

BY JAMES H. WILLIAMS, ABLE SEAMAN

Over twenty years ago Mr. Williams first wrote for The Independent his true "yarns" of stirring adventures at sea, tales of long voyages on board the old American wind-jammers in the days when shipping was a game of individual initiative and "sea sense." Mr. Williams still follows the sea—he has recently come into New York from Argentina—and he spends his time between voyages working to improve the conditions of sea service. In the following article he takes up the points made by Commodore Miller in "Back to the Sea," which was published in The Independent of September 8, and discusses them from the viewpoint of an able seaman.—THE EDITOR.

IN the days of the windjammers, when the stately white-winged American clipper covered every sea, no special schemes were ever devised to man them, yet their complements were always full. Their crews came to them by natural attraction and were made up of men of all nations and races under the sun. They never received any special system of training or nautical education and never needed any, for what was born in them was developed by opportunity, natural qualification and constant practise.

I was sent to sea when less than twelve years old, yet no man ever taught me, nor had to teach me, a single detail of all the multiple apparel, rigging, spars, gear or accessories, nor the names of them nor how to handle them; all of that I learned by close observation, application and constant practise, and every other man who ever became a sailor had to do likewise, without asking questions and without special instruction. If he succeeded he became a sailor; if not he became a discarded ranik.

In the numerous discussions which have taken place on this perplexing subject during the past twenty years much stress has been laid upon what is euphoniously termed *sea habit*. What is sea habit? How shall we define it? Is it a good or a bad habit? In my opinion all that a sailor needs to make him a success is *sea sense* and a rugged constitution, with no habits at all.

When Captain Samuels of the famous American clipper "Dreadnaught" quarreled with the Liverpool pilot board over pilotage charges he decided to take his own ship down Channel without a pilot. Lord Brassy followed the ship out in his steam yacht "Sunbeam" to witness the disaster which he fully believed—perhaps fondly hoped—would befall the lofty clipper. But great was his astonishment when he sighted the "Dreadnaught" sailing majestically on her way; to see her intrepid skipper sitting carelessly on the fore-topsail yard and conning his ship safely to sea by the *color of the water*. That was sea sense!

About thirty years ago, coming home from the Philippines in a ship hailing from Portland, Maine, we were dismasted in a hurricane off the Bermuda Islands, losing our fore main topmasts, and our mizzen mast almost completely. After the storm we worked into Bermuda and tried to refit. But the avaricious ship-mongers, taking full advantage of our distress, demanded impossible prices for supplying the necessary spars and rigging. Then the towing company offered to tow the ship to New York on a ruinous salvage basis. But both these enterprizing proposals were indignantly rejected by our stalwart skipper with intense vigor and lurid profanity.

Two American vessels, a brig and a barkentine which had been anchored in the harbor during the hurricane, had parted their cables, fouled each other and were thrown upon the beach. Both their bottoms were knocked out and they were abandoned. Our old man made an agreement to strip them with his own crew, taking such of their spars as he required to re-rig his own ship for his share of the salvage.

We stripped both the stranded vessels, re-rigged our own ship with their salved spars, converting her into a full-rigged brig instead of a ship, and brought her safely into New York.

That was *seamanship!*

WHEN the "Titanic" went down about 635 lives were lost and that terrible calamity was largely due to the prevailing and persistent faith in "sea habit." Had the "Titanic" been fully manned by a crew of old-time practical sailors this awful sacrifice of human life might have been avoided whether there were enough lifeboats or not. For on board the "Titanic" there was abundant material for the construction of a great raft, or series of rafts, capable of floating all of those unfortunate people to safety. During the three hours or more that the ship floated after striking the ice it would have been done had there been there the skill and practical knowledge necessary to have accomplished it. Had she been properly manned it would have been done, for in such an emergency it would have been the first thought that would have flashed into an old sailor's mind.

Our problem, therefore, resolves itself into this: How are we to attract together the youths and men endowed with the spirit of sea sense and keep them where they naturally belong?

The only logical and practical way is to give them a chance to develop their natural talents and a purpose for which to live. School ships will not suffice; for a school ship is only a boy's outing place, and few of them find any serious purpose in being there.

An old-time clipper under full sail

Among all the thousands of ships, steam or sail, that entered the River Plate in 1910 the finest and by far the most interesting was the magnificent Danish four-masted bark "Viking." She was built by the Danish Government for the training of young men to the sea service, and has been a splendid success. This ship, manned by merchant officers and seamen, carries also about fifty cadets and engages regularly in genuine commerce. I saw her loading grain at Buenos Aires last December. Her cadets therefore receive sound practical training and instruction in every detail of regular ship's work, and in the end become thoroly practical seamen. They receive good treatment, food, care, clothing and quarters; and their moral welfare is jealously safeguarded as well. It was a fine sight to see the sturdy young fellows marching in a body to church every Sunday under the watchful care of their own captain and officers.

Both France and Germany were carrying on the same system before the war, and the governments of both countries were operating several large commercial sailing ships with eminent success. Why cannot the United States, following this plan and taking advantage of existing conditions after the war, proceed with the construction of a large fleet of big sailing ships, and put them into general service as ocean freight carriers?

FOR many years the American shipping owners have refused to build sailing ships because they cannot compete with steam. At the same time certain enterprizing New England lumber companies have been buying up large numbers of foreign square-rigged sailing ships and operating them successfully in the River Plate and other South American trades, while the Scandinavians have been constantly buying all the sail tonnage in sight for years and building many others as well and operating them to all parts of the world without complaint. Norway has now more sailing ships than any country in the world and more and better sailors than any country in the world!

Meanwhile the American steamship owners have been constantly clamoring in Washington for subsidies, subventions, rebates and drawback bounties to keep them out of the poorhouse for the past twenty years, while the redoubtable Robert Dollar threatens to sell his nine steamers or place them under the Chinese flag unless Congress consents to subsidize them. Repeal the La Follette law and allow him to carry Chinese coolies instead of American seamen. No one [Continued on page 482]

COUNTING THE BILLIONS

BY ALEXANDER D. NOYES

AUTHOR OF "FORTY YEARS OF AMERICAN FINANCE"

THE War Revenue Bill, as it passed the Senate on Monday, September 10, embodies the results of long deliberation, in the course of which opinion as to the amount that ought to be raised by taxation was influenced alternately by changing estimates of what the war would cost the United States Government, by controversy as to how much of this should be raised thru taxes and how much thru war loans, and by divergence of judgment as to how the new taxes should be distributed.

The question of what our Government's war expenditure would actually be, in its first year of belligerency, has been an extremely confusing factor. When we went to war in April the Treasury estimated that the first year's war expenses (exclusive of ordinary Government expenditures) would be $3,502,558,000. But the department raised its estimate of probable expenditure repeatedly and very heavily during the next four months. In August it calculated, on the basis of war appropriations made or pending, that the year's total expenditure for all governmental purposes would be $10,735,000,000, as against $1,041,000,000 in the fiscal year which ended last June. In other words, new expenditures arising from the war would exceed $9,000,000,000.

Still later, Congress and the financial world were startled by what appeared to be the virtual doubling of this estimate, in another supplementary statement by the Treasury that the war expenditure for the year would foot up $19,000,000,000. This estimate turned out to be a very loose and misleading calculation, for it included $4,000,000,000 in loans made or to be made to the Allies (which are not, strictly speaking, public expenditure), and also included numerous enormous requisitions, some of which have not been passed on at all by Congress and a good many of which, like the appropriation for new ships, could not possibly be expended in a single year.

THE House of Representatives passed its War Revenue Bill six weeks after our declaration of war. Its bill was drawn up on the basis of the original $3,500,000,000 estimate of probable war expenditure. In line with the Treasury's suggestion that one-half of this be raised from taxes, the House of Representatives promptly prepared and passed a war revenue bill which was estimated to produce $1,867,000,000. The Senate committee at first prepared a bill to produce the somewhat smaller revenue of $1,449,000,000; reasoning that fifty per cent of war expenditure was an abnormally large proportion to pay from taxes. But the subsequent mounting-up of Treasury estimates led, first to an increase in the committee's plan for revenue from taxes to $2,006,970,000, and then to further increases, made on the floor of the Senate, which brought the estimated yield, as the bill now stands, to $2,406,670,000. This sum, it should always be remembered, is for war taxes pure and simple, and is in addition to the revenue provided for ordinary governmental purposes—which itself amounts to about $1,300,000,000.

It is difficult to say what proportion of the year's total expenditure this Senate bill would provide. The congressional debates on the subject have been very confusing, and the Treasury's estimates of expenditure even more so. If the Treasury's August figures—the last submitted in detail—are accepted as the measure of probable public expenditure, then our total revenue from taxation would be slightly under 25 per cent of the year's whole government expenditure. That ratio would compare with the similar ratio in the case of the British Government, of about 21 per cent in the first full year of war, 26 per cent in the British fiscal year ending last March, and 27¾ per cent as estimated for the pending British fiscal year.

BOTH House and Senate were immediately confronted, when the revenue bill came up for consideration, with a demand that all war expenditure be paid from taxes. At first this demand was avowedly based, not only on the assumed wrongfulness of placing the burden on posterity, thru future interest payments on the war bonds, but on the strange idea that the wealthy classes had brought the United States into the war, and ought therefore to be punished for it. But both House and Senate came to several clear and sober conclusions in the matter both of the income tax and of the war profits tax. First, it was not a question of punishing anybody for the war, but of raising revenue. Second, posterity had at least something at stake in this war, as well as the Americans of today. Third, while the Government has as much right to appropriate all private incomes for war purposes as to draft all men, old and young, into active military service, public interest demands the use of reasonable common sense in both processes. Fourth, continuance of the country's finance and trade on a sound and prosperous basis requires that the capital of private investors be allowed to accumulate in an amount at least sufficient to conduct such operations. Fifth, it is altogether wise to leave a margin for increased taxation, in the possible event that the war should be long continued, and that our war expenses should enlarge as they have done in England. In the end, this idea of taxation to the limit was overwhelmingly defeated in both House and Senate.

When it came to settle how the taxes should be raised, the House of Representatives acted in so great a hurry that the bill as it passed that House was apologized for, even by its friends. Instead of taxing war profits as such, it contained a clumsy provision for putting a tax, at a very high rate, only on all profits exceeding eight per cent of capital. The income tax and the excise and documentary taxes were made very heavy by the House. But the total sum desired was not attained by the estimates on them, and in the eleventh hour two very objectionable provisions were thrown into the House bill—one a "retroactive tax," amounting to one-third of the income tax already paid for the calendar year 1916; the other, an all-around ten per cent increase in customs duties, with every article now on the free list paying ten per cent duty hereafter.

All three of these highly objectionable provisions were swept away by the Senate. The House tax on profits over eight per cent was replaced by a graduated tax on excess of profits of companies and partnerships over the average profits earned in the three years before the war. The rate of that taxation rises in the Senate bill from twelve to sixty per cent, according to the percentage increase in profits, as compared with the pre-war period. This tax is estimated to raise $562,000,000, as against $200,000,000 calculated for the House tax. The "retroactive income tax" was entirely rejected, and the ten per cent increase in tariff duties replaced by a few judicious changes in the duty on specified articles.

OF the $2,406,670,000 which is reckoned as the yield under the Senate bill, $1,060,000,00 would come from war profits and $842,000,000 from incomes. That is to say, something over 79 per cent of the new war revenue would be derived from these two taxes. This is a fairly conclusive answer to the accusation that the Senate had been laboring to exempt wealth from the burden. As a matter of fact, after the doubling of the present two per cent "normal" tax on all incomes, super-taxes are imposed in the Senate bill, beginning with an extra one per cent on incomes between $5000 and $7500, and rising by regular gradations until 45 per cent is taken from incomes between $750,000 and $1,000,000 and 50 per cent from incomes of more than a million.

Thus the bill passed the Senate, and in that form it went to the conference committee of the two Houses. If agreed to in the form reported by the Senate—and in substance this will probably be the result—it will remain to see what is to be the effect of a tax schedule on the country's general financial position, and how far they will represent the proper contributions by taxes to war expenses. Judgment on both considerations will depend very largely on whether the end of the war does or does not seem to be in sight when Congress assembles next December.

New York City

MUSICAL MEDIOCRITY

(*Continued from page 468*)

gave us the Boston Symphony, one man, the late Edward de Coppet, gave us the Flonzaley Quartet. We cannot expect an organization to be actuated by the exalted and often precarious ideals that occasionally actuate the individual. There is something just a little absurd in the spectacle of this recent tirade directed against the Philharmonic at a time when the Philharmonic is doing the best business of its history. Assuming that the directors of the Philharmonic possess a keener degree of perspicacity than we have credited them with, we can imagine that they have consciously subordinated a policy of artistic idealism to a popular appeal. Well, can we blame them? It is sheer nonsense to contend that an organization of this kind is an educational institution. It is under no obligation to educate anybody; it supplies entertainment to the public, and, in the present instance, it is very evidently giving the public what the public wants. In other words, a pleasant interim between a late luncheon and a five o'clock engagement for tea at the Plaza! Those persons—always in the minority—to whom art is a real and living thing—an automatic part of them, like breathing, for instance—well, they can stay away.

The present writer has, in times past, vehemently assailed the administrators of this city's musical activities. This attitude now appears to him ill-considered and immature. The matter is one of supply and demand. To borrow from our pungent vernacular, it is "up" to the public, and the public has not made good. The performances accorded the Wagner music dramas in this city are deplorable. But who is to blame for this? Who allows Wagner to be performed, year after year, in a dead, monotonous and perfunctory fashion? The public. The greatest music that the world has ever known—the music of Richard Wagner—is emasculated and desiccated at the Metropolitan Opera House, and the subscribers to that institution are not sufficiently interested to protest the matter. There are not lacking individuals who writhe under the inadequate treatment afforded these incomparable master works by the conductor, Mr. Bodanzky. They know, for instance, that the third act of *Tristan* consists of a series of stupendous contrasts thru which are driven like spray before a hurricane the fever wrought imaginings, delusions and recollections of a delirious, mortally wounded man. As an exhibition of a kind of frantic strength this is probably the greatest piece of emotional and dramatic writing that the human brain has given us. Psychological subtility and tension of an excruciating degree are literally thrown at one in great gusts of sound. Mr. Bodanzky not only misses the significance of all emotional music—but he deletes its most essential section. Mr. Bodanzky's talent is a delicate and difinified one; it is obviously lyrical, eminently sane. In the external treatment of physical action, atmospheric phenomena (we refer especially to his reading of Siegfried) he is satisfying. As an interpreter of the tragic, sensuous and interior aspects of Wagner's incomparable art, he is incompetent. As such he is not a satisfying substitute for a Toscanini or a Hertz.

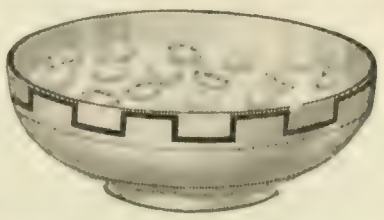
These things are the merest commonplaces of conversation among the cultivated portion of our musical public. But, unfortunately, this portion is a very small portion. It has witnessed a gradual deterioration in the quality of the musical affairs in New York, and it has seen no concerted effort made to combat this con-

Don't Treat Them Like Tidbits

These Steam-Exploded Grains

This is to housewives—to the hundreds of thousands—who regard Puffed Grains as bubble-like tidbits, to be served in a mincing way. They are dainties, of course—thin, flaky and flavory. They taste like food confections. But that fact makes these perfect foods inviting.

The facts are these: All folks need some whole-grain diet. They must have minerals and enzymes of which flour foods are robbed. And whole grains must be wholly digestible to yield their elements in full. Puffed Wheat and Puffed Rice are whole grains. By Prof. Anderson's process—shooting from guns—every food cell is exploded. Every atom is fitted to feed.



No other process does that. Hours of cooking will usually leave half the food cells unbroken.

Then there are many times when you want a food which doesn't tax the stomach—between meals or at bedtime. And Puffed Grains are the ideal foods for these times. So every day, at some time, it is wise to serve a Puffed Grain.

Puffed Wheat Puffed Rice
And Corn Puffs
Each 15c except in Far West

At breakfast serve with sugar and cream, or mixed with any fruit. They taste like bubbled nut-meats. For luncheon or supper float in bowls of milk. For after school, douse with melted butter, to be eaten like peanuts or popcorn. Also use in candy making or as garnish for ice cream. Every ounce is clear nutrition, in a bon-bon form.

On What Does Health Depend

By ROY WILSON BEAL

HAVE you ever sat beside a careful chauffeur while he was driving his car? If so, you have probably noticed that if the engine makes any unusual sound, he is instantly alert, stoops forward and intently listens to be sure that nothing in the way of trouble is developing. For, in order to be considered a competent chauffeur, he must take care of the *little troubles* before they develop *big troubles*.

And if more of us humans would appreciate the importance of keeping ourselves in good running order and eliminating the "little troubles" before they develop, there would not only be far less illness but we would be much more efficient at all times—brighter, stronger, keener of perception and eminently better fitted to meet all the demands of this busy life, without being handicapped by the little troubles or derangements which gradually drag on us more and more until the big trouble comes and we are really ill.

Now it may be claimed that an automobile or other piece of machinery is not comparable with a human being, one being the product of man and the other of Nature. In reply to this I ask how many products of Nature can you successfully bring to a productive stage nowadays, without due attention to the little troubles before they develop into big troubles?

If you desire a productive orchard, you must spray the trees to remove destructive insects and sometimes plough the grounds that the tree roots may be the stronger—

If you have animals (cows for instance) little troubles will frequently cause a falling off in milk production and you hasten to correct them—

And surely you would never expect to raise vegetables successfully without keeping the garden clear of weeds—

Therefore, although Nature builds well, she must have attention nowadays if her highest efficiency is to be secured.

Perhaps the best comparison to weeds in the garden is accumulated waste in the human system—

And as the little troubles in an automobile and the small weeds in a garden will develop and put them out of business, just so accumulated waste in the human system gradually increases, keeping us below par, nervous, bilious, irritable and without ambition in the process, until we become auto-intoxicated and really ill.

All doctors agree, remember, that approximately 95% of human ills is due to Auto-Intoxication, which is the technical term for "self-poisoning" by the system absorbing the poisons from accumulated waste—and there is no more noxious poison existent, as you probably know.

I sincerely wish that every reader of this magazine could see as I have, literally volumes of letters which are in the possession of Dr. Charles A. Tyrrell, written by thousands of users of Internal Baths, which, by the simple use of warm water, keeps the lower intestine free of this poisonous waste.

"I did not know what it was to have ambition until I bathed internally"— "For twenty years I had to take medicine constantly, but for the past eight years have bathed internally and had absolutely no need for any medicine"— "Our entire family use the Internal Bath and our health is only exceeded by our happiness"— "Before I bathed internally, I was a 'grouch'; now I want to be pleasant to everybody"— "I am 80 years old and have bathed internally for 20 years. Best and only remedy without the use of drugs"— "My physician on noting its effect, told me to cut out medicines and continue bathing internally twice a week"— These quotations give but a faint idea of the experience of those who are now using this method of keeping the system at its highest efficiency, because of being clear and clean of the "little troubles."

Dr. Tyrrell has specialized on Internal Bathing for over twenty-five years and in that time many facts and experiences have developed of vital interest to all who seek to know just how and why this treatment will keep them in such a magnificent physical nervous and mental condition.

The result of this long experience is summed up in a little book called "The What, The Why, The Way of Internal Bathing," which will be sent to you absolutely free on request if you write to Dr. Chas. A. Tyrrell, 134 West 65th Street, New York City, and mention having read this in The Independent.

The least that this little book can do is to give you authentic information about your physical makeup that you probably have never before known, so why not send for it now while this is before you.—*Adv.*

dition. This is all the more remarkable in view of the fact that New York has known in the past a higher aggregate of individual excellence than any other city in the world. Perhaps the whole matter rests upon a fundamental indifference on the part of the public toward what is highly beautiful. Perhaps the average intelligence, the average perception, cannot react with accuracy to the finer, less obvious values. One thing appears to stand out in sharp and unmistakable relief—the fact, repeatedly emphasized in these few notes, that the fault must be laid upon this average capacity for appreciation, and not upon the individuals who administer the affairs of our musical organizations. So long as the public accepts with indiscriminate and fatuous enthusiasm the present conduct of Dr. Muck and the Boston Symphony, just so long will Dr. Muck continue to insult our intelligence with programs that are utterly sterile four times out of five. There are times when Dr. Muck's performances are absolutely uninteresting (something that cannot be said of the Philharmonic and Mr. Stransky), but the public buys the house out twice over for these concerts whether the programs are interesting or not. The Boston Symphony is a great orchestra—perhaps the greatest in the world—but it does not always measure up to its possibilities, simply because the public does not demand that it should. Nor does the public demand that great individual talent be retained by the Metropolitan, or that a conductor of comprehensive and compelling significance be placed at the head of New York's principal orchestra.

This sort of thing does not augur well for the present standard of musical taste in New York. Indeed, one is sometimes tempted to think that this standard was never lower than it is at the present time. One naturally wonders whether this condition is indicative of a nation-wide indifference to the finest musical manifestation, or whether it is purely local in its disquieting significance.

The New Books

Beyond the Law

IN *Beyond*, by John Galsworthy there is restated in the terms of English life the lesson of "Anna Karenina." Both the English and the Russian women find that giving up a conventional marriage for a lawless passion does not insure happiness. In the new relation beyond the sanction of society, there is even more room for jealousy, unrest and uncertainty deepening into distrust and acute suffering. The story of Gyp, beautiful, motherless, proud and sensitive, hints of the subtle deterioration of a loving nature under the ban of the bar sinister and, later, in the bonds of a loveless marriage. Love unsanctioned by marriage brings brief joy and lasting sorrow. It is an inconclusive book, and for that reason lacks the greatness that compels the reader's sympathy for the actors in the tragedy —for Galsworthy always makes life a tragedy, the coming storm is always threatening from the horizon of his world even if his characters stand for a moment in pale sunshine.

Beyond, by John Galsworthy. Charles Scribner's Sons. $1.50.

Three Allies and Germany

TWO impressive facts relating to the diplomacy of the war are for the first time set clearly before us in *The Next Republic*, by Carl W. Ackerman, first, the conflict raging between the German Foreign Office and the military clique representing the army and navy, and, second, President Wilson's extraordinary patience and forbearance, hoping against hope, as it were, that the United States might maintain friendly relations with Germany. We may assume President Wilson knew what Mr. Ackerman now discloses—that the peace party in Germany, led by Dr. von Bethmann-Hollweg, does appear to have striven honestly to overcome the ruthless war policy of Admiral von Tirpitz and his followers. Between these two parties the Kaiser would seem to have swung back and forth, lending his supreme support to the one side and then to the other. Evidently it was this situation which developed such a harassing problem for President Wilson, and left the American public in indignant bewilderment.

To such straits, indeed, was the German Foreign Office driven by the military clique, that while it snatched at the expedient of presenting President Wilson to the German public as a hypocritical pro-Ally, diplomatically every effort was being directed to secure his good offices toward peace. Naturally such a policy could not succeed. Sooner or later it was bound to exhaust President Wilson's patient tolerance. The cry of the Von Tirpitz party that President Wilson had "enmeshed their submarines in a web of notes" will go down in history as a great diplomatic victory won by the American President.

The violent hatred of the German military party for America, and all things American, as shown by Mr. Ackerman, is difficult to comprehend, tho he leaves us in no doubt about it. Its supreme arrogance, its lofty disdain and revengeful might is something for which, to find a parallel, we

The Pullman Car
1867 - 1917

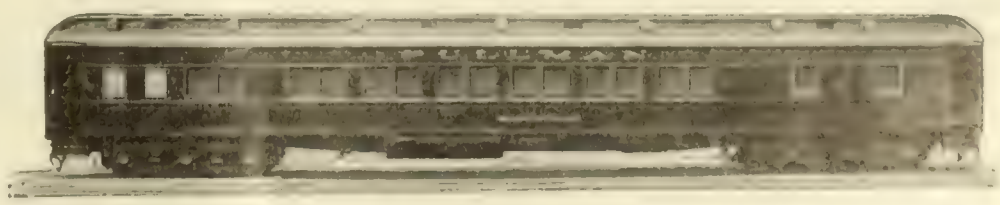
FEW were the comforts and conveniences of the Pullman car of half a century ago; slight was its contribution to the safety of travel.

But to the travelers of that day it was a marvel of luxury and elegance.

It was constructed entirely of wood, lighted by oil lamps, and was heated by box stoves which burned cord wood.

It rested on blocks of India rubber instead of springs, platforms were open and four wheel trucks were used with iron wheels.

Nevertheless, the introduction of the Pullman car inaugurated a revolution in railroad transportation.



Today 7,400 Pullman cars, built in the shops of the Pullman Company, are operated by its own trained employes.

Today twenty-seven million passengers are afforded assurance of safety, comfort and convenience on 137 railroads embracing 223,489 miles of track.

Staunchly constructed, electrically lighted, sanitary, ventilated and steam heated, they include every feature for the personal convenience and luxury of the passenger.

In addition, the cars of the Pullman Company afford a uniform and continuous service unequalled by that of any like organization in the world.

THE PULLMAN COMPANY
Chicago

WALK ON YOUR HEAD

Here is a health discovery as revolutionary as walking on your head!

This discovery was revealed to me at the age of 65. At that time I was an **old man,** suffering from piles, dyspepsia, insomnia, catarrh, and general lassitude. Today I am 67 years **young,** and rid of all my bodily afflictions. My rejuvenation convinces me that I have made the most remarkable health discovery of all time. It has given me the vital Force, the Appetite, the Digestion, the Sleep, the Ambition of healthy youth.

It is different from anything heretofore published. No concoction nor contrivance of any kind; no expense and no trouble at all.

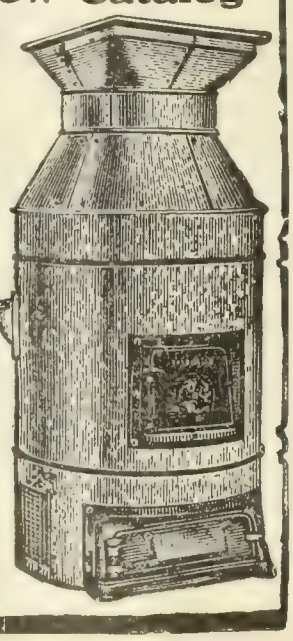
It is something new as old as creation.

My discovery is revealed in a booklet of 39 pages of big type and 8 pages of illustrations; price $5 (or); not for the little book but for the **BIG IDEA**—Its value cannot be weighed in the scale of dollars and cents.

On receipt of $5.00 I shall mail you a copy. If, after reading it, you doubt the efficacy of its teaching, submit the book to your physician and if he disapproves, send it back and I shall refund your money promptly. Remit by check, money order or registered letter.

I am just a plain business man (manager Caw's Pen & Ink Co., 40 years); never studied medicine nor anatomy, but I believe my book divulges the most effective means of restoring and maintaining good health known to man.

Instalment Plan: Remit 50c. and you will receive the book by return mail; then remit monthly for five months, altogether $5.00. If the book be returned uninjured within the 6 months I shall refund all payments except the last.



FRANCIS CASHEL BROWN, C-76 Duane St., New York

must go back to the age of barbaric conquerors. For the fall of the military clique Mr. Ackerman fixes upon the day when the Allies deliver a crushing defeat upon the German army. Before that he does not look for any determined awakening of the German people.

Perhaps the best piece of work in Captain Dawson's *For France* is the character drawing of Paul Dupont, French grocer of Dijon, subsequently a sergeant in the trenches. The precise, methodical manner in which the Dupont family conducted the grocery and their intimate affairs, and accepted the burden of war is well drawn. There is no unnecessary hustle, no display of nerves. Everything moves forward day by day upon a solid basis of careful deliberation, shot thru with provincial French shrewdness. This the author holds to be that fundamental of French character against which the German machine system contends in vain. That admirable discipline of the French army, coupled wth a never failing sense of what the individual Frenchman owes to himself as a defender of France, is also skilfully displayed. A chapter on the Dogs of War is a positive revelation of the extent to which the sagacity of those animals can be utilized by those who know how to train them.

In a complimentary preface to André Chevrillon's *England and the War*, Mr. Kipling tells us that M. Chevrillon's "analysis of the national mind . . . is nearer the root of the matter than anything that has yet been written by any Englishman." Were M. Chevrillon writing about the Indian Punjab, unquestionably Mr. Kipling's opinion would carry the weight of established authority, but with England, Mr. Kipling has too often separated himself from the national mind to be regarded as a dispenser of the British conscience. Tho M. Chevrillon's study does not surpass or, indeed, nearly equal that revelation of the English mind presented by Mr. H. G. Wells, yet skilfully made is his clean cut distinction between the British sporting conception of war and the German vision of its glory. The author seems over severe on the English "slackers" since as Americans who joined the British service have told us their comrades did not know what they were fighting about. It was doubtless difficult for the stolid mentality of a large number of English people to comprehend why they should now fight with a people that during the whole of the Victorian era they had been taught to regard as their next of kin. To the French, of course, the case was immediately presented as the crisis of a long threatened national danger.

Mr. Will Irwin's record has placed him among the most intelligent observers of war conditions in Europe, and he entirely lives up to this high reputation in his latest volume, *The Latin at War*. His view of Paris, "The City of Unshed Tears," in February, 1916, should be read by us somewhat apart from the excellence of his descriptive vein, because he displays the readjustment in business and social life which, in some degree, we are likely to experience should the war continue for one or more years. Thus, in spite of the loudly proclaimed "work for all" cry of certain French "upper-class optimists," he discovered acute distress among many who could not readily pass from what he terms "light-fingered work" to heavy labor jobs. All the arts and all business dependent on the sale of luxuries remained practically dead after two years of war. On the other hand, business in necessaries was fairly flourishing, while the demand for muscular labor was far in excess of supply. It is in the latter that working women of the peasant class have

found their great opportunity, filling numerous positions formerly occupied by men. With the more refined type of woman, however, the case is reversely unfortunate, excepting mothers of young children for whom the French Government makes special provision. Secluded with shrinking pride in some dingy abode, there seemed nothing for her to do but, at best, eke out an existence on the verge of starvation. Men of the same class beyond military age are in the same position. From Paris, Mr. Irwin passes to the Italian front, giving us some finely drawn pictures of the herculean task of driving back the Austrians thru the Arctic atmosphere of the High Alps. Our Italian fellow citizens who abandoned their picks and shovels at the summons to help redeem the lost provinces appear to have been mighty glad to see Mr. Irwin. In returning to France, Mr. Irwin takes his reader to the Verdun front, where he presents an intensely human side of that great strife in several thrilling episodes. His concluding chapter on the Army of Equals, emphasizes that democratic spirit of the French army on the basis of duty and discipline willingly shouldered, to which Americans serving in it have enthusiastically attested.

Aided by some thirty-eight officials Mr. Powell found a fairly easy path to the Italian and French fronts. Thus, his pen pictures of the present war condition of the northern cities of Italy, and the outposts of the army in the high Alps, are both informing in an exceptional degree and of unflagging interest. Nothing short of a miracle would seem to have been accomplished by the Italian army in driving back the Austrians from impregnable natural positions. Mr. Powell's excellent photographs perhaps tell better than words of the tremendous difficulties of these operations in the blizzards of winter, the baking heat of summer, over glaciers and arid plateaus, to bridge huge chasms with the sole expedient of wire cables. If his visits to the Champagne, Verdun and the Somme front are less impressive, it is because what is comprized within the title of his book, *Italy at War*, today is the best first hand record of that war region.

Germany and the Next Republic, by C. W. Ackerman. $2. *For France*, by A. J. Dawson. $1.50. G. H. Doran Company. *England and the War*, by André Chevrillon. Doubleday, Page & Co. $1.60. *The Latin* at War, by Will Irwin. D. Appleton & Co. $1.75. *Italy at War*, by E. Alexander Powell. Charles Scribner's Sons. $1.50.

Is and Ought in Diplomacy

THE ORIGINS OF THE TRIPLE ALLIANCE, by Prof. Archibald Cary Coolidge, of Harvard University, is based on a series of lectures delivered at the University of Virginia and retains all the lucid explicitness and even flow of narrative which characterizes the best kind of public lecture. The subject is an intensely interesting one, since the whole diplomacy of the world from 1882 to 1914 was dominated by and adjusted to the military league of Germany, Austria-Hungary and Italy. What chiefly strikes the reader of this survey of the detailed diplomacy of Europe between the Franco-Prussian War and the formation of the Triple Alliance is the absolute callousness of the statesmen concerned, their utter indifference not only to the weal of subject peoples and little states but even to traditions of friendship and hostility among the great powers themselves. Each nation was willing to make any alliance with any nation and against any nation if some minute and temporary gain of security or prestige might be expected to result.

Herbert Adams Gibbons, in *The Reconstruction of Poland and the Near East*,

DID ***Germany begin this war?***

READ "CHRISTINE" BY ALICE CHOLMONDELEY

"Christine's convincing plausibility of detail makes it more than probable that it will be long accepted by everybody out of Germany as a document hardly less valuable—perhaps more trustworthy—than the 'papers' of assorted colors that have been issued by the belligerents."—N. Y. Times.

CAN ***the German people be divorced from their Kaiser?***

READ "CHRISTINE" BY ALICE CHOLMONDELEY

"Those who have wished to make a sharp distinction between the German people and the German Government in connection with the war will be disillusioned by Miss Cholmondeley's observations."—N. Y. Post.

"The real force of the book is in the descriptions of the German people who think on all national questions as though their convictions were machine made, as they really are."—San Francisco Chronicle.

WHAT ***would life be like if Germany could win this war?***

READ "CHRISTINE" BY ALICE CHOLMONDELEY

"We Germans fear not God, but everything else in the world. We are polite only by the force of fear. Consequently—for all men must have their relaxations—whenever we meet the weak, the beneath us, the momentarily helpless, we are brutal. It is an immense relief to be for a moment natural. Every German welcomes even the smallest opportunity."—From "Christine."

CHRISTINE

"Whether fact or fiction, 'Christine' is unique among all the books evoked by the great conflict."

Already Six Editions. $1.25

The Macmillan Company, Publishers, New York

Ask for "Christine by Mrs. Cholmondeley," (pronounced Chumly), or you may be given the wrong book.

The Home Correspondence School
Dept. 305, Springfield, Mass.

makes the main thesis of his book the denunciation of just this type of diplomacy. He favors a peace which will sincerely mean the emancipation of the small nationalities and not the aggrandizement of the victorious powers. For example, he insists that Poland shall be a wholly independent buffer state and in no sense affiliated with either Germany or Russia. In the Balkans he desires a rearrangement of boundaries with reference to ethnology but with no reference whatever to which of the Balkan states is on the winning side at the end of the war. He favors the independence of Armenia, Arabia and other parts of Asiatic Turkey, but he insists that none of the new states to be erected shall be under the tutelage of any European power and he is willing that Turkey shall keep Constantinople and the Straits. Mr. Gibbons' denunciation of Russian and Italian imperialism is couched in such vigorous terms that some hasty readers will class him as "pro-German" until they reflect that he is, after all, making his plea to the Entente Allies whom he thinks *may* be sincere in their demand for the emancipation of the nationalities and not to the Central Powers from whom it is useless to hope anything. He believes, however, that the influence of the United States is necessary at the peace conference to keep the other Allies loyal to their professed ideals. Curiously enough, he has almost no hope that emancipated Russia will pursue a more enlightened foreign policy, or be a juster ruler of subject peoples, than the old Czardom.

The Origins of the Triple Alliance, by Archibald Cary Coolidge. Charles Scribner's Sons. $1.25. *The Reconstruction of Poland and the Near East*, by Herbert Adams Gibbons. The Century Company. $1.

The Concord Gilbert White

IN the past year Thoreau, the forerunner of all our essayists on nature, has had much and deserved attention. Various reprints have brought his writings into wider ken, and Mr. Van Doren's critical essay ushered in Mr. Sanborn's definitive biography and Edward Waldo Emerson's wholly charming reminiscences.

Of the reprints *Through the Year With Thoreau*, arranged by Herbert W. Gleason, is quite beyond the average volume of gleanings. The extracts are each illustrated by uncommonly fine photographs taken by Mr. Gleason, and the whole is an attractive bit of bookmaking. Such a collection of paragraphs that lend themselves especially to illustration, of course, have little hint of the witty and wise philosophy and shrewd comment that give Thoreau's records of Concord more flavor than White's chronicles of Selborne. Extracts from the journal having this quality illustrate much of the biography Mr. Sanborn finished just before his death, last winter.

Here is much material on Thoreau's forebears, not to be found in Mr. Sanborn's earlier work nor in Mr. Channing's more intimate book; and here also a more critical weighing of character and of literary values than we have had. These leave us with an increased regard for the independent, unambitious artist, and put the somewhat carping criticism of neighbors at its true value.

For a swiftly drawn sketch of a living personality nothing could be more delightful, however, than the delicate and loyal appreciation of the friend of his childhood by Emerson's son. In these few pages we see the author of "Walden" at his best and, we feel convinced, as he really was. Both books have much as to that very human Concord group, and Mr. Sanborn's analyses of the relations of these men and households to one another will be most interest-

ing to those for whom Concord has perennial attraction.

Through the Year with Thoreau, H. W. Gleason, ed. $3. *A Life of Henry D. Thoreau*, by C. B. Sanborn. $4. *Henry Thoreau as Remembered by a Young Friend*, by E. W. Emerson. $1.25. Houghton Mifflin Company.

The Marne

A belated but brightly written narrative is *Across France in War Time*, by Kuklos. A journalist of the road with job gone when war broke out, and nothing to do, he took his bicycle to France and tried how near he could get to the fighting line, some twelve days after the Marne. If much of what he relates has been told elsewhere, yet he adds fresh wayside touches to complete the picture of what we already know of France at that period. Several artistically done drawings by the author make the little volume well worth its price.

A thoro and painstaking review of the operations which led up to and immediately succeeded the battle of the Marne is to be found in *The Marne Campaign*, by Major F. E. Whitton. Major Whitton has adopted a commendable method in a kind of textbook plan, so that the reader can easily grasp any disputed point by referring to the subsections into which each chapter is divided. He thus avoids the confusion into which military authors have been apt to lead their readers, thru the necessity of always bearing in mind the great number of actions simultaneously proceeding not only upon the East but West fronts, and which tho separate were interwoven as regards the ultimate results. In this way, also, Major Whitton is able to extend his scope to embrace the others fighting both on land and sea during this period. The book contains an excellent map of the alignments of the armies at the great battle, numbered according to their corps, divisions and brigades upon the most reliable up-to-date information.

Across France in War Time, by Kuklos. E. P. Dutton & Co. 50 cents. *The Marne Campaign*, by Major F. E. Whitton. Houghton Mifflin Company. $4.

Sidelights on Religion

For classes studying the dark continent, Cornelius H. Patton's *Lure of Africa* has much information. It recounts what he learned of conditions and possibilities during wide journeyings. These are arranged not as an account of travels, but under topics, an index making the matter accessible. (Missionary Education Movement, 40 cents.)

A brief *Cyclopedia of Temperance, Prohibition and Public Morals*, with topics arranged in alphabetical order for the convenience of the prohibition advocate, is published under the editorship of Deets Picket. Its most interesting feature is the summary of prohibitory legislation enacted during the war in European countries. (Methodist Book Concern, 50 cents.)

An interesting anthology, *Christ in the Poetry of Today*, has been compiled by Martha Foote Crow. The humanness of Jesus and of his daily life is the predominant note, and often these modern verses are almost as naïve as the folk ballads of which there are a few good imitations. A most useful book for all having to do with programs for church, schools and societies. (The Woman's Press, $1.)

The fifteenth annual issue of the year book for the *Christian Movement in the Japanese Empire*, covering the year 1916, contains a very full and illuminating section on social problems. Various writers discuss the status of women, industrial conditions, the social evil, the labor movement, and different endeavors in the way of social service. Great care has been taken to make these articles trustworthy and informing. The usual surveys of all kinds of missionary effort appear. (The Missionary Education Movement.)

Do You Want A 25% Increase In Earnings?

This Man Got It—

and he got more leisure at the same time

"Formerly I seldom had time for anything outside of my regular work as Engineer and Superintendent.

"Since completing your course I am not only more efficient in my regular work, which is evidenced by an increase of 25% in my salary in the past year, but I have considerable time for improving myself along all lines. And am making use of this extra time by taking a course in Law."

C. E. EDWARDS,
Okanogan, Wash.

Course in Personal Efficiency

24 Lessons—With Charts—Records—Diagrams—Condensed—Clear

Through this course already 20,000 men are on the way to get what they want in the quickest, shortest, easiest way. The Treasurer of the biggest bond house in the Northwest saves hours every day—an author in New York does twice as much work and has more time to sell that work—a State official saves his State $3,000 on one job.

The Efficiency Movement has swept the world because it has brought to men who saw no way out a new road to success. Other nations have profited—other nations make the most of their time and talents; but we—with our abounding wealth, have been prodigal with natural resources, with mental resources, with time. Now we must stop and reorganize.

And above all, it is the individual who must reorganize himself, because it is he who is the basis of the trouble. Let the Emerson Course teach you to conserve your brains, your time—for these are your capital—just as money and machinery are the capital of the factory. Learn to invest them right. There's more coming to you out of life—Get it. Get the money and rest and success you ought to have. You won't work longer—you'll work less. You are full of unused energy. Consider country people and city people. The rapidity of the city man's life bewilders the country man. A day in New York is a terror. But give him a year in the city and he will keep the pace as well as anyone. He will get ten times as much out of himself—and he won't be working any harder. That's what Efficiency will do for you who are already in the city. It will attune you to a new gait—a new zest and snap—and things will leap along where now they crawl.

These principles are not casual ideas of Mr. Emerson's. They are the scientific principles he has developed in forty years of study. He has applied them in over 200 factories, railroads and other organizations. They are studied by other Efficiency Engineers in America, England, France, Germany and other countries who have learned them from Emerson. His big organization in New York (he has 40 assistants) has taught Efficiency to steel mills and railroads, factories and publishers.

FREE Send the coupon at once for this valuable book entitled "A Short Cut to Success" illustrated in colors, telling "What Efficiency Is, What It Can Do For You;" "Your Undeveloped Possibilities," and a dozen other articles—with a special article by Harrington Emerson.

20,000 already are enrolled. If you want to do less work and get more for it—send this coupon. If you are trying to get ahead and the way seems closed—send this coupon. If you need more money and see no way to get it—send the coupon. If you're overworked and tired—send this coupon. Send the Coupon today for the Free Book.

YOUR SERVANT—THE RED CROSS

(*Continued from page 463*)

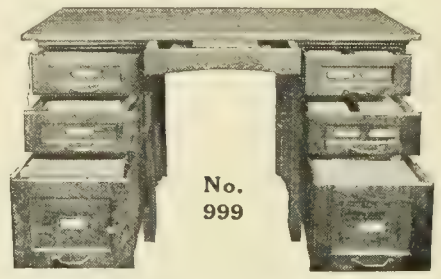
wanted. "Give us canteens," was the answer. The word *canteen*, like many others, has found a new meaning in the Great War. It does *not* mean a place to buy alcoholic drinks. It means, first, a field kitchen close behind the first line of trenches from which hot coffee and tea and bouillon and cold lemonade and such drinks are served out to fighting men—men actually in the front trenches, bearing the brunt of the bombardment, men to whom the refreshing drink, gulped down while the heavy guns roar, may mean all the difference between sagging morale and spirited fighting.

It means, also, an outpost of civilization—a place where a poilu leaving the front can wait for his train, at railhead or junction, in comfort, can shave and wash his mud-stained body and disinfect his germ-laden clothing, can read and write and play games, and perhaps can sleep, if he must wait over night. At some of these points now—dead little stations in peace time—a desperately fatigued and grimy soldier must lie on the station platform all night, and then go on as he is, perhaps to carry filth and infection into his home. Nearly fifty thousand soldiers are passing thru eleven important stations every day, and the sight of a friendly American woman at each of them, and the heartening service she is equipt to render, will be hugely appreciated by these French troopers now—and later by our own men in khaki. Fifty women have already sailed to take part in this work. At the front, too, where the sight of our uniform is needed quickly, there will be American men at the field canteens.

Millions of hospital garments, medical supplies and surgical dressings are being sent to France. The Red Cross, with which the Surgical Dressings Committee is now affiliated, reaches three to four thousand hospitals thru its Supply Service.

Two and a half million dollars' worth of supplies for immediate relief have been put at the disposal of the Red Cross Commission. This includes staple foodstuffs for the sick, wounded and refugees, and household goods, building materials, live stock and implements for the homeless who are striving to resume something like normal life.

A motor truck service, independent of the railroads, provides for distribution without embarrassing the French transportation system, already severely burdened.



For victims of tuberculosis and those who must be guarded against it, for the permanently crippled and the invalided, for the ruined villages which must be tactfully but concretely helped to rebuild themselves, the Red Cross is at work supplementing French agencies, coöperating with British and American organizations, helping France wherever it can.

At home, meanwhile, an effective organization has been built up. National Headquarters, a marble building without any front lawn—the Red Cross couldn't wait for things to be fixed up—was erected by Congress and private subscription as a memorial "To the Heroic Women of the Civil War." It is a monumental affair. But it is the liveliest monument ever seen. In the Assembly Hall, with its great stained glass windows and beautifully modeled ceiling, are crowded so many little offices that you piece the windows together with difficulty by peering over the tops of temporary partitions. An old church and a new workshop behind the building have been added

Weis

FLAT TOP DESK AND FILE COMBINED

Arranged from a varied assortment of filing drawers to meet your individual requirements, puts your records and correspondence within easy reach. Investigate this line before you purchase that new desk.

Plain Oak, Golden, Natural or Weathered

Freight Paid in Eastern and Central States **$30** **Slightly Higher in the West and South**

Desk shown here has the new built-up, five-ply cross veneered Oak Top, 54x30 inches in size. This new length increases the distance between pedestals to 21 inches. Left pedestal is Letter width and has slide shelf, storage drawer, drawer for filing cancelled checks, etc., and large drawer for filing correspondence. Handy storage drawer between pedestals. Right pedestal Letter width, equipped with slide shelf, drawer for filing 3x5 record cards, drawer for 4x6 record cards and large correspondence or catalog filing drawer. All drawers are 22¾ inches deep inside; operate on indestructible fibre rollers; cannot be pulled out accidentally but may be removed easily when desired. Let us suggest an arrangement of drawers applicable to your filing needs.

Humanize Your Phonograph

A New Invention That Eliminates All Surface, Nasal, Metallic and Harsh Sounds and gives to every talking machine, regardless of make or quality, the Actual, Living Breathing Vibrant voice of the finished artist. Lasts a Lifetime. Costs no more than the best records.

Being a lover of music you are entitled to the full benefit of the talent of the artists who made your records.

Free Trial **In Your Own Home**

You are losing more than fifty per cent of the real richness and beauty of your records now, and to convince you that this is true I will bear all the expense of a five days' trial.

Use your own needles, play a piece half through with your reproducer and the remaining part with NU-HUMAN-TONE, and if you do not find that it eliminates all harsh and metallic sounds, producing a blending of melodies that you did not dream were in your records, and in your own mind you do not feel that the NU HUMAN-TONE more than doubles the value of your talking machine, send it back to me at my expense and owe me nothing, or if you find it all and even more than you expected, send me $7.50 as payment in full. If more convenient, payments may be sent in monthly remittances of $1.50 each.

Simply send your name and address, state name of maker and name of your machine, also retail price paid, so we can send reproducer to fit your phonograph, and the NU-HUMAN-TONE will be sent to you by return mail. Remember, you do not pay a single penny unless you decide to keep it, and that you are to be the sole judge. Address David B. Clarkson, 951 Clarkson Bldg., Chicago, Ill.

Desk Men
All Need Bran

Indoor people—men and women—need a daily dish of bran food. It is Nature's laxative.

Not clear bran, but a bran-flaked dainty. Then they won't neglect it. Pettijohn's is an ever-welcome form.

Bran helps folks keep fit. It breeds good cheer. Prove that by a week's test and you never will omit it.

Pettijohn's

Rolled Wheat—25% Bran

A breakfast dainty whose flavory flakes hide 25% unground bran.

Pettijohn's Flour—75% fine patent flour with 25% bran flakes. Use like Graham flour in any recipe.

Both sold in packages only.

THE INDEPENDENT, 119 W. 40th St., New York City

to the office space—and still the six hundred odd employees spill over into the corridors.

At the strategic points in the machine are men and women who bring as a free gift to the Red Cross the experience they have won in industry and finance. Many of their subordinates have also volunteered or have accepted a reduction of their normal salaries. There are nearly a hundred who serve entirely at their own expense, contributing technical skill that an organization like the Red Cross could never afford to buy, and yet could ill afford to do without in the face of its stupendous task.

With their help the Red Cross has been reorganized for greater efficiency. Circulars of instruction and standardized patterns have been prepared for millions of women workers. The Chapters—there are now more than 2600 of them—now report to thirteen Division Managers, receive their supplies from thirteen Division Warehouses and ship their finished goods to the same centers. A machine capable of handling the very large quantities of raw materials and relief supplies which must be kept ready to meet the needs of Europe and this country has been built up, and ocean transport secured, in spite of the tremendous pressure on cargo space.

The National Army and the National Guard in their cantonments and camps need the Red Cross, too. A field director of Camp Service is being sent to every camp and cantonment to insure prompt action when the Red Cross can be helpful. Sanitary units have been sent to make the zones about the cantonments, outside the military jurisdiction, free from possible sources of disease. In coöperation with the state and the Public Health Service, the Red Cross is stamping out malaria at Columbia, South Carolina. At Fort Oglethorpe, Georgia, an old quarry has been turned into a swimming pool. Red Cross ambulance companies are on duty at many camps, in addition to those who have gone abroad.

In caring for the dependent families of men in the army and navy, the Red Cross will help to provide for those cases in which the allowance which may be made by the Government is not adequate to protect the family from financial distress, and the Chapters will offer the friendly services which may be needed. Institutes for the training of volunteer workers in this "home service" will be held in nearly every large city in the country.

That is not all. There is far too much to tell. The Red Cross is the agent of the whole American people, assigned to the relief of the suffering brought by war and disaster. It is custodian of a fund representing more than one dollar from every man, woman and child in the country, and a generous share of the man-power and woman-power of four million members. It is spending that money and that energy, thru efficient channels, for a work of relief and reconstruction that only a world at peace, looking back on the nightmare of these years, can comprehend in its entirety. It is busy at a big job.

Washington, D. C.

A SONG OF THE FOOD ADMINISTRATION

Give a rouse, then, in the wartime,
For a life that knows no waste!
(If I had a little more time,
This would not show signs of haste.)
For it's always spare weather,
When food fellows get together,
With war bread on the table,
And a beltstrap tightly laced
Oh, it's always spare weather,
When food fellows get together,
With rice on the table,
And a beltstrap tightly laced.

Salt Mackerel
CODFISH, FRESH LOBSTER

FAMILIES who are fond of **FISH** can be supplied **DIRECT** from **GLOUCESTER, MASS.**, by the **FRANK E. DAVIS COMPANY**, with newly caught, **KEEPABLE OCEAN FISH**, choicer than any inland dealer could possibly furnish.

We sell **ONLY TO THE CONSUMER DIRECT**, sending by **EXPRESS RIGHT TO YOUR HOME.** We **PREPAY** express on all orders east of Kansas. Our fish are pure, appetizing and economical and we want **YOU** to try some, payment subject to your approval.

SALT MACKEREL, fat, meaty, juicy fish, are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

CODFISH, as we salt it, is white, boneless and ready for instant use. It makes a substantial meal, a fine change from meat, at a much lower cost.

FRESH LOBSTER is the best thing known for salads. Right fresh from the water, our lobsters simply are boiled and packed in **PARCHMENT LINED CANS.** They come to you as the purest and safest lobsters you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

FRIED CLAMS is a relishable, hearty dish, that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

FRESH MACKEREL, perfect for frying. **SHRIMP** to cream on toast, **CRABMEAT** for Newburg or deviled, **SALMON** ready to serve. **SARDINES** of all kinds, **TUNNY** for salad, **SANDWICH FILLINGS** and every good thing packed here or abroad you can get direct from us and keep right on your pantry shelf for regular or emergency use.

With every order we send **BOOK OF RECIPES** for preparing all our products. *Write for it.* Our list tells how each kind of fish is put up, with the delivered price so you can choose just what you will enjoy most. Send the coupon for it now.

TELL THE STOCKHOLDERS!

BY LUIGI CRISCUOLO

FINANCIAL EDITOR OF THE INDEPENDENT

IT can be stated upon good authority that the railroad capital of the country in the hands of the public amounts to nearly seventeen billion dollars, while fifty million people—one-half of our population—are interested in the welfare of railroad securities. These security owners are directly concerned in matters which affect the stability of their properties, yet they are not in any position to keep well informed as to the progress of these properties.

While a great number of individuals own directly many millions of dollars of securities, a vast amount is owned by them indirectly thru the medium of savings bank deposits, insurance policies or memberships in fraternal organizations. Institutions of the sort mentioned invest a very large portion of their capital in railroad, municipal, public utility or industrial bonds and sometimes stocks.

Institutions, particularly the more important ones, are in a position to analyze the status of the corporations whose securities they hold, because of the exceptional facilities they have for securing data thru well organized statistical bureaus in charge of competent analysts. The small security holder or the average business man, who has neither the time nor the training to make a deep study of the securities he owns or contemplates purchasing, must rely upon his financial paper or else consult his investment bankers for advice on the most trivial matters. If he received from corporations whose stocks he owned the sort of annual reports which could be read in a short space of time, he would be in a position to act intelligently with respect to the securities he owned.

Corporations issue annual reports containing detailed statements of earnings and expenses. These reports are usually sent out to all stockholders whether they happen to own one share or a thousand. Railroad reports vary in size from twenty to seventy-five pages of printed matter. Industrial or public utility reports are usually much shorter, many of the former being four-page leaflets altho the companies issuing them are among the largest in the country in point of capitalization. Many reports issued by railroads are exceptionally complete in so far as statistical matter is concerned. Such will contain a list of officers and directors, a letter from the president, statement of earnings, balance sheet, statement of funded debt and other tables showing securities owned, equipment, mileage, classification of tonnage, revenues and expenses in detail, ratios of operation, etc.

LOST IN STATISTICS

NOW, all of these figures are intensely interesting to the statistician of a banking firm or to a railroad accountant or expert, but they are not very enlightening to the average man who has bought one or a hundred shares of some dividend-paying stock for permanent investment. The Pennsylvania Railroad is said to have upwards of ninety thousand stockholders, half of whom are women. The reports sent out by this company are very complete statistically. It can be imagined, however, what would happen to the reports if one were sent to each of the forty-five thousand women stockholders. The chances are that before the stockholders read beyond the statement of earnings each report would find its way to the waste paper basket.

The Pennsylvania Railroad with its ninety thousand stockholders sent out in 1916 only 1434 reports, including 600 in preliminary form which were handed out at the stockholders' annual meeting. Most of the reports were sent out to banking firms or to libraries and stockholders who made specific requests for copies. The practise of sending reports broadcast was abandoned as unnecessary, inasmuch as the operations of the company are given wide publicity in the press, thus affording the company a very large saving, possibly $25,000 a year. But the Pennsylvania is an exception, as many railroads still send out large reports even to holders of one share of stock.

Some time ago the writer held a nominal interest of one share in the Chicago, Rock Island and Pacific Railway Company. When the 1916 report was sent out, a heavy pamphlet of 73 pages, he received a copy. It cost six cents to mail it, besides the cost of paper, printing, wrapping and handling. Even to a trained analyst, time did not permit of the report being thoroly studied. It can thus be figured out what the thousand and one other stockholders did when they received their copy of the report.

AN OPEN BOOK

CORPORATIONS of considerable magnitude are developing into more or less quasi-public organizations and are therefore responsible to the public to a certain extent for the manner in which they conduct their affairs. At one time, when they existed as close-corporations and did not ask the public for credit, they could rightly keep their books closed from prying fingers. But, as government regulation became necessary and as the corporations began to ask the public for credit or to become partners in their enterprizes, the necessity for detailed reports to the federal or state commissions became obvious. So, from the brief reports sent out by the railroads of twenty-five years ago evolved the fifty to seventy-five page volume now in vogue and modelled from the forms furnished by the Interstate Commerce Commission.

While the railroads sin in being unnecessarily extravagant to the extent, perhaps, of several hundred thousand dollars a year in wasted paper, postage, printing and handling, many industrial corporations feel that while they have sold securities to the public they are doing well if they furnish a four or six page leaflet containing a brief statement of earnings, a balance sheet and a short letter from the president. This is the other extreme which, while it does not give us the opportunity of accusing the corporations of wastefulness, does make it appear as tho it had something to hide or was reluctant to take its partners into its confidence.

So much has been said about the advisability of corporations taking their stockholders into their confidence by means of more frequent reports of earnings, that we realize now how easy it has been for the "insiders," who know how industrial concerns are earning, to manipulate their stocks up or down at their pleasure. Such tactics have resulted in a demand for more frequent statements, and many industrial concerns have met the demand by issuing quarterly as well as annual statements. The railroads report their earnings weekly as well as monthly, and these figures are given to the press. However, in most cases they are merely statements of gross and net, without accrued interest charges, and give the security-holder no indication of the margin of safety behind his stocks or bonds during the period reported.

Some railroads, notably the St. Louis-San Francisco, have adopted the practise of issuing statements showing accrued fixt charges and balance for dividends, while the road mentioned sends out to each stockholder a one-page statement each quarter giving a brief but clear statement of earnings for the month and period, with ratios. This is highly commendable, particularly as that company has only recently emerged from a receivership. On the other hand, the company's annual report is too long.

WHEN THE RAILROADS WAKE UP

IF the railroads would awaken to the fact that the reports which most of them now send out promiscuously not only do not serve the purpose—that of enlightening the security-holder—but are a *waste* of good money, they would immediately inaugurate the practise of printing only a small supply of detailed reports for bankers, libraries, and insistent stockholders, of which there are few. They could extract a few pages such as the president's letter, statement of earnings, balance sheet, statement of funded debt and some bare statistics as to ratios, mileage and classification of traffic, and have them printed in uniform pamphlet form to occupy at the most a dozen pages.

The form should be standardized and used by all railroads, large as well as small, so that comparisons would be facilitated. This is a matter in which the initiative should be taken either by the Railroad Board at Washington or the National Association of Owners of Railroad Securities, rather than by individuals not acting in any official capacity. Such an innovation should result in a great saving to the railroads, but, better than that, would make the stockholders read the annual reports of companies whose securities they owned and be in a position to realize the faults of the railroads as well as the problems.

THE PUBLIC'S GREAT SAFEGUARD

AS for industrial corporations, there being no sort of government regulation with respect to reports, no uniformity has prevailed in the matter of statements. The larger concerns, such as the United States Steel Corporation, are so prosperous that they can afford to be extravagant in the matter of reports while the railroads work on a very much smaller margin of profit and should economize wherever possible. Industrial corporations which send out brief reports should be made to realize that if they expect the public to extend them credit or subscribe to stock issues, they should be willing to furnish clear, but not voluminous, quarterly as well as annual reports.

One prominent financial daily newspaper carries over its inquiry column the very appropriate motto: "Intelligent inquiry is the public's great safeguard." This is a good maxim, but corporations should minimize the necessity for many inquiries on trivial matters regarding what are considered to be standard securities. They should encourage investment in such securities by demonstrating a willingness to furnish reports which are intelligible to the small investor.

New York City

Mr. Purinton's War Service Question Box

Mr. A. C. O., Minnesota. "I cannot enlist in the regular army or navy because of physical defects. Age nineteen. Have taught school, am now working on farm. Want to enlist somewhere, but don't know what positions I could fill, or whether I would be accepted. Prefer the ambulance corps, but should like to consider various positions. Kindly make suggestions."

You will find a list of the main branches of federal war occupations in the book "A Directory of Service," published by the Division of Intelligence and Publicity of Columbia University. Apply to the secretary of the University, Morningside Heights, New York, for No. 9 in the *Columbia War Papers*, price 20 cents. You will probably take special interest also in other numbers of the series, that you could order at the same time: No. 1, "Enlistment for the Farm"; No. 6, "Food Preparedness"; No. 8, "Farmers and Speculators"; No. 12, "Rural Education in War." Price of these four pamphlets, five cents each.

Miss M. B., Maryland. "I have been twice to Europe and want very much to go to France as an auxiliary nurse. But I am a leading officer in a large girls' school; and my feeling of duty toward this institution makes me hesitate. My salary here is about my only income; and if I went to Europe, this would be cut off, leaving me in bad financial straits. Can you help me decide what I ought to do?"

We see by your letterhead that your college is one of the few where the daughters of rich men largely gather. We believe you can do ten times more good by staying where you are, and lining up all the girls of your school for personal war study, coöperation, drill, work, sacrifice. You live near Washington. Why not go, this summer, and consult officials of Department of Agriculture, Department of Labor, and Bureau of Education, as to all possible means of enlisting college girls?

Look over back files of War Service Question Box, and watch future numbers, for answers of interest to you. See local officials of General Federation of Women's Clubs. Write Mrs. Governor Charles S. Whitman, Albany, New York, for details of plans of the "First Fifty." Obtain literature from sources mentioned on pages 112, 113 of the "Directory of Service," noted in previous reply to Mr. A. C. O., Minnesota.

Mr. I. H. E., Missouri. "For ten years my training has been wholly in the newspaper profession—from student in a school of journalism to editor of a country weekly. I am now in employ of the state, collecting material and contributing articles for the *Missouri Historical Review*. This work has placed me in very close touch with state and national newspapers—I examine each month about 700 papers, in research alone. How can I make this experience useful to the country?"

You could institute a column of patriotic news in state weeklies or dailies. You could write special editorials and appeals, based on local matters, or suggested by news items you run across. You could submit your query, and offer of services, to George Creel, Chairman Board of Censorship, Washington, D. C.; to American Newspaper Publishing Association, New York City; to "The Vigilantes," particulars from Irvin S. Cobb, 601 West 110th street, New York; and to American Association of Teachers of Journalism, President James Melvin Lee, New York University, New York.

Mr. E. C. W., North Carolina. "Please advise me where I can obtain information regarding the latest and best methods for efficient church financing, raising the salaries, incidentals, etc."

The pastors of your local churches can give you the addresses of the national publication boards or societies of their respective denominations. Write all these for catalogs of financial books and other efficieny aids, beginning with your own church and including all the others in your community. Also apply to Laymen's Effi-

U. S. Army or Navy

AN INCOME FOR LIFE

Of all the investment opportunities offered there are few indeed not open to criticism. Absolute safety is the first requisite and adequate and uniform return equally important, and these seem incompatible. Aside from government bonds, the return under which is small, there is nothing more sure and certain than an annuity with the **METROPOLITAN LIFE INSURANCE COMPANY**, by which the income guaranteed for a certain lifetime is larger by far than would be earned on an equal amount deposited in an institution for savings, or invested in securities giving reasonable safety. Thus a payment of $5,000 by a man aged 67 would provide an annual income of $618.35 absolutely beyond question or doubt. The Annuity Department, **METROPOLITAN LIFE INSURANCE COMPANY**, New York, will give advice as to the return at any age, male or female.

THE NEW YORK CENTRAL RAILROAD CO.

New York, September 11, 1917.

A Dividend of One Dollar and Twenty-five cents ($1.25) per share, on the Capital Stock of this Company has been declared payable November 1, 1917, at the office of the Treasurer, to stockholders of record at the close of business October 8, 1917. EDWARD L. ROSSITER, Treasurer.

UNITED SHOE MACHINERY CORPORATION

The Directors of this Corporation have declared a quarterly dividend of 1½% (37½ cents per share) on the Preferred capital stock, and a dividend of 2% (50 cents per share) on the Common capital stock, both payable October 5, 1917, to stockholders of record at the close of business September 18, 1917.

L. A. COOLIDGE, Treasurer.

THE J. G. WHITE MANAGEMENT CORPORATION.
43 Exchange Place, New York,
MANAGERS
THE MANILA ELECTRIC RAILROAD AND LIGHTING CORPORATION.

The Board of Directors of THE MANILA ELECTRIC RAILROAD AND LIGHTING CORPORATION has declared a quarterly dividend of One Dollar and Fifty Cents ($1.50) per share on the Capital Stock of the Corporation, payable Monday, October 1st, 1917, to stockholders of record at close of business Tuesday, September 18th, 1917.

T. W. MOFFAT, Secretary.

Keep Your Dollars Busy

Now, as never before, it is important that your money be kept at work in legitimate enterprises. You will benefit by consulting The Independent Investor's Service before buying securities of whose merit you are uncertain.

ciency League, 49 East Twenty-fifth; Laymen's Missionary Movement, 1 Madison avenue; Church and School Social Service Bureau, 80 Fifth avenue; Federal Council of the Churches of Christ in America, 105 East Twenty-second; all New York.

Mr. G. N. H., Illinois. "I help to conduct a philanthropic and educational institution. We need a large amount of money for a specific purpose. (a) How can this be raised? (b) Are there not financial experts who might plan the campaign for us? I have heard of such but cannot locate any."

(a) The logical people to furnish both counsel and money are your own alumni, former students, clients, or beneficiaries. They know the value of your work, the need for it, the future in it. We do not approve indiscriminate, general appeals for endowment of an educational scheme on a charity basis. The principle is wrong. Learn to give good business value, then teach your students to earn their way!

(b) Yes. Write to Leo L. Redding and Company, 440 Fourth avenue, New York; also to Wilbur A. Bowen, 280 Madison avenue, New York. Ask officials of a local hospital or a branch of the Y. M. C. A. to refer you to leaders in the modern "short-term campaign," used with great effect in recent years.

Mr. S. T. B., Ohio. "Am twenty-three, have had college and teaching experience, also done clerical work, Play piano, guitar, sing well. Have engaged in religious activities. Where could I best serve my country?"

We think you belong in a Y. M. C. A. war unit, either at the front or at one of the many training camps. The secretary of your local Y. M. C. A. should be able to advise you, or put you in touch with the proper national official. Your combined experience in religious and educational work, together with your musical gift, would mark you for leadership in Y. M. C. A. war service.

Mrs. D. W. G., Maryland. "I have read a statement that the men of this country burn up $100,000,000 a year in tobacco. The next column of the newspaper contained a piteous plea to the *women* of America to save on all household expenses, omit all luxuries, and become brave soldiers of economy! Please why this discrimination? What of the nation's tobacco bill, and of the poker games, heavy breakfasts, lodge banquets, and other forms of waste exclusively masculine? Should war economies fall to women alone?"

Of course not. But nobody seems to have the nerve as yet to preach aloud that men give up their tobacco. The nearest advice, lately offered by a noted suffragist, was that men should cut their tobacco ration in two, and send half to the boys at the front! A noble sacrifice, indeed.

Men's clubs are omitting fancy dishes from their menus; fraternal societies are reducing or eliminating the usual idiotic banquets; plutocrats are seriously thinking of trying to exist without a valet; and young fellows are even ordering trousers bereft of the cuffs on the bottom. Cheer up, anxious lady, men are patriots, too.

The national economy appeal is to women primarily because women, directly or indirectly, spend eighty per cent of the family budget. You have four times the spending power of your husband; therefore you should have four times the spending skill.

Mr. F. C., Montana. "We are to have a debate in our class. The question reads: Resolved, that the United States should adopt universal military service. I am on the affirmative side, and look to you for some points on the question."

We never "take sides." There is truth on both sides of almost every debatable question. the purpose of the debate is to bring out all the truth, in the most logical, interesting and forceful manner possible.

You will find good material in the following publications: "Why Universal Millitary Service?" (10c), Columbia War Paper No. 13, from secretary of Columbia University, New York; "Military Obligations of Citizenship," by Leonard Wood (75c), from Princeton University Press; "Arms and the Boy," by L. R. Gignilliat ($1.50), from Bobbs-Merrill, Indianapolis; "Right and Duty," by F. A. Kuenzli, a description of Swiss training methods ($1), from Stechert, New York; and George Creel's article "Four Million Citizen Defenders," in *Everybody's Magazine* for May, 1917.

WHY BONDS?

The Nation needs money. Bonds extend long after "war profits" end. They increase all taxes, burden industry until paid and ultimately cost $2.00 for every $1.00 raised. They increase living costs and reduce wages.

THINK OR PAY

A tax on land **values** only will raise yearly $5,000,000,000, will abolish all other taxes, force idle land into use, increase crops, boom industry and perpetuate real prosperity.

TAX LAND

MANNING OUR MERCHANT MARINE

(*Continued from page 469*)

should take Mr. Dollar too seriously, however; he sounds like a man overboard hollering for more water!

When it becomes necessary for the Government to subsidize privately owned ships it is time for the Government to own them!

When American shipowners refuse either to train or employ American seamen it is time for the Government to do so.

In time of war would it be fair to call upon American naval seamen to defend privately owned ships that carry only Asiatic coolies in times of peace? No, obviously not!

The plan that I should propose would be, now that the United States Government has a huge shipbuilding scheme on hand, to supplement it further with the construction of 100 or 150 square-rigged sailing ships of from three to five thousand tons burden and place them in the general carrying trade.

Owing to the enormous losses in foreign tonnage during the war and the immense demand for goods and material existing in all countries to replace war losses, ocean freight rates must remain abnormally high for a long time after peace has been declared. Consequently there will be a good demand for tonnage of all kinds, sail as well as steam, for years to come, and sailing ships will be a good investment. Therefore, these ships could be profitably entered into general carrying trade; they would soon pay for themselves and would always remain self-sustaining.

Their cadets as well as their crews could receive good wages and be advanced according to grade. This would be an attraction to good boys to join the service and work up in it, and would enable poor boys who must always constitute the majority of the personnel of both our merchant marine and navy—to qualify for service on equal terms with their more wealthy messmates. These ships would always be available for the transportation of coal, naval stores and other supplies in national service to any part of the world and would, therefore, be a valuable and sometimes indispensable adjunct to the naval service whether in peace or in war.

And finally, they would fulfil the purposes under discussion by providing a genuine, practical and profitable training ground for both boys and men so that at the end of ten years the United States would have at sea a fleet of both ships and seamen that would be the glory of the nation and the envy of the world.

New York City

Curates have been working as tram conductors. There is "punch" in the work of modern clergymen at last.—*London Opinion.*

THE ORIGIN OF PHILOSOPHY

The world is made of dirt and water.
Thus fraught with truth did Wisdom bud;
And then she grew a little fraughter,
And said these two make mud.

And from this mud at once there sprouted
The three schools of philosophy
By which mankind have ever pouted,
Or borne their destiny.

To keep our souls a little drier,
One school stands in the mud and blubbers,
The second set denies the mire,
The other gives us rubbers.

INSURANCE INSTEAD OF PENSIONS

BY HENRY MOIR

ACTUARY OF THE HOME LIFE INSURANCE COMPANY OF NEW YORK

THE intentions of those who are responsible for the War Risk Insurance Bill meet with the approval of all intelligent citizens. Many young men are sacrificing the comforts of home life and the companionship of early friends, and are making financial losses, all of which demonstrate the patriotism of the nation, and its love of liberty. Accordingly, we all feel that this country should do not only what is reasonable and fair, but also what is generous toward our soldiers while in service. Also, we must help their families during their absence, and care for all those who meet with mishap or disaster. These principles are dictated by the best feelings of humanity and are cordially supported by all classes in the nation.

For many years there has been a feeling that pensions were granted with undue freedom to those who had served in the army —not that pensions in themselves are wrong, but simply that many men who had done but little for their country were pensioned, and from motives more political than patriotic. The new War Risk Insurance Bill empodies an attempt to forestall any objectionable legislation like that of the pension bills passed since the early nineties. Many who suffered in the Civil War were neglected and were not compensated in due season, yet pensions were granted some thirty or more years later to many others who had done but little, and who had suffered not at all.

SO far as the proposed War Risk Insurance Bill places, or even attempts to place, the compensation of soldiers on a scientific basis, it is to be highly commended. There is some little difference of opinion as to the best methods of doing this. In general, however, the broad principle of Workmen's Compensation Insurance, whereby all who are injured in the course of their employment receive a fair compensation, dependent upon the salary scale and therefore dependent upon their value to the employment, meets with the approval of intelligent men and satisfies the aspirations of scientific thinkers. It has stood the test of twenty years' trial, and the principle has been steadily gaining converts.

The fundamental basis of such compensation is that the cost should be borne by the occupation. It is clearly an insurance benefit, but workmen are not called upon to pay directly for it. Compensation is obligatory under state laws, and becomes a tax on the occupation; thus, an occupation involving great hazard has to pay more to its workmen than an occupation involving but little hazard. Moreover, the system fosters the "Safety First" idea and discourages preventable accidents.

THE bill now under consideration consists of four articles:

Article I is administrative and is therefore a subject for careful discussion by those who are expert in the management of governmental affairs. To an outsider the suggestion that the director of a large bureau of this nature should receive a salary of $7000 a year seems to imply that one of two things must happen: either that a second-rate man will secure the appointment, or that a first-rate man will sacrifice himself on the altar of patriotic duty—either of them a pleasing consideration; but the point is a trivial one.

Article II prescribes that allowances must be made by each soldier for a wife, children or dependent parents; and when he apportions part of his pay the amount is increased from Government funds by monthly payments which range from $15 per month in the case of a wife and no children, to $32.50 per month for a wife with two children, and still larger allowances if there are more children. The minimum sum received by the wife of a soldier in active service will thus be $30 per month, of which $15 comes from his own pay and $15 from the Government, and larger allowances for a larger family, running up to nearly $60 per month (of which $15 is from his pay). The provisions of this article are based upon the experience of other countries such as Great Britain and Canada, now in the war. The provision for such dependent families is highly desirable and in all its main outlines is satisfactory.

ARTICLE III is most important so far as the men themselves are concerned. It consists of a combination of life, accident and health insurance and provides compensation for injury or disease contracted during military service. If a soldier is killed in service leaving a widow and children, the widow is entitled to draw a percentage of his pay as a pension during her life, and the children until age eighteen. Many will be maimed and disabled more or less for life. In event of complete disability a man will receive a pension for life—40 per cent of his pay but not less than $40 per month. Larger allowances are made when the maimed or disabled soldier has a wife and children. If he has a wife and two children he is entitled to 60 per cent of his pay for life but not less than $75 per month.

Provision is made also for cases of partial inability to work on a basis which seems fair and reasonable. In some respects these disability payments might perhaps be increased but criticism of this nature is minor in character.

TO illustrate the extent of the life insurance benefit in this Article III: The annuity to widow and children has a present value which, if we ignore remarriage, would range from $6000 to $8000 as a minimum, according to age, and run up to about $30,000. Widows who do not remarry would get a monthly compensation during their life time. If the probability of remarriage is taken into account the present value of the benefit would be somewhere in the neighborhood of $5000 as a minimum ranging to a maximum of about $25,000. These figures represent the capitalized values of the proposed pension benefits.

Since young men in civil life carry relatively small sums of life insurance—less than $2000 on the average—it will be seen that this life insurance benefit, given by the country without cost to the soldier, is on a broad-minded and generous scale.

In addition to the provisions already mentioned the sponsors of the bill, desiring to introduce a direct life insurance benefit, called a meeting of experts in insurance who approved the suggestion. They recommended that the Government should itself carry the hazard, that a uniform amount should be paid for the death of each soldier, also that this benefit be granted by the nation, without charge, like the other provisions in the bill. Insurance experts know that the collection of premiums needs a complicated machinery; it introduces difficulty on failure to pay premiums, since the benefit will presumably lapse; it also brings about a contractual relationship between the soldier and the Government which might frequently necessitate an appeal to the courts to decide differences. The practical recommendation therefore is that the benefit be given—not sold. Another complication lies in the danger of speculation where benefits are sold at about 10 per cent of the true value, and in some cases on lives known to be poor risks from a life insurance standpoint. In spite of these recommendations the last part of the bill runs directly counter to such advice of experts.

ARTICLE IV provides that soldiers must elect whether or not they wish any of this additional life insurance, and must pay for such benefit the rates usual in this country in time of peace. The basis of the article is therefore entirely different from the earlier portions of the bill. The question as to how it might work out depends on nice points of psychology. Insurance experts know that the family man needing insurance is not the man who goes deliberately to take it. He must be talked into it. It is only the unusually thrifty who take life insurance on their own initiative.

In submitting estimates of the cost of this feature for appropriation purposes, the Secretary of the Treasury assumed that only 25 per cent of the soldiers would take advantage of this option and then only for an average amount of $2500 each. By this assumption 75 per cent of the men would remain uninsured, and a still larger proportion would have only a small amount.

Those who are likely to take such insurance freely divide themselves in two classes: *the first*, those who have means of their own, or who being young officers geting more than their former pay, can easily purchase this insurance, being of thrifty disposition; and *the second*, the unmarried men and those without dependents who are not compelled under the bill to allot part of their pay to their families.

These two classes do not need the protection so much as the third class who are not likely to take this optional insurance if paid for by themselves, yet they are the very people who need it most—the enlisted men, mayhap volunteers, who are not of a thrifty temperament yet have dependent families.

THIS section of the bill is loose and vague in matters which are quite important. The insurance benefit during the war is at a yearly increasing premium familiarly known as "step rate." The soldier will have to pay a little more next year than he does this. The premium he thus pays confers no benefit whatever except the immediate insurance protection. If he comes back in sound health when the war is over, he has nothing to show for the insurance premiums he paid. Those who come back in good health will therefore be a cheerful band of "knockers." This has been the experience of this form of policy for the past fifty years. The anvil chorus will swell still louder when those who come back convert their policies to the forms then provided, and find that they are expected to pay to the Government premium rates which are actually greater than the premium now charged by many of the best life insurance companies for the same benefit. There will thus be the usual complaint

which rises against cheap insurance, resulting in that unpopularity which brought about the downfall of the Mutual Reserve Life Insurance Company a few years ago and has damaged so many of the assessment companies making a similar attempt.

If the men convert their cheap temporary benefits into permanent forms of insurance, then the Government will be fully embarked upon all phases of a life insurance business. The terms of the policies seem to lie at the discretion of the Director of the Bureau. A century of experience in the business has developed an elaborate Code of Laws in each state yet the adoption or abrogation of these laws for the Government policies will seemingly be left to the discretion of an official earning a modest salary.

Again the Government will become a large investment agency. There is no provision in the bill for carrying proper reserves, yet these are essential if the values promised are to be paid, and vast funds will accumulate. If investments are made only in Government funds, and if the Government's credit after the war becomes as good as it has been in recent years, then the Director of the Bureau will find it impossible to earn 3½ per cent interest, and there will be a danger that the insurance bureau will become insolvent, this earning rate being essential under the bill as now proposed.

Criticisms along specific lines like those now indicated show that practical suggestions have not been given due consideration. All the difficulties could be avoided if the insurance benefit were given for one fixt amount, or for an amount depending upon the rank and pay of the soldier, and were given gratuitously by the nation to the soldiers while they are in service, and possibly for a period of years after their return.

New York City

Mother Goose on Food Control

Jack Sprat would eat no fat;
His wife would eat no lean,
So, rather than have an argument over it the Food Controller put them both on a diet of bran muffins.

Sing, sing, what shall I sing?
The cat ran away with the pudding bag string.
"I haven't the heart to ask for cat meat these days," said he.

Hickety, pickety, my black hen,
She lays good eggs for gentlemen.
Gentlemen come every day
And make a careful, itemized record of her output for the national food census.

To market, to market
To buy a fat pig!
Home again, home again
With some much less expensive but equally nourishing cereals.

When I was a little boy I lived by myself,
And all the bread and cheese I got I put upon the shelf
Until suddenly I realized that I might be prosecuted for food hoarding.

Old Mother Hubbard went to the cupboard
To get her poor dog a bone:
But when she got there
She found that the bone had been used by Miss Hubbard, her daughter, in making a tasty dish from yesterday's left overs.

—*New York Sun.*

1917

Atlantic Mutual Insurance Co.

Atlantic Building, 51 Wall St., New York

Insures against Marine and Inland Transportation risk and will issue policies making loss payable in Europe and Oriental Countries

Chartered by the State of New York in 1842, was preceded by a stock company of a similar name. The latter company was liquidated and part of its capital, to the extent of $100,000, was used, with consent of the stockholders, by the Atlantic Mutual Insurance Company and repaid with a bonus and interest at the expiration of two years.

During its existence the Company has insured property to the value of $29,903,820,962.00
Received premiums thereon to the extent of - - $301,565,931.44
Paid losses during that period - $149,414,735.48
Issued certificates of profits to dealers - - - - - - - $94,086,050.00
Of which there have been redeemed $86,410,870.00
Leaving outstanding at present time $7,675,180.00
Interest paid on certificates amounts to - - - - - - - - - - $23,871,310.65
On December 31, 1916, the assets of the Company amounted to - - - - - - - - - - - - $17,458,990.74

The profits of the Company revert to the assured and are divided annually upon the premiums terminated during the year, thereby reducing the cost of insurance.

For such dividends, certificates are issued subject to dividends of interest until ordered to be redeemed, in accordance with the charter.

A. A. RAVEN, Chairman of the Board,
CORNELIUS ELDERT, President,
WALTER WOOD PARSONS, Vice-President,
CHARLES E. FAY, 2d Vice-President.
G. STANTON FLOYD-JONES, Secretary.

"My dear, you mustn't let anybody read that letter from cousin George at the front. I'm surprized that he'd write such things."
"What's the matter with his letter? It's mighty interesting."
"Some parts of it are, but his confessions of his disgraceful conduct are dreadful. I wouldn't for the world have any one know of his doings."
"I don't get you at all."
"You don't? Didn't you read that part of his letter where he says he was out with a British tank last night, and they rolled all over the place?"—*Detroit Free Press.*

WHEN MODERN HISTORY BEGAN

(*Continued from page 461*)

resourceful talents, with a masterful will and with a natural capacity for leadership, he was everywhere in the front on the field. And when at last he realized what was involved, and that no possible compromise with the Roman hierarchy could be made, after long and prayerful consideration, throwing his life in the balance, he issued a clear and positive defiance to the Pope and his claim of infallibility, as sitting in the seat of the Apostle Peter.

And when the Pope responded with a Bull of Excommunication, commanding all true Christians to capture and slay him, Luther took that famous step, at which all the world trembled. At the head of a company of students and citizens he publicly, in the city square of Wittenberg, committed the Papal Bull of Excommunication to the flames. This was a signal to all that the last tie was severed, that the mighty conflict was on and that it was now to be a battle to the end for God's Word, for a renovated Church and for human freedom. The shout which arose from the approving crowd was that of the awakening nations.

Luther's next appearance on the stage of the Reformation drama was in the epochal scene at Worms. There in the assemblage of the mighty highnesses of Church and empire, he made his memorable answer, which at the distance of four centuries still makes our hearts thrill within us: "I cannot submit my faith to either the Pope or councils. Unless, therefore, I am convinced by proofs from the Holy Scriptures, or by cogent reasons, I *neither can nor will retract anything.* Here I stand: I cannot do otherwise. God help me. Amen!"

"This response of Luther," says Carlyle, "marks the very greatest moment in the modern history of man, the point, indeed, from which the whole subsequent history of civilization takes its rise: England and its Parliament, America and its vast work these centuries, Europe and its work everywhere at present—the germ of it all lay there. Had Luther in that moment answered other, it had all been otherwise."

The great truths underlying the Reformation are vital to the progress and welfare of mankind. The central Reformation idea is that man can find communion with God, forgiveness of sins and peace for his soul, by going himself directly to the Word of God, without the mediation of any ecclesiastical system. As the great theologian Schleiermacher exprest it, "The fundamental difference between Romanism and Protestantism lies in this, that according to Rome, the soul can only come to Christ thru the Church, whereas in the Protestant conception the soul comes to the Church *thru Christ.*"

The observance of this Reformation Quadricentennial will call new attention to this vital truth—the heart of the Gospel, and the central teaching of Christianity. And it will naturally depict anew the marvelous personality of the author and commanding figure of the Reformation—Martin Luther. His piety, his courage, his universality, the daring originality of his ideas, his conservatism, his skill as a diplomatist, his love for the fine arts, his joy in little children and the home, make him, as Coleridge called him, "the most notable character in history since the apostles." The observance of such a quadricentennial, on a scale such as the world has never witnessed, cannot but be of surpassing interest and incalculable benefit.

Good men, whether experienced in life insurance or not, may make direct contracts with this Company for a limited territory if desired, and secure for themselves, in addition to first year's commission, a renewal interest insuring an income for the future. Address the Company at its Home Office, No. 277 Broadway, New York City.

YOUR HOTEL *in* NEW YORK

WHEN you come to New York, make the Hotel Astor your home. It is more than a mere stopping place. It is New York epitomized.

Situated in the very heart of the metropolis, the Hotel Astor is the logical scene of New York's most important functions. Here Big Business meets for consultation. Here are held receptions for distinguished foreign visitors and ambassadors. The Hotel Astor is chosen for great National festivities.

Whether you need a single room or an elaborate suite, you will obtain at the Hotel Astor the utmost in comfort. From the magnificent roof garden to the cool orangerie and the numerous lounges, promenades, writing rooms and restaurants you will find a spot to fit your every mood. The cuisine and service are superb.

Do not run the risk of marring your visit by accepting less than the Hotel Astor offers you—nor waste time in an effort to obtain more elsewhere.

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. ORAL AND WRITTEN COMPOSITION.

The Story of the Week.

1. Write a short composition in which you show that the making of the Liberty Motor has demonstrated the patriotism, the inventive ability, and the skill of the American people.
2. Select a colleague, and, with him, challenge any two members of your class to debate on the question: "The drafting of friendly aliens into military service is a just procedure."
3. Write a paragraph of detail concerning the means of raising revenue for the support of the war.
4. Members of your class may be able to assist their parents in purchasing bonds when the details of the second Liberty Loan are made public. Give to your class a spirited talk that will at once awaken interest in the matter and suggest means of assistance.
5. Explain to your class in what ways the title, "The Shark Hunters," is justified, and in what ways it is effective as a title.
6. Write appropriate titles for the last three paragraphs of the article called "American Gunners in France."
7. Give to your class an impressive talk on "The American Army of Today."
8. A veteran of the Civil War has asked you to explain the Soldiers' and Sailors' Insurance Bill. Show him the advantages it will give. (See "Insurance Instead of Pensions.")
9. Write a paragraph of contrast in which you point out the differences between the French cabinet and the cabinet of the United States.
10. Write an exposition in which you point out the various reasons that have made the people of Germany deeply interested in talk concerning peace.
11. Imagine that you are a resident of Argentina. Write a letter to a friend, explaining the Luxburg incident, and expressing your opinion as a loyal Argentine citizen.
12. Give an oral summary of the reasons that prompt Sweden to aid Germany, and a summary of the reasons that should prompt her to aid the Allies.

Editorial Articles.

1. Make an outline of "A Birdseye View of the Battlefield."
2. Give an oral summary of the reasons that make it so difficult for the Allies to defeat Germany.
3. Read "Are We Fighting Shadows?" and then write a composition of contrast in which you explain the difference between the Government of the United States and the present Government of Germany.
4. Imagine that you are a patriotic citizen of Poland, and of pure Polish descent. Give a spirited speech in which you present your ideals for the future of Poland.

Your Servant—The Red Cross. By Geddes Smith.

1. Make a *précis*, or summary, of the article, showing in what ways the Red Cross is "your servant."

Manning Our Merchant Marine. By James H. Williams.

1. From the article draw an exposition on the subject, "What It Means to Be a Genuine Seaman." (If you wish an interesting book on the subject, read "The Cruise of the Cachalot," or else "Two Years Before the Mast.")

SECTION II. LITERATURE.

The New Books.

1. Explain the following sentence in "Beyond the Law": "It is an inconclusive book, and for that reason lacks the greatness that compels the reader's sympathy for the actors in the tragedy."
2. Give an account of the life and work of Gilbert White.
3. What are "wholly charming reminiscences?"
4. What is a "volume of gleanings?"
5. Give an account of the life and work of H. D. Thoreau.
6. What is "carping criticism?" To what kind of criticism is it inferior? Explain in full.
7. What writers were members of "The Concord Group?"
8. What qualities have made "Walden" a famous book?
9. Give an account of the work of Charles Warren Stoddard.
10. Give an account of the work of Joaquin Miller.

SECTION III. WORD STUDY.

1. Give the derivation and the meaning of every one of the following words prominent in the news of the week: code, sanctioned, intermediary, catspaw, compromising, abrogation, adequate, contingent, litigation, compensation, discriminate, incompetence, vulnerable.
2. Select the first paragraph of any article in this number of of The Independent. Tell from what language every word in the paragraph is derived. Give the total number of words from every language represented.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Financing the War—"Counting the Billions," "Senate Approves War Taxes," "The Second Liberty Loan."

1. Study the financial history of the United States during the Civil War and the Spanish-American War. Compare the revenue bills of those times with the bills under discussion.
2. What are the chief provisions of the War Revenue Bill as passed by the Senate? Explain (a) the proposed system of taxing war profits, (b) the income tax provision, (c) the proposed excise and document taxes.
3. Discuss the legislative steps thru which the present bill has passed and the steps still necessary before it becomes a law.
4. It is estimated that this bill will provide "slightly under 25 per cent of the year's whole Government expenditure." How will the remaining 75 per cent be raised?

II. Taking Care of Our Soldiers—"Insurance Instead of Pensions."

1. Comment on the phrase: "Objectionable legislation like that of the pension bills passed since the early nineties."
2. What is the rate of pay of the American soldier—private, non-commissioned officer and officer?
3. What is the purpose of Article II of the proposed law? Article III? Article IV?
4. Discuss the relative advantages of the old style pension laws and the proposed soldiers' insurance law.

III. The Swedish Incident—"Results of the Luxburg Incident," "Another Swedish Misstep."

1. Make a brief statement of the facts in this case as far as they have been published. How do you suppose the State Department discovered the facts?
2. What principle of international law have the Swedish representatives in Argentine and in Mexico violated?
3. How do you account for the friendly attitude of Sweden toward the Central Powers?

IV. Alien Friends and Alien Enemies—"The Senate and the Alien."

1. Review the history of the Alien and Sedition Acts of 1797. Compare the action taken by the Government at that time with the action proposed at the present time.
2. State the arguments in favor of Senator Chamberlain's resolution.

V. Progress of the War—"A Birdseye View of the Battlefield."

1. On the map her [Germany's] position looks better than ever." Draw the maps that justify this statement.
2. "Seventeen nations . . . are now arrayed against the four central powers." Make a list of the seventeen with a brief statement of the cause which led four or five of the seventeen into the war.
3. Draw a map indicating the progress of the war (a) in Belgium and northwestern France, (b) on the Italian front.

VI. Causes and Results of the War—"The New Books: Three Allies and Germany; Is and Ought in Diplomacy."

1. If you were privileged to buy just one of the books mentioned in these reviews, which one would you choose? What would be your second choice?
2. Explain the significance of the title: "Is and Ought in Diplomacy."

VII. The Government of Germany—"Are We Fighting Shadows?"

1. Make a brief of the above editorial under this sentence as a heading: "But the fallacy in all such arguments is that it ignores German history and tradition."

VIII. Poland—"A Polish Republic."

1. Study the second paragraph of this editorial. Supplement the statements by such facts as you can discover.
2. Explain the second sentence in the third paragraph: "Whether the Hapsburg Emperor or a German princeling rules," etc.
3. In view of the history of Poland during the past two hundred years, is "Poland united, independent, republican," an easily attainable ideal?

IX. The American Merchant Marine—"Manning Our Merchant Marine."

1. "In the days of the windjammers, American clippers covered every sea," etc. Write an account of our merchant marine in those days.
2. What are the causes which put an end to those days? What measures have been taken to revive the American carrying trade?
3. "When it becomes necessary for the Government to subsidize privately owned ships, it is time for the Government to own them." Do you agree?

ON THE POPE'S PLAN FOR PEACE

The Austrian Emperor's Reply

Holy Father: With due veneration and deep emotion we take cognizance of the new representations which your Holiness, in fulfilment of the holy office intrusted to you by God, makes to us and the heads of the other belligerent states, with the noble intention of leading the heavily tried nations to a unity that will restore peace to them. . . .

Happy in the thought that our desires from the first were directed toward the same object which your Holiness today characterizes as one we should strive for, we have taken into close consideration the concrete and practical suggestions of your Holiness and have come to the following conclusions:

With deep-rooted conviction we agree to the leading idea of your Holiness that the future arrangement of the world must be based on the elimination f armed forces and on the moral force of right and on the rule of international justice and legality.

We, too, are imbued with the hope that a strengthening of the sense of right would morally regenerate humanity. We support, therefore, your Holiness's view that the negotiations between the belligerents should and could lead to an understanding by which, with the creation of appropriate guarantees, armaments on land and sea and in the air might be reduced simultaneously, reciprocally and gradually to a fixed limit, and whereby the high seas, which rightly belong to all the nations of the earth, may be freed from domination or paramountcy, and be opened equally for the use of all.

Fully conscious of the importance of the promotion of peace on the method proposed by your Holiness, namely, to submit international disputes to compulsory arbitration, we are also prepared to enter into negotiations regarding this proposal.

If, as we most heartily desire, agreements should be arrived at between the belligerents which would realize this sublime idea and thereby give security to the Austro-Hungarian monarchy for its unhampered future development, it can then not be difficult to find a satisfactory solution of the other questions which still remain to be settled between the belligerents in a spirit of justice and of a reasonable consideration of the conditions for existence of both parties.

If the nations of the earth were to enter, with a desire for peace, into negotiations with one another in the sense of your Holiness's proposals, then peace could blossom forth from them. The nations could attain complete freedom of movement on the high seas, heavy material burdens could be taken from them, and new sources of prosperity opened to them.

Guided by a spirit of moderation and conciliation, we see in the proposals of your Holiness a suitable basis for initiating negotiation with a view to preparing a peace, just to all and lasting, and we earnestly hope our present enemies may be animated by the same idea. In this spirit we beg that the Almighty may bless the work of peace begun by your Holiness.

The German Reply

(Transmitted by Chancellor Michaelis to Cardinal Gasparri, Papal Secretary of State)

His Majesty has been following for a considerable time with high respect and sincere gratitude his Holiness's efforts, in a spirit of true impartiality, to alleviate as far as possible the sufferings of the war and to hasten the end of hostilities. The Kaiser sees in the latest step of his Holiness fresh proof of his noble and humane feelings, and cherishes a lively desire that, for the benefit of the entire world, the papal appeal may meet with success.

The effort of Pope Benedict is to pave the way to an understanding among all peoples, and might more surely reckon on a sympathetic reception and the whole-hearted support from his Majesty, seeing that the Kaiser, since taking over the government, has regarded it as his principal and most sacred task to preserve the blessings of peace for the German people and the world.

In his first speech from the throne, at the opening of the Reichstag on June 25, 1888, the Kaiser promised that his love of the German army and his position toward it should never lead him into temptation to cut short the benefits of peace, unless war were a necessity, forced upon us by an attack on the Empire or its allies. The German army should safeguard peace for us, and should peace, nevertheless, be broken, it would be in a position to win it with honor.

The Kaiser has, by his acts, fulfilled the promise he then made in twenty-six years of happy rule, despite provocations and temptations. . . .

Appreciating the importance of his Holiness's declaration, the Imperial Government has not failed to submit the suggestion contained therein to earnest and scrupulous examination. Special measures which the Government has taken in closest contact with representatives of the German people for discussing and answering the questions raised, prove how earnestly it desires, in accordance with his Holiness's desires and the peace resolution of the Reichstag on July 19, to find a practical basis for a just and lasting peace. . . .

We share his Holiness's view that definite rules and a certain safeguard for a simultaneous and reciprocal limitation of armaments on land, on sea, and in the air, as well as for the true freedom and community of the high seas, are the things in treating which the new spirit that in the future should prevail in international relations should find first hopeful expression. The task would then of itself arise to decide international differences of opinion, not by the use of armed forces, but by peaceful methods, especially by arbitration, whose high peace-producing effect we together with his Holiness fully recognize. The Imperial Government will in this respect support every proposal compatible with the vital interest of the German Empire and people.

THE KING OF YELLOW BUTTERFLIES

BY VACHEL LINDSAY

THE *King of Yellow Butterflies*, given below, is a form of public verse which I have recently evolved or revived. I have chanted this at the side of the platform, while the dancer in costume on the stage, with no other orchestra, has used the poem as the basis of dancing and pantomime. I have also developed "The Potato Dance" and several other poems to this end. I have called these entertainments Poem Games. Lewellyn Jones of the *Chicago Evening Post* called the evening's experiment at the Chicago Little Theater, a "rhythmic picnic." Maurice Browne of the same Chicago Little Theater said that the work bordered on the precedents of the Greek Tragic Dance.

I would like to have such of the readers of The Independent as are interested in the higher forms of dancing, especially dancing teachers, see what they can do with the *King of Yellow Butterflies*. There are several ways it could be used. One person could recite the poem, marking the rythms heavily, while another danced the ideas. Or a group of people with good voices could stand at the back or side of the stage, chanting the thing more elaborately, developing the music of the English alphabet, rather than traditional musical notation, while a group of equal size or larger worked out the figures in the center of the stage. The principle of the repetition of the lines can be carried still farther, if so desired, or the scheme of repetitions can be completely altered to suit the figures as they are evolved. There are many simple poems, new and old, that are adapted to this method of treatment. The individual dancer, if a brilliant soloist, should go thru books of verses, and find the thing for which he or she has an instinctive affinity, develop the repetitions to fit the figures evolved, and then give the poem to the chorus or to a chanter to be memorized.

The King of Yellow Butterflies, which has not appeared in any of my published works, Miss Eleanor Dougherty found in an old pamphlet of mine. She developed these repetitions. She danced the poem in a costume of her own designing at the Chicago Little Theater and at Mandel Hall, Chicago University, in an evening's program of similar experiments. The Little Theater affair was given under the auspices of *Poetry, a Magazine of Verse*, and the Chicago University affair under the auspices of the Senior Class, both performances in the last week of November, 1916. Miss Dougherty, a trained and charming dancer, and an excellent actress, pleased every one with her pioneer work in this field. I hope that larger groups will take up the idea, whole dancing classes, and that it will not be considered either a matter exclusively for the soloists, or that I am to be expected to be present to do the chanting. Emphatically, the Poem Games were brought forward as hints and hopes for other groups to develop and modify in their own fashion with other poems, and other styles of costume grouping and chanting.

The king of yellow butterflies,
The king of yellow butterflies,
The king of yellow butterflies,
Now orders forth his men.
He says "The time is almost here
When violets bloom again."
Adown the road the fickle rout
Goes flashing proud and bold,
Adown the road the fickle rout
Goes flashing proud and bold,
Adown the road the fickle rout
Goes flashing proud and bold,
Adown the road the fickle rout
Goes flashing proud and bold—
They shiver by the shallow pools,
They shiver by the shallow pools,
They shiver by the shallow pools,
And whimper of the cold.
They drink and drink. A light pretense!
They love to pose and preen,
Each pool is but a looking-glass
Where their sweet wings are seen,
Each pool is but a looking-glass
Where their sweet wings are seen,
Each pool is but a looking-glass
Where their sweet wings are seen.

Gentlemen adventurers! Gipsies every whit!
They live on what they steal. Their wings
By briars are frayed a bit.
Their loves are light. They have no house,
And if it rains today
They'll climb into your cattle shed,
They'll climb into your cattle shed,
They'll climb into your cattle shed,
They'll climb into your cattle shed—
And hide them in the hay,
And hide them in the hay,
And hide them in the hay,
And hide them in the hay.

"THE KING OF YELLOW BUTTERFLIES" DANCED AT THE WASHINGTON IRVING HIGH SCHOOL IN NEW YORK

The Independent

WITH WHICH IS INCORPORATED

HARPER'S WEEKLY

THE CONFLICT OF PEACE TERMS

THE publication of the replies to the Pope's appeal of August 1 brings out in the most striking fashion the real impediment to peace, which is that the twenty-one belligerents are fighting for very different objects. The Entente Allies have little in common except their common enemy; the same is true of the Central Powers, while American interests and ideals are quite distinct from those of the European and Asiatic belligerents. In reading the papal note and its replies one would suppose that they dealt with different wars or worlds, for one ignores what the others point out as the most important issues of the war.

When we extract the concrete proposals from these documents we see that they disagree not so much on the terms of settlement as they do on what questions need to be settled. All agree in deploring the war and declaring for a just and durable peace, but they differ widely as to what are the essentials of such a peace. Pope Benedict in his note of August 1 suggested these conditions:

THE POPE'S PEACE TERMS

1. Reciprocal condonation of damages.
2. Reciprocal restitution of occupied territory.
3. Diminution of armament.
4. Compulsory arbitration.
5. Settlement of territorial questions by future conferences.

President Wilson in his reply of August 27 emphasized the following desiderata:

THE PRESIDENT'S PEACE TERMS

1. Deliverance of the free peoples of the world from the menace of militarism and irresponsible government.
2. Reparation for wrongs.
3. Equal commercial opportunities.
4. Guarantee of peace terms by the German people.
5. Repudiation of reprisals, punitive damages, dismemberment of empires and exclusive economic leagues.

Altho he did not specifically mention them on this occasion we know from his former utterances that President Wilson favors (6) Freedom of the seas, (7) Limitation of armament, and (8) Compulsory arbitration.

The German and the Austrian replies to the Pope, which we publish in large part on another page, are unusually verbose and platitudinous even for diplomatic documents, but they specify four concrete conditions for a permanent peace:

THE AUSTRO-GERMAN PEACE TERMS

1. Reciprocal limitation of armament.
2. Compulsory arbitration.
3. Freedom of the seas.
4. Equal commercial opportunities.

The Entente Allies have apparently approved, or at least acquiesced, in the Wilson response, tho it is not probable that they would all have brought forward the same points. In fact, we find quite another set of demands in the only official utterances of their joint peace terms, the Allies' note to President Wilson of January 17, 1917, and the resolutions of the Paris Conference of June, 1916. From them we gather:

THE ALLIES' PEACE TERMS

1. Surrender of all territory of the Allies seized during the present or former wars.
2. Compensation for damages.
3. Liberation of all the subject races in the German, Austrian and Turkish empires.
4. Autonomy of united Poland under the Czar.
5. Reorganization of Europe to secure national and economic rights.
6. Expulsion of the Ottoman Empire from Europe.
7. Measures agreed upon in the Paris conference to restrict future German commercial competition in the Allied countries.

Here we see the curious contrast between the Allied and Teutonic governments. The Allies are almost exclusively concerned with questions of territorial transfers and financial indemnities. The German reply to the Pope does not even mention these questions but is almost exclusively concerned with the opportunities for industrial development and foreign commerce. It would not be safe to infer from this that Germany is ready to relinquish all her conquests, but it is permissible to assume that she regards these as less important than her commercial future. We know that the German people are split into two factions on the terms of peace. The majority are in favor of renouncing all forcible annexations. A resolution to that effect passed the Reichstag on July 19 by a vote of nearly two to one. On the other hand the Pan-Germans or Imperialists demand that Germany hold everything she can get her hands on and reach out for more. They would keep Belgium, northern France, Poland and the Baltic provinces and grab part if not all of the British, Belgian, French and Portuguese possessions in Africa, which means most of that continent. The Pan-German party, tho less numerous than the No-annexations party, is more influential in army and court circles and has the favor of the Crown Prince if not of the Kaiser.

The German Government has so far not openly sided with either faction. The old Chancellor, Bethmann-Hollweg, refused to yield to the Pan-German pressure and did not commit himself in that direction further than to declare Poland independent of Russia and to express some vague desires for a strategic rectification of the frontier. The new Chancellor, Michaelis, apparently leans in the opposite direction, for in his opening address to the Reichstag he exprest a cautious and qualified approval of the no-annexation resolution, and now he endorses it more plainly in his reply to the Pope, which contains not a word in favor of the Pan-German program. He is all for free trade, free seas and free competition, for international arbitration and reduction of armament. It is a platform that Lloyd-George might have run on before the war, but it would have been rather too advanced for Woodrow Wilson's party. If Germany had talked and acted—in that fashion four years ago there would have been

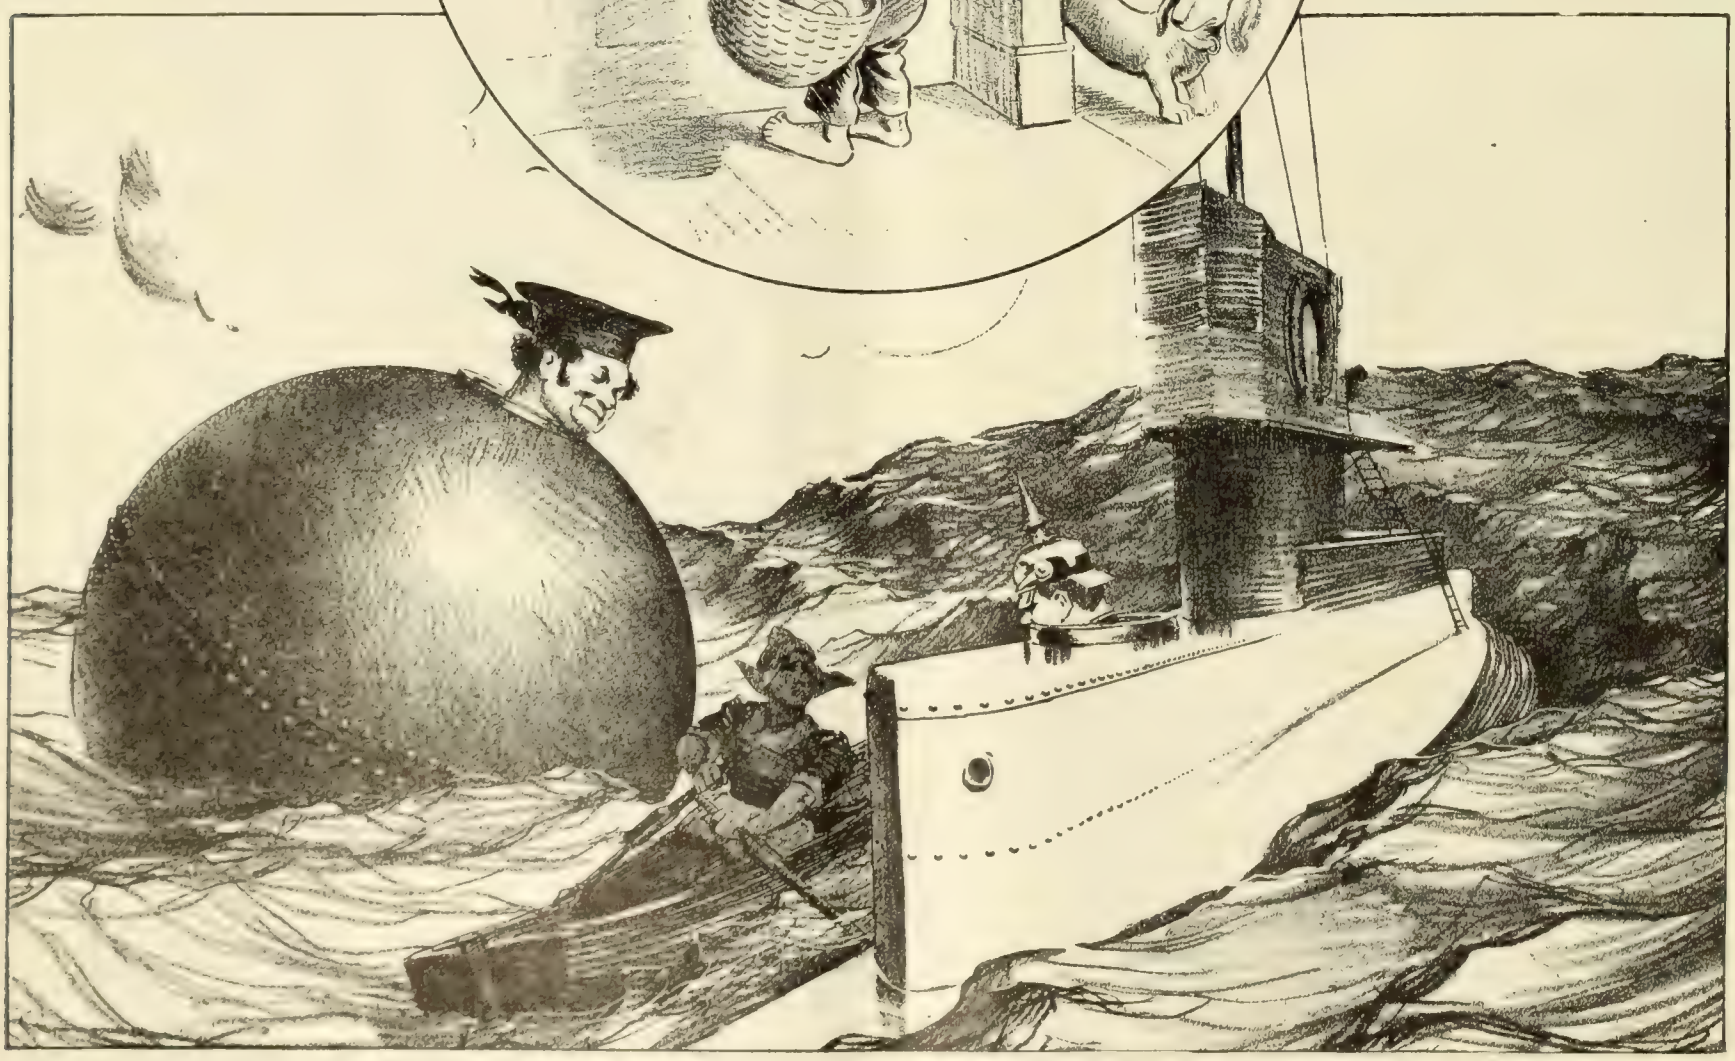
CARTOON COMMENT

AN EMBARGO THAT BEATS THE DUTCH

THE DEVIL AND THE SEA

The strait and narrow path of neutrals now is shown by Cesare in the New York "Evening Post." Denmark, Holland, Sweden and Norway watch their step as they pass between the clutching hands of the Teutonic monster and the guarding trident of the Allied blockade

"NO MORE DOG MEAT, SONNY!"



In the cartoon below—a typically American treatment of international problems—drawn by Knott for the Dallas (Texas) "News," Uncle Sam is stern tho kindly in his refusal of little Holland's plea for just a little more "dog meat" from the world's Provision Store. No wonder the German dachshund, waiting just around the corner almost out of sight, looks decidedly anxious—he has been getting a living for many months on the "scraps" that have come to him from that neutral market-basket

NOTICE TO QUIT

London puts the matter in plain terms. "Look here, my dear Miss Hook of Holland," says Uncle John Bull, "Give that hulking blackguard notice to quit or Uncle Sam and I shall have to restrict your supplies." The cartoon was drawn by Thomas Maybank for "The Passing Show"

HOLLAND TRYING HARD TO BE A "LITTLE FRIEND OF ALL THE WORLD"

This neutral finds herself in a dilemma, according to "De Amsterdammer," which illustrates with this cartoon of the small craft trying to steer between opposing perils a recent speech from the throne that "Our relations with all foreign powers remain friendly"

no war. Has Germany repented of her scornful attitude toward arbitration and disarmament, or is it a case of the devil who would be a monk? Chancellor Michaelis is enthusiastic over the benefits of peaceful competition between nations: "The free play of forces in the world in peaceful wrestling with one another would lead to the highest perfecting of the noblest human possessions." All right, but who was it that quit wrestling and took to fighting? We are not going to have a westling match with anybody who is likely to give us a foul blow.

It all falls back upon what President Wilson said, that the world cannot trust Germany. She must prove a willingness to relinquish her own conquests before she is entitled to complain because the Allies will not relinquish theirs. It is useless for her to talk of "enjoying equal esteem" so long as she does not say a word about compensation for ruined cities and sunk ships. It may be that the fair words of the Reichstag resolution and the reply to the Pope express the spirit of a majority of the German people, but before we can listen to them the German people must find some way of convincing us, not only of their sincerity, but also that they have the power to hold their Government to it.

IS IT COINCIDENCE?

NOW that Russia has been officially proclaimed a republic, we find among the nations fighting on one side in the Great War the republics of Bolivia, Brazil, China, Cuba, France, Haiti, Liberia, Panama, Portugal, Russia and the United States of America. This list does not include the many other Latin American republics which have broken with Germany or officially exprest their approval of the war policy of the United States, nor yet the parliamentary monarchies such as Great Britain and Belgium, which are republican in all but name. Can any one name the republics on the other side of the battle line?

UNIFORMITY

MILITARY drill on a large scale is a novel thing to Americans of this generation and they are curious about it. To the minds of the hundreds of thousands who are drilling and of the millions who are watching the question will come up: "What's the use? Why this uniform clothing and these uniform movements? What is the object of this machine-like precision?"

The question contains its own answer. The object is to make men uniform so that they can be handled like a machine. Now the essential feature of modern machinery is that it is composed of parts that are alike and interchangeable. Americans ought to understand this easily because it is their own invention. The shop adopted the system from the army, not the army from the shop. Old Eli Whitney, the cotton-gin man, was the first to demonstrate it. In 1799 he astonished a group of distinguished gentlemen by showing them half a dozen muskets, taking them apart, mixing up the pieces and then putting the guns together from any set of parts that happened to be picked out. Among the gentlemen who witnessed this feat was Jefferson, who as President got the interchangeable system adopted by the Government. In the Civil War when millions of rifles had to be made quickly all the contractors came to the Springfield Arsenal to learn how. The idea was carried from the gun shops to the watch factories and then into other lines of American industry, and has since spread to all parts of the world. Even Swiss watches are now made on the American plan. They have lost their individuality but they have gained in convenience because they are easier to repair by replacing a missing part.

Now an army is unfortunately even more liable than a watch to have one of its parts disabled and if another just like it cannot be slipt in at once the whole machine becomes useless. But men are inclined to be individuals. They are natural born non-conformists—even the Episcopalians. So to make a military machine of them they must be first selected so as to insure that they all have about the same length of step and physical vigor and then drilled until personal eccentricity of movement and temperament are so far as necessary evened down. Then one man can step into another's place in the ranks as readily as a bolt or screw is substituted by another from the box. Military drill is essentially a process for the standardization of human units.

PIONEERS IN STATESMANSHIP

THE Sons and Daughters of the American Revolution, according to their custom of erecting bronze tablets wherever famous deeds have been done, unveiled one recently on a building in Cheyenne. It commemorates a famous victory won at that spot on December 10, 1869, a victory over conservatism, over selfishness, over intolerance, over narrowmindedness. It is one of the milestones of human progress, for it marked the beginning of the enfranchisement of half humanity. It is a date to rank with 1492, for it added a new hemisphere to the political world.

Nor need we hesitate to compare the nine men who formed the upper house of the first legislature of the Territory of Wyoming with the bold mariners of the "Pinta," "Nina" and "Santa Maria." It requires no more courage to sail into unknown seas in search of an undiscovered country than it takes to strike out a new and uncharted course in politics with no other guidance than the eternal stars of freedom and justice. They were that kind of men, these Wyoming pioneers, and they could sing Whittier's song:

> We cross the prairie as of old
> The pilgrims crost the sea,
> To make the West as they the East
> The homestead of the free!

The Columbus of this venture into a new world of politics was William H. Bright of South Pass. But behind Columbus there was Queen Isabella and behind Bright there was Esther Morris. Mrs. Morris was the "wise woman" of the neighborhood and when Mr. Bright was elected a member of the territorial Council he went to her for advice as to what legislation he should undertake. She answered: "Introduce a bill that will give woman the right to vote and to hold office." The idea appealed to him. He presented such a bill at the meeting of the first legislature in Cheyenne. The idea appealed to the members. They past the bill. That was all there was to it. No nagging, no picketing, no processioning, no slapping of policemen's faces, no slashing of paintings, no burning of grandstands. Just a fair and square proposition presented to fair and square men.

Of course that was not the end of it. The opposition came afterward, the sqrt of opposition we all know so well, the ridicule, the contempt, the malice, the open threats and the secret intrigues of "the dark forces." They said that Governor Campbell would be signing his political death-warrant, that President Grant would remove him. But he signed it and he was not removed. They said that the Supreme Court would declare it unconstitutional, but it did not. They said that Congress would never admit Wyoming as a state with such a clause in its constitution. But the men of Wyoming answered: "If we cannot come into the Union with our women we will stay out forever!" And the opposition in Congress collapsed.

The woman who inspired the suffrage law was made Justice of the Peace, the first woman in the world to fill such an office. But that was only a slight expression of public gratitude. Citizen Esther Morris is revered in Wyoming as Jeanne d'Arc is revered in France and Grandmother Breshkovsky in Russia.

Wyoming in 1869 had fewer than 10,000 population

scattered over an area greater than New England. A large part of the 10,000 were Indians and soldiers and the women were much fewer than the men. But the state has never regretted the day when it took "Equality" for its motto and its example has since been followed in all parts of the world. Nineteen of our own states have granted the franchise to women. So have Australia, New Zealand, the greater part of Canada, Norway, Denmark, Sweden and Finland and it is promised in Great Britain and Russia. Down in Maine they have not yet heard the good news of woman's emancipation, but they will in a century or so. The motto of Maine, *Dirigo*, has long become meaningless. The rudder of our ship of state is nowadays hung on the Western end.

THE TWO ENGLANDS

THE war of 1917 is a new war. It is henceforth to be fought over new issues as well as with new forces. The entrance of the United States has not only brought financial and military aid to the armies of the Allies, but it has brought hope and courage to the liberal wing of the Allies. This moral support for the democratic cause was sorely needed. A war government is necessarily to some extent a reactionary government even when it remains in the hands of liberal-minded men. But in countries having the ministerial system the government is not stable like ours, but may at any moment be put into other hands without a new election, and so a conservative administration may come into power without reference to the will of the people. That is the case in England. When the war broke out the Liberal party was in power by an overwhelming majority. No election has since been held, yet the power has shifted to the Conservative side. The War Council, which has virtually dictatorial powers, is composed of three Unionists of the most conservative type, Earl Curzon, Lord Milner and Bonar Law. The Liberals are represented by Lloyd George, the Premier, and the Laborites by George Barnes. The entire Coalition Cabinet consists of thirty-three members, of whom the majority belong to the Unionist or minority party. Lloyd George is a forceful personality and we do not agree with those who say that he has abandoned his democratic principles and gone over to the Tories. But he cannot do everything and there is no denying that the British Government as now constituted is more conservative than it has been for many years.

The liberal, radical and democratic part of the British population are deeply distrest over the situation. They are willing to submit to anything to win the war. They have relinquished their party advantage and it seemed to them a few months ago that they had sacrificed the popular rights gained by the struggle of generations. But when the situation looked darkest aid came from unexpected quarters. Two great republics, the Russian and the American, took their places among the Allies. Neither has as yet done much in the field, but they have greatly strengthened the moral cause of that side. It is no longer necessary for the British press to adulate the Autocrat of All the Russias. Instead of this the outspoken utterances of Wilson and Kerensky in favor of democracy had to be published and received the official endorsement of the British Government, however distasteful these sentiments may have been to some members of it.

But, as may be imagined, the Tories are furious at having the tables so turned on them and some of their organs are not able to conceal their chagrin. The *Saturday Review* holds that it is wrong to say that the Allies are fighting for liberalism and popular government. They are fighting for something far nobler than liberalism or any mere form of government—but the *Review* does not say just what it is. Hilaire Belloc is indignant at England's being called a democracy. England, he says, is more of an aristocracy. *Blackwood's Magazine* objects to Mr. Wilson's saying that "the world must be made safe for democracy," and thinks rather that the world should be made safe *from* democracy. This is *Blackwood's* argument:

> It is not an ideal which can be held up before all men as worth striving for. It is a mere method of government, neither more nor less, and it must be tried, like other methods of government, by results only. Hitherto it has seldom meant wise or honest government, and most democracies have paid justly for their sins by extinction. Neither England nor France has fired a shot nor struck a blow for the cause which to Mr. Wilson seems pre-eminent. Assuredly Great Britain is fighting for something far deeper and dearer than a mere method of government. We are fighting for our lives, and for freedom to live and to think for ourselves—a freedom which an unbridled democracy would demolish, if it had the power, with swifter ferocity than an unbridled autocracy. France has as little reason to love her democracy as we have to love ours.

What has roused the wrath of the Tories is obviously that the British people have received with too evident delight the statements of Wilson and Kerensky as to the American and Russian aims in the war. Whatever it might have been in the beginning it is now a people's war for the overthrow of autocracy.

The English are fond of saying that there are two Germanys, one the land of science, music and domesticity, peaceable and friendly, the other autocratic, aristocratic and militaristic. Unfortunately there seems to be only one Germany now, and that the wrong one. But America has always known that there are two Englands. The England that has been the enemy of the United States has always been the Tory England. It was this England that provoked the Revolution and tried to disrupt the Union. But there has always been another England that was friendly to the United States even in time of war. During the Revolution there were those who spoke for us in Parliament. During the Civil War when the Lancashire mills were closed by our blockade of the Southern ports that shut off their cotton supply, the starving workingmen held meetings in support of the cause of freedom. The British people have always been friendly to America even when those who govern them were our enemies. It is upon that constant friendship and unbroken unity that the closer harmony demanded by the present crisis may be built. It is to this England, the real England because the popular England, that we are now practically allied, and to it we should give our heartiest sympathy and support.

May We See the Letter?

You will soon be receiving letters from some one you know who is serving America and civilization in the army or navy. If you will send us copies of these letters, or extracts from them, telling about the life at the training camps, on shipboard or in the trenches, The Independent will gladly print such of them as in our judgment will be of greatest interest to our readers. We do not ask for anything that could come under the head of military information, even if it has passed the censor, or for those personal and intimate paragraphs which are too sacred to trust to print. But the descriptive bits, the sidelights on the soldier's life, the little human touches which never get into the cable despatches but do get into correspondence; perhaps you will be generous enough to share these with the rest of us. At any time up to the end of the war The Independent will appreciate such contributions.

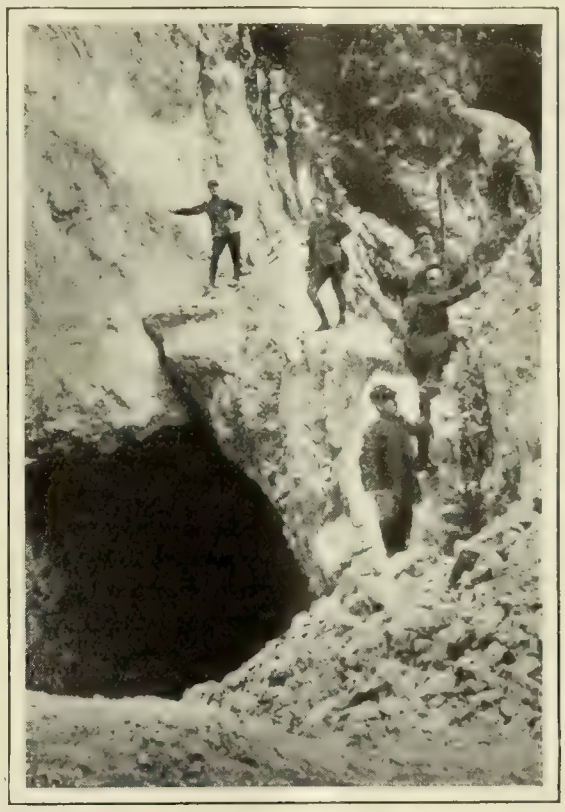
THE STORY OF THE WEEK

Peace and the Papacy

The German and the Austrian peace notes, which we print elsewhere in this issue of The Independent, warmly commend the love of peace exprest by the Pope and assert that the Central Powers share to the full his sentiments. They emphasize a general disarmament "to a fixed limit," international arbitration, the freedom of the seas and equal commercial opportunities for all nations as the fundamental requisites for a lasting peace. Strangely enough, neither note makes the slightest direct reference to questions of annexation or indemnities, tho Austria hints that with disarmament and arbitration conceded "it can then not be difficult to find a satisfactory solution of the other questions which still remain to be settled." In other words, the Central Powers refuse to publish their terms of peace but are willing at any time to enter into a conference with the Allies where they can be discust. It is not impossible, however, that the Central Powers may soon issue a supplementary statement dealing with points not considered in the replies to the Pope.

The Pope, also, may add to his previous peace message. Cardinal Gasparri, the Papal Secretary of State, declared that an essential step in disarmament was the abolition of conscription. He favored a binding rule upon all nations that war should not be declared and no compulsory military service introduced without a popular referendum. The idea of an international army to enforce peace he scouted as impracticable because wherever the army might be located it would be dominated by local prejudices. The only method he suggested for seeing that international treaties and agreements were carried out was a general economic boycott of the disobedient nation.

The Bernstorff Intrigue



Secretary of State Lansing, who has startled the world by his exposure of German intrigues in Mexico and Argentina, seems to have an endless chain of incriminating evidence against the German diplomatic service to produce as occasion may require. A message of Ambassador von Bernstorff to the German authorities, dated January 22, 1917, advised as follows:

> I request authority to pay out up to $50,000 in order, as on former occasions, to influence Congress thru the organization you know of, which can prevent war.
>
> I am beginning in the meantime to act accordingly.
>
> In the above circumstance a public official German declaration in favor of Ireland is highly desirable in order to gain the support of Irish influence here.

Congress will investigate the whole affair in order to remove the suspicion that any member of the Senate or of the House of Representatives was directly influenced by the corruption fund. Of course, all members of Congress who voted against the declaration of war deny that they had any knowledge of bribery in the German interest. The common opinion is rather that the money was spent for propaganda, and in particular for subsidizing the shower of peace telegrams which poured in upon Congress from all sections of the country a few days after the Bernstorff message.

Until the matter is cleared up, every anti-war organization in the United States will be under suspicion of being in the pay of the German embassy. The language of the message seems to implicate particularly the Irish-American organizations and papers which have been conducting an extremely active propaganda against the Entente Allies ever since the beginning of the Great War. The recent discovery of a personal letter from Jeremiah O'Leary, one of the most prominent of these agitators, reproaching a German-American editor for his loyalty to the American cause throws a flood of light on the real character of much of the anti-British propaganda in this country.

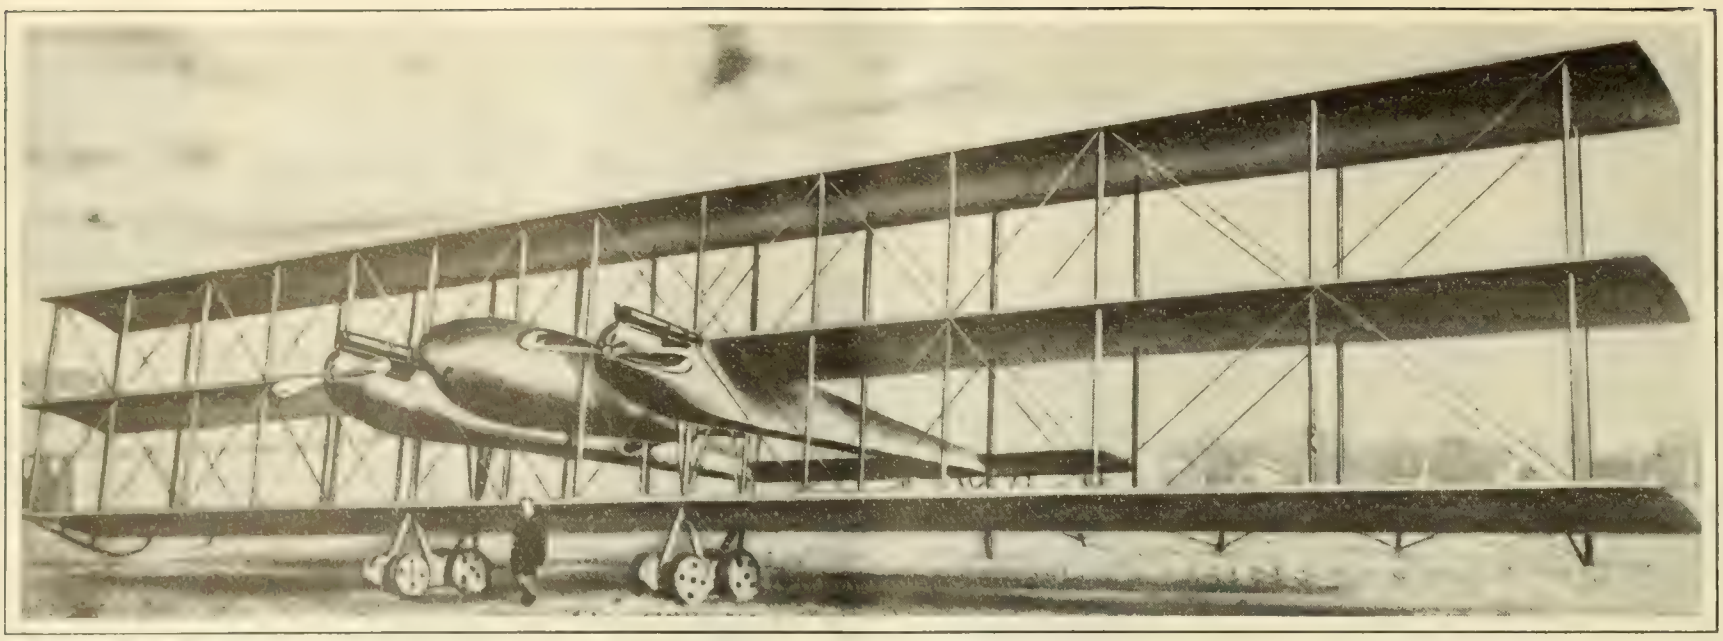
Justice Cohalan of the Supreme Court of New York is perhaps the most prominent of the Irish-Americans involved in the Bernstorff intrigue. A letter from him to the German embassy, written last year, urged Germany to send aid to Ireland by landing troops, arms, ammunition "and possibly some officers from Zeppelins." John Devoy, editor of *The Gaelic American*, was shown to be involved in the Roger Casement insurrection in Ireland. Many pro-German propagandists are mentioned in the letters, telegrams, notes and checks "for services rendered," among the numerous pieces of evidence seized by United States secret service agents.

Paul Thompson

WHERE THE AUSTRIANS HID THEIR GUNS

The Italian advance in the Alps has captured numerous gun positions like the one photographed above—holes deep-blasted in the mountain side years ago and equipt with big guns, covered over with a thin concrete shell to hide and protect them until the time came for their use

Viscount Ishii, head of the Japanese mission to the United States, in a speech at Washington has made the definite charge that German publicity agents had for the past ten years labored to rouse enmity between the United States and Japan by spreading rumors in each country about the hostile ambitions of the other. In a word, while anti-war or anti-Ally propaganda has undoubtedly in many cases been started by organizations not connected with official Germany, for example the I. W. W. and certain Irish societies, when once these organizations were in being the German diplomatic service almost always found a way to make use of them to further its own purposes.



British Victory in Belgium

For several weeks past the British confined their activities to small raids and bombardments without venturing a renewal of their big push in Belgium. On a number of occasions they increased their artillery fire to so intense a degree that the Germans confidently expected an immediate attack, only to have the bombardment die down once more and begin anew on some other sector of the front. That this period of "quiet" was in reality filled with numerous artillery duels and minor engagements is evident from the British casualty list which totaled over 27,000 in the course of one week. Nearly five thousand of these were killed in action. Evidence points to losses at least equally heavy on the German side.

At daybreak on September 20 the great British attack was delivered. The advance was on a front of about eight miles from the Ypres-Comines Canal near Hollebeke to the Ypres-Staden Railway near Langemarck. It brought within the British lines the villages of Zevenkote and Veldhoek and pushed back the Germans for about a mile at several points. The British infantry were protected during their charge by an artillery barrage of unprecedented intensity so that their losses were not so heavy as might have been anticipated for a military action on such a scale.

The War in the East

For the space of a few days after the collapse of General Korniloff's ill starred rebellion things went well for Russia in the field. German attacks were repelled and the Russians began an advance in the direction of Riga which regained a considerable area of the surrounding country, tho it did not embarrass the Ger-

ITALY'S NEW TRIPLANE—THE PROMISE OF BIG ACHIEVEMENTS IN AIR FIGHTING

The Caproni triplane establishes a new record in aeroplane power. Driven by three 700 H. P. motors and three propellers, any one of which can keep the machine aloft if the others are disabled, it can maintain a speed of eighty miles an hour and carry over four thousand pounds—which may include fuel for a six hours' flight, a crew of three people, three guns and 2750 pounds of bombs. A similar plane, tried out recently at an American aviation camp, took fifteen passengers on a six hour flight

man occupation of the city itself. But the Germans soon gave proof that their striking power exceeded that of their foes by the capture of Jacobstadt on the Dvina. The town of Jacobstadt, with a population of some six thousand, has no military or political importance, but the German victory also meant the capture of a bridgehead on the Dvina and the retirement of many Russians beyond the river. But Germany has not been pushing the Russian campaign with sufficient vigor to make probable an advance on Petrograd this autumn. Elsewhere than around Riga the eastern front has been comparatively quiet.

One reason for the inability of the Russian army to accomplish its tasks is doubtless the frequent change of leadership. General Korniloff's military career ended, for the time at least, with his rebellion and arrest. General Alexieff became chief of staff for a few days and then resigned. General Tcheremisoff succeeds him. The new Russian commander seems to have been chosen for political reasons, as he is more radical than Alexieff or Korniloff and less in sympathy with the stern military discipline of the old monarchy. General Kaledines has resigned from his post as chief of the Cossacks of the Don. He is accused by the Government of aiding in the Korniloff insurrection. Very serious disorders among the sailors in the Baltic Fleet and among the soldiers of the Women's Battalion have engaged the attention of the Russian military authorities.

Loyal Business

A convention of American business men, recently in session at Atlantic City, New Jersey, under the auspices of the Chamber of Commerce of the United States, passed the following resolution:

> Undismayed at the prospect of great taxes, facing the consumption of its accumulated savings, American business without hesitation pledges our Government its full and unqualified support in the prosecution of the war until Prussianism is utterly destroyed.

The convention advocated Federal control of prices during the war, a central purchasing board to handle the buying of war supplies by the Government, due allowance for increased cost of production in revising prices from time to time, and adjustment of labor disputes during the war by arbitration. The meeting was particularly significant from the fact that the delegates who attended it represented more than half a million business men and every industry in every state in the Union.

What Congress Is Doing

Congress is expected to adjourn early in October after it has completed the consideration of the emergency war program which has engaged its attention ever since last winter. Only a few measures remain to be disposed of and most of these are well advanced toward passage. The most contested of these, the War Taxation bill, has been delayed in conference for several days because of wide disagreements between the conferees from the Senate and those from the House of Representatives on important details of the measure. The Senate has agreed to the conference report on the $11,538,000,000 war bond and certificate issue.

The War Appropriations bill, authorizing expenditure for the army and its equipment, for fortifications, artillery, naval construction and aircraft, and for the use of the Shipping Board has passed the House of Representatives without opposition. The appropriations covered by the measure are already in excess of $7,000,000,000 and will probably be increased before the bill is finally enacted. The Soldiers' and Sailors' Insurance measure will be hurried thru to early passage.

Besides these financial measures authorizing war expenditure or the collection of revenue, Congress has before it the Trading with the Enemy Act and the Alien Draft bill. The latter measure aims to make conscription apply to aliens resident in the United States as well as to citizens, subject of course to existing treaty rights. The House and Senate conferees have broadened the scope of the Trading with the Enemy Act by giving the Government the power to regulate and censor "communications by mail, cable, radio or other means of transmission passing between the United States and any foreign country" should the public safety require such action. The amendment by Senator King requiring periodicals printed in the German language to print English translations of any comment on the war policies of the American Government has been altered in conference to include all foreign language periodicals and all news items "or other printed matter" dealing with the war. But if such translation into English is filed with the postmaster at the place of publication at the time the periodical concerned is first distributed to the public, together with an affidavit as to the completeness and accuracy of the translation, the requirement of the law is considered answered even if the translation is not published in the periodical itself. The President is authorized to issue a special permit to foreign language newspapers and other periodicals exempting them from the necessity of filing translations with the postal authorities. This permit may be revoked at any time, and all foreign language publications attempting to ignore the law will find themselves barred from the use of the mails.

THE GREAT WAR

September 17—Twenty-eight British ships sunk during previous week. General Kaledines deposed from leadership of the Cossacks.

September 18—House of Representatives passes war appropriations bill. German attacks renewed in Champagne.

September 19—Heavy artillery fire in Flanders. Argentine Senate votes for break with Germany.

September 20—British attack on eight mile front near Ypres and smash German lines to the depth of a mile. Russians gain again on Riga front.

September 21—German and Austrian peace notes published. Costa Rica severs diplomatic relations with Germany.

September 22—Germans advance on the Dvina. Argentina sends ultimatum to Germany.

September 23—Germany sends apology to Argentina. British destroyer sunk by U-boat.

Another Ally

On September 19 the Council of State of Haiti voted to recognize the existence of a state of war with Germany. At the same time the Government decreed that no more licenses would be granted to German firms for business undertakings within the republic. Several weeks ago the Haitian Government severed diplomatic relations with Germany, but the national Congress failed to carry out the recommendation of the President that a formal declaration of war be voted. The original occasion of the break with Germany was Germany's submarine warfare, which had cost the lives of several citizens of the little negro republic. Germany has had very important commercial interests in Haiti for a number of years; and, while the country yet remained neutral, it was also fertile soil for the plots and intrigues of the Kaiser's agents who labored, as elsewhere in Latin America, to create difficulties for the United States. President Tinoco of Costa Rica has caused the arrest of several German conspirators who had attempted to stir up civil war in that Central American republic.

Russian Republic Established

While Russia has been a republic in fact ever since the revolution, in the sense that the nation has had no hereditary ruler, the provisional Government has hitherto refrained from declaring what shape the Russian constitution would take when it was regularly established. It was understood that a constitutional assembly would be called as soon as elections could be held and that, in the meantime, the revolutionary Ministry would carry on the work of national administration. But the radicals were unable to wait. Much of the disorder in Petrograd grew out of the popular uneasiness lest the monarchy be restored and all the fruits of the revolution snatched away. An exactly similar period of uncertainty existed in France immediately after the close of the Franco-Prussian War when France was governed without a king and yet did not definitely declare herself a republic for several years after the overthrow of Napoleon III.

Finally, the "Bolsheviki," who represented the most radical faction of Russian Socialism, took matters into their own hands and demanded that Premier Kerensky declare a Socialist republic at once. Their pretext for this action was the revolt of General Korniloff and some of the Cossacks, which, as they held, was an indication of what might be expected in the future if Russia had no regularly constituted republican Government. Kerensky, altho himself a Socialist, saw the impossibility of altering the whole economic life of one hundred and seventy million people by executive order and so refused to listen to the demand for the abolition of private property and the exclusion of all non-Socialists from public office. He recognized, however, the justice of the popular cry for assurance that the provisional Government was not "camouflage" for a future monarchy, and he issued the following proclamation:

> General Korniloff's rebellion has been quelled. But great is the confusion caused thereby, and again great is the danger threatening the fate of the fatherland and its freedom.
>
> Holding it necessary to put an end to the external indefiniteness of the state's organization, remembering the unanimous and rapturous approval of the republican idea exprest at the Moscow State Conference, the provisional Government declares that the constitutional organization according to which the Russian state is ruled is a republican organization, and it hereby proclaims the Russian Republic.

In lawyers' language the republic ceased to be merely *de facto* and became *de jure* by the terms of this proclamation and the assent accorded to it by foreign governments.

Thus Premier Kerensky has reached the summit of his public career, as the chief executive of the Russian Republic. He is beyond question the outstanding figure among all the men raised to prominence by the greatest revolution in human history. Before the overthrow of the old Russian Government gave him his opportunity Kerensky was not very widely known in Russia and practically unheard of in western Europe and America. As a lawyer he defended the Jew, Beilis, accused of ritual murder and prosecuted by the Russian authorities on that charge shortly before the Great War. This incident gave him a certain standing among the revolutionists and was doubtless the origin of the report, widely printed in the American papers after the outbreak of the revolution, that Kerensky himself was of the Jewish race. He is, however, of Russian descent and a native of Siberia. His earnestness, eloquence and power of rapid decision assured him a rise to supreme power in the revolutionary administration; Socialist deputy to the Duma from Saratov, then Minister of Justice, then Minister of War, then Prime Minister of the provisional Government, and finally chief executive of the republic. Yet he is still under forty years of age and handicapped by illness.

French Premier Outlines Policy

Premier Paul Painlevé has succeeded in organizing the new French ministry and apparently in securing for it the support of a majority of the people's representatives. In an address before the Chamber of Deputies he outlined the war policies of the incoming administration, which, as had been anticipated, did not differ greatly from those of previous cabinets. He promised to put down sedition and anti-war conspiracy with a strong hand and

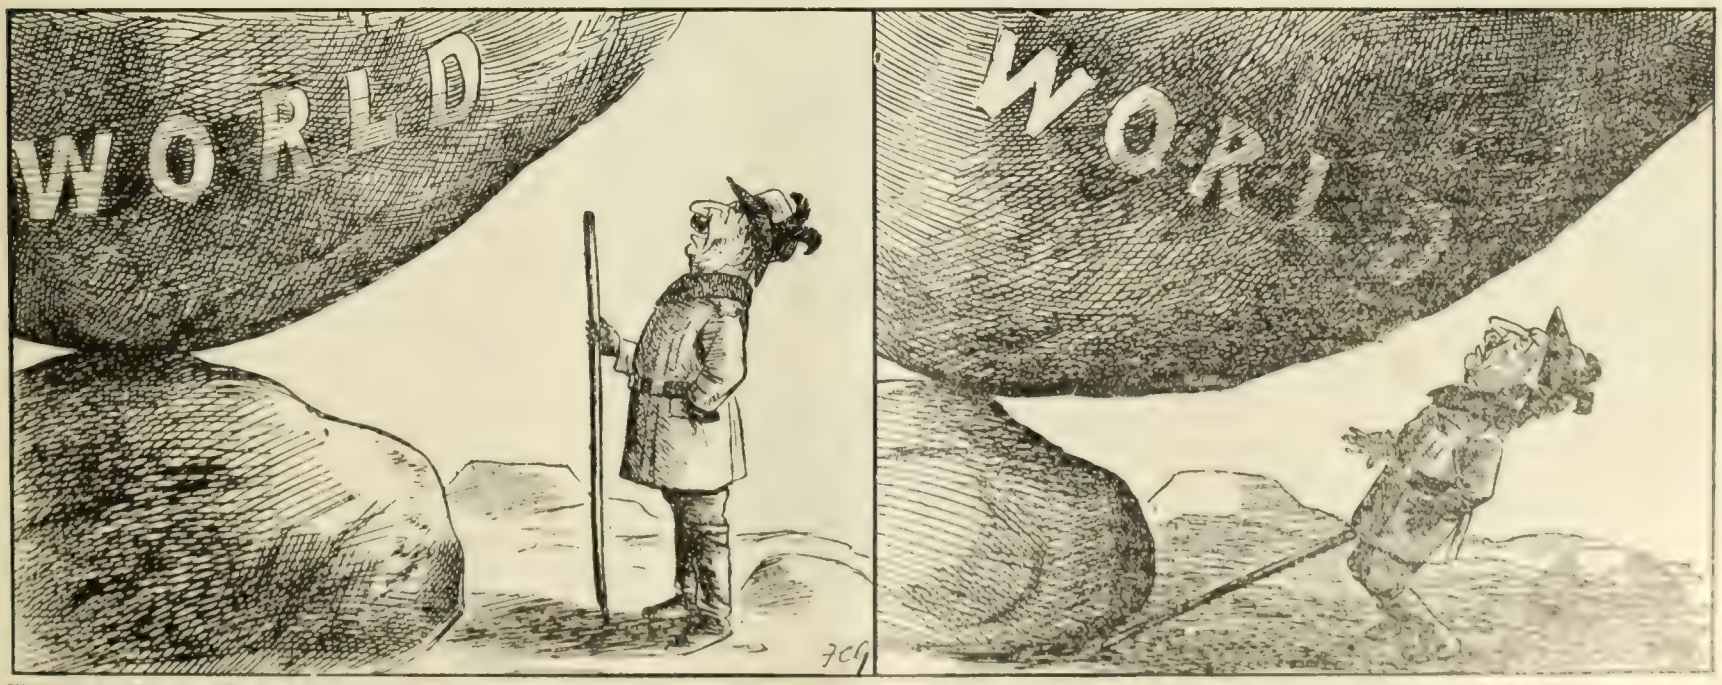
WHAT A FIFTY-DOLLAR LIBERTY BOND WILL DO

The proceeds of one fifty-dollar Liberty Loan Bond will purchase:

Thirteen 13-pounder shells for destroying submarines.

Four 5-inch shells for the same purpose.

One hundred pounds of smokeless powder.



Eighteen gas masks for a like number of soldiers at the front.

Enough coal to drive a destroyer 120 miles.

Enough gasoline to drive a submarine destroyer 150 miles.

A sailor's uniform outfit.

Four months' subsistence for a soldier.

Westminster Gazette (England)

THE WORLD-ROCKER

I'LL MAKE IT ROCK! I WISH I'D LET IT ALONE!

"to govern in closer union with Parliament." Concerning the conditions of peace, he stipulated:

> The disannexation of Alsace-Lorraine, reparation for the ruin caused by the enemy and the conclusion of a peace that will not be a peace of constrained violence, comprizing within itself germs of wars to come, but a peace that is a just peace, in which there are efficacious guarantees to protect the society of nations against all aggressions from one among them.

This is in conformity with previous French declarations.

The Minister of Finance has introduced into the Chamber of Deputies a bill appropriating 12,150,000,000 francs (about $2,430,000,000) for the fourth quarter of the year 1917. The total national expenditures for all purposes since the beginning of the war, if the present budget is added, amounts to 103,000,000,000 francs, or $20,600,000,000.

The War for the Trident

The German warfare against British shipping achieved an unusual result during the week ending September 16. Eight British vessels of more than 1600 tons each and twenty smaller vessels fell victim to the Germans. The total number of ships sent to the bottom was greater than in any previous week since that ending June 24, and only at one other period, during the week ending May 6, were so many small vessels sunk. On the other hand, during no previous week since ruthless submarine warfare began were so few vessels of more than 1600 tons lost. For the first time also the losses among the smaller vessels exceeded those among the larger. This may be interpreted in at least two ways; the British may be relying more largely upon small ships to carry their commerce or they may have devised effective methods of protecting their large vessels from submarine attack. During the week Italy lost one small steamship.

The Germans have recently succeeded in sinking several neutral vessels with loss of life. Among the merchant fleets of the chief belligerent nations the American has suffered comparatively little, probably because we have relatively few steamers as yet in the Atlantic service. On September 15 the American oil tank ship "Platuria," of 3445 tons gross register, was struck by a torpedo and sunk in spite of the fact that it carried a naval gun crew. The captain and eight of his crew were drowned, but forty-five survivors were rescued by the Italian steamship "Andrea."

Altho the British Government refrains from making public the number of enemy submarines which have been trapped or destroyed, the authorities have relented sufficiently as to permit the description of eight recent encounters which illustrate the many various ways in which the U-boats may be hunted down. In the first case the work was done by shell-fire from an auxiliary cruiser; in the second, by dropping an explosive charge overboard above the spot where the submarine had dived; in the third, by a torpedo from a British submarine; in the fourth, by a bomb from a seaplane; in the fifth and sixth, by bombs and gunfire from naval vessels; in the seventh and eighth, by gunfire from defensively armed merchant ships. No cases of trapping in steel nets were recounted, altho it is believed that more U-boats have come to grief in this way than in any other.

The Swedish Revelations

Sweden is much stirred over the revelations of the American Government, showing that the diplomatic representatives of the nation in Argentina and in Mexico had acted as errand boys for the German embassies in those countries. The nation is divided between resentment at Germany's conduct and resentment at the harsh criticism of the Swedish Government in the Allied press. Foreign Minister Lindman asked Germany for an explanation of the abuse of diplomatic privilege of which Germany's representatives had been guilty and announced that his Government has ceased transmitting German messages from the moment that the character of Count von Luxburg's dispatches was made public. Germany sent a note of regret to the Swedish Government, but all sections of public opinion in Sweden branded it as inadequate. According to recent election returns the Socialists increased their representation in the national Parliament from 43 seats to 48 and the Liberals from 29 to 37, while the Conservative Party carried 30 seats instead of 43. This indicates a strengthening of the sentiment for peace and neutrality and a weakening of pro-German influence.

Germany officially denies the American charge that the German Minister to Mexico had requested the German Government to bestow a decoration of honor upon Folke Cronholm, the Swedish diplomatic representative in the country. Nobody in Germany will say a good word for Count von Luxburg, however, and a warm reception probably awaits that disastrous diplomat on his return to the Fatherland. Some German papers attempt to soften "spurlos versenkt" into a less inhuman meaning; some say that if the German admiralty had carried on submarine warfare with sufficient zeal, no diplomat would have proffered advice to it; some dismiss the whole affair as the eccentricity of an individual, and some concentrate their wrath on the United States for exposing the intrigue.

AMBASSADOR TO JAPAN

Mr. Roland F. Morris, recently appointed to represent the United States in Japan. He is to leave for his new post shortly

Argentina is resolutely indignant. Not content with the expulsion of Count von Luxburg from his post, the Argentine Government withdrew permission from a German wireless company which had attempted to get into communication with Germany, thus cutting off every channel of intercourse between the countries. The German official apology to Argentina was not considered satisfactory. On September 19 the Argentine Senate voted to break off all diplomatic relations with Germany. This meant that another German Minister, if one should be sent in the place of von Luxburg, would not be received.

Exports to Canada Limited

The Exports Administrative Board has announced that all exports of wheat, wheat flour, butter and sugar to Canada or Newfoundland will hereafter require an individual license instead of the license issued thru the customs service which permitted the exportation of these foodstuffs to British America in unlimited quantities. The order is merely a precaution, enabling the Government to restrict exports should that step become necessary owing to a food shortage in the United States. There is no present intention to refuse licenses. Shipments now in transit are not affected by the order, and exception is also made of small individual shipments from places close to the international boundary line.

Coal Administrator Garfield will exercize close supervision over all coal exports and require a special license for each shipment. Hitherto coal, like foodstuffs, might be exported to Canada under a general customs service license. While the Government will take care not to reduce the coal shipments to Canada in such degree as to injure the industry of our northern neighbor, there will be some restriction. During the fortnight from August 24 to September 6, it was discovered, over 530,000 tons of coal had gone to Canada by way of Lake Erie, or about three-tenths of the coal traffic on the lake. This is far in excess of the proportion of exports to Canada by the lake route in normal times. In the meantime, the states of the upper Mississippi valley are faced with a fuel shortage that may compel the closing down of many industries during the winter unless coal is sent there promptly and in large quantities. The Fuel Administration attempted to remedy the situation by requiring the railroads to give preference to coal shipments in the direction of the Great Lakes, but it discovered that it was also necessary to curtail Canadian trade.

A GREAT EVENT IN ENGINEERING—COMPLETING THE BRIDGE AT QUEBEC

In spite of two fatal disasters, the middle span of the big Quebec bridge has finally been hoisted into position, and one of the biggest engineering feats ever attempted is now practically sure of success. The two ends of the bridge were built out from the banks; the middle span, 640 feet long, was built on shore, brought down the river on pontoons, and hoisted by powerful jacks into its place 122 feet above the water. The photograph above shows it about half way up; it was in this position last year that the span fell

Restrictions on exports to Latin American countries are also being considered.

The St. Paul Conference The conference of the National Non-Partizan League at St. Paul, Minnesota, has attracted general interest as the first organized expression of radical opinion among the farmers of the upper Mississippi Valley on the issues arising out of the war. Governor Frazier of North Dakota was the first to speak on behalf of the conference and he acted also as presiding officer during its sessions. A. C. Townley, president of the National Non-Partizan League, expounded the purposes of the meeting. He denied that the farmers opposed the fixing of a price for wheat, or even so low a price as $2.20 a bushel, but he insisted that in consistency the Government should go further and fix the price of coal, iron, steel and oil, and, indeed, of all necessary commodities. He scored the "profiteers" bitterly and asserted that they had commanding influence at Washington. Representative Baer of North Dakota, the first member of the League to be chosen to Congress, spoke in a similar strain and with even greater bitterness.

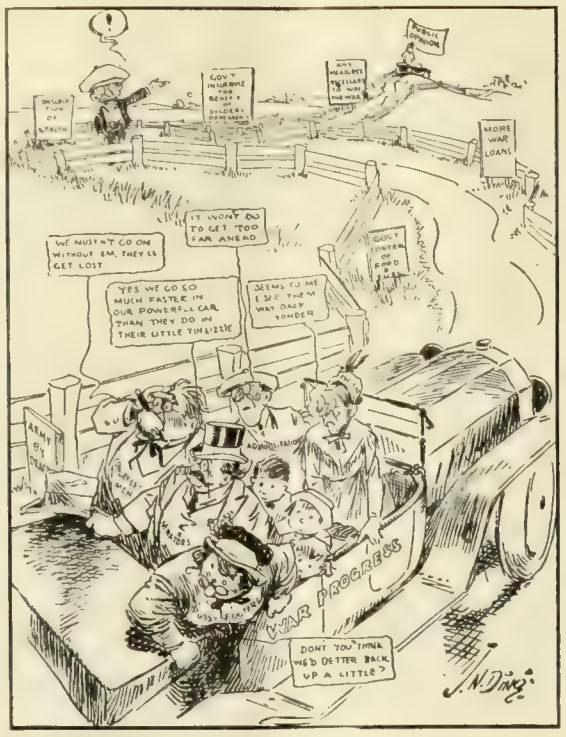
A number of prominent statesmen of radical tendencies, not directly affiliated with the League, were invited to speak before the conference and some of them were able to attend. Senator Gronna of North Dakota, Senator La Follette of Wisconsin and Senator Borah of Idaho were well received by their audience, altho Senator La Follette devoted a part of his speech to a denunciation of the war and the expression of his conviction that the United States had no real reason for quarreling with Germany. That he did not represent the views of the conference was evident from the resolution which was adopted pledging full loyalty to the national cause in the Great War. Congresswoman Jeanette Rankin spoke on the copper situation in Montana, championing the interests of the miners. The declaration adopted by the conference recommended the confiscation of war profits by maximum taxation to pay for the war, the control by the Government of the retail price of bread as well as of the price of wheat to the farmer, loans to farmers to buy seed wheat, a general land tax of two per cent, an income tax which would make impossible any individual income of more than $100,000 a year, public ownership of mines and railways, an increase in the pay of common soldiers on active service, Government operation of industries impeded by strikes for the duration of the war, coöperation between farmers and labor unions, restriction of immigration and direct legislation.

The Shipyards' Strike The creation of our new merchant marine has been greatly impeded by widespread strikes in the shipyards, affecting both steel and wood construction. On September 17, some 25,000 iron workers and metal trades mechanics engaged in war emergency work in and near San Francisco went on strike to obtain a fifty per cent increase in wage schedules. On the whole Pacific Coast at least 50,000 men of the shipbuilding trades left their work, tying up about twelve per cent of the construction work undertaken by the Government. Not only the metal trades were involved, but wooden construction in Oregon and Washington as well. A number of unions not engaged in shipbuilding struck in sympathy.

Chairman Edward N. Hurley, of the United States Shipping Board, offered his services as mediator to settle the strikes on the Pacific Coast. The causes of trouble were complex. Besides the demand of the metal workers for increased wages, some unions demanded the closed shop and wood workers in the shipyards insisted that no lumber be used that had not been manufactured in mills running on the eight-hour day plan.

At the same time as the San Francisco strike, 6500 longshoremen and cargo handlers left their work in the port of New York. The dispute was over a point of discipline. The longshoremen demanded the discharge of a foreman who had dismissed a member of the union. After four days' absence from work, the men agreed to return on condition that the question at issue be submitted to arbitration.

The frequent and menacing strikes in the shipyards and in the metal mines of the western states have greatly concerned the President. In order to prevent trouble for the future, he appointed a special commission of personal representatives to investigate labor difficulties on the spot and take counsel with the local authorities on ways and means of mediation. The commission will consist of Secretary Wilson, of the Department of Labor; two representative business men, Colonel J. L. Spangler, of Pennsylvania, and Verner Reed, of Colorado, and two chiefs of labor federations, John H. Walker, of Illinois, and E. P. Marsh, of Washington. Mr. Felix Frankfurter, assistant to Secretary Baker, of the War Department, was selected as secretary of the commission.



Your Bond Is Coming Secretary McAdoo of the Treasury Department announces that the delivery of bonds of the first Liberty Loan will begin on September 26. The long delay, which has surprized and possibly perplexed some of the subscribers to the loan, is accounted for by the large number of individual applications for bonds and the consequent enormous task of printing them. In all, some 8,700,000 bonds of various types and denominations have been printed, and the great majority of these are of the fifty and hundred dollar denominations. Even now that a large supply of bonds have been made ready for distribution the deliveries will occupy several weeks. Secretary McAdoo advises holders of

certificates of payment not to be in a hurry to exchange them for bonds, since they will probably have an early opportunity to exchange these certificates for bonds of the new issue at a higher rate of interest than the present three and a half per cent. Of course, the bonds of the first issue will also be convertible into the new bonds; but the bother of securing the three and a half per cent bonds only to exchange them later for the new issue may be avoided by those who are willing to wait till the second issue is ready. Until June 15, 1918, there will be no extra charge made for those who wish to exchange a number of small bonds for a bond of larger denomination or who wish to exchange registered bonds for coupon bonds.

The second Liberty Loan was approved by the Senate on September 15, by an unanimous vote. The interest rate was left at four per cent and Senator La Follette secured an amendment fixing the same rate for the issue of war savings certificates. He also offered an amendment fixing a time limit for the bonds, but this was rejected. Their termination is fixed by the Secretary of the Treasury according to the bill as it passed the Senate. The war bond bill was then sent to a joint conference of the two Houses of Congress.

The Market for Stocks

There was a change for the better in the stock market, at New York, on the 19th, when prices moved upward after several days of depression. On Monday, the 17th, a downward tendency shown at the close of the preceding week became more pronounced and the entire list declined. This was ascribed mainly to the continuing high interest rate, 5 and 6 per cent, on call loans, and not to any fresh news from Europe or Washington, altho reports from Petrograd reduced the price of Russian bonds by 3 points. Stocks of steel companies were affected by rumors that the price to be fixed by the Government would be only $45 a ton, altho $68 had been predicted a few days earlier. The

Ding in New York Tribune

WAITING FOR PUBLIC OPINION TO CATCH UP

day's net losses in the industrial list were from 1 to 2½ points, with the exceptional reduction of 6¾ for Bethlehem Steel. As a rule the railroad shares showed only slight losses, but 2¾ was cut from the price of St. Paul, which had been weak for some time. Of the day's business, 44 per cent was in Steel Corporation shares, with a loss of 2½. On the 18th the price movement was irregular and confused. For some stocks a part of Monday's losses was recovered, but an average showed additional reduction. The call loan rate declined to 3 per cent, with a favorable effect. In the railroad list only slight fractional changes were seen, with Canadian Pacific's loss of 4 points an exception. Steel Corporation advanced ⅞ on sales of 234,000 shares in a total of 649,000.

Prevailing opinion was that the marked improvement shown on the 19th was due chiefly to reduction of loan rates and the movement of the Federal Reserve Bank to stabilize them. The rate fell to 2½ per cent, closing at 2¾. It was understood that plans had been made for coöperative action by the banks concerning funds available for loans, and to prevent abnormal interest charges. There was no news to which weight was given. Conference committees at Washington had agreed upon the $11,000,000,000 bond or War Credit bill, which would soon be enacted. New taxes could be measured. Prices for steel had not been announced, but shares of all steel companies moved sharply upward, the Corporation leading with a net gain of 3¼. Additions for Gulf, Midvale, Lackawanna and Republic were from 3 to 4½. War order industrials advanced, of course, and the railroads showed moderate improvement, Canadian Pacific recovering 2½ of the 4 points lost the day before. Motor stocks, recently deprest by taxes, economy and high cost of raw material, were notably strong. Even the Russian bonds shared in the movement by gaining 3 points.

On the 20th this general advance was not checked. The day's average for industrials may be indicated by Steel's gain of 1⅞. Railroads were an exception to the rule, being comparatively weak. The money rate was 3½ and 4 per cent. The Steel Corporation's addition of 10 per cent to the wages of its 252,000 employees was regarded as proof of confidence. This is the fifth increase in nineteen months, and the men's wages are higher by 60 per cent than they were in January, 1916.

Copper shares were strong. It became known that the Government had fixed the price of the metal at 23½ cents a pound, or about 4 cents below current market rates. Some had predicted not more than 20 cents. Russian bonds continued to rise. Gains for several other steel companies exceeded those of the Corporation. In four days 1,000,000 of that great company's shares had changed hands, or 35 per cent of the total.

DIGGING IN

One of the feats of modern warfare—to lie flat on the ground while you dig a trench and throw up earthworks, at the same time keeping out of sight of the enemy gunners

WORKING WITH THE JAPANESE

BY MILDRED AUGUSTA CLARKE

It will be gratifying to all friends of good international relations to learn from the following article that the Japanese problem on the Pacific Coast is beginning to settle itself. If only the American Government will seize the opportunity of the visit of the Japanese Mission now in Washington to take up the whole American Japanese problem it will find that the Japanese are more than responsive and that there is nothing in the problem which cannot be settled in accordance with the principles of right and justice.—THE EDITOR.

IT has been commonly believed that organized labor is the citadel of California's anti-Japanese movement. The violent agitation which has, during the past several years, brought about many diplomatic complications, was started by a labor leader in San Francisco, under whose slogan of "The Japanese must go!" California's labor, organized and unorganized, readily rallied. The temporary expulsion of Japanese children from the public schools of San Francisco, the conclusion of the "gentlemen's agreement" between Tokio and Washington, and the enactment of the anti-alien land law by the legislature at Sacramento, were the harvest reaped by this agitation.

With these incidents still fresh in our minds the conciliatory attitude recently shown by California's organized labor toward the Japanese seems little short of marvelous. When, in the summer of 1915, a Japanese labor union sent a representative to the conventions of the California and American Federations of Labor with the request that he be admitted as a fraternal delegate, Mr. Olaf Tveitmoe, a prominent labor leader in California, said to a newspaper reporter: "I would rather sit with a Jap delegate than with a lot of other delegates."

GETTING ACQUAINTED

THIS utterance was amazing because Mr. Tveitmoe had for almost ten years been regarded as hostile toward the Japanese. Its real significance lies in the indication it implies of the signal change that has come over the sentiments of the class of people with whom its author is identified. Today the labor leaders of California are willing to face the Japanese question in a conciliatory, even sympathetic spirit. Because of this new attitude on the part of California's labor, the once celebrated Japanese and Korean Exclusion League of San Francisco went out of existence in 1914. Addressing the Japanese at a recent banquet at which both Japanese and Americans were present, Mr. Walter Macarthur, a prominent Democrat and labor leader in California, made, in a humorous vein, a very clever and exceedingly pertinent observation by saying: "The more I see you, the less you look like a Jap!" The implication is obvious. If Japanese and Americans only get together and become acquainted with one another, the barrier between the two must gradually vanish.

It is a salutary tendency that California's labor leaders have come to regard the Japanese question as an economic question rather than a race issue. "The objection of the American to the Japanese," writes James W. Mullen, editor of the *Labor Clarion*, organ of the California Federation of Labor and the San Francisco Labor Council, "was not based upon racial ground, but upon economic ground. The racial aspect has since been injected into the issue by designing persons." With which Walter Macarthur, whom I have just mentioned, agrees by saying: "The movement for Asiatic exclusion is based chiefly upon economic grounds. . . . It was the injection of the idea of racial inferiority—an idea that had no place in the minds of any honest exclusionist—that led to the misunderstanding and created a breach between the two peoples."

I have referred to the Japanese labor leader who was admitted as a fraternal delegate to the San Francisco convention of the American Federation of Labor last year. The same gentleman, Mr. Bunji Suzuki by name, has been again in this country attending the recent conventions of the California Federation and the American Federation of Labor. He represents the Yu-Ai-kai, Laborer's Friendly Society of Japan, of which he is the president. It has 30,000 members and is so far the only labor organization in Japan which promises to become influential as well as beneficial to the working class.

THE JAPANESE DELEGATE

WHEN Mr. Suzuki arrived in San Francisco a year ago he was, without a dissenting voice, admitted to the convention of the California Federation of Labor held at Santa Rosa, and there he delivered an appealing address. He was also invited to address the San Francisco Labor Council, which, with the San Francisco Building Trades Council, had long been regarded as the hotbed of the anti-Japanese agitation. When the American Federation of Labor opened its convention in San Francisco in November, 1915, Suzuki was also received, with but slight opposition, as a fraternal delegate. That a Japanese was seated at all in these gatherings was in itself remarkable enough, but the surprizing part of it all was the cordiality with which he was received and the enthusiasm with which his speeches were listened to. Had he come but a year or two before, the doors of such labor organizations would have been closed in his face.

Upon the close of the San Francisco convention of the American Federation of Labor Mr. Suzuki went home, leaving behind him a very favorable impression with the labor leaders of California. That was in November, 1915. Since then events have happened, all tending to create among the laborers of California a sympathetic feeling toward the Japanese. The first of such events was the conciliatory attitude of the Japanese steamship company, the Toyo Kisen-Kaisha, toward the longshoremen who went on a strike last May. The San Francisco office of this Japanese firm was one of the two shipping concerns which promptly accepted the demands of the longshoremen and thus declined to line up with the Waterfront Employers' Association, whose uncompromising attitude resulted in the protracted strike. For this gracious attitude on the part of the Japanese steamship company the labor organizations of San Francisco and California evinced keen appreciation.

A SYMPATHETIC WALK-OUT

THEN came the strike of culinary workers of San Francisco, numbering more than 3000 cooks and waiters. When the strike was declared the Japanese employed by various restaurants voluntarily and spontaneously walked out. These Japanese had never been given a square deal at the hands of organized labor; they had been denied admission into the union and had not enjoyed the protection which was back of the union men. And yet they had no hesitation in showing their sympathy and their feeling of comradeship for the striking workers by quitting their jobs. True, their number was very small, not exceeding forty. In the final issue of a city-wide strike so small a number of Japanese did not count for much. But it was the chivalrous spirit shown by the Japanese, rather than the actual influence exercized by them, that was appreciated by the striking culinary workers. The occasion furnished food for reflection on the part of American workers, who were at heart conscious that they had not been square with the Japs. When Hugo Ernst, secretary of the Culinary Workers' Union of San Francisco, reported at the San Francisco Labor Council, on the sympathetic "walk out" of the Japanese and argued for the affiliation of Japanese workers with the American Federation of Labor, he was enthusiastically applauded by the audience. Only a few years before any suggestion that the doors of American labor organizations be opened to the Japanese would have been received with laughter and derision.

At this psychological moment Mr. Suzuki, president of the Laborers' Friendly Society of Japan, came to San Francisco for the second time. He was again admitted as a fraternal delegate to the convention of the California Federation of Labor held at Eureka in October, and made an impressive speech. He brought with him a letter from the Laborers' Friendly Society of Japan, inviting representative labor leaders of California to be present at the fifth anniversary of

[Continued on page 517

A BETTER BERTH FOR JACK TAR

BY JAMES H. WILLIAMS, ABLE SEAMAN

THE sailor has always, in all maritime countries, been regarded as the "nation's ward" and natural defender, for whose particular needs special legislation has always been found necessary. In fact it may be laid down as an axiom that those nations which attained to the greatest naval power have done the most to develop good practical seamanship and to encourage commerce afloat.

It is Great Britain's naval supremacy today that has enabled her and her allies to hold the colossal military power of the Teutons in check for the past three years, and it is the great result of her long established commercial policy of nation protection to merchant seamen that enables her to do so.

And now that the United States has entered the great worldwide conflict, in the horrid contemplation of which all humanity stands dumbfounded and aghast, I believe it to have been nothing short of an act of Divine Providence which brought the La Follette measure into being and operation as soon as it did.

During the past five years I have been marooned in the midst of the great Argentine country and almost completely isolated from the world without.

It was while sojourning in the province of Cordoba in 1915 that a waif word came to me that a new seamen's law had been enacted by the United States Congress and approved by President Wilson, but did not seem popular, either with American shipowners or editors. I had no information at that time regarding the provisions of the new law, but thanked God for its unpopularity.

Since my return to New York I have made every effort in my power to become acquainted with the provisions of the new act and compare them faithfully with the previous navigation laws.

Against the wealthy shipping corporations and other allied interests that have so persistently and volubly joined in public denunciation of the measure I have neither time nor space to contend here. That, perhaps I can do better and more effectively when next I go to sea.

The learned editor of a very exclusive and high class New York periodical refers to the La Follette measure as "a criminal law."

But please hear me first and judge the La Follette law for yourself afterward. The wretched condition of our merchant seamen during the past fifty years is not fit to tell; it is enough to say that under the inexorable rule of the "crimp" and the bloody belaying pin of the "bucko" mate, under the old system of chattel slavery—imprisonment for desertion, starvation and "blood money," the American boy instinctively shunned the sea; the American man fled from it.

Edwin Levick

Sixty-five per cent of the deck crew should have a rating of able seamen

MORE than twenty years ago the United States Commissioner of Navigation warned the Government, thru his annual report to the department, that at least ninety-five per cent of the seamen then serving in the merchant marine were foreigners. It is also highly probable that the remainder were mainly officers whose positions required them to be American citizens, or become such.

As a result of this condition the vast majority of men, by courtesy called "sailors," in the American merchant marine at that time were highly inefficient, largely ineffective, like the roustabouts who composed the crew of the ill-fated "General Slocum."

Under the provisions of the La Follette law every man seeking employment as a seaman must first make application to the Board of Local Inspectors for a certificate of competency in whatever grade or rating he desires to serve. To obtain such certificate the applicant must be first subjected to three separate examinations to determine his fitness.

The first test relates to language. The applicant for a berth in any American ship must prove his ability to understand any order given on shipboard in the English language.

The second test is physical and the applicant must bring a certificate from the marine surgeon declaring him to be free from any physical ailments, disease or infirmity which would render him incapable of efficient service.

The third test is technical and is based upon proof of at least three years' active service on deck, in the case of an able seaman, and proportionately less for men of lower grade.

Graduates of school ships approved by and conducted under rules prescribed by the Secretary of Commerce, may be rated "able seamen" after a further service of twelve months at sea in the merchant marine, provided they prove competent.

Under the new law no seagoing vessel, whether American or foreign, will be permitted to depart from a United States port unless forty per cent in the first year, forty-five per cent in the second year, fifty per cent in the third year, fifty-five per cent in the fourth year after the passage of this act (March 4, 1915) and thereafter sixty-five per cent of her deck crew are of a rating not less than able seamen.

The beneficent effect of such regulations as these will certainly be appreciated, even by a landsman, when it is known that under the old law no qualifications of any kind were ever demanded of a merchant seaman, or of any one seeking employment as a seaman.

No questions were ever asked any applicant for shipment so long as he was willing to ship on the terms offered.

THE logical result of such haphazard practises must be obvious. The crimps were in the business for "blood money" alone, and the more ignorant and complaisant they found a man the better he suited their purpose. They could get just as much advance for a greenhorn as for a skilful seaman, and he was much more easily deceived as well as easier to handle. A man who could not understand the English language could not tell of his troubles, and a cripple couldn't fight much. So all sorts and conditions of humanity were regularly shanghaied on board outward bound windjammers and turned over to the "bucko" mates to be "combed out" and remodeled into sailors.

Ten years ago I contributed a story to The Independent called "A Son of Ishmael," in which I described the harrowing experiences I endured at the time of my mother's death in 1888. Because I had signed articles in an outward bound ship I was beaten, abused, and dragged thru the streets of Philadelphia by two policemen and a force of boarding house runners to a magistrate's office, for only beseeching to be released from my contract to attend my mother's funeral!

In October, 1893, I was one of three sailors arrested at New Haven, Connecticut, for refusing to perform unnecessary work on the Sabbath Day. We were handcuffed—my two shipmates together, myself alone—dragged thru the streets like felons and taken in a public street car to Whalley Avenue Jail, where we had been committed in $200 bail each by a local commissioner to await trial before the United States court to be held in Hartford two months later.

Fortunately for us, however, the old "blue laws" prevailed in Connecticut at that time and were more respected than the old slave laws. The unusual spectacle of three defenseless seamen being dragged about the city in irons naturally attracted attention as well as indigination, and when the cause of our arrest was learned a committee waited upon the commissioner demanding an explanation. Bail was furnished for us forthwith. A lawyer was sent to the jail with our release. New clothing was provided for us and our board and lodging paid at the Sailors' Home and the superintendent of that staid institution instructed to treat us with all possible kindness until we could be reshipped. That was one instance where godliness triumphed over injustice, but I believe that in a case of this kind it is the only one on record.

THE La Follette law gives the sailor his Sunday rest and five legal holidays in each year, circumstances of course permitting. And a few weeks ago, on our voyage home from Buenos Aires in the sailing ship "Brynhilda" of New York, at eight a. m. on the Fourth of July morning, all hands were mustered on the poop deck, master, mates and men, to salute the American flag. And as Old Glory fluttered to the mizzen-peak I could not help uttering a prayer of gratitude because at last my country had given me a flag to salute; for in all my long experience since 1876 I have never witnessed such a salute on board an American sailing ship at sea before.

Imprisonment for desertion and advance wages have always been the bane of the sailors' lives. They are in fact and effect the complements of each other. Without either the other could not exist.

The payment of advances, allotments, bonuses, etc., to, or on behalf or in the names of seamen was as old as maritime history and the fugitive sailor laws of all nations were intended to protect the payee against loss by the refusal of the seaman to perform his contract. The sailor never received the money thus signed for; it was invariably paid to a third party known as the "original creditor," to whom he was presumed to be in debt. The original creditor of a sailor was always the "crimp," or "jackal" thru whom he was engaged.

These harpies infested every seaport in the world and thrived bountifully by trading upon the wages, necessities and self-respect of seafaring men. In time they organized into powerful groups or gangs, and in order to make their power over the seamen more sure and complete proceeded to corrupt and coerce shipowners and masters as well as their crews. This they could always accomplish either thru fear or bribery. The shipowner who was too honorable to be bribed would be compelled to lay up his vessels and allow them to "rot in their own neglected brine" because he could obtain no crews except from Crimp & Co., who controlled the available supply of slaves.

On the other hand the master or owner who complaisantly accepted a rebate out of the sailors' advance notes would never experience difficulty in obtaining seamen. This pernicious custom at length became part of an inexorable system, so much so, in fact, that shipowners as a whole came to regard it as a necessary and legitimate business and absolutely refused to engage crews on any terms except those prescribed by the crimps.

The original scale of provisions served out to American seamen until improved by appropriate legislation in 1898 was, like many other maritime regulations, a relic of the [*Continued on page 515*

The sailors' meals on shipboard nowadays are fit to eat—no more "old horse, old hog, shadow soup, hard tack and humbug"

FOOD FRIGHTFULNESS

EXPLAINED BY A GERMAN GROCER

With an Introduction by Sydney Reid

EVERY time that Moses produced a plague the magicians, retained by Pharaoh, duplicated it, making double trouble, until the plague was boils. Then the magicians were so preoccupied with strictly personal affairs that they neglected their enchantments and the unfortunate Egyptians suffered nothing worse than Moses inflicted.

If the United States Government and Mr. Hoover could only confer boils upon the owners of storage warehouses, middle men and speculators in the food business it would probably afford very considerable relief to the common people who find themselves unable to live without eating and who must purchase their food from convenient grocers and butchers. These consumers find that enchantments have been worked against them till their food now costs on an average nearly double the price of three and a half years ago. Some staples have advanced to more than double the price. At the end of last August potatoes went up to ten cents a pound, almost ten times their ordinary price for this season of the year. The Great War provided legitimate excuse for one-tenth the advance, but the rest was pure enchantment.

It may be a mere coincidence that most of the food middle men, storage warehouse keepers and commission merchants in New York City are German born or of German descent—and then again it may not.

BUT the Teuton food dispensers in the United States live unthreatened in peace and safety, in the land that welcomed them and gave them fullest opportunity, and where they developed and prospered as they never could have done at home. To some men an obligation like this compels gratitude. To others it seems an insult, and they hold a secret grudge against benefactors. If any Teuton food men are in the latter class they must be slyly reveling because of the manner in which they are paying off the old score.

Every time the United States makes a move against the fatherland, they can and do collect a fine—just as in Belgium or northern France—by simply raising prices. Any remonstrance by a consumer meets with a bland and placid general explanation: "Yes, I know that is so, but then in this business there is a good deal of loss. What we lose on one article we must make up on another or we could not live at all."

America has chosen Mr. Herbert C. Hoover as Food Administrator just as Pharaoh chose Joseph to help avert famine, but Joseph's advantages over Mr. Hoover were numerous and great. To begin with he had seven years for preparations—the seven full years. Then he possest unlimited means and autocratic power. He established a chain of storage warehouses in which he preserved the surplus of the full years. When the lean years came he had a monopoly of food with which he was able to buy not only the land, houses, implements and cattle of the consumers, but also ultimately the consumers themselves.

Mr. Hoover had no such preparation. He is attempting to control food prices of a loosely organized area that is larger than two hundred Egypts, and his powers are such as are conferred upon him from time to time by a slow-moving democracy that is suspicious of power. Opposed, he finds a powerful army of the cleverest magicians who ever waved a wand. They can make vast stores of provisions vanish into thin air, then reappear again from somebody's pocket, or sleeve, or collar band. So far, Mr. Hoover has not been able to reduce prices of staple foods, or even to hold them from rising. What he did in Belgium shows that he possesses many of Joseph's best qualities, and he may achieve success in spite of all the great difficulties. There were three million additional small gardens in the country this year, and the principal food crops were unprecedentedly large. But to offset that this year's exports broke all records. The increase of exports to the neutral nations in 1917 was 112 per cent, and to belligerents 210 per cent. There is an embargo shutting out neutrals now, but the demand of America's allies is greater and more pressing than ever.

Stopping the war would give no immediate relief. It would, during the first subsequent year at least, only increase the demand. Meanwhile the magicians give a continuous performance, and the only safe prediction concerning food is that it will continue to go up in price.

The Grocer's Answer

IT isn't the grocers who are making the big profits. I get nothing of it. I am worse off than before the war. I have twice as much money invested in my stock, and my profits are smaller. Take my wrapping paper, for instance, and the paper bags I use; I must wrap my parcels or put them in bags, and the cost of this paper has trebled, so that quite often the bag that I must give my customer costs me a cent, which comes out of my profit. My bacon costs me forty-one cents a pound wholesale. It sells for fifty cents a pound, but we lose in the end pieces. Potatoes before the war at this season of the year cost $2.50 for three bushels; now it costs more than that for one bushel, tho potatoes are more plentiful here than ever before—that is, home grown potatoes. We used to import potatoes by shipload from Scotland, for instance, before the war, and I remember one spring about thirteen years ago when potatoes rose to $5 a barrel and then came down to $1.50 in one week. Importations from Belgium made the difference. Almost all imported food has been shut off, while at the same time our exports have greatly increased.

I think if we stopped exporting, food prices would come down. We have raised more than ever in this country, but where is it going? If we send it away we haven't got it—isn't that so? Then when we make food scarce we make it dear—isn't that always so? Of course speculators have something to do with the high prices. I know a man who made a fortune in potatoes. Early last fall he hired a large building for three months and filled it with potatoes that he bought for $3 to $5 per barrel. During January and February of this year he sold them all—say 2000 barrels—for from $10 to $12 per barrel.

ONE of my friends has a farm right on the outskirts of New York City—within the city line. He has to raise two crops a year to make it pay on account of the taxes, and he thinks that the people themselves are going to make potatoes dear this fall in spite of the great crop by grabbing them and storing them in their cellars. That will produce an artificial shortage and prices will go up. If this war goes on, the cost of all food will go higher still because farmers are killing their stock. It pays better to kill the stock and sell it for meat than to carry it when feed is so dear. Farmers can get $20 per hundredweight for live hogs, and corn is $4.65 per hundredweight, so it pays better to sell. Then again, the farmer is driven nearly crazy by the shortage of labor since so many men have gone into the army. Two years ago pork brought $7.50 per hundredweight on the hoof. So of course the farmers sell. There is such a big demand that meat will go higher still. That and the shortage of labor mean more stock killing, and that again will compel another great rise in milk, butter, and all dairy products. Chickens, too, are being killed for the same reason. Feed is so high and labor so scarce it doesn't pay to keep them. I know fifteen families around here in Queens County who kept flocks of chickens in their back yards, and raised eggs, most of which they sold. They've killed the chickens because it cost too much to feed them. If there are fifteen families doing this in my little circle, how many like them are there in the nation? I expect to see eggs go up to $1 a dozen. Handling eggs is a gambling proposition. Some of my friends have ruined themselves speculating in eggs. They have bought at a high price and stored the eggs, then open weather has come, the hens began to lay again, and they couldn't sell storage eggs when fresh eggs were on the market.

Canned and package goods have gone up, farina has doubled in price, rice has doubled. [*Continued on page 511*

HOW THE ALLIES ADVANCE IN FRANCE

The photograph above shows one of the important German positions taken by the Allies last spring on the western front. The lines of trenches have been retraced and lettered to bring out exactly the problem that their capture offered and the direction of the attack, to the summit of Cornillet, indicated. During the preliminary bombardment the French gunners fired over fifty thousand shells into this one spot. The attack, successful only after a month of hard fighting, was carried on under the direction of General Anthoine (whose photograph is published on this page). After the battle of Marne the Germans occupied an uninterrupted line of observations starting at Notre Dame-de-Lorette, extending to Vimy, Chemin des Dames, Moronvilliers. Montfaucon and Les Eparges, down to Hartmannswillerkopf. One of the strongest points on this line was Mont Cornillet, which was a dominating point to the plains of Châlons. Under the direct command of General Anthoine the costly battle of Moronvilliers began on April 17, 1917, and lasted till May 20 of the same year. The capture of Mont Cornillet, which changed hands a score of times, was the

THE CAPTURE OF MONT CORNILLET

key to the rest of the "massifs" which protected Moronvilliers. German genius in putting up a strong defensive observation post on the summit of the hill was discovered after a survey by a major of Fifty-first Infantry. There he found a shaft thirty meters deep cut in the center of the hill and a connecting tunnel dug thru from the eastern slope leading directly to the shaft. An elaborate series of barracks and commanding posts large enough to house three infantries safe from the most terrific bombardment had been built there, yet a single shot from the 400 French mortars demolished the whole structure and the German dead were found piled on top of each other for ten meters deep. A French engineer, sent in to explore the German tunnel-redoubt under Mont Cornillet after the Allies had captured it, took the photograph on the opposite page by the light of a German flare. At least six hundred corpses, piled five or six deep, were lying in heaps in various parts of the long underground galleries; the French bombardment had choked the entrances and ventilation shafts in such a manner that almost the entire garrison were killed by suffocation

AFTER THE BATTLE

This flashlight photograph of the tunnel under Mont Cornillet was taken by a Frenchman sent in to reconnoiter after the

CLIMBING THE UP TRAIL

BY A RECENT SING SING GRADUATE

This autobiographical sketch of a reformed criminal who finds in the tangled circumstances of his fight to "come back" illustration of Emerson's essay on "Compensation" is an interesting psychological study as well as a good story. The ex-convict's first grasp on honest success was broken by one of his own pals, who robbed him of his capital. His subsequent attitude toward himself and toward his fellow convict "Mickey" is a telling point in prison reform. — THE EDITOR.

FOR weeks before my release from Sing Sing Prison I had been eagerly looking forward for the great day to arrive. I used to restlessly pace up and down my cell, dreaming great dreams of what the future held in store for me. Prison born ideas loom large in the minds of the men who have long been immured from the world. On the other side of the iron-barred gate lies a different world—a strange world. And so I found.

I left with $7.45 in my pocket, plus a ticket to New York City. My sole earthly possessions consisted of the suit of clothes I had on, the $7.45 in my pocket and a packet of manuscript I had under my arm. At the end of two days I found that I hadn't a penny in my pocket. I figured out the account of my expenses:

Room rent	$4.00
Tooth brush	.25
Tooth paste	.25
Pair of socks	.25
Comb	.15
Collars (2)	.30
Meals (two days)	1.60
Carfares	.65
Total	$7.45

That night I went over the packet of manuscript I had brought home—things I had written in the solitude of my cell. I selected a story, took it to an editor, explained my position and I sat there while he read it. Half an hour later I left his office with a check for a hundred in my pocket. I was rich; affluent.

I bought a suit of clothes, some underwear and a pair of shoes. Two days later I went to work for a large motion picture corporation at a salary of $30 a week. Every penny I could save I put aside; in the evening I would get out my packet of manuscript and work over a story.

As soon as I had finished one I would take it to an editor—in this way, I soon sold five of my stories and put the money aside. A feeling of elation was mine; I was beginning to taste the fruits of honest labor; when my stories appeared in print, I would hurry to the privacy of my room and there view with pride the children of my brain.

The zest for life was keenly alive; I began to enter more fully into the things that go to make this land of ours a busy hive. It was a wonderful thing to struggle against the tide, there was an honest pride in the knowledge that I was able to breast the stream; some of my dreams were beginning to materialize, and like Alexander of old, I began looking for new worlds to conquer.

Then opportunity knocked; without hesitancy, I flung the door open and made my guest welcome.

A new invention was put on the market—it was a wonderful little contrivance, and so I made a bid for the agency.

I resigned my position, opened an office in the theatrical district—and began the "Upward Trail."

LET me call him Mickey. Mickey had been in prison several times. The judge who sentenced him to serve ten years called him a menace to society. "There are two classes of men," he told Mickey. "The first class should never have been sent to prison; the second class should never be allowed out of prison, and you, young man, belong to the second class. Ten years at hard labor."

I was first attracted to Mickey by his smile; later as I saw and knew him better, I began to feel a genuine liking for him. Mickey told me his story one day. He had learned to smoke opium when he was sixteen years of age; "it was cheap as dirt, then," and Mickey became an habitual user of the drug.

One day Mickey came into my office. He had served his term, and one would never dream that this clean looking fellow had served *at least* four terms in prison.

MICKEY picked up my electrical contrivance and looked it over critically.

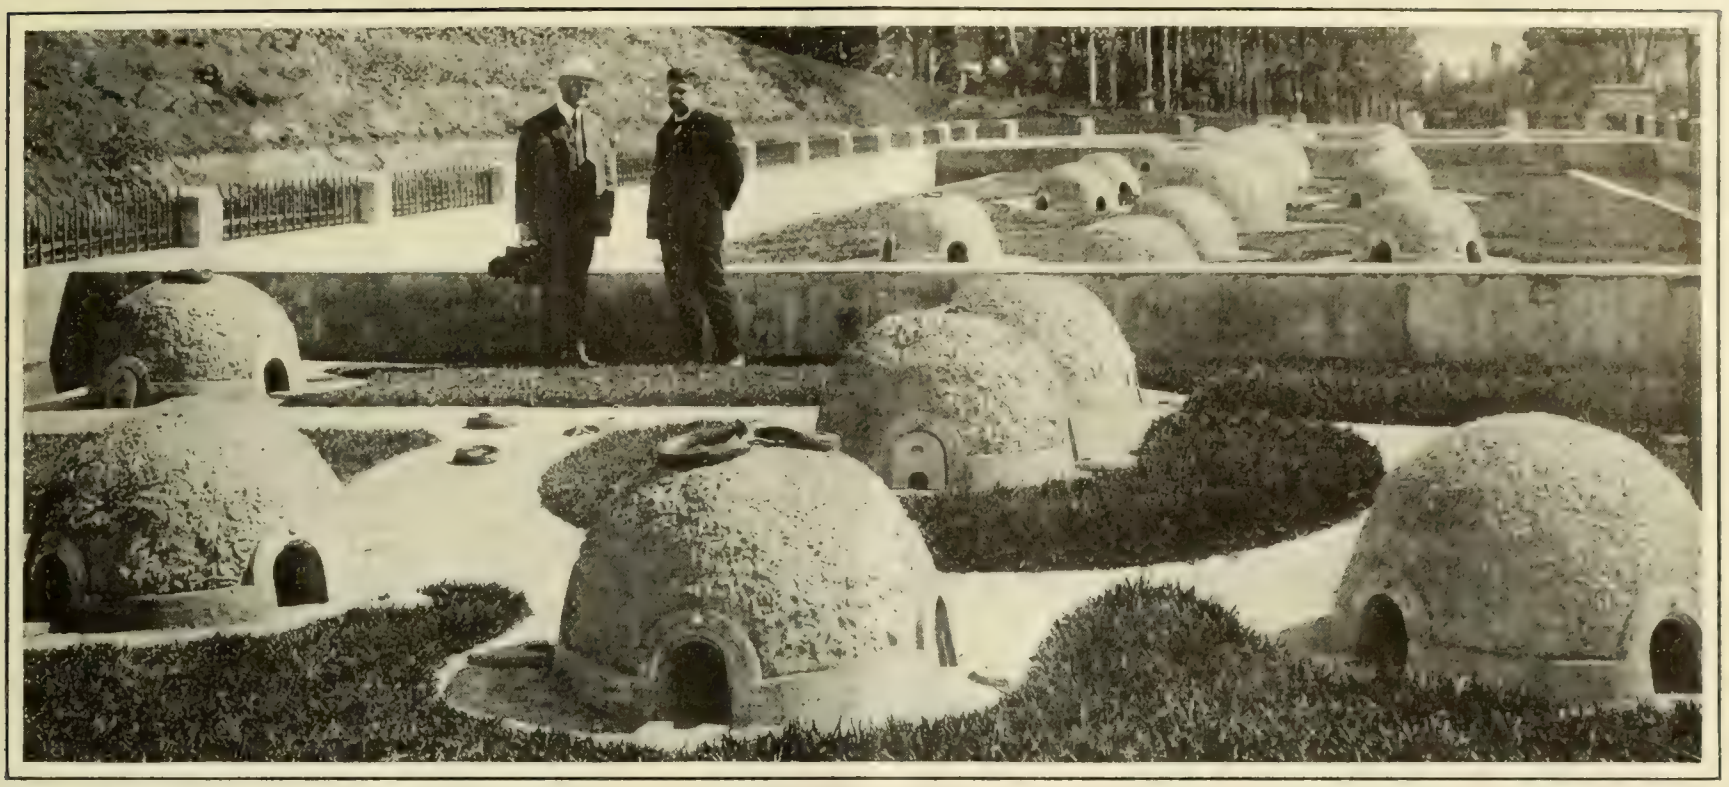
"Say, this is *some* machine; why, I could sell them like hot cakes, *everybody* will buy one of these, lemme sell some of them for you. How much are they?"

This rapid monolog was thrown at me like lightning; I caught his enthusiasm, and so Mickey became one of my salesmen—my best. For two weeks Mickey went about his work gloriously happy. He *did* sell the machines. He said it was the first time in his life that he had ever performed any honest work.

"I wish I knew years ago how *easy* it is to make money. I'd never done those four 'bits' in prison."

"But you forget the 'dope' you used to take, Mickey," I reminded him. "You simply cannot do any work when your system is filled with drugs; and particularly 'hop' (opium). After you smoke all you have energy enough to do is sleep—until it is time to smoke again." He nodded his head in assent.

Then it happened! I had had a particularly trying night; my tooth ached horribly, and when I reached my office the next morning I had a headache along with my tired, sleepy feeling.



A few minutes after, Mickey strolled in. His "good morning" made me look up from my typewriter in surprize. There was a certain thickness in his tone that alarmed me. I thought at first it was liquor, but a glance at his eyes told me that he was again in the grim clutches of dope. Anger and disappointment struggled for the mastery. I knew that under the influence of the drug Mickey was capable of almost anything. The appetite that had lain dormant all these years had been aroused. I saw he was getting restless; a sign that the drug he had filled his system with the night before was dying away, and that his tortured nerves would soon be crying for more. I wheeled on him suddenly.

"LOOK here, Mickey, this is a raw deal you are handing me. For nearly three years you have not tasted this drug—any drug. You came in this office, went to work, turned your money over to your mother and you were happy. You had made good. Now see what you have done. You filled yourself with dope; you know that this was the cause of your being sent to prison so many times. You cannot work in this condition; you know any one who is filled with this stuff cannot enunciate his words clearly; how in blazes do you expect to be able to sell the machines?

"Then I ought to be considered, too. I have worked pretty hard the past few months. I have raked and scraped and saved every penny I could. I have denied myself many of the little things I wanted and needed, simply to get myself a start again. I have had no easy time of it. I have to be mighty careful; I must restore the confidence I forfeited and I must *work* honestly in order to prove my sincerity. You and I are in the same boat. You have to do the same amount of thinking as I, and you must work just as hard. We have a large, man-sized scrap on our hands and if we only half try, we are bound to win and win big.

"Suppose some one we knew came into the office and saw you in this condition? What would they think? Let's go out and get some black coffee; it will do you good and counteract the effects of the dope."

THE coffee braced him up somewhat and I sent him home to bed. Before going home to the office, I happened to remember that I needed some stamps; so I went to the post office and purchased seventy-five two cent ones. I was more or less worried the rest of the day. I felt genuinely sorry for Mickey, for I liked him immensely. About three o'clock, my tooth not getting any better, I closed up the office and went to a dentist. I remember distinctly putting the stamps, fifty-five of them, in the [*Continued on page 516*

Dr. Vital Brazil looking over his snake colony in Sao Paulo. Each of these curious mounds is home to a whole family of snakes

DOWN ON THE SNAKE FARM

BY CHARLES D'EMERY

THERE is in Sao Paulo, Brazil, supported by the Brazilian Government, an immense snake farm. It is called by its director, Dr. Vital Brazil, the Institute of Serum-therapique, and here after many months of experiment Dr. Brazil has succeeded in perfecting an anti-toxin, made from the venom of the snakes themselves, to fight the many cases of death from snake bite that occurred every year in his country.

In order to manufacture this anti-toxin it is necessary to obtain venom from the various species of snakes. These snakes are sent to the institute from all over Brazil and the shipper in return for his trouble receives a little glass vial carefully packed, and all necessary instructions as to how to use it.

This is the anti-toxin for snake bites and it will enable him to save life, even tho the application is made several hours after the accident. In this way the institute keeps on hand about five thousand snakes of every species, both the venomous snakes and the non-venomous.

The venom is extracted from the serpent by grasping the snake firmly, just behind its head, and then squeezing the glands, just back of its jaws. A light oily liquid, almost clear, but with a slight greenish-yellow cast, drips slowly from the snake's jaws into a glass receptacle.

It is then placed in an incubator and slowly evaporated. A crystalline formation is left, varying in color according to the species of snake from which it was obtained.

The next stage in the process is the inoculation of healthy animals with this poison. The animals used are generally strong mules, cattle or even horses, and these animals are able to resist a small injection of the poison. As only a minute injection is made at a time, they have time to manufacture in their blood

© Newman Travel Talks and Brown & Dawson

A death struggle between two of the big snakes. The Mussurana has a strangle hold on the poisonous snake and is crushing it

system an anti-toxin that counteracts the poison. After three weeks each animal, having been under constant observation, is relieved of some of its blood, usually from one to two quarts. This blood by a careful process is separated from the toxins that the animal has

© Newman Travel Talks and Brown & Dawson

The first step in making anti-toxin. The venom is extracted from a serpent by grasping it firmly just behind its head and squeezing the oily liquid from the poison glands

manufactured, the extract being a clear, glycerine-like liquid.

Forty-five cubic centimeters of this toxin will cure the deadliest snake bite, the fluid being injected into the system just behind the shoulder-blade.

ANOTHER branch of the work carried on at the snake farm is the raising of Mussuranas, a non-venomous snake of the constrictor type and the deadly enemy of all venomous species. This snake is quite harmless and is being used extensively in Brazil for the extermination of rodents of all kinds as well as for a guard against the poisonous snake.

One of the photographs shows a Mussurana killing its prey, and altho it may be bitten it is immune from the poison. The deadly species depend upon their poison to kill, the Mussurana on its strength. In an instant there are four coils, sometimes more, about its victim, and these gradually contract, the contraction forming the loop seen in the photograph. The teeth of the Mussurana are in the neck of its victim from the start, the life being slowly crushed out in the vise-like grip of the coils. After a period of ten minutes or more the coils relax and the conqueror starts to make a meal out of the victim, by swallowing it head first. Sometimes after its meal it will go to sleep for several weeks.

A simple but effective method of telling the harmless from the venomous type of snake is thru the eyes, the venomous ones having a long, narrow pupil, while the non-venomous species have a round pupil.

A general observation of the ease with which the poisonous snakes are handled and their sluggishness when not annoyed goes to show that snake farming is not a dangerous occupation, and in the tropics it is a very useful and necessary one.

KEEP ABSORBINE, Jr.

IN YOUR FIRST-AID CABINET

It is a dependable preparation for the numerous household accidents—dependable because it combines efficiency with positive safety. Absorbine, Jr., is made of herbs, and cannot do harm no matter how carelessly used.

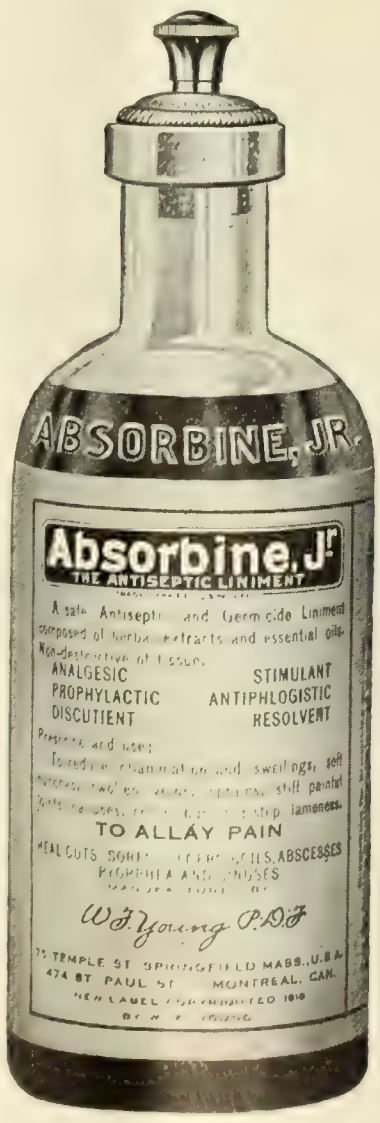
Applied to cuts, bruises and wounds, it makes the part aseptic, kills the germs and promotes rapid and healthy healing. Guard against infection by keeping Absorbine, Jr., handy for emergencies.

ABSORBINE JR
THE ANTISEPTIC LINIMENT
TRADE MARK REG. U.S. PAT. OFF.

For the muscle that has been strained, for the cut or laceration that runs a chance of infection, for the abrasion that pains and the limbs that are stiff and lame from overexertion—use Absorbine, Jr.

Used by athletes the world over as an invigorating antiseptic and soothing rub-down—keeps muscles right and prevents second-day stiffness and soreness.

A Boston physician writes:



"I have used Absorbine, Jr. It is a pleasant remedy, safe and prompt—and does what is expected of a high-grade liniment. In fact, I know of no other liniment as good. It is a good remedy to have always in the house."

Absorbine, Jr., is concentrated and economical, as only a few drops are required at an application; has a pleasing odor and leaves no greasy residue.

Profiteering has been charged against the flag-makers.

Their "$tar $pangled Banner" begins, "Oh, $ay, can you $ee?"—*New York Tribune.*

Wu Ting Fang is at the head of the Chinese Foreign Office and you can't put much over on a man with as good a sense of humor as Dr. Wu. T. K. H. recalls his famous wheeze about the Chinaman who committed suicide by eating gold-leaf. "But I don't see how that killed him—how did it?" inquired an American woman. "I suppose," said Wu, seriously, "that it was the consciousness of inward gilt!"—*St. Louis Globe.*

"You must leave at once."

Her voice was tense, yet there was no response.

"Dinner will be served in a minute and he must not find you here," she exclaimed in anguish.

"You know how he hates you and all your kind," she went on, glancing nervously toward the door. "If you won't go I'll have to kill you!"

And she reached for the fly-swatter.—*Judge.*

The professor was showing a friend round his chemical laboratory. "What has become of Jim Fillbottle?" the friend asked. "Wasn't he studying with the class last year?"

"Ah, yes," replied the professor. "Fillbottle, poor fellow! A fine student, but absent-minded in the use of chemicals—very. That slight discoloration on the ceiling—notice it?"

"Yes."

"That's Fillbottle."—*Tit-Bits.*

On a road in Belgium a German officer met a boy leading a jackass, and addrest him in heavy jovial fashion as follows:

"That's a fine jackass you have, my son. What do you call it? . . . Albert, I bet!"

"Oh, no, officer," the boy replied quickly. "I think too highly of my King."

The German scowled and returned: "I hope you don't dare to call it William."

"Oh, no, officer. I think too highly of my jackass."—*Paris Liberté.*

They were discussing that joke about getting down off an elephant.

"How do you get down?" asked the jokesmith for the fourth time.

"You climb down."

"Wrong!"

"You grease his sides and slide down."

"Wrong!!"

"You take a ladder and get down."

"Wrong!!!"

"Well, you take the trunk line down."

"No, not quite. You don't get down off an elephant; you get it off a goose.—*Indianapolis News.*

The sun shines bright on my conservation flat;
'Tis summer, as none will gainsay.
We have cut out milk, and eliminated fat,
And our meals are only two a day.
The young folks dine on a conservation pie.
Bereft of potatoes and meat;
And our bread is made of the barley or the rye,
And nobody uses any wheat.

Wheat no more, my lady!—
Oh, wheat no more this year!
We will sing one song for our conservation flat,
Till we make the Germans disappear.
—*F. P. A. in the New York Tribune.*

FOOD FRIGHTFULNESS

(*Continued from page 504*)

You see one thing affects the others. People turned to rice when potatoes were so dear, so rice took a sudden jump. Sugar has gone up. The consumer got it for sixteen cents for three and a half pounds before the war. It is thirty-two cents now. Exporting probably makes the difference. It isn't as if all the exports got safely across. A lot is sunk where it does nobody any good. It has to be duplicated, and America is out so much more. On that very big steamship that was sunk about two years ago—I forget the name—Armour was sending 1,500,000 pounds of meats. How many more ships is he sending loaded like that? We have a big supply of foods, but it is not unlimited, and if we send it away we haven't got it, and of course the people here must expect to pay high prices for what remains. Then again some of the new laws have helped to send prices up. You can't keep eggs in storage warehouses more than six months now. Before that law was passed I don't think there was any limit. That helps to make eggs dear.

In a way, I suppose, the high prices are making people economize. I haven't noticed any great change, tho. Eggs, for instance, I only sell two cases of where I used to sell four. But we sell more bread now than ever before. That is because potatoes, cereals, rice, and all bread substitutes have gone so high. Bakers no longer take back the left over loaves, so we can't afford to carry more than we can sell, but bread is among our best sellers. Then there are a few new customers for oleomargarine. People who would be ashamed and afraid to buy oleo for fear their neighbors might find it out, are now eating it in place of butter. So it has risen from twenty and twenty-two to thirty-two and thirty-four cents a pound, and will soon take another rise. A lot of people made gardens this year and raised some stuff to eat, but I don't think it made much difference.

There are many articles that have always been five cents, and customers think they always will stay five cents. Take stove polish, for instance; we're out of pocket selling stove polish, because dealers now charge us fifty cents a gross and we can't sell a box for more than five cents. Customers blame us. With salt it is different. Salt has gone up and we still must sell at five cents a bag, but the dealers provided for that by making the bags smaller. A bag of salt selling at five cents used to contain four pounds. Now it holds only two and a half pounds. The customer doesn't notice the difference, a bag of salt is a bag of salt to him.

The green vegetables have all gone high because of the demand caused by the high prices of other foods. And so it goes. There is only one real cure. Stop the exports!

New York City

Mr. Tucker had unexpectedly come face to face with Mr. Cutting, from whom he had frequently borrowed money.

"Er—aw—what was the denomination of the bill you loaned me?" he asked nervously.

"Episcopalian, I guess," said Mr. Cutting. "At any rate, it keeps Lent very well."—*New York American.*

When Gen. Leonard Wood was a small boy he was called up in the grammar class. The teacher said: "Leonard, give me a sentence and we'll see if we can change it to the imperative mood."

"The horse draws the cart," said Leonard.

"Very good. Now change it to an imperative."

"Get up!" said young Wood.—*Exchange.*

THE NEW BOOKS

A Hindoo Drama

THE CYCLE OF SPRING, by Rabindranath Tagore, is another half-lyrical play by one popularly termed "probably the greatest living poet." This time he deals with the coming again of Spring into the heart of Earth, and into the hearts of her children, human or animal, flower or bird, young or old. Tagore's greatly overestimated wit, wisdom, mysticism, pleasantness, cast again their glamor. Considered as a play *The Cycle* lacks, however, complicating forces, and, therefore, development, characterization, interest, climax. It is chaotic art. Considered as poetry its lyrical interludes are mostly imperfect, meaningless, or prosy. Here is not a tithe of the atmosphere of Maeterlinck's "Pelleas and Melisande," not a tithe of the vigor, message, dramatic intensity, say of the English Gibson or of our own too near Americans, Frost and Sandburg. Yeats and the thoroly underrated Francis Jammes have incomparably more intimacy with both humanity and nature than is here or elsewhere yet shown in Tagore. Still the world will always crown glamour, renunciation, the sentiments and the exotics.

The Cycle of Spring, by Rabindranath Tagore. The Macmillan Company. $1.25.

Statecraft and the War

FOR those who seek to know what the Entente Allies have officially to say to the United States, Francis Halsey's book, *Balfour, Viviani and Joffre*, will have a unique interest. It is based on the newspaper accounts of the visiting war commissions to America and gives the text of all the principal speeches made in this country by Mr. Balfour, Marshal Joffre, the Prince of Udine, Baron Moncheur of Belgium and Ambassador Bakhmetieff of Russia. At the end of the book is a chapter giving contemporary accounts of the arrival of the vanguard of the American expeditionary force in England and in France.

Official utterances at best seem trite, no matter with how much sincerity and earnestness they may be delivered, and many will prefer to read the purposes of the Allies in the words of a literary free lance of distinguished scholarship, unimpeachable integrity and much acuteness of reasoning; such a man as Gilbert Murray, whose *Faith, War and Policy* is one of the most persuasive defenses of British foreign policy ever written. The author's task is a very definite one, altho his work is a compilation of various addresses and articles covering a period of nearly three years. He undertakes to explain and defend the British Government before the bar of liberal and radical opinion, especially in neutral countries. He not only performs perfectly the easy task of showing the manifold fallacies of non-resistant pacifism but courageously ventures to discuss the most questionable phases of his case, such as the suppression of the Dublin revolt, British interference with neutral trade, and the secret diplomacy of the British Foreign Office. But his object thruout is not the making of a partizan case for England and against Germany; it is rather to promote a good understanding among the liberals of every nation so that they may not become the unconscious allies of German militarism thru mistaken and ill-timed quarrels with Germany's opponents. To persons who are not liberals Gilbert Murray attempts no appeal; he is as much opposed to British and American reactionaries and jingoes as to their more numerous kin in Germany.

The writings and addresses of an equally distinguished American scholar for the same fateful three years have also been collected. President Nicholas Murray Butler, of Columbia University, in *A World in Ferment*, pleads for America to abandon the traditional isolation of the past and take its rightful position as a leader among the nations; not only in the sense of a military alliance but in the international confederation which he hopes will ensure a lasting peace when the war is ended. Like Gilbert Murray, President Butler is a pro-Ally because he is first of all a pacifist and an internationalist.

That there are Germans who take the same view of the world conflict is proved by Herman Fernau, whose book, *The Coming Democracy*, is a masterly arraignment of the policy of his nation's rulers. He shows by innumerable quotations from German politicians, historians and court professors how the masters of Germany indoctrinated the people with their ambitious dreams and unscrupulous theories of statecraft. For this reason he lays the whole blame for the war upon Germany's dynastic constitution, which not only placed supreme power in the hands of hereditary rulers but encouraged the people to take all their opinions from those set in authority over them, so that they might applaud rather than protest against the international plot which in no case did they have the power to prevent.

Balfour, Viviani and Joffre, by Francis W. Halsey. Funk & Wagnalls. $1.50. *Faith, War and Policy*, by Gilbert Murray. Houghton, Mifflin Company, Boston. $1.25. *A World in Ferment*, by Nicholas Murray Butler. Charles Scribner's Sons. $1.25. *The Coming Democracy*, by Herman Fernau. E. P. Dutton. $2.

"Probably the greatest living poet"—Rabindranath Tagore

Soul Science and Mysticism

KANT suffered from gout, and succeeded in mitigating his suffering by diverting his attention to philosophical problems. With this and similar facts as a basis it is possible to build up a scientific analysis of consciousness and emotion; with the same foundation it is possible to build up confusion and mysticism.

The firmer path is chosen by the "psychoanalytic" school. *What Is Psychoanalysis?* by Dr. Isador H. Coriat, gives a clear and helpful explanation of the methods and principles of psychoanalysis in the form of a catechism for beginners of the study. *The History and Practise of Psychoanalysis*, by Dr. Paul Bjerre, is both critical and illuminating. It contains bits of philosophy as well as illustrative cases, and constantly emphasizes the prior claim of practical application as against interest in speculation. Dr. Ferenczi's *Contributions to Psycho-Analysis* consists of a dozen odd papers selected and translated by Dr. Ernest Jones. Some of the studies are almost uncanny in their searching insight into the represt thoughts and feelings of ordinary human beings, and they all reveal something that will interest those who are concerned with the more subtle and at the same time the most practical phases of psychology.

The Emmanuel Movement's contribution to "the moral and religious forces in healing" is ably and sincerely presented by Dr. Loring W. Batten in *The Relief of Pain by Mental Suggestion*. This is both empirical and eclectic, seeking to discriminate between various types of ill-health, and to utilize whatever science has to offer while adhering to the assurance that religion is a dynamic force of great potency.

Horatio W. Dresser's *Handbook of the New Thought* will, no doubt, be helpful to many readers—but it is a baffling attempt to show that

theories do not matter, so long as one has the right "point of view." Its logic is distressingly confusing to one who has been contaminated by materialist science; but there must be something in it, since Mr. Dresser's books—more than a dozen of them—are widely read by all sorts and conditions of men and women. *A Simple Study in Theosophy*, by Michael J. Whitty succeeds in its object of stating some portions of the theosophic theory without technical terminology. It is a useful book for those who would have some idea of the general scheme of this revival of ancient thought.

What Is Psychoanalysis? by I. H. Coriat. Moffat, Yard & Co. 75 cents. *History and Practise of Psychoanalysis*, by Paul Bjerre. *Contributions to Psychoanalysis*, by Dr. Ferenczi. R. G. Badger, Boston. $3 each. *The Relief of Pain by Mental Suggestion*, by L. W. Batten. Moffat, Yard & Co. $1.25. *Handbook of New Thought*, by H. W. Dresser. G. P. Putnam's Sons. $1.25. *Simple Study in Theosophy*, by M. J. Whitty. Mitchell Kennerley. $1.25.

War Flames

JUST now sensible people suffer so acutely in contemplation of the agony that is the reality of warfare that a book of shrewd realism describing that agony and its inner meanings can hardly be a book to give pleasure. But when our children's children look back upon this time of the world's terrible travail they will wish to know what it was really like and what it meant to the nations and to the men and women involved in it, whose lives were lost and forgotten that the race might win a new freedom and blessedness.

A book which may possibly live to give posterity that understanding of the great war is *War Flames*, by John Curtis Underwood. Only a Homer could swing such rich heroisms as the war has brought forth into an adequate rhythm; only a second Dante could constructively image this Inferno by using rhythmical forms; and to do it would be the work of years. But Mr. Underwood has not attempted these. He has made prose poems, each one a realistic picture or story of the meaning of the great war in individual lives. And he has grouped these poems by nationalities. They are very bravely and beautifully written, conceived with the utmost gravity and sincerity of spirit. No war book has seemed to me to possess a greater dignity. Altho the book must be read as a whole for the best that is in it, yet I like to quote the last passage of "Spring in Picardy":

Facing her is a huge shell hole and a crater, where her eyes are caught and lost in blackness again and again.
And she stares farther away into emptiness till her eyes creep inch by inch to two tiny violets
That have blossomed overnight at the very verge of the void, and she softly looses her husband's hold of her
And staggering like a little child she comes, and she falls and buries her face and her soul in the France that breathes from their fragrance.

War Flames, by J. C. Underwood. The Macmillan Company. $1.35.

Federated Protestantism

THE foremost movement in American church life has been the federation of the great branches of Protestantism thru the Federal Council of the Churches. This body has recently published a *Library of Christian Coöperation*, which sets forth in a painstaking and inspiring fashion the common platform of the churches on certain vital reform movements. Volume 1, *The Churches of Christ in Council*, is merely a report of meetings held and committees appointed. It is of interest to the expert only.

The second, third and fourth volumes, by Sidney L. Gulick and Charles S. Macfarland, deal with the questions of *The Church*

TWO BOOKS WHICH MADE HISTORY

"The books and speeches of James M. Beck and our present-day duties should be studied by every real American."—THEODORE ROOSEVELT.

The Evidence in the Case

"For the clearness of its statements and the cogency of its legal argument it has not been surpassed, if indeed it has been equalled, by any writer since the war began."—LORD BRYCE, *Formerly Ambassador for England to the United States.*

"I regard it as the most able and comprehensive of the many papers produced by this terrible war and you have placed the world under great obligation by your work."—JOHN W. FOSTER, *Formerly Secretary of State.*

"It seems to me in every respect a most able and admirable statement of the case. A masterly analysis of the diplomatic records. I have read it with great admiration."—ARTHUR JAMES BALFOUR, *Formerly Prime Minister of England.*

Part or all of this book has been printed in SEVEN LANGUAGES

More than 1,000,000 copies sold. 14th Large American Printing. 12°. Over 300 pages. $1.25 net. (By mail $1.35)

The War and Humanity

3d Edition. Revised and Enlarged

"Mr. Beck's volume was a classic the moment it appeared. We know of no more logical and lucid discussion of the essential facts and problems of the great war, nor any more truly consistently and even vigorously American in its spirit."—*N. Y. Tribune.*

"One of the most virile and convincing books that the great war has produced in any country of the world."—*N. Y. Sun.*

12°. 400 pages. $1.50 net. (By mail $1.60)

Estimated unearned discounts	220,283.18
Total	$209,953,374.73

and International Relations, the fourth volume specializing on Japan. These contain a splendid summary of the peculiar problems facing the American Church because of the war in Europe, and are a thrilling call to the proclamation of the gospel of peace. The fifth volume, by Charles S. Macfarland, discusses *Christian Coöperation in World Redemption*. Its first part is a convincing and clear-cut summary of the church's attitude toward such problems in American life as prohibition, Sunday observance and divorce. The latter half deals with coöperation in home and foreign missions. Henry H. Meyer, in the sixth volume, *Coöperation in Christian Education*, splendidly sets forth the intricate problems involved in Sunday schools, missionary classes and theological seminaries. Together these books offer an enlightening and helpful addition to recent religious literature.

Library of Christian Coöperation. 6 vols. Federal Council of the Churches of Christ in America, New York. $5.

Stories of Several Sorts

A story of dual personality has a fascination lacking to an ordinary detective novel. *The Other Brown*, by Adele Luehrmann, adds to its psychological interest, a murder, a mine in Mexico and a love story ending in New York; sufficient material to interest for an idle hour. (The Century Company, $1.35.)

Day and Night Stories, by Algernon Blackwood, have the author's usual unusualness. No one else could write with the restrained art which always seems about to lift the curtain between man and the unseen, yet always leaves us with a sense of mystery and of Isis faintly guessed at thru many veils. (E. P. Dutton, $1.50.)

Understood Betsy, by Dorothy Canfield, is the story of a nervous child who has been fussed over by aunts suffering from enlarged conscience. Later, she is sent to Vermont where the wholesome life on a farm with quiet, simple people works a rest cure and develops a new and charming Betsy. Primarily a story for children, there is an underlying substratum of sensible lessons for parents on the way to train a child mostly by letting her alone. (Henry Holt & Co., $1.30.)

Real service has been rendered the historian of the novel by the publication of *The Life of Lazarrillo de Tormez* in an English translation by Louis How. The work is especially interesting because it is the earliest of the picaresque tales from which the modern novel has developed. The text is a scholarly and careful presentation of the original. It is accompanied by a full and erudite introduction and notes by Charles Philip Wagner. (Mitchell Kennerley, $1.50.)

If You Like Essays

Some Views Respecting a Future Life, by Samuel Waddington, the English poet and editor, are written in leisurely style with allusions and extended quotations from many ancient and modern writers on immortality. The author holds, with J. S. Mill, that if enlarging knowledge should lead to disbelief in individual, personal survival, the zest of life would still remain and ethical ideals would not lose their force and alluring power. (John Lane Company, $1.25.)

An unusual and interesting piece of criticism is that on *English Biography*, by Waldo H. Dunn. He does not agree with the usual thesis that biography is merely an easy form of the narrative and he analyzes the methods and manner of the great lives from Walton's to Allen's Phillips Brooks and defines the qualities that go to make such a work masterly and bring it truly into the realm of literature. (E. P. Dutton & Co., $1.50.)

A book which will give the student a good idea of the every day life of the Greeks in the age of Pericles is *The Days of Alkibiades*, by Professor Robinson, of Winchester. This well done essay takes us to market, to the games, to feasts, to the mysteries of Eleusis, and even into the homes of Athenian gentlemen. (Longmans, Green & Co., $1.50.)

Many will remember the column essays by Louise Collier Willcox that made for years one of the worth while features of *Harper's Weekly*. One of the best known of these, *House in Order*, a sane little sermon for downhearted folk but as far as possible from the Pollyanna school, has been reprinted in pleasant booklet form. (E. P. Dutton & Co., 25 cents.)

Francis Thompson: Essays, a biographical sketch and other papers on the poet, by Benjamin Fisher, is now posthumously published. Of flowery and figurative language, this tiny book possesses real critical grasp, and has itself real beauties of phrase that make us curious to see that earlier work, "Life Harmonies," praised of Alice Meynell. (Franklin Publishing Company, Canton, Ohio, $1.)

During a series of years, Harry Lyman Koopman, Librarian of Brown University, has been writing of *The Booklover and His Books*. While under their spell, books have worked upon him, in their various aspects, and he has graphically registered bookish themes, from a variety of slants. His twenty-four essays, now assembled, make a direct appeal to bookish people. (The Boston Book Company, $2.)

Pictures and Plays

Schnitzler's *Comedies of Words* are well named. Words, words, words, to little interest and at times to little dramatic purpose! "The Big Scene." being twice as long as the others, took too much courage to tackle, but of those read, "His Helpmate" is the best, adding a new and more pessimistic twist to a play in the "Green Cockatoo" volume. (Stewart & Kidd Company, Cincinnati, $1.50.)

Mrs. Lorinda Munson Bryant's new volume, *American Pictures and Their Painters*, is an informative summary of the American school of art. The older and younger painters are critically considered and the author's appreciations are characterized by both fairness and interest. The 230 illustrations are chosen with discrimination and are characteristic of the painters. The book is an admirable survey of the field. (John Lane Company, $3.)

In his latest book, *Community Drama*, Percy MacKaye has an "address" no doubt highly acceptable to those who believe in the commanding and permanent place of the pageant as a great welding force in society. Rambling, etherial, idealistic, illogical, however, when weighed on the printed page, it takes into account few facts regarding ninety-nine plus per cent of humanity as humanity now is and is, sadly, long yet liable to be. (Houghton, Mifflin Company, 50 cents.)

The Art of Looking at Pictures, by Carl H. P. Thurston, "tells not merely *what* to look for in the work of a painter, but *where* to look, and *how*." One hundred and twenty artists, conservatively chosen, are treated by brief, interesting biographies, and illuminating quotations. Thirty-two illustrative prints (few genre or landscape), helpful introductory material and bibliography, chronological chart and indexes complete a useful guide. (Dodd, Mead & Co., $1.50.)

Three chapters are added to the new edition of Montrose J. Moses's *American Dramatist*. It is, all in all, an excellent book, yet it does not give enough attention to individual plays; gives too much attention to conventionalized ideas, and gives too little credit to "the movies," to the little theater and to those dramatists of excellent "moments," who by their very failures to construct model plays best exemplify the American drama's real trend. (Little, Brown & Co., Boston, $1.75.)

A BETTER BERTH FOR JACK TAR

(*Continued from page 503*)

Dark Ages. It consisted chiefly of old horse, old hog and hard tack, shadow soup and humbug, with three quarts of water per day for cooking, washing and drinking.

When the seamen's bills were first submitted to Congress, the chief surgeon of the United States Marine Hospital Service came voluntarily forward and submitted a far more elaborate and varied scale of provisions than the seamen themselves had ever dared to demand. Speaking before a congressional committee in support of this improvement the doctor declared that a substantial improvement both in regard to the quantity and quality of food then granted to seamen was absolutely essential to their health and welfare and as a preventive of scurvy.

The learned doctor also joined unreservedly in our plea for better, safer and more sanitary living and sleeping quarters. According to statistics compiled and kept by the marine hospital boards during the previous century or so, he said, the average life of a seaman was only about thirty years, and the terrible mortality among them, excluding accidents, he attributed mainly to scorbutic diseases arising from poor food and lack of vegetable diet; and to consumption and other pulmonary diseases due to crowded quarters, lack of ventilation and enforced uncleanliness.

Prior to that time there never had been any real legislation either in regard to forecastles or food. The law only said there should be a "forecastle or sailors' house" in each vessel, leaving its size, location and appointments to the option of each individual shipowner. In some ships a dog hole in the forepeak could be made to answer for a forecastle because it was unavailable for cargo, and sailors could not rebel. In other cases a small compartment in the forward house, next the junk locker, would be partioned off for a forecastle and the venerable legend: "Certified to accommodate 'ten' seamen," indelibly carved over the door frame.

In these stifling, stinking, darksome dens merchant Jack was obliged by custom and usage to live and move and have his being without adequate ventilation in the tropics, or heat in the frigid zone. Here, too, he must keep all his clothing and personal effects. In stormy weather the forecastle had to be battened tight to keep out the water; thus often, for weeks at a time in certain latitudes, both light and air would be excluded from the sailors' quarters, leaving them to rest as best they might in their cramped and dismal dens.

But eventually pulmonary diseases among seamen increased to such an alarming extent that the United States Government was at length persuaded to act upon the urgent requirements of the case, and a sanitarium for consumptive seamen was established.

Then a forecastle space of not less than seventy-two cubic feet for each seaman was decreed by law. This space, 6x6x2 feet, has fittingly been referred to as being rather large for a coffin but too small for a grave. And any one who will take the trouble to measure it out on one side of a room and then try to live and keep house in it for a month or two will appreciate the justness of the gruesome simile.

The La Follette act makes a further increase in crew space to 120 cubic feet per man and extends the law to vessels of 100 tons and upward and likewise to fishing vessels, which had hitherto been exempted from compliance with legal provisions in this regard. The act also provides for adequate facilities for sleeping room, hospital quarters, fumigation and baths.

During the comparatively short time it has been in force the La Follette law has achieved amazing success in remedying these evil conditions. It is now considered a privilege and an honor to serve in the American merchant marine.

Old-time Yankee sailors, the best that ever grew, are coming home from all quarters of the globe asking to be repatriated and qualified to serve their country. Coincident with the vast increase in our merchant marine and the assurance of improved conditions guaranteed under the new laws, American young men have been entering the service during the past two years in great numbers and are eagerly aspiring for "A. B." certificates, while the clean, stalwart, English-speaking Scandinavian seamen, every one of them a sailor, have been flocking by thousands to the American colors, sailing in reformed American ships and proud of their American citizenship.

Today, thanks to Senator La Follette, there occurs no alarming dearth of loyal and competent American seamen or American sentiment to man our navy, our coast patrol, our army and supply transports or our merchant marine, and defend them either against Teuton pirate-fish or corsairs.

I believe this to be the silent prayer that rises triumphantly in the heart of every true sailor in times of danger: "The world has given us nothing to live for; may Heaven grant us something for which to die!" That is why he has always been so terrible in a fight, so reckless in a storm. A man before the mast in peace; behind the gun in war.

New York City

Pebbles

Germany has suffered from a bad drought. And still more from a bad reign. —*London Opinion.*

"The Kaiser's credit is certainly good."

"How's that?"

"Why, whenever he wants an advance he promptly receives a check."—*Puck.*

Annoyed because a waiter wouldn't attend to him a young man in a Strand restaurant broke a plate over his head. Well, well! "Youth will be served," as the saying goes.—*Passing Show.*

"Then this" asked rejected James, "is absolutely final?"

"Quite," was Dorothy's calm reply. "Shall I return your letters, James?"

"Yes, please," answered poor James. "There's some good material in them that I can use again."—*Augwan.*

A tired Tommy, burdened with about five tons of equipment, climbed wearily into a bus outside a London railway terminus. There were no vacant seats and no one offered the weary man a seat. He was dead tired and so resolved to get a seat by strategy. He flashed from his haversack a small bomb.

"This is one of the things we use out there, you know," he remarked to the interested passengers. "See this pin here? When I pull it out like this it should explode fifteen seconds later. They're pretty deadly, too. If I put it back again the thing's harmless." Then, beginning to search frantically, "Gosh! Where on earth did I put that pin?"

The passengers rose in a body and scrambled for the door, tumbling over one another to get off. Tommy watched them go. Then, putting the bomb back in his haversack, he stretched himself full length on the cushioned seats. —*Pittsburgh Chronicle Telegraph.*

Trade Mark

Adopted 1916

About five years ago a woman in New York asked her business advisor, *"Why Can't I Buy Bonds in a Department Store?"*

This was the beginning of the Thrift Bond idea. The business man started to investigate. He did much traveling in this and foreign countries. He interviewed bankers, lawyers and merchants. He compiled statistics and made tests. He interested a group of high-grade, successful, conservative men in the enterprise.

$10. THRIFT BONDS

are 3% certificates of ownership in Governmental obligations held by the Equitable Trust Company of New York as Trustee.

They furnish an absolutely safe, convenient medium of saving and investment and should be on sale in every store in America.

Thrift Bonds are issued in $10 and $100 units, and are accepted at par in exchange for bonds of the Liberty or other Governmental War Loans with no charge to holders except transportation, premium and accrued interest, if any, at the date of the exchange.

Correspondence with Banks, Employers and Merchants is especially invited.

Send for pamphlet "War Savings for Workers."

CLIMBING THE UP TRAIL

(*Continued from page 508*)

top draw of my desk before I went out. This was Thursday. I had my tooth extracted and two others treated and then went home. I felt considerably better next morning, and as I left for the office I began mentally to go over my plans for the day. I had two or three letters to answer, and after sealing them I opened my draw to get the necessary stamps—they were not there. I thought it strange, yet I looked thru every draw in the desk. Where on earth did those stamps go to? Just then the telephone rang. It was an inquiry for a machine for immediate delivery. I went to get the machine—then the blow struck home. *They were all gone!* Who could have taken them? Then I saw a stub of a cigaret on the floor—Mickey's favorite brand—then I knew!

Ruin stared me in the face unless I could locate Mickey and get some of my machines back. I had about seventeen dollars, and with this I started out. I fine-combed the city without success. Several people had seen him; two of them told me he had my machines. I was utterly discouraged. About six o'clock I learned definitely that he had gone to Boston. Without hesitancy, I bought a ticket. One of his pals must have notified him that I was on his trail, for I found that he was gone, but in his hurry he left three of the machines behind. These I sold before I came home, using the money to pay some bills.

. . . . . .

Years ago I read Emerson's essay of "Compensation." Today the full force of it struck home. I had only reaped what I had sown; I was getting a dose of my own bitter medicine. I sat in my office wondering what was going to happen. Here I was with one hundred and seventeen dollars in bills to meet and nothing with which to meet them. Worse than that, I was penniless. True, I could write, but I simply could not concentrate my mind on anything, much less write coherently. Perhaps I could sell some of my ideas to some of our popular writers—there, too, I met with failure. Then my board bill came due, and instead of going home I made myself comfortable in my office, or as nearly so as a hard seated swivel chair will permit. That night I came face to face with temptation. I knew where I could easily get from $800 to $1000, and *I knew the combination of the safe.* A titanic struggle took place; I was almost driven wild with the frenzy of despair—till the picture of a little girl arose: then the struggle passed. On the morrow I shall look for a job and start all over again. I've intelligence and a proportionate amount of initiative. There is a niche for me to fill and I *know* that I shall find it. Mickey? Some day he is coming back to me, because when he realizes that he has injured a friend—he will make amends. It wasn't Mickey—it was the dope he had taken. That is why I have faith in myself—and Mickey.

Customer—Which way to the hosiery department, please?

Shopwalker (an ex-soldier)—Right turn at the next aisle, sir, forward about twenty paces, left oblique, forward, left turn, halt, and it's there.—*Judge.*

"That 'ere Sammy's an educated toff from 'arvard," said Tommy Atkins, leaning on his spade. "I'm jolly well weary of 'is learnin', too, that I am. We're ordered to throw up trenches along the Marne, and as 'e picks up 'is spade, th' bloomin' college blighter says, says 'e: 'Well, Tommy, come on; it looks like we're infra dig!' And wot I says is: Blarst a college education, anyhow, eh?"—*Richmond Times-Dispatch.*

WORKING WITH THE JAPANESE

(*Continued from page 501*)

the inauguration of the Japanese labor organization to be held at Tokio next spring. The invitation was at once accepted by the convention and Mr. Paul Scharrenberg, secretary-treasurer of the California Federation of Labor, has been agreed upon as California's delegate to Japan some time in 1918. After the Eureka convention Mr. Suzuki went to Baltimore, where he attended the convention of the American Federation of Labor, and extended to President Samuel Gompers the same invitation which he had extended to the California Federation of Labor. The invitation addrest by Mr. Suzuki to President Gompers is an interesting document, setting forth the reasons why his society desires Mr. Gompers' visit to Japan. It runs in part thus:

There are various reasons which prompt us to extend this invitation to you. In the first place, your presence on the occasion will prove a great encouragement to the working people of Japan who are just awakening to the importance of the part they are playing in the industrial advancement of the country.

In the second place, your visit to Japan will make most favorable impressions upon the conservative classes of the Japanese. Your constructive views with regard to relations between capital and labor will go a long way toward convincing the conservative elements of our country that the labor movement is nothing to be feared but something which must necessarily accompany industrial development, and which has to be fostered and guided in the right direction.

Last but not least, your visit to Japan will aid in the promotion of peace between the two countries. There is in our country a large number of people who really believe that the United States is determined to wage an aggressive war against Japan. They believe that America is expanding her army and navy with that aggressive campaign in view. We hope that you will carry to the masses of Japan a message of peace and friendship from the masses of your country. We believe that you will do a great service to the cause of humanity if you will cross the Pacific and assure the people of Japan that the common people of the United States have no desire to embroil the two countries in an armed conflict.

At the Eureka convention, which I have already mentioned, an important resolution was adopted to the effect that the executive committee of the California Federation of Labor look into the practicability of organizing Japanese workers in this country with a view to affiliating them with the American Federation of Labor. This is indeed a great stride toward the creation of better relations between the American and the Japanese workers. Another noteworthy aspect of the convention was that it did not recommend any fresh legislation for further restriction of the rights of the Japanese in California. Up to 1913 the successive conventions adopted resolutions or platforms urging the prohibition of ownership of land by the Japanese. When the anti-Japanese land law was finally adopted in 1913, the State Federation of Labor and the San Francisco Labor Council put themselves on record as favoring the enactment of a more stringent land law, depriving the Japanese of the right to lease agricultural land. But the Eureka convention this year, contrary to the proceedings of the previous sessions, did not adopt any such measure. Nor did the platforms of the State Federation of Labor and the San Francisco Labor Council, in the political campaign just ended, include any plank looking toward further restriction of the rights of Japanese in California. True, the Eureka convention, as previously, did adopt a resolution objecting to Oriental immigration; but the significant part of it was the divergent views the resolution called forth. "This sort of resolution gets us nowhere," declared Hugo Ernst, representing the culinary workers of San Francisco; "why can't we face the question more squarely and honestly and organize the Japanese workers in our midst, which is the only solution of the question?"

Now the question is: "What has brought about such a signal change of feeling on the part of California's working classes?" It is not easy to answer. Perhaps Japan's generous participation in the Panama Pacific International Exposition is one of the important factors. Undoubtedly the efforts of the intelligent classes of the Japanese in California to get into closer touch with Americans are another factor. The untiring efforts of the California Women's Peace Party and of the California branch of the American Peace Society have contributed considerably toward the betterment of the situation. The presence of Mr. Suzuki, the representative of the Laborers' Friendly Society of Japan, at the important labor meetings in California last year is unquestionably a fourth factor.

This last-named fact deserves more than a passing note. The idea of bringing Japanese labor delegates to American labor conventions was suggested to Dr. Sidney L. Gulick, of the Federation of the Churches of Christ in America, by Mr. Frederick K. Ely, labor editor of the San Francisco *Bulletin*, at the convention of the American Federation of Labor held at Philadelphia in November, 1914. Dr. Gulick, with Mr. Shailer Mathews, sailed for Japan in 1915, carrying a message of peace and friendship to the people of Japan. While in Tokio he met Japanese officials who welcomed his plan and as a result Suzuki came to America as the representative of the Laborer's Friendly Society of Japan.

With all these circumstances working toward the alleviation of the unhappy situation in California, the attitude of organized labor would not have changed so markedly in favor of the Japanese had it not been for the realization by the workers of California that, thanks to the "gentlemen's agreement," Japanese immigration had ceased to be a menace to their welfare. The barrier between the Japanese and the American working men is economic competition. Once that barrier is razed both are willing to stand face to face upon the plane of equality.

It is the realization of this fact which brought about the conciliatory attitude of California's labor toward the Japanese. If professional politicians and agitators will only let the matter alone, the question will solve itself in the due course of time. It would be the hight of unwisdom on the part of the California government or legislature to revive the Japanese question when Japan is glad enough to forget the controversy. It is beyond a doubt that the Japanese Government is willing to follow the same policy with regard to immigration that it has been following ever since the conclusion of the gentlemen's agreement. The danger that confronts America and Japan is not yellow immigration, but yellow politicians and yellow journals. If the latter will refrain from boiling the pot for a few years, the antagonism of the Pacific Coast toward the Japanese will have spent itself.

San Francisco, California

This New Range Is A Wonder For Cooking

Although it is less than four feet long it can do every kind of cooking for any ordinary family by gas in warm weather, or by coal or wood when the kitchen needs heating.

There is absolutely no danger in this combination, as the gas section is as entirely separate from the coal section as if placed in another part of the kitchen.

Note the two gas ovens above—one for baking, glass paneled and one for broiling, with white enamel door.

Gold Medal
Glenwood

The large oven below has the Indicator and is heated by coal or wood.

See the cooking surface when you want to rush things—five burners for gas and four covers for coal.

When in a hurry both coal and gas ovens can be operated at the same time, using one for meats and the other for pastry—It

YOUR BUSINESS AND THE WAR

The Independent offers you the free service of its Efficiency Plan and Purchase Department to help you put your business house in order.

We are at war. It is a time for clear thinking and exact planning. It is a time to consider thrift, economy, cost-saving, organization, equipment, efficiency.

ARE YOU READY?

You will lose some of your valued men. How will you replace the lost effort? How will you keep your business machine running smoothly under the new war conditions? Have you figured out the way to meet the emergencies which are inevitable?

Is your business in "the third line of defense"? Do you know the list of "war trades" that experience has taught England must be carried on and not suffered to slacken? Do you know how this list compares with ours in the United States?

Have you arranged your office expenses on the budget system? Have you estimated what your business should cost for the next twelve months?

Have you considered how many machines there are on the market that will make your workers more efficient—and save many dollars in your pay-roll?

Without cost to you, The Independent-Harper's Weekly Efficiency Service stands ready to help you meet these questions squarely. Our files of information are at your service. Our expert counsellors are at your service.

This is a time to chart your course; to perceive your actual needs; to take an inventory of your dependable resources; to strike a balance on which you can proceed intelligently and with every possible chance of future surprise and shock eliminated.

IF YOU WILL WRITE

to our Plan and Purchase Department and ask for its Check List of useful suggestions as to appliances, and ways and means the chances are that you will get new light on some business problems that concern you now more than ever before.

When you get the Check List, mark it carefully. State your problem exactly and fully, and within a reasonable time you will receive a complete report on the matters you have indicated.

We have served hundreds of executives throughout the United States during the last few months in all lines of business endeavor. We are ready to help you now—without expense or obligation on your part.

The Independent-Harper's Weekly Efficiency Service

Independent Opinions

The following message was adopted by the Washington Street Congregational Church of Toledo, Ohio, Sunday morning, July 8, sent to all the negro churches of the city and, thru them, to 8000 negroes in Toledo:

To our Negro Brethren in Toledo:

In view of the recent "race riots" in East St. Louis, Illinois, we can well understand the discouragement and depression of spirit which have come to thoughtful Christian black people in the United States. We can realize that for them, as for us, the problems of living together under the same Government are not yet settled and that the utmost charity, patience and coöperation are still necessary.

To our brethren of the negro race in Toledo we send a word of good cheer! Their race has made splendid progress since slavery days. We believe they will take heart, even in the face of the present discouragement, and move forward to still finer things in education, character and efficiency. We believe they will thus rebuke their critics and lift up those among them who are cast down!

We send this message in no spirit of self-satisfaction, for without trying to assign the final blame for the tragedy at East St. Louis we realize that white men as well as black men must bear part of the responsibility and shame. Race riots are not one-sided evidences of defect and degeneracy in men and in social institutions! In the difficult task of readjustment and of uplift we pledge our sympathy, coöperation and service.

ERNEST BOURNER ALLEN, MINISTER
Toledo, Ohio

Thru membership in a local C. L. S. C., I have read The Independent carefully for two years, usually with much pleasure and profit. But your attitude toward the South on the negro question is uniformly unfair, just as is the attitude of many other Northern papers. If the race riots of July 1 to 3 had occurred in St. Louis, Missouri, they would have been the theme of many a Northern editorial, and offered a fine text for enlarging upon the lack of safety for the negro in the South. But they occurred in the Illinois town of East St. Louis. In speaking of this race war, The Independent brings in present labor conditions, and says the trouble was "due to economic jealousy rather than race hatred."

MAY BASKERVILLE KENT
Dublin, Virginia

We are surprized to find that one of our readers believes The Independent to condone mob murders in the North. We have always denounced in the strongest terms Northern as well as Southern lynchings. It is true we mentioned the local labor situation in East St. Louis, because all accounts agree that it was an important factor in the riots, but certainly with no idea of palliating crime. It is as wicked to kill a man because he works to support his family as to kill him because you don't like his race.

We quote with our fullest approval the following extract from a sermon delivered on the occasion of the East St. Louis massacre by the Reverend James W. Lee, of St. Louis:

There never was an anarchist among the negroes. They believe in observing the law,

and yet anarchists like Emma Goldman can stir up sedition, urge insurrection against the Government, and go practically unmolested, while the poor negroes in East St. Louis, for no other crime than that they wanted work, were pounced upon, many of them beaten to death, their houses burned, and they themselves driven from their homes by hyenas and tigers in human form.

My father was a slaveholder. I was brought up on a plantation near Atlanta, Georgia. When my father joined the Confederate army he left my mother and his children on the plantation with no other protection than such as the negroes could give. This was true with the families of slaveholders all over the South. And yet, while the soldiers of the Northern armies were fighting to free the negroes, and the negroes knew it, there has never been a case reported where the negroes failed to be loyal and true to the families of Southern soldiers.

In view of all this, it must be clear that what we need in the United States today is a new civilization, in which there must be the silent reassertion of the principle of authority, of an authority purged and purified by the rejection of all unworthy elements, an authority based on the reality and sacredness of life, that we have more or less lost in the past fifty years.

St. Louis

A Southern reader charges us with prejudice against his section of the country.

I herewith hand you two clippings taken from The Independent. When the first came out I preserved it for the express purpose of comparing it with your comment on the East St. Louis affair.

In one instance, one man was killed, wrongfully, and in your comment you saw fit to fasten the crime upon "The best citizens of a Southern state."

In the other case between 20 and 300 were slain. This you discovered was by the "white men of the city slums." I wish the author of these two articles would calmly and dispassionately search his own conscience and soul, and undertake to discover what motive prompted him to use the pages of a great magazine to so discriminate in his treatment of crime, when committed in different sections of this country. If he will be but honest with himself, no further comment will be necessary on the part of readers.

M. C. EDWARDS

Dawson, Georgia

The Independent condemned both crimes equally. The reference to the "best citizens" of Memphis who participated in the lynching there was in quotation marks and, of course, sarcastic. There were, indeed, according to the newspaper accounts of the time, some *prominent* citizens involved in the affair; but The Independent well knows that the true "best citizens," both North and South, are those who in any rank of life stand for law and justice and that in every part of the nation these are in the majority.

I want to remind you that a short time before the declaration of war, when Woodrow Wilson stated that the United States must get ready to "put down revolution here and abroad," or words to that effect, you protested emphatically that revolution was an American right and something she should not deny to other countries. Now you have completely changed front.

EMMA R. SINGER

Middletown, California

The Independent is as far as ever from any denial of the "right of revolution." We do not think, however, that a country like the United States, which is based upon the voted will of the people, needs any other kind of revolution than such as may be brought about by the orderly and legal process of legislative reform.

YOUR HOTEL *in* NEW YORK

WHEN you come to New York, make the Hotel Astor your home. It is more than a mere stopping place. It is New York epitomized.

Situated in the very heart of the metropolis, the Hotel Astor is the logical scene of New York's most important functions. Here Big Business meets for consultation. Here are held receptions for distinguished foreign visitors and ambassadors. The Hotel Astor is chosen for great National festivities.

Whether you need a single room or an elaborate suite, you will obtain at the Hotel Astor the utmost in comfort. From the magnificent roof garden to the cool orangerie and the numerous lounges, promenades, writing rooms and restaurants you will find a spot to fit your every mood. The cuisine and service are superb.

Do not run the risk of marring your visit by accepting less than the Hotel Astor offers you—nor waste time in an effort to obtain more elsewhere.

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. ORAL AND WRITTEN COMPOSITION.

The Story of the Week.

1. Write a single paragraph of detail in which you present the most important facts given in "The War for the Trident."
2. Write a full and conclusive paragraph based on the following topic sentence: "Premier Kerensky is one of the greatest men the war has produced."
3. Write a short exposition in which you explain why Haiti and other formerly neutral nations have joined the Allies in the war against Germany.
4. Give orally a clear explanation of the present situation in the Balkan lands. An outline map of the Balkan lands, placed on the blackboard, will aid you in making your statements clear and convincing.
5. Write a short newspaper item concerning the work of the Exports Administrative Board.
6. Imagine that you are a patriotic and honor-loving citizen of Sweden. Write for your local paper an editorial article concerning the Swedish revelations.
7. Imagine that you are a correspondence clerk for a bank in a small village. Write a letter to be sent to the patrons of the bank, explaining the issue of the Liberty Loan bonds.
8. Prepare a speech suitable to be given to strikers in shipyards during the war.

Editorial Articles.

1. Point out the elements of contrast that appear in "The Two Englands."
2. Explain orally why uniformity is essential in any work done on a large scale.
3. Read "Pioneers in Statesmanship." Prepare a speech appropriate for the unveiling of the Cheyenne tablet.

Down on the Snake Farm. By Charles D'Emery.

1. Point out the ways in which the article fulfils the requirements for a popular technical article.

Food Frightfulness. By Sydney Reid.

1. Show in what way the author of the article made his work original, interesting and emphatic.

The Up Trail. By a Recent Sing Sing Graduate.

1. Explain in full all the reasons that may have induced the editors of The Independent to accept the article as one that would appeal to their readers.

A Better Berth for Jack Tar. By James H. Williams.

1. Make a short précis, or summary, of the article, placing especial emphasis upon its principal thought.

Working with the Japanese. By Mildred Augusta Clarke.

1. Write a short criticism of the article, showing with what you agree, and with what you disagree, and giving your opinion of the article as a whole.

SECTION II. LITERATURE.

The King of Yellow Butterflies. By Vachel Lindsay.

1. Explain in full what is meant by "public verse."
2. What is the advantage gained by producing verse in the way suggested by Mr. Lindsay?
3. Point out and explain the figures of speech in the poem.
4. What characteristics make the poem unusually beautiful?
5. Join with the rest of your class in reading the poem in a way somewhat like that suggested by Mr. Lindsay.

The New Books.

1. Explain the following expressions: half-lyrical play; complicating forces; lyrical interludes; atmosphere; trite; technical terminology; picaresque tales; erudite introduction.
2. Rabindranath Tagore has been termed "probably the greatest living poet." Explain at some length your reasons for opposing or supporting that statement.
3. If you could have only one book from those reviewed in "Statecraft and the War," which would you buy, and why?

SECTION III. GRAMMAR.

May We See the Letters?

1. Give the syntax of the following: all the pronouns; all the words ending in "-ing"; all the prepositional phrases.

SECTION IV. WORD STUDY.

1. Give the meaning and the derivation of every one of the following words prominent in The Story of the Week: trident, conspirators, camouflage, de facto, de jure, revelations, convertible. fiscal, sedition, contingent.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Our Food Supply—"Food Frightfulness," "The Food Fight," "The St. Paul Conference."

1. "These consumers now find that . . . their food now costs on an average nearly double the price of three and a half years ago." Why?
2. "Mr. Hoover has not been able to reduce prices of staple foods," etc. Why not?
3. "Stopping the war would give no immediate relief." Why not?
4. "It isn't the grocers who are making the big profits." Who is?
5. Discuss the various factors which have contributed to the rise of prices of meats, dairy products, cereals, eggs and other staple products.
6. What are the remedies which the St. Paul Conference proposed?

II. The Women's Suffrage Movement—"Pioneers in Statesmanship."

1. Many people would regard the language of this editorial as extravagant. Pick out some of the sentences which sound extravagant. Justify the statements if you can.
2. "Nineteen of our states have granted the franchise to women." Name as many of these states as you can.
3. Explain the reference to the state of Maine.
4. Interpret the last sentence in the editorial.

III. World Peace—"The Conflict of Peace Terms," "Peace and the Papacy," "The German Reply," "The Austrian Emperor's Reply."

1. Discuss the peace terms set forth by the Pope, by President Wilson, by the Allies and by Austria and Germany, pointing out the proposals that agree, the demands that might well be seriously considered, and the terms that seem irreconcilable.
2. What is the fundamental contrast in viewpoint between Germany and the Allies in their proposals for peace?
3. Sum up as many reasons as you can to support the statement "It all falls back upon what President Wilson has said, that the world cannot trust Germany."
4. "The German people must find some way of convincing us, not only of their sincerity, but also that they have the power to hold their Government to it." What seems to you the solution?

IV. The Government of England—"The Two Englands."

1. Under normal conditions how does public opinion react upon the Government of England? How has this been modified during the war?
2. "The Tories are furious," etc. Why?
3. "But America has always known that there are two Englands." What are the facts that prove this?

V. The Russian Revolution—"Russian Republic Established."

1. The Russian Revolution has already passed thru several stages. Many of these are similar to those in the French Revolution. Study the history of the two revolutions and make comparisons as follows: (a) Milukoff and Mirabeau; (b) the Duma and the Estates General; (c) Kerensky and Danton; (d) The riots in Petrograd and those in Paris; (e) the National Council and the National Convention; (f) the establishment of the republic in both countries.
2. "An exactly similar period of uncertainty existed in France immediately after the close of the Franco-Prussian War." Justify this comparison.

VI. The California Labor Market—"Working with the Japanese."

1. Review the history of the "anti-Japanese movement."
2. "The movement for Asiatic exclusion is based chiefly upon economic grounds." Explain.
3. Since then [November, 1915] events have happened, all tending to create . . . a sympathetic feeling toward the Japanese." What are these events?

VII. The American Merchant Marine—"A Better Berth for Jack Tar."

1. "It is Great Britain's naval supremacy today that has enabled her and her Allies to hold the colossal power of the Teutons in check," etc. Prove that this is so.
2. What is the La Follette law referred to in this article? What effect is the law having upon the development of our merchant marine?
3. Summarize the conditions which existed on board American merchant ships as described by the author. Compare these conditions with those which exist under the new law.

"LOOK IT UP IN NELSON'S"

The World's Great Rulers, Statesmen, Diplomats, Scientists, Specialists, and Scholars, when seeking the most Accurate and the Latest Information, depend upon Nelson's—the World's Greatest Question Answerer—Because by means of Nelson's Perpetual Loose-Leaf Binding Device Nelson's is years later than any of the other Encyclopaedias, which are bound in the old way of stitching and gluing. Nelson's Perpetual Loose-Leaf Encyclopaedia is always New—IT CANNOT GROW OLD.

Treating over 1,000,000 Topics with 7,000 illustrations, 500 new maps and plans, models, manikins, and colored plates. The Patented Loose-Leaf Binder makes a volume so practical that by simply turning a nut the pages are loosened, the obsolete pages easily removed and the new pages substituted. The Publishers issue to subscribers not less than 250 revised pages each six months—in March and October—thereby making Nelson's Encyclopædia always new and abreast of the times.

HAS REVOLUTIONIZED ALL ENCYCLOPAEDIA MAKING

Nelson's patented loose leaf binding device is remarkable for its simplicity. To insert the new pages, you loosen the nuts at top and bottom, and raise the cover. The pages will then be free for you to remove and insert the new ones.

Sciences change overnight. Discoveries are of last week—inventions of yesterday. Encyclopædias that served you well within the last decade are now practically obsolete. They tell you nothing of the Great War—destined to change the map and the history of the world—whereas Nelson's is down to October 1st, 1917.

Research Bureau for Special Information

Nelson's Permanent Research Bureau for Scientific Reports and Special Information and Special Correspondence is the only organization of its kind in existence. It is prepared to answer fully and freely any question, to supply **free** any information that Nelson's subscribers may ask or may want to know. Any time a subscriber wishes a special report on any subject, large or small, old or new, he simply writes to Nelson's Research Service Bureau with the positive assurance that he will promptly receive the latest obtainable and most dependable information on that subject.

READ THESE LETTERS

Dr. George A. Tolman of Detroit says:

"I particularly recall a civil suit for alleged hydrophobia from dog bite. Found medical literature, at my command, unsatisfactory. Sent an S. O. S. to your Bureau, and in an incredibly short time received synopsis of all the best authorities. Have frequently used the Bureau, with satisfaction along other lines."

Mary E. Mack, Assistant Librarian of Cornell University, says:

"I add with pleasure my name to the many who have already expressed their appreciation of the excellence of the NELSON LOOSE-LEAF ENCYCLOPÆDIA. The best in many repects that we have in our library."

Dr. T. Verner Moore, Lieutenant U. S. Medical Reserve Corps, says:

"I wish to express my appreciation of the very prompt response of Nelson's Research Service Bureau and the very able way in which you handled the subjects. They were concise, to the point, and of the greatest value.

"I have been detailed down here on active duty, and, of course, had to leave my L. L. at home and I miss it more every day, as I had come to rely on it very extensively for reference.

"I have had a detachment of men for the Medical Department sent here for intensive training, and with the help of your Research System I am able to keep up."

WHEN ALL ENCYCLOPAEDIAS FAIL LOOK IT UP IN NELSON'S

The fact that Nelson's Perpetual Loose-Leaf Encyclopaedia is the standard authority in every quarter of the globe is in itself the highest recommendation. No book which is not thoroughly good could stand the inquisition of these hundreds of thousands of readers and continue to sell as Nelson's is selling now.

EXCHANGE Send for price list giving amounts allowed for old encyclopaedias to apply as part payment on a new Nelson's.

ARE YOU INTERESTED IN THESE NEW SUBJECTS ?

JOHNS-MANVILLE ASBESTOS ROOFING

JOHNS-MANVILLE SERVICE
COVERS THE CONTINENT

Cleveland Museum of Art
Cleveland, O.
Hubbell & Benes Archts.

This Monumental Building has a Monumental Roof

WHEN you look at this enduring monument to art—its grace, its repose, its beauty, all unite to express one thought eloquently—permanency. It is a valuable building; its contents almost priceless. So it is made of the best materials obtainable. It has a Johns-Manville Asbestos Roof.

This doesn't mean that it has an expensive roof, because over a period of several decades, or as far into the future as you care to think, it will need no coating or painting because it is all mineral. And during your life and even those of your children it will still be guarding the art treasures beneath it from weather and fire.

Any building can have a Johns-Manville Asbestos Roof. Your building can have the same protection—an all mineral roof (Johns-Manville Asbestos and natural asphalt) that's immune from all roof diseases.

There is a Johns-Manville Asbestos Roofing for every roofing purpose, and all of them are protected by

Johns-Manville Roofing Responsibility

—a principle that protects the users through an exclusive system of registration. When you register your roofing it is then our obligation to see borne out every claim made for it, so that you will be completely satisfied with its service.

Asbestos Built-Up Roofing for flat surfaces; Asbestos Ready Roofing for sloping surfaces; Transite Asbestos Shingles.

* * *

All the Johns-Manville Asbestos Roofings listed here are examined, approved and labeled by the Underwriters' Laboratories, Inc., under the direction of the National Board of Fire Underwriters.

REMARKABLE REMARKS

GERTRUDE ATHERTON—Authors are queer cattle.

CASPAR WHITNEY—There are no degrees of amateurism.

GUTZON BORGLUM—I believe there is no sex in an angel.

HERBERT HOOVER—The large question of the hour is prices.

GENERAL LEONARD WOOD—The war will not be easily won.

PRINCE ARTHUR—It is good to deepen our faith in the future.

SENATOR VARDAMAN—I never have anything to do with lobbyists.

W. J. BRYAN—The quickest way out of the war is straight thru.

VICE-PRESIDENT MARSHALL—I do not care to engage in hair-splitting.

J. OGDEN ARMOUR—The hard thing is to overcome riches and be human.

SENATOR GRONNA—I don't know what I am. I used to be a Republican.

JOHN D. ROCKEFELLER—Boys nowadays take advice and then do as they please.

THEODORE ROOSEVELT—The only peace is the peace of overwhelming victory.

ROY K. MOULTON—The most of the Long Island Sound comes from Oyster Bay.

FATHER H. B. TIERNEY—Get acquainted with your neighbor; you might like him.

GENERAL PERSHING—I try to do a good day's work, and when it is finished I go to bed.

ORVILLE WRIGHT—I find that a larger proportion of women make good flyers than men.

PRESIDENT JAMES A. B. SCHERER—Women do not take to the notion of wearing "Hooveralls."

HARVEY M. WILEY, M.D.—I have no more faith in tobacco-habit cures than in alcoholic-habit cures.

MARY PICKFORD—The only signs that I believe in are four leaf clovers and the wish at the new moon.

OTTO H. KAHN—The business man's slogan during the war should be "No panicky saving and no excessive profit."

EMPEROR WILHELM—German loyalty will bring to naught every attempt of separation between the German people and their Kaiser.

LINDSAY RUSSELL—Japan can be made one of the world's great playgrounds. It is but a day farther from the geographical center of the United States than Switzerland.

EX-PREMIER ASQUITH—Perhaps of all the men of this generation Alfred Littleton came nearest to the olden ideal of manhood which every father would like to see his son aspire to and, if possible, attain.

RUPERT BROOKE—In five things America excels more than England: fish, architecture, jokes, drinks and children's clothes.

SENATOR LA FOLLETTE—I am one citizen in the United States who is ready to go against the wall to preserve democracy.

GENERAL VON HINDENBURG—By his attempt to create disunity, President Wilson has succeeded in uniting the German people.

BILLY SUNDAY—Pontius Pilate was a stand-pat, free-lunch pie-counter, pliable, lickspittle, tin-horn, peanut-grafting, ward-heeling, weasel-eyed, rat-hole of a whiskey-soaked God-forsaken politician.

THE FOOD FIGHT

Under this head, every week, The Independent will print some vital part of the information which is being circulated by the Department of Agriculture to aid American housekeepers in their patriotic and intensely necessary work of conserving food.

GRANDFATHER used to think he was not properly fed unless he had chops or steak for breakfast, a big rare roast for dinner and still another cooked meat for supper. But today Americans use much less meat than they did in grandfather's times. One reason is because the price has risen and most people can't afford to eat it so freely, and another is because people have come to realize that they are generally better in health if they eat less meat.

To turn the entire country into a non-meat-eating people is by no means desirable. But to stretch the supply of meat over the needs of the United States and the Allies is necessary, and quite possible without entailing any hardships.

In France, horses killed at the front are being shipped directly to Paris for sale in the public markets, and legislation has restricted not only the amount of meat purchasable, but also the days when it shall be purchased.

Under the stress of much want among our Allies, every American woman ought to do what she can to help. The Food Administration suggests the following economies:

In the first place limit the number of times you serve beef, mutton or veal and pork in roasts, steaks or chops to once a day.

Insist on having all the meat you pay for; that is taking home all trimmings of fat or bone and making use of them.

Do not throw away so much as an ounce of meat or fat.

If there is meat left over, serve it in some way for luncheon. Stews, goulashes, meat pies, and such combinations as a moderate service of meat with a liberal service of gravy for potatoes, rice and so on, make a most satisfactory luncheon dish or might even do for the family dinner. If the amount of meat left over is small, use it for flavoring rice, or vegetables, for making gravy, or seasoning vegetable soups.

The estimate below, published by the Connecticut Food Supply Committee, is an impressive argument for saving every particle of meat:

A two pound steak is calculated to serve four people.

If one ounce, or one-thirty-second of that steak, or any other kind of meat, is thrown away by each one of the 20,000,000 families in this country it will amount in a day to 1,250,000 pounds.

The average estimate of meat per pound is low at 25 cents. That 1,250,000 pounds a day at 25 cents a pound would amount in money to $312,500 a day.

Think of throwing away that much money or that much meat when our Allies are actually in need of food!

ABOVE THE BATTLE

AN AIRMAN'S PHOTOGRAPH OF ONE OF THE BIG GAS ATTACKS IN FLANDERS

COUNTING OUR BLESSINGS

THERE is no use in attempting to ignore the black cloud of depression which hangs over all of us as the result of thirty-eight months of war. Altho the United States is an eleventh hour belligerent, we were immersed in the war atmosphere during the months of our neutrality; we suffered with the sufferings of Europe and the anxieties of the men who fought for freedom were our own. We know so well what is wrong with the world that we are in danger of losing our sense of perspective and forgetting that while clouds may gather and then drift away the sky is always there.

On what may we congratulate ourselves or, to put things more modestly, for what should we be grateful? It will do us no harm to seek an answer to this question.

In the first place, the German Government has not only failed in its raid on civilization, but has confest its failure. Can any one believe that the Central Powers, who blocked disarmament at the Hague conferences and refused arbitration in the case of Serbia, would now be pleading for limitation of armament and compulsory arbitration if victory had perched on their banners? It may yet require months or even years to turn a peace based on compromise into a peace based on justice, but the peace that Germany desired to dictate in Paris in 1914 is forever impossible. The only danger now is of stalemate, not of checkmate.

In the second place, the Russian peril has vanished from the earth. Russia is still in danger for herself, but she is no longer a danger to others. The more powerful and wealthy the present liberal republic may become the better every one, except the military oligarchy of Central Europe, will be pleased. The nightmare of Europe and Asia ruled by the knout, which once drove England into a shameful alliance with the Turk and at a later time frightened the German liberals into submission to Prussian militarism as the less of two evils, has disappeared, as all bad dreams do, with the first rays of the morning sun.

In the third place, America has assumed her rightful leadership among the nations. President Wilson occupies a position of moral authority to which no other of the rulers of mankind can lay claim. The historic policies of the United States have become the maxims of the statesmen of Europe. It is to the people of this country that the free nations of the world are now looking, and not in vain, for men, ships, arms, supplies, food, medicine, invention and diplomatic guidance.

In the fourth place, we have now the assurance that the United States is a nation, not a mere population. Labor and capital have alike pledged life and work for their country's cause. A generation that has never known compulsory service has accepted it without resistance for a war thousands of miles from our shores. There is, indeed, a selfish minority that cannot see why we should concern ourselves about the freedom of the seas or the freedom of the European continent, but no one would have predicted before we entered the war that this minority would have been so small or so wholly without influence. Very little has gone into the melting pot that proved infusible.

In the fifth place, we have learned to know our neighbors. Argentina, for example, is no longer "one of those funny little countries where they are always having revolutions." We recognize it as a stable and prosperous commonwealth which is rapidly becoming one of the most important nations of the earth. England is no longer "our hereditary enemy." France is no longer to us a suburb of Paris. Belgium is not now a mere workshop or Italy a mere art gallery. The war has educated us.

Finally, we have been brought face to face with the realities of life. We have passed beyond the easy optimism that can shut its eyes to evil or the still easier pessimism that flies the white flag of surrender whenever misfortune appears. We believe that God is immortal and that the soul is immortal, that daybreak follows every night, and that, while we may now and then lose a battle with the forces of evil, a battle is only an incident in the great campaign. Christians have always believed this, but many of them have only lately realized the significance of their creed. Is it nothing to be grateful for that in the hour of trial millions of human beings have found the basic truth of the religion which formerly seemed to them too good to be true?

A BILL FOR THE PROMOTION OF SECTIONALISM

BLOOD is thicker than water—but there is something thicker than blood, and that is printer's ink. This country, peopled by all the races of the earth, is one of the most unified of nations. Why? Because the people read the same newspapers, magazines and books.

It was not the Constitution that united the United States. It was the railroads and the uniform postal rate.

Any one familiar with present political conditions will realize that the country is threatened by a new sectionalism arising from conflicting interests and temperaments. There is danger of another Mason and Dixon line dividing the East from the West. There is only one way of preventing such a disaster; that is to keep the people reading together and so thinking together. Congress should promote this, not prevent it.

The proposed zone rate for periodicals may prove to be as great a blow to the Union as the passage of the Secession act by the Legislature of South Carolina in 1860. The zone tariff was adopted not as a measure of economy, but for the protection of the villag store against the mail order house, and the local farmer against his distant rival. To include books in it was a great mistake because it imposed a tax upon the Western reader without benefiting anybody. But to impose such a restriction upon periodicals is much worse because more people read them and because they deal with current events and questions. There is here no question of protection to local industries, for books and periodicals can only be published in a few places in the country. Local periodicals, however well edited and printed, can never take the place of the national weekly or monthly in its unique public service of keeping the minds of the American people in touch with one another. It would be far better as a measure of public welfare and national security to carry all written and printed matter free of cost than to penalize and prevent the circulation of national periodicals by the proposed zone system. Would the American people have presented so united a front to Germany as they do if for the last three years the people of California had read only San Francisco literature and the people of Illinois only Chicago literature and the people of Massachusetts only Boston literature?

The German Government under the same circumstances has taken exactly the opposite course from that contemplated in the American Congress. The German newspapers and magazines have been harder hit by the war than those of any other country. The rise in the cost of paper, of machinery, of labor, of everything connected with the printing business has seriously crippled the publishers of Germany and has caused the suspension of many periodicals. Of course it is the better class of periodicals, those that are

run for a higher purpose than money-making, that have suffered most.

The German Government, realizing that the suspension of such periodicals would destroy the greatest educational and moral agency of the country at the time when it was most needed, has taken the radical step of relieving them from the burden of postage altogether! That is, the German Government, which is in desperate need of money and is taxing everything it can lay its hands on, has deliberately relinquished a part of its postal revenue because it interfered with the spread of literature among the people. *Fas est et ab hoste doceri.* It is meet to learn even from an enemy.

The American periodicals are unrivalled by any other country in numbers, variety, popularity, attractiveness, literary merit, beauty of illustration, independence of thought, moral purpose and political power. To restrict the range of their influence and to narrow their field would be to inflict irreparable injury upon the nation.

THE FIRST STEP

If the world is to be made safe for democracy it must be made unsafe for autocracy.

THE CULT OF THE BAD BOY

THE last forty or fifty years have witnessed a strange revolution in the boy hero of the story books. We remember what he used to be like. Groomed with exquisite neatness; gifted with the manners of a French dancing master of the age of Louis XIV and the morals of New England's first generation; eschewing tobacco, profanity and bad grammar with equal zeal; as thrifty and industrious as if he had stepped out of "Poor Richard's Almanac"; such was the lad held up for admiration and, if possible, for imitation. Imitators he rarely found, but admirers he must have had or he would not have remained for so many decades the ideal of all those who wrote edifying fiction.

In the busy generation that followed our Civil War the public grew (somewhat excusably) tired of Timothy Trusty and his Addisonian English. Boys were permitted to be a little mischievous, even within the covers of a book. But these changes were at first made gradually and with some apology.

When Aldrich's "Bad Boy" or Hughes's "Tom Brown" got into a fight their authors had to stop and explain to the reader for a page or so that an exchange of fisticuffs on the playground is not necessarily a deadly sin. Such a delay would not now be tolerated; the reader is anxious to see the scrap and asks no apologies from the author in his capacity as referee.

Finding that the public did not remonstrate, the authors grew bolder. They dropt their purpose or pretense of edification and gave straightforward realistic stories of boy life in which nothing was extenuated and naught set down in malice.

Scores of excellent stories, from "Tom Sawyer" to "Penrod," became possible. It is hard to imagine any one producing such fiction in the days of "Sandford and Merton" when the tale was only an excuse for the moral.

But this beneficent revolution went too far. The writers of fiction were not content to let the "good boy" and the "bad boy" dwell together in a common tolerance like the lion and the lamb in the prophet's vision of the millennium. They began to take sides with the bad boy and extol his mischievous deeds as signs of grace. Toward the conventional good boy they showed an increasing intolerance and they pelted him with hard names such as "prig," "grind" or "goody good." Again they wrote books with a purpose, but the purpose was the exact opposite of what it had been to an earlier generation of novelists. Stealing watermelons was no longer a misdeed, or even an excusable outbreak of animal spirits; it was a positive duty. The boy who did *not* steal watermelons, the fictionists darkly hinted, was fit for treasons, stratagems and spoils. Fighting became almost a ritual. Covering the teacher's chair with fresh mucilage was a part of the life of every "normal boy." The boy to whom baseball was the greatest thing in life marched amid the applause of authors, publishers and educational theorists into the full limelight of publicity, while the youngster who was fond of his schoolbooks slunk into the shadows to escape the finger of scorn which every one pointed at him. Nietzsche's dream, the transvaluation of all values, had been achieved.

We do not protest against the promotion of Deadshot Dick, the Boy Bandit, from the forbidden pages of the penny dreadful to the dollar-and-fifty-cents novel of schoolboy life reposing respectably on the parlor table. We object only to those writers who make a convention out of naughtiness.

For one thing, boys are not all of a pattern. There is no need to cry shame on the lad who reads Tennyson instead of Alger or who helps his sister wash dishes instead of mixing green paint with her hair tonic. Happiness is attained in various ways, and a child has as much right to seek it in quiet channels as in boisterous ones.

And in the second place, it is almost sure to take all the fun out of mischief to regard it as a duty. When a boy takes a day off from school and goes fishing without previous notice to parent or teacher the thrill in his adventure comes from the fact that he is doing what is forbidden and punishable. How can the modern educator have the heart to spoil his fun by stopping at the river bank to say: "That's right, my boy; every manly man played hookey when he was a youngster. Now if you are good—I mean bad—and will help me set fire to Farmer Brown's haystack I will show you how you can crawl into the circus tent without getting caught"?

PAYING FOR THE WAR

NOT many years ago the country was scandalized by the idea of "a billion dollar Congress." Last week Congress passed by a unanimous vote a special deficiency bill appropriating nearly eight billion dollars. This time there is little disposition in the country at large to criticize Congress for extravagance, but the unprecedented expenditure has aroused serious consideration and widespread alarm. It is indeed necessary that we should seriously consider the distribution of the burden of these vast sums and how to reduce our personal expenses to meet them, but the alarm over the future is largely founded on a financial fallacy from which a little clear thinking will relieve us.

The popular apprehension commonly takes the form of such expressions as these: "The world is going bankrupt. We are spending the wealth of the past and of the future. How can we ever pay the enormous bills that will be thrust upon us when the war closes? They will put an unbearable burden upon our children's children."

These are all false alarms. We can answer the points in the same crude fashion: "The world cannot go bankrupt because it cannot borrow from the other planets. We cannot spend much of the wealth of the past because it is not suitable for warfare. We cannot spend any of the wealth of the future because it is not in existence. There will be no unpaid bills at the close of the war. Our children's children will be poorer than they might have been had there been no war, but they will not owe us anything because we shall all be dead by that time. At the moment the peace treaty is signed all of the damages, all of the expenses, will have been paid for—by somebody."

To simplify the problem let us consider a single isolated country, Germany. People sometimes wonder why Germany has not gone into bankruptcy since it has been virtually shut off from the outside world. The answer is that Germany has not gone into bankruptcy just because it has been shut off from the outside world. If Germany had been free to buy and borrow from other countries her financial credit would have sunk very low if not altogether collapsed. But as it is the German Government has met its vast expenditure mostly by taxation and borrowing from its own people. This means essentially that most of the able-bodied men of Germany have been in the employ of the Government for the last three years and working at war instead of working at more profitable and agreeable industries. They have had lower wages, but in some cases better food and clothes than formerly. The economic effect is the same as if the courtiers and capitalists of Germany had increased their personal expenditure to the same amount as by giving ten thousand dollar dinners every night and smashing up an automobile every day. The German people have lost most of their labor for three years, but they have not lost a large part of the property they had at the beginning of the war. The land is still there, tho its fertility has not been kept up, the cities are intact, the libraries and museums are safe, the mines are in existence, altho they have been robbed of part of their treasures.

But, generally speaking, Germany has paid for the war day by day, and as a whole will owe little at the end of the war. The German Government has already accumulated a war debt of $5,000,000,000, but in so far as this is owing to its own citizens it would not make any difference to the amount of money in the country whether it is ever paid or not. Suppose the Government should repudiate its internal loans or all its creditors should burn up their bonds. The former would be an economic crime and the second would be an unparalleled act of patriotism, but either course would wipe out in an instant the war debt that looms so large in our imaginations, yet Germany would be not a pfennig richer or poorer.

WHAT has been said of Germany applies to the belligerents as a whole. This is practically a world-wide war. Now the earth, as Wells has said, imports nothing but meteorites and exports nothing at all. All of the great capitalistic nations, that is all that have accumulated any considerable amount of available wealth, are now numbered among the belligerents, so it is impossible for them as a whole to acquire a heavy external burden of debt. Within each group of belligerents there have been extensive transfers of wealth. Great Britain, France and the United States have made gigantic loans to their weaker allies, Russia, Belgium, Serbia, Italy and Rumania. Germany has furnished funds to Bulgaria and Turkey. Japan, which has been making munitions instead of fighting for the past two years and a half, is getting relatively richer. Such neutrals as Norway and Sweden and the remoter belligerents, such as Canada and Australia, have been obtaining good prices for their products, but probably no nation, neutral or belligerent, is as well off as it would have been if there had been no war. All have suffered, tho not in the same degree.

As we have said, all the bills have been paid by somebody. But the party who has paid for the depredations of the war and the expense of carrying it on ought in many cases, to be relieved of the burden. When the Austrians burned down a Serbian cottage or the Germans blew up a Belgian factory it was the owner who stood for the loss. He should be recompensed at the cost of the invader. The military expenditures have been largely borne by those patriotic citizens who voluntarily contributed their savings to the government for national defense. They should be reimbursed at the expense of the nation as a whole. The country also owes it to those who have risked their lives in its defense that they or their dependents should never suffer want. The financial obligations of these loans and pensions may extend to the end of the twentieth century or longer, and this is really what people mean when they speak of the burden laid by the war upon future generations. The point we are making is that this is not a new burden to be imposed but merely a readjustment in the name of justice and mercy of losses already sustained. We, the people now living, have paid in full for this war in blood and gold and all that can be done about it is to see that those who have suffered least or even profited by it individually shall share with those who have had to suffer most.

All nations, even the richest of them, live from hand to mouth. If all the people should stop working they would all speedily starve. There is barely enough food in the best of times to last from one harvest to another. The food the soldiers are living on was produced within the last twelvemonth and the same is true of most of the things they are consuming. Shoes, rifles, clothes last only a few weeks. The submarines, aeroplanes and most of the big guns now in action have been built since the war began. All the belligerents ran short of ammunition within a month after they began to fight. But the production has been continuously increased, so if the war were to stop today the world would be richer in all kinds of military supplies than it ever was before. That is to say, there has been a net gain in that form of wealth which has been most extravagantly consumed.

THE total cost of the war for the first three years is estimated at $100,000,000,000. The material damage is somewhere about $5,000,000,000. If we take this latter figure to represent the civilian property existing in 1914, but since destroyed, such as railroads, bridges, machinery, ships and buildings, it appears that the current military expenses of the war are already some twenty times greater than its material damage. At the present rate of expenditure, about $150,000,000 a day, either party could better afford to stand its own losses rather than to continue the war a month longer, even tho by that time it could force the enemy to assume the whole bill for damages. Before the war the countries now at war were spending over $2,000,000,000 a year on their armies and navies. If the war results in a peace so stable that this amount could be saved the cost of the war could be largely paid for in the next fifty years without the burden being any heavier than was borne in 1914.

It has in part been met already by individual economy, by more efficient management, by harder and more profitable work, and by drafting into service the idle rich and idle poor. If these practises could be continued after the war it might be possible within a single generation to bring the world to the same stage of prosperity that it would likely have reached if it had gone on in the same old way without the set-back of the war.

There are of course certain irreparable losses. The forests that have been depleted for timbering the trenches can be grown again in the course of many years, but the reservoirs of petroleum drained to furnish fuel for aeroplanes, ships and motor cars will never be refilled. The coal and the copper, the iron and platinum will be for all future time scarcer and dearer because of this reckless waste. In this respect we may be said to have been robbing posterity. Most serious of all the permanent losses is the loss of life. There will be as many people in Europe after the war as there were before, but they will be of inferior quality, for ten million picked men have been killed. Among them may have been some scientist whose discoveries would have been worth millions a year, some genius who would have reorganized industry, some artist who would have created a thing of beauty to last forever, some preacher who would have inspired nations to a nobler life. Such losses as these are as irreparable as they are inestimable.

THE STORY OF THE WEEK

War Tax Bill Reported

The conferees from the House of Representatives and the Senate have concluded their deliberations and reported a measure which represents a compromise between the views of the two branches of Congress. As revised, the War Taxation bill is expected to raise about $2,700,000,000, in addition to the annual Federal revenue of about $1,333,000,000 obtainable under existing laws. Few changes were made in conference in the two most important schedules, the income tax and the excess profits tax, but the increase in some minor taxes and the restoration of others approved by the House but abandoned in the Senate increased the total expected yield of the measure by some $275,000,000.

Some of the most important changes introduced in conference relate to postal rates. First class mail matter, except drop letters, will pay an extra cent for each ounce above the present rate. Second class mail matter, including periodical publications, is made subject to a modification of the zone system of the utmost imaginable complexity. Beginning with next July the portion of such publications not devoted to advertisements will pay an extra postal rate of a quarter of a cent a pound, and a year later of half a cent a pound. The portion of such publications devoted to advertisements is subject to the zone system, increasing in cost with the distance to which the periodical is sent. These increases are imposed gradually and do not come into full effect until July 1, 1922. By that time the postal rates will vary from two to ten cents a pound according to distance, in addition to the flat rate on the portion of the periodical containing no advertisements.

While the conferees were considering the War Taxation bill the Senate approved military appropriations amounting to nearly $8,000,000,000. This represents an increase of $850,000,000 over the expenditures authorized by the House of Representatives. The Senate, excusably concerned over the size of the war budget, agreed to a limitation of the funds set aside for registering and drafting men for the army, providing that the money should only be used for the enlistment of recruits for whom the Government has provided uniforms and equipment.

Angry Argentina

The German Government has repudiated in formal and explicit terms the policy of treacherous warfare against Argentine shipping advocated by Ambassador von Luxburg. This disavowal did not, however, content the Argentine public. The Government ordered the mobilization of the navy and took steps to put the army in readiness. A general strike affecting eleven railroad lines was made the excuse for this partial mobilization of the military strength of the republic, but everyone knew that the possibility of a break with Germany had been taken into consideration. On September 25, the Chamber of Deputies of Argentina sustained the action already taken by the Senate and voted to sever diplomatic relations with the German Government. The vote in favor of a break was 53 to 18. But in spite of the action taken by the Argentine Congress, President Irigoyen delayed the formal announcement of a break with Germany, perhaps for the purpose of investigating German diplomatic intrigues more completely and finding fresh justification for such a step. More than four hundred cable messages sent or received by the Swedish legation as intermediary between the German Government and the diplomatic representatives of Germany abroad are now being examined for evidence of German conspiracy against neutral nations.

Sentiment in other parts of Spanish America does not lag behind that of Argentina. The Costa Rica Congress has approved the action of the national Government in breaking with Germany, Peru has sent an ultimatum demanding that within eight days Germany give satisfaction for the sinking of the "Lorton." Both Paraguay and Uruguay are considering the question of severing relations with Germany, and members of the Uruguayan Congress marched in a procession of anti-German demonstrators thru the streets of Buenos Aires, the capital of Argentina. German intrigues and atrocities have nearly achieved the creation of a solid South America.

THE GREAT WAR

September 24—Fifteen British ships lost during the previous week. Air raid on London. Argentina mobilizes navy.

September 25—Senate votes military appropriations. Argentina Chamber of Deputies favors break with Germany.

September 26—British attack on six mile front in Flanders. Peru sends ultimatum to Germany.

September 27—British repel German counter-attacks before Ypres. Foreign Minister Terestchenko resigns from Russian ministry.

September 28—German Chancellor refuses to state peace terms. Russian Democratic Congress opens sessions.

September 29—Artillery duel on the Ypres front. War tax bill adopted by Congress conferees.

September 30—British defeat Turkish army in Mesopotamia. Italians take prisoner 1400 Austrians.

International Film

BASEBALL OVERSEAS

It takes more than a world war to blot out American interest in the national game. These sailors stationed in British waters got permission to go ashore for a "big game"—real players with their old-time uniforms and real fans with plenty of pep. It was a brand-new experience for the English

Peace and the Central Powers

Dr. Michaelis, the German Chancellor, in addressing a committee of the Reichstag again refused to state the German terms of peace. Certain conditions, such as international disarmament and compulsory arbitration, were indicated in the reply of the Central Powers to the Pope's peace message, but the German demands in the matter of territory and indemnity are still veiled in the profoundest mystery. The Chancellor's stated reason for refusing to make terms public to the world is the fear that to do so would "bind the hands of our negotiators."

The noncommittal attitude of the two Kaisers and their chosen spokesmen encourages the freest speculation as to peace prospects in Germany and Austria-Hungary. At one extreme a newspaper attached to the Hungarian Independence Party declares that "Wilson, by the courage of his answer, deserves the thanks of every honest believer in peace." Maximilian Harden, the most famous of German free lance journalists, urges President Wilson to call an armistice at once on the ground that the tone of the German reply to the Pope opened the way to an immediate peace. At the other extreme of opinion stands the so-called National Liberal Party. The central committee of this party adopted a resolution demanding "ample war indemnities," opposing any consideration of the Alsace-Lorraine question, denouncing the Reichstag majority for disclaiming conquests and objecting to the introduction of parlia-

THE SPOKESMAN OF JAPANESE GOOD-WILL

Viscount Ishii, head of the Japanese mission to the United States, has done much to foster the growing cordiality of the two nations. For several weeks the mission has been making a tour of our big cities—New York capped the climax with a spectacular fête last week

mentary government in the German Empire. There is much discussion of the future status of Belgium, and it is rumored that Germany is willing to abandon the idea of annexing Belgium provided that it is given economic control of the country and that the Flemish parts of Belgium are separated politically from the Walloon provinces. Nothing certain is known about the matter, however, nor can anything be known so long as the German Chancellor maintains his policy of silence.

German Air Raids Renewed

Southeastern England has again been the victim of repeated German raids. On September 24 hostile airplanes appeared over London and before they were driven off by the British anti-aircraft guns they dropt several bombs, killing fifteen persons and injuring seventy but doing little other damage. During the same night Zeppelins visited the Yorkshire and Lincolnshire coasts but were repulsed by gunfire. On the following night German airplanes reached London by way of Kent and Essex. Seven persons were killed and twenty-six injured. On September 29 German airplanes bombarded London for the third time during the week but no casualties were reported.

The British have very greatly improved their home defenses by multiplying the number of anti-aircraft guns in London and at various points on the coast and by keeping airplanes in readiness to engage the raiders. Warning is always given in the case of a raid so that people may take cover, but the warning signal not infrequently has the result of calling a few reckless sightseers into the open to watch the battle between British and German aircraft. The enormous range of the modern airplane was strikingly illustrated by the recent trip of Captain Laureati of the Italian army from Turin to London. The distance traveled, about 656 miles, was covered in a little more than seven hours and no stops were made on the way.

The Flanders Front

The only important action on the western front during the week was a British attack on the German lines east of Ypres. There have also been rather more than the usual number of artillery duels, trench raids, counterattacks on recently occupied positions and aerial combats, but these were not in themselves important and it is hard to say how far they are significant for the future. The action of the Allied censorship in holding up for a short time communications from British and American war correspondents has provoked much speculation as to what offensive might be in preparation or what redistribution of troops in progress.

East of Ypres the British attacked at daybreak on September 26 along a six-mile front and advanced at some points about two-thirds of a mile. The advancing army reached the village of Zonnebeke, passed thru Polygon Wood and approached close to Gheluvelt. Less ground was gained than in the attack of the previous week, but the British military authorities claim to have taken all the positions which it was their intention to occupy. German counterattacks did not succeed in regaining the conquered entrenchments. Apparently it is the intention of the British to drive a broad wedge into the German front before Ypres by numerous small attacks until the Germans are forced to straighten out their line by a general retreat. This repeats the strategy of the Somme campaign of last year, when the bending in of one small sector of the German line compelled a strategic retreat and the abandonment of a considerable part of the German conquests in France.

The Russian Democratic Congress

The eastern front has been comparatively quiet ever since the fall of Riga; the Germans preferring to concentrate their attention on the critical situation in France and Flanders, the Austrians collecting all their available army corps to stem the Italian drive, and the Russians devoting their energy to internal politics. Both Germans and Russians have made small local gains along the Dvina River and the Rumanians are still holding the line in Moldavia.

Russia's greatest danger is within. The radical parties are now holding a great convention in Petrograd, the so-called Democratic Congress. It is an informal political organization, similar in type to the recent Moscow Conference, but very different in its composition. At the Moscow Conference the moderate Republicans, or Constitutional Democrats, were strongly represented. Kerensky was compelled to defend his administration from the attacks of the military commanders who accused him of tolerating lax military discipline and of befriending the extreme radicals. At the Democratic Congress, on the contrary, Kerensky has been accused of opposing peace, aiming at a dictatorship and compromising with the capitalists. The Democratic Congress is divided into two main factions: the "Bolsheviki," whose platform might be summarized as an immediate and general peace, the establishment of socialism without delay and the formation of a government containing only radical revolutionists, and the Socialists who support the policies of Kerensky. The Constitutional Democrats and the other non-Socialist parties have refused to take part in the Democratic Congress (where, to be sure, they would hardly be welcomed) or to recognize it as having any authority. On the other hand, the Bolsheviki seem to desire to turn the Democratic Congress into a governing body as a substitute for the Duma, which, in their view, is not really representative of the Russian people.

Russia is much interested in the revelations brought out in connection with two state trials of first importance. It is still uncertain what penalty will be meted out to General Korniloff for his military rebellion. The Bolsheviki accuse Kerensky of secretly favoring Korniloff in order to put Russia under a military dictatorship, and they demand the punishment of the rebel general as a guarantee of the good faith of the provisional government. Others, however, defend Korniloff's conduct and lay the blame upon Vladimir Lvoff, a member of the Duma, who is said to have misrepresented the demands of General Korniloff in reporting them to Premier Kerensky. The other political trial has been concluded. General Soukhomlinoff, Minister of War under the monarchy, has been sentenced to life imprisonment for treason.

Balkan Campaign Renewed

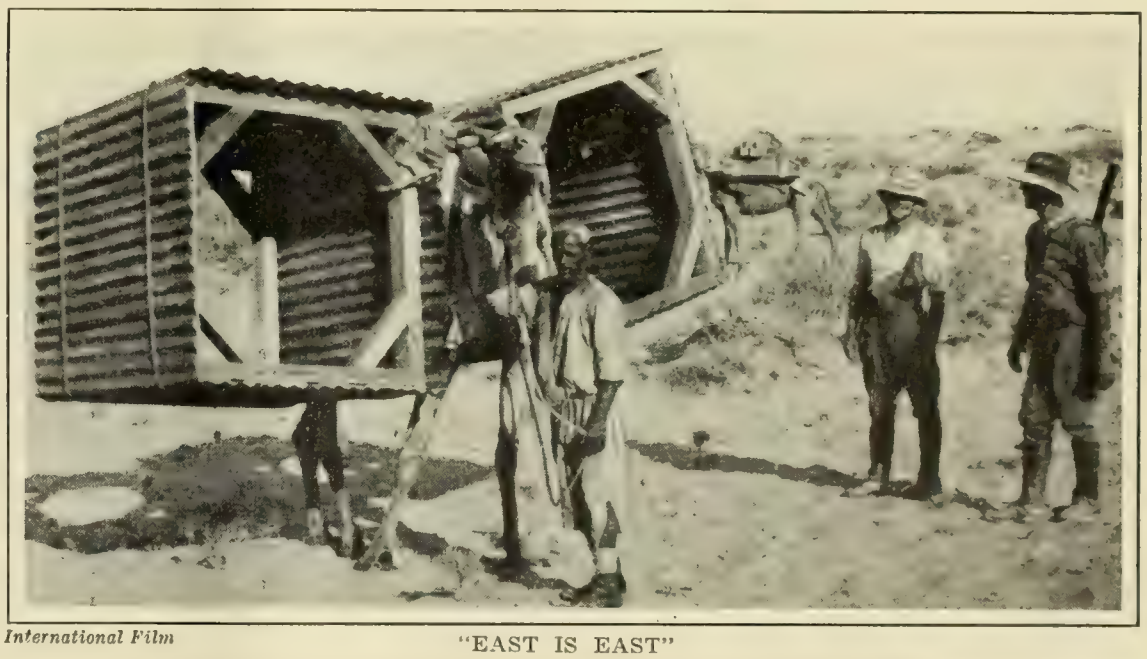
The campaign in Macedonia has been practically suspended for months past, so far as the public has been permitted to know, and the recent indications that it has been renewed are therefore of exceptional interest. Greece has added its national forces to those of the other nations represented in the Salonica army and has joined battle with Bulgaria in northern Greece. The French have penetrated the mountainous region west of Monastir. Still further to the west the Italians are driving back the Bulgarian lines in Albania. Italy has a small contingent on the Macedonian front, but the main Italian army in the Balkans, estimated at more than half a million men, is located in Albania between the Adriatic and the Serbian frontier. This army has seen comparatively little active fighting, remaining content to occupy and police central and southern Albania. The report comes from Athens that Greece and Italy have reached an agreement by which the southern extremity of Albania, which contains a numerous Greek population, has been evacuated by the Italians and handed over to Greece.

U-Boats and U. S. Boats

The week ending September 23 showed the lowest number of total losses of British shipping recorded in any week since unrestricted submarine warfare began. Thirteen ships of more than 1600 tons were destroyed and two of smaller tonnage. The number of large ships sunk was greater than in the week preceding, tho far below the average, but this was more than counterbalanced by the good luck of the little ships. The Germans were not without some success in the Mediterranean. Seven large and five small French vessels fell victims to submarine and mine within the week and the Italians lost one steamship and six small sailing vessels. The British Government admits the recent loss of a destroyer, sunk in the English Channel by a German U-boat. Fifty of the crew were saved.

The American Government has now in its service 458 vessels with an aggregate of 2,871,359 tons. This sum does not include the 117 German and Austrian ships requisitioned since our entrance into the Great War. The Government is now constructing 353 wooden cargo ships, 58 of composite construction, and 225 of steel. When the whole construction program is completed the United States will have at its disposal, barring losses from mine or submarine attack, some 2100 ships aggregating about 14,500,000 tons. It will be more than two years before all this has been accomplished, but a very considerable part of the vessels now building will take to water within the next few months; that is to say, before the shipping shortage of the Entente Allies begins to injure their military efficiency by depriving them of needed imports.

The Shipping Board has published an estimate of the available tonnage of the world as it was early in the month of September. Great Britain is credited with Atlantic liners of 4,860,000 tons aggregate, and "tramps" totaling 8,540,000 tons. The British have also over a million tons afloat on the Pacific. The total world's tonnage now in use on Atlantic highways is placed at 25,500,000, and in the Pacific 5,500,000 tons. This does not take account of the coastwise or inland shipping of the Allied and neutral nations nor of the 5,000,000 tons, more or less, in the harbors of the Central Powers.



The American Government has effected considerable reductions in shipping rates for war material. The rates determined on range from $8 to $13 a ton for Atlantic cargoes, a decrease of from 65 to 75 per cent from current rates.

Irish Convention Reassembles

The Irish Convention reassembled in Cork on September 25 after a long adjournment. The city administration entertained the members of the convention as guests and the people gave them a very favorable reception in spite of the fact that the Sinn Fein, who refused to take any part in the convention, are very strong in Cork and the surrounding country. Sir Horace Plunkett presided over the sessions of the convention, which were attended by about ninety delegates. The convention unanimously resolved to hold a few days' general discussion on suggested alterations of the Irish constitution and then to adjourn. A grand committee will be chosen to consider the various plans submitted for the future government of Ireland and to prepare a compromise scheme which will come as near as possible to satisfying the exprest desires of the different factions and parties represented in the convention. This plan will then be laid before the convention for its consideration. If adopted it will, no doubt, be made the basis for a new Home Rule bill in Parliament.

Militant China

China has offered to send 300,000 soldiers to France if the Entente Allies and the United States would help the nation equip and transport them. It is understood that Japan and also the European

Allies have approved the plan. As a first step, a trial division of 24,000 men is expected to arrive on the western front by the beginning of next year, unless a shipping shortage should make the long journey an unprofitable venture for the Allies. If the plan is carried out, the French front will be a very cosmopolitan one within the next few months, with French, British, Belgians, Americans, Portuguese, Chinese, Russians and natives from French Africa on the firing line, not to mention the motley group of nationalities represented in the French Foreign Legion or possible contingents from Italy, the Balkan States or Latin America. The Chinese soldiers are already trained and drilled, but they will be used as a second line force until they are practised in the new methods of warfare developt in the course of the present Great War. China has always been considered the least warlike of nations, but those who know the Chinese best insist that the military weakness of the nation is due to obsolete methods, inefficient organization and inferior equipment rather than to any inborn defect of the national character.

The Rumanian Plot Secretary of State Lansing has made public documentary evidence that the German embassy in Rumania had laid in a supply of explosives and disease germs at the legation grounds in Bucharest and had not removed them even after the United States had taken over the German legation as a consequence of the break between Germany and Rumania. Rumanian and American officials unearthed the explosives, phials of disease germs and incriminating documents. The germ cultures discovered were those of anthrax and glanders and directions accompanying the phials show that they were designed to destroy horses and cattle. Of course, the conduct of the German Government was in violation of international law in several different respects; by plotting against the lives and property of Rumanian citizens at a time when Rumania was still at peace, by introducing prohibited and atrocious methods of warfare, and by abusing the protection of the American embassy while the United States was a neutral nation in charge of German interests in Rumania. The evidence for the whole affair is detailed, abundant and unquestionable.

Copperheads and German Gold Representative Heflin of Alabama recently stirred his colleagues in the House of Representatives to anger by suggesting that there were a number of persons in the House and in the Senate whose actions indicated that they might have been beneficiaries of the corruption fund which Ambassador von Bernstorff requested to have spent in influencing Congress to keep peace with Germany. Representatives Norton and Fordney introduced resolutions of inquiry, demanding that Representative Heflin prove his accusations. From all parts of the House

Kirby in New York World
STRANGLING HIM

came indignant protests and "dares" to name congressmen who were suspected of serving their own pockets by serving Germany, but the names were not given.

The remarkable series of revelations by Secretary Lansing of the extent of German intrigues and bribery in the United States has completely discredited every anti-war organization and activity. The pacifist members of Congress are probably innocent of any direct participation in corruption funds, but those who have acted as apologists for Germany are consciously on the defensive. A number of prominent citizens, including ex-President Roosevelt and President Butler of Columbia University, have demanded the expulsion from Congress of Senator La Follette and others alleged to be pro-German. Every day the law is being more and more invoked against the soap box orator and the anti-American periodical, and large numbers of alien suspects have been interned as the result of secret service investigations.

The strangest plot was unearthed in an investigation at Enid, Oklahoma. A number of farmers' and laborers' organizations, including the Industrial Workers of the World, the Working Class Union and the Farmers' and Laborers' Protective Organization of Texas, planned a national uprising involving the burning of cities, the destruction of bridges and telegraph lines and attacks on the army and police. The agitators told their dupes that two million men would join the uprising, but the whole affair petered out into very local anti-draft demonstrations. Federal officers have arrested many I. W. W. leaders in Chicago and elsewhere.

A Wide Open Loan Secretary McAdoo of the Treasury announces that the second Liberty Loan will not be restricted to any definite sum. The loan is expected to reach at least $3,000,000,000; but this is only a minimum and the Treasury Department reserves the right to allot bonds in excess of this sum to the extent of not over one-half of the sum by which the total subscriptions received exceed the minimum. To give an illustration, if five billion dollars are subscribed the Government will distribute among all who subscribed three billions in bonds and may also distribute in a similar fashion as much as one billion more. Of course bonds would not be issued in excess of the total amount authorized by Congress, but there is little probability that the subscriptions for the second loan will be so great as to make further loans for the coming year unnecessary. The first Liberty Loan was oversubscribed, but subscriptions were not accepted in excess of a definite sum, so the present "wide open" loan is a new departure.

Secretary McAdoo made plain also many other details of the new bond issue. The bonds will bear interest at four per cent, beginning with November 15, 1917, and the interest will be payable on the fifteenth of May and November in each year. The bonds are due in 1942 and may be redeemed at the option of the Government at par and accrued interest at any time after November 15, 1927. The bonds are exempt, both as to principal and interest, from all taxes except inheritance taxes, unless they are held by one person in excess of $5000, in which case they are subject also to the supertax on incomes and war profits taxes. If further loans are made during the war at a higher rate of interest the bonds issued for the present loan are convertible into bonds carrying the higher rate.

Only One Lump, Please Food Administrator Hoover advises the United States to reduce its consumption of sugar. The French have requested us to export 100,000 tons of sugar for the coming month. This can only be done by reducing the amount of sugar sold within the United States, as there will not be enough to export if the usual amount is consumed here. The American public uses nearly four ounces of sugar a day for each person, whereas the French have to content themselves with less than one ounce. The English and the Italians are only a little better off in this respect than the French. The needs of the French can be supplied if the consumption of sugar in the United States can be reduced by one-third. With the first of next January the new West Indies crop becomes available and the danger of a sugar famine in France will diminish. Mr. Hoover states that the amount of sugar used in preserving fruit should not be much decreased, since the conservation of our fruit supply is a matter of importance, but in other respects the use of sweets should be curtailed. The beet sugar producers, in conference with the Food Administration, unanimously agreed to sell to wholesalers at Eastern refining points for seven and one-quarter cents a pound. The retail price will, on the average, be about eight cents a pound. An international committee of five has been named to arrange for the purchase and distribution of the sugar supply needed by the United States and by the Entente Allies, and, as it will control a large part of the world's output, the European neutrals are watching the operations of the committee with much interest and some anxiety.

Strikes and the Government The coal miners of the central field, including the mines of western Pennsylvania, Ohio, Indiana and Illinois, have presented demands to the operators for extensive wage increases. For different classes of labor the desired increases vary from twenty to as much as eighty per cent, and this in spite of the fact that several large increases in pay have already been granted within the last few months. The operators bluntly refused all these new demands on the ground that they violated former agreements and would tend to wipe out all of the owners' profits now that coal prices have been adjusted by agreement with the Government. The representatives of the miners said that they had no desire to set aside existing agreements, but the rising cost of living and the attraction of higher pay in factories were making it impossible to keep men at work in the mines unless wage schedules were readjusted. If the Government agrees to an increase in coal prices the operators may agree in turn to a raise in wages.

The strike of 30,000 iron workers on the Pacific Coast was settled on a basis of compromise by representatives of the President. This enables the shipyards to go ahead with delayed construction valued at no less than $150,000,000. The Administration is investigating the whole labor situation in the states of the Rocky Mountain and Pacific Coast regions where strikes have recently been unpleasantly frequent.

Texas Governor Ousted Governor James E. Ferguson, of Texas, was impeached by the State Senate of Texas on September 22. Three days later the Senate formally pronounced judgment and declared him removed from office and disqualified from holding any office within the state of Texas thereafter. Governor Ferguson anticipated his removal by resigning a few hours before the Senate had acted, but he announced that he would be again a candidate for the governorship at some future election. Lieutenant-Governor William P. Hobby is now chief executive.

Of the twenty-one charges preferred against Governor Ferguson by the Texas House of Representatives, ten were sustained by the Senate. Most of these related to misuse of trust funds and public money to favor banks in which he had a personal interest. He was also convicted of various unlawful attempts to coerce the Board of Regents of the University of Texas. The Independent has dealt with earlier phases of the conflict between the Governor and the legislature in its issues of July 7, August 11 and September 15.

Mayor Held on Murder Charge Philadelphia is stirred by the great investigation which has been begun as a sequel to the primary election riots of September 19, in which policeman George A. Eppley was murdered; James A. Carey, a local politician, seriously wounded, and several other persons assaulted. Warrants were issued, based on an affidavit of Isidore Stern, a member of the Pennsylvania Legislature, accusing Mayor Thomas B. Smith, Police Lieutenant Bennett and Councilman Isaac Deutsch, a political rival of Mr. Carey, of conspiracy to commit assault and battery and murder. The actual killing was done by "gunmen," presumably in the pay of politicians "higher up." The two gunmen who were arrested have criminal records well known to the New York police.

The trouble arose from a factional contest within the Republican party, which is all powerful in Philadelphia; both Carey and Deutsch aspiring to the leadership of the Fifth Ward. Both fraud and intimidation have been freely used in such struggles to the disgrace of American municipal politics, but matters have rarely come to the point of the official employment of thugs and assassins, even in the case of the most corrupt civic administration, and Philadelphia is hoping that the result of the investigation may clear her trusted public officials of the charges brought against them.

Suffrage Progress Altho the advocates of Federal woman suffrage have not yet succeeded in persuading President Wilson or the leaders of Congress to include the suffrage amendment in this session's program of war emergency legislation, it is not improbable that Congress may have an opportunity to consider the question this winter. On September 13, the Senate Committee on Woman Suffrage favorably reported the constitutional amendment giving the franchise without restriction to all the women of the United States. This means that the amendment will take its place on the calendar of congressional business for the December session. At the same time, the Senate unanimously approved Senator Shafroth's bill authorizing the Hawaiian Legislature to confer limited suffrage on women and to submit to the people of the territory the question of unrestricted suffrage.

On September 24, the House of Representatives established a special Committee on Woman Suffrage. Hitherto bills or constitutional amendments relating to the question have been handled by the Judiciary Committee. The vote, 181 to 107, was to some extent a test of suffrage strength in the House, since most of the anti-suffragists opposed the creation of a special committee and some declared that its establishment was a surrender to the militant pickets who have been badgering the President to put thru Congress the suffrage amendment. MORE RUSSIAN PRISONERS COME TO DENMARK

One of the first photographs to show the results of the German advance. The problem of taking care of war prisoners is growing [illegible] for all the nations as the war goes on. Denmark and Holland have big internment camps for both Germans and [illegible]

Rankin made one of the principal speeches in the debate. She pointed out that some state constitutions were almost unamendable and that Federal action was therefore necessary to enfranchise the women in those states.

Record Liquor Year The recently published report of Commissioner Osborn of the Internal Revenue, covering the year ending June 30, shows an appalling increase in the expenditures for luxuries indulged in by the American people. The use of distilled spirits for the year amounted to more than 164,000,000 gallons, representing an increase over last year's production of 26,000,000 gallons. This would give to the average American family more than a gallon of liquor during 1916-17 over and above the amount used in the previous year, and this in spite of the increase in prohibition territory. Beer production also exceeded that of last year, tho it was less than in 1914-15. Last year America smoked over 9,200,000,000 cigars, used more than 30,000,000,000 cigarets, chewed or smoked in pipes above 445,000,000 pounds of tobacco and took 35,000,000 pounds of snuff. All of these represent very considerable increases during the year; cigaret production alone increased by some forty per cent in a single twelvemonth. Internal revenue officers ascribe this excessive expenditure on drink and tobacco to "war prosperity."

Copper and Steel The Administration has entered into an agreement with the copper producers whereby the Government, the Entente Allies and the American public will all obtain copper at twenty-three and one-half cents a pound, taking the New York market price as basis. The price was about three cents below the prevailing market rates at the time the price was established. The Administration may commandeer for its use the mines and plants of producers who refuse to abide by the agreement. The copper producers are also bound to observe certain conditions, not to reduce prevailing wages, not to let speculators buy up the copper to manipulate prices, and to keep production at its maximum. Of course, the agreement will end with the war and it is subject at any time to revision after the existing rates have been given a four months' trial. The United States is now producing more than three-fifths of the world's copper, and yet we import more copper than any other nation in the world. The United States is not the ultimate consumer of all the copper that is imported or mined in the country, for a great deal of it is exported after being smelted and refined in American plants. The copper production of the country in 1916 was 1,928,000,000 pounds, according to the recent estimate of the United States Geological Survey.

The question of price fixing for the steel industry has awakened even wider interest. The prices announced by the War Industries Board, after conference with the steel producers, operative until the first of next January, represent a heavy decrease from prevailing market rates. Only iron ore remains at the old price, $5.05 a gross ton. Pig iron will hereafter sell at $33 a gross ton, a reduction of over forty-three per cent, and steel bars, shapes and plates are affected even more greatly by the change in prices. In the case of steel plates the price reduction is over seventy per cent. Coke also is made cheaper. The new rates apply to purchases by the Government, the public and the Allies, but they do not affect existing contracts with the navy.

Trade With Our Latin Sisters The commerce of the United States with the republics of Latin America has nearly doubled in two years, according to a statement made public by the National City Bank in New York. For the fiscal year 1914-15 exports from the United States were $252,000,000, while two years later they were valued at $592,000,000. During the same period our imports from Latin America increased from $558,000,000 to $962,000,000.

Argentina stands at the head of South American countries in the volume of trade done with the United States. The increase in trade with Argentina was due largely to the increased importation of wool into the United States. From 1915 to 1917 the value of wool imports from Argentina increased from $18,000,000 to $78,000,000. But during the same two years the importation of beef decreased enormously, from more than 130,000,000 pounds to but little over two millions; or, in other words, the South American nation has practically ceased to be a source of our beef supply.

With Chile and Bolivia we have developed an important trade in metals. Copper imports from Chile increased from 58,000,000 tc 138,000,000 pounds in a single year, and imports of tin ore from Bolivia for the last fiscal year came to nearly $3,000,000, altho in previous years this trade had been insignificant. Of course, the war conditions which interrupted the normal currents of trade between the European countries and the two Americas (the increase of trade with Europe was very largely in war commodities) have played a large part in developing inter-American commerce.

RED CROSS CANTEENS CHEER THE TRIP TO CAMP

And they're a big help to the soldier boys who are making the difficult transition from home pantry to army grub. The women volunteers serve hot coffee and good "eats"; they collect the letters home, too, and "mother" the men generally

THE PARADOX OF PRUSSIAN PEACE

BY NORMAN ANGELL

AUTHOR OF "THE WORLD'S HIGHWAY"

IT will be safe to assume that the passionate attachment to disarmament and arbitration displayed in the recent notes of the Central Powers is hypocritical and insincere; that it is in large part a maneuver or trap. It should be the business of the Allies, therefore, to see that they do not fall into the trap. This they will certainly do if they allow the discussion with the Central Empires—for that is what the exchange of notes with the Pope now in political reality amounts to—to end at the present stage. The advantage in political and diplomatic strategy would then undoubtedly be with the Central Powers. They would have stiffened the morale of their own peoples and have checked a certain internal disintegration which has become quite obvious of late in both Germany and Austria, particularly the latter; they will have lessened certain difficulties of their own and added to certain difficulties of ours.

It is obviously worth while to realize how this would be the case.

IT is plain that in a war of attrition, which this has now become, the point of collapse will be very largely determined by the amount of suffering which the civil population is prepared to stand. If, for instance—to make the point clear by putting the case in its extreme form—a nation is prepared to see all its children and all its old men and women starve to death in order to allow ample supplies to reach the army, it will be able to maintain its resistance long beyond the point at which otherwise it would break down. It is mere ignorance of patent realities to argue that in an autocracy the attitude of the mass does not matter, that the government will impose its authority by sheer physical force. Whose physical force? There is none available except that of the very people—the common soldier, and, just as importantly, the common workman in the factory—against whom the physical force is used. Two per cent of a population cannot impose its will upon the remaining ninety-eight by sheer weight of muscle. There must be at least moral acquiescence or submission on the part of the mass or it becomes impossible for the minority to use the force which that mass represents. There need not be rebellion in the ordinary sense to make this use of the mass impracticable. In a war in which the factory, the mine and the railroad are as important as the army, mere fatigue and a sense of grievance greatly affects output and efficiency. With the growth of that sense of grievance or weariness we get a tendency for industrial quarrels over small matters, strikes of both men and women, collisions between soldiery and workers, soldiers refusing to fire, "sabotage," defective work on shells and ammunition, delays, confusion; the government less certain how to act, making wrong decisions, alienating support, provoking more ministerial changes, and finally the whole thing affecting the trenches, with increasing tendency to surrender.

MR. ANGELL

If that sort of thing is possible in Germany—and it is one of the paradoxes of the war that the autocratic German Government has been more obviously afraid of its own public opinion and at greater pains to placate it than has any democratic government among the Allies—the disintegration in Austria with its rival national factions might well become explosive. More than once paralyzing disorganization has threatened Austria (in one case half a million men actually deserted to the Russians) and would probably have occurred if certain advances made by Czechs and Slavs to the Allied governments had been encouraged. And if Austria "cracks," the whole edifice crumbles. One must, in our day, apply to the whole nation the adage which in Napoleonic days was applied to armies: the foundation of success is morale. Because the nation—farmer, factory hand, miner, railwayman—has become an integral part of the army in a sense which it never was before.

NOW the governments of the Central Powers have realized that they can make the morale of their people almost impregnable and be immune from any danger of this disintegration, if they can create a "defense psychosis." That is to say, if they can persuade their people that they are fighting really to protect the Fatherland, to insure its security and rights in the world, German morale will never be undermined. For all history shows that any people, savage or civilized, good, bad or indifferent, will fight to the last against what they believe to be national annihilation. To bolster that belief on the part of the German people is today the prime need of the German autocracy.

And in that task the German and Austrian governments have been greatly helped by the political and diplomatic strategy sometimes adopted by the Allied governments.

Those governments proclaimed at the beginning of the war that their major object was the destruction of Prussian militarism, and the aggression and wickedness for which it stood. That was and remains the highest object of our arms. But we failed to make known to the German and Austrian peoples how their national rights and interests were to be respected when Prussian militarism had gone. What did it mean, the "destruction" of German militarism? Did it mean that in future Germany and Austria were to have no armies? Were they to be so popular that no nation would quarrel with them and take an unfair view of its claims upon them? How were they to protect themselves and insure respect of their rights? On that point there was no declaration (there is still no declaration). And this silence has enabled the enemy governments to say to their peoples: "This talk of the destruction of German militarism really means that you are in future to be at the mercy of your enemies, and to be deprived of any means of defending your Fatherland, its rights and interests."

SO that our failure to give to the justly destructive aim of our policy also its constructive complement converts this war for the German people, however aggressive its origins, into a war of defense. It does not suffice that we have declared that we have no intention of destroying the German nation or of putting it at a disadvantage. No virile people—and especially a people with elements of savagery and barbarism in its composition—will accept the mere general declaration of its enemies as sufficient basis of its security and the defense of its rights. Mr. H. G. Wells—who will certainly not be accused of pro-Germanism—wrote recently of this situation:

"This is the argument that holds the German people stiffly united. For most men in most countries it would be a convincing argument, strong enough to override considerations of right and wrong. I find that I myself am of this way of thinking, that whether England has done right or wrong in the past—and I have sometimes criticized my country very bitterly—I will not endure the prospect of seeing her at the foot of some victorious nation. Neither will any German who matters. Very few people would respect a German who would."

Now the thing which would make it possible for such Germans as Mr. Wells has in mind to repudiate German militarism and turn against the present German

WITH THE BOYS IN CAMP

FIRST ARTICLE FROM HILTON HOWELL RAILEY

REPRESENTATIVE OF THE WAR DEPARTMENT COMMISSION ON TRAINING CAMP ACTIVITIES.
SPECIAL CORRESPONDENT OF THE INDEPENDENT IN ITS MORALITY SURVEY OF THE WAR CAMPS

THIS subject is so profound, so broad in its scope, that it is almost impossible to tell it in a limited space and preserve the proper sequence of thought. More especially does this fact become salient as I sit here in my tent in the very heart of training camp activities. Soldiers are passing up and down the Battery Street upon which my "rag shanty" is pitched. Night has fallen all around us. I can see the rays of lanterns in far off tents; I can see young soldiers writing letters to their mothers, fathers, friends and sweethearts. I can almost divine their thoughts, read the descriptive narratives which, imbued with an illimitable enthusiasm, tell those at home what "soldiering" is like. My heart is with them. From each tent there comes a voice, unexpressed, unformulated, yet forever emphatic and insistent—calling upon me to tell more about their lives and less about the grim battle I must wage to preserve their health, their morals, their efficiency. I cannot, I will not resist it!

A month ago I went into the hills of Arkansas to watch men prepare to fight for more than man has ever fought for before. Somewhere among the yellow buttes of Pulaski County a great cantonment, a monster machine of men and wood, was building for the development of 40,000 drafted youths of the nation into a National Army. As I crost the Arkansas River, sluggish with red mud, and passed thru Argenta into the forest beyond, I drew a mental picture of the scene that was soon to unfold before my eyes. But my visionary powers were too limited to sense the enormity of the scale upon which the United States is preparing to give battle.

After journeying eight miles thru cl uds of dust, blown from a hastily c nstructed military road, the driver stopped his car at the foot of a low hill and pointed out the way to Camp Pike, the cantonment I am about to describe. Before I had advanced many steps the clear and resonant call of the bugle fell upon my ears. Somewhere beyond the hill upon which I stood, the Call to the Colors was signaling "Retreat."

I climbed the crest of the hill—and behold! a veritable city of low wooden barracks was laid out before me. Well-used, well-oiled streets divided them into squares with a precision peculiar to the military way of doing things. They covered an area too broad, too long to be included in a fixed focus of the naked eye. Two hundred yards to my left a large body of sunburned troops had just paid homage to the emblem that is to lead them into battle and on to victory. Hundreds of sturdy young men in khaki hurried to the performance of certain duties. Others stood around in small groups and laughed, and joked, and talked. All thru the great field of never-ceasing activity freight engines labored heavily over new roadbeds, carrying lumber, steel, tanks and what not to some central point. Clouds of black smoke poured from their stacks and darkened the fresh pine boards of the new buildings. Pack trains could be seen in the distance. A corral filled with horses and mules, heavy trucks and other necessary parts of a great army's equipment lay near by. Scores of blacksmiths hammered away beneath a rambling shed. The ring of steel dealing blow on blow upon many forges added to the bedlam of noise, which was to me the grandest symphony ever played by the tools of man. An afternoon paper informed me that the barracks which I was viewing represented the use of 30,000,000 feet of lumber. And I had been told by my guide that this site had, a month ago, been a wilderness of pines! As the sun slipt beneath the horizon of the distant hills, radiating its last magnificent colors against a sky which beggars description—my heart thrilled with the mighty and grim significance of it all.

I had been sent from Washington to represent the War Department Commission on Training Camp Activities. Mr. Raymond B. Fosdick, the chairman, had appointed me to the post. My duties had been clearly defined by him and by other Government officials, who wisely deemed after war was declared, that prostitution and venereal diseases, liquor and gambling, should not imperil the health, morals and efficiency of the National Army, for the responsibility of the nation to its drafted youth is indeed very great. So I came to see to it that the evil men and women do should not contaminate those who are being called to arms from every walk of life and mobilized into great fighting machines which are to be used to cure Hohenzollern paranoia with blood and iron. And night, creeping in from the west, crept across my soul as the weight of this responsibility prest upon my mind.

A two minute walk brought me to the headquarters of Colonel C. D. James, the commanding officer of the First Arkansas Infantry, the National Guardsmen and border-tried soldiers who were temporarily policing the construction of Camp Pike. Upon reading my credentials he courteously invited me to

discuss the ramifications of my charge. As the story was unfolding he became grave—for he knew, and I knew, that it is a matter of history that prostitution follows all armies; and he knew, and I knew, that in spite of the efforts of Governor Charles H. Brough, of Arkansas, Mayor Charles E. Taylor, of Little Rock (which is located seven and one-half miles from the camp), and in spite of all our combined efforts, with the coming of a great and heterogeneous body of men, there would arise many grave and complex problems. He was not very optimistic as we discussed the wisdom of the Government's policy of repression, but when I departed I knew by the grip he gave my hand that I had won a friend, and that the fight was on!

When I approached Governor Brough of Arkansas upon the subject of appointing a State Vice Commission, he acted immediately, and within twenty-four hours the commission, composed of fifteen representative business men, became a reality.

LITTLE ROCK'S close connection with Camp Pike compelled her, involuntarily, to present the battlefield for our war against the prostitute. Mayor Taylor's attitude toward the enforcement of law and order is widely known. He has been a constant, persistent and dangerous enemy of vice, and because of his fair and firm dealing with the liquor question, there have been few violations of the liquor laws during his administration. He has been elected to office for four consecutive terms upon a well kept platform pledge and policy of repression. When I called upon Mayor Taylor he instantly placed at my disposal the police force of Little Rock, one of the cleanest and most efficient of its size in the country.

But a few days after my arrival in Little Rock I learned that the wisdom of the existing policy of repression had been sorely tried. A certain number of lewd women—in sufficient strength to be reckoned with—had defied the law, taken root, and others followed their example.

Because I know the prostitute, her methods, her haunts, her tendencies, because I know that she follows the line of least resistance—I decided, after analyzing the situation, to fight her with that all-powerful and invincible weapon, public opinion. This valuable ally could not be won in a day, it could not be won in a week, nor even a month; but when the seed was sown in a soil so well tilled and full of promise—it took root overnight.

The Rotary Club of Little Rock was the first organization to place itself on record as favoring the policy I outlined. They had requested me to give them "a straight from the shoulder" talk, and my subject was "The Problem of the Red Light District." When I had told them that the old theory of segregation had been exploded because segregation never segregates; when I explained to them that medical inspection of the prostitute is inevitably inadequate because, first of all, there is no way of inspecting the man, and because physicians are tempted to issue false health certificates in return for substantial fees; when I exposed the commercialized vice interests and told how they secure inflated rentals from the miserable creatures who operate in their hovels; when I proved to their satisfaction that a segregated district is a continuous advertisement of vice, a source of mystery to the uninitiated—and when I told them with all the force I could put behind it that no community can afford to recognize a segregated district and not, at the same time, tolerate other violations of the law without contributing to the retrogression of the whole people—their faces became grave. Finally, after analyzing civic morality, I sat down in their midst and awaited their action. It came swiftly. The whole body of men, some of whom had never given the subject a serious thought, a few of whom believed segregation to be the only solution of the problem, gave me an enthusiastic, sweeping vote of endorsement and confidence. So was the first mold of public opinion fashioned.

THEY told me when I came here that the soldier was to be my greatest problem. But he became my greatest asset. No one alive is blest with more of the milk of human kindness than the American soldier. Nor is he difficult of access or approach. There are many ways of doing the things we mortals have to do, but there is only one real way—the right way. So when several commanding officers said to me, "For God's sake, Mr. Railey, explain the Government's policy to the men; get out among them and talk man to man," I knew I had found the key, and I straightway placed it in the lock. The result may prove interesting. But before I tell the story, keep before you, my reader, the fact that ninety-nine per cent of the thousands of men I have talked and lectured to were, thru custom and ignorance, hostile to the policy of their Government in regard to prostitution. They were willing to listen, but they thought I could never convince them. Here is how I did it!

LATE one Sunday evening I walked into the camp of the First Arkansas Infantry and asked permission of the commanding officer "to lecture to the men upon the subject of their morals." I particularly requested that, in announcing my presence to the men, they should be told that attendance at the lecture was not compulsory. For this I had two reasons: First, I know the men were hostile to a discussion of any moral question, because most of them believed they were the best judges of that side of their lives. Second, I wanted to see just how many men would assemble voluntarily to hear me speak. The psychology of a mass of undisciplined men (undisciplined in the sense that no military formality was to be observed, and that they would dictate their own conduct) interested me above everything else. An hour later a "top sergeant" announced to me that there would not be more than fifteen men present for the lecture. I smiled and said I would speak if only one man appeared. But my heart sank nevertheless.

At the appointed hour I placed a box under a tree in the clearing south of the camp, set a lamp upon it in order that they might see me clearly, and waited for results. More than two hundred and fifty men surged across the opening in the woods and sat down in a huge circle around me! There was then no way out of it. I was caught in their very midst and simply had to make good.

A great, golden, mellow moon rose from the east and cast mysterious shadows thru the pines. Looking over the heads of the men I could see their tents in the distance. I was almost dreaming when the murmur of many voices brought me back to earth.

"MEN!"

I gave the word as a command. Silence ensued almost before it reached the edge of the immense human circle.

"If you have come prepared to hear a sentimental discussion of a moral question," I began, "you are to be sorely disappointed." I let that sink in for a moment, and then

[Continued on page 44

Mr. Railey's Question Box

Mr. Railey will devote his time, probably for the duration of the war, to a thoro study of training camp activities and the moral conditions which will surround American youths as they prepare to become a part of the new army. He will be glad to put the results of this first-hand investigation at the service of mothers or fathers of boys in camp. A letter addrest confidentially to The Independent Question Box for Soldiers' Mothers will be answered in the fullest possible detail in accordance with his intimate knowledge of the situation.

To the Mothers of America

Your boy, no matter where he may be in training, is kept busy all hours of the day. At the close of his period on duty the Government offers him every form of recreation known to be wholesome and effective. He has easy access to the Y. M. C. A.'s which are located in every cantonment. There will also be football games, boxing matches, wrestling matches, fencing and athletic contests of all kinds and make-up at his disposal. He will be amused at night by moving pictures and singing under the direction of a Government song leader, by theatrical performances and educational classes. Unless he is weak minded or a moral imbecile there is no justifiable reason why he should not improve spiritually, morally, mentally and physically. His is the highest of all callings. Rest your minds. All that can be done for your soldier boy is being done by the Government on a scale never equaled in the history of any nation's preparation for war.

MAKING MY PEN BEHAVE

BY BURGES JOHNSON

He practises what he preaches and he practises it first. Which is only one of the reasons why Burges Johnson is preëminently fitted to speak with authority on "Making My Pen Behave." The good behavior of his own pen began some twenty years ago when Mr. Johnson was a reporter on the "New York Evening Post." Subsequently he has been an editor, a publisher and a professor of English, and between times he has written a dozen books, among them "Bashful Ballads," "A Yearbook of Humor" and "A Private Code."—THE EDITOR.

SOCIETY has bridled my tongue. It is not free to utter what it will, however uncontrolled may be the mind and disposition behind it. Man-made laws control it. It must not lie about my neighbor to his injury, nor bear any false witness against him. It may not scatter noisome phrases or ideas; and society asks that it shall not become a trouble maker thru mere malice, or habitually decry others, or unduly vaunt myself or my deeds.

It may not steal; yet I fear this commandment rules the tongue in feeble fashion, leaving judgment to a public opinion which does not yet determine distinctions between my tongue's grand larceny, its petty thievery and its mere umbrella borrowing.

The control that society exercizes over my tongue is unquestioned, yet with it I may break all social rules, even all moral laws with a certain impunity, for the very simple reason that the record of its misdeeds is graven on the imperfect and perishable tablets of a hearer's memory. It is not so with my pen. All of these restrictions control it with doubled force. What is written is written. My pen is its own incontrovertible and coldly relentless accuser.

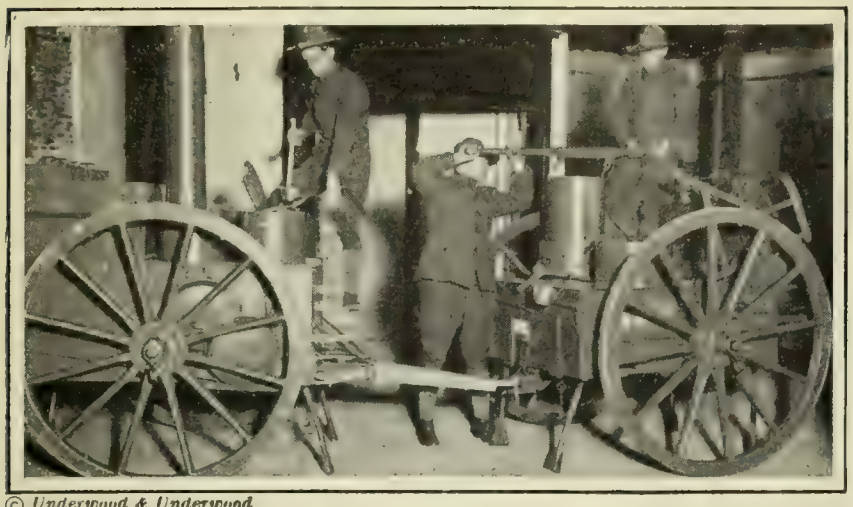
The misdeeds of my tongue may be extenuated by the expression on my face or the tone of my voice. My pen has no such defenders, and each petty misdeed is magnified by very reason of their absence. The stinging phrase, sheathed in a smile or a friendly tone, may be flourished harmlessly and theatrically with fine effect; and then its wielder, seeking similar effects with his pen and carelessly forgetting that it lacks such a scabbard, finds to his surprize that he has cut and jabbed and now faces a pack of righteously angry enemies.

IN seeking for some recognized code of behavior among the gentlefolk of the pen, I find myself turning first to journalism, that field where writing is a commodity that is daily bought and sold. If here we should find a recognized code of ethics, perhaps we might utilize it as a framework in formulating a code for the individual.

The ethics of newspaperdom! Surely there is such a code, whether or not any single sheet daily abides by it; and I believe that when one has comprest all of its commandments into a few comprehensive ones, you would recognize rules that govern the conduct of decent folk in any walk of life.

First of all, *the respectable newspaper as a purveyor of certain literary commodities recognizes that it should not sell its goods under false labels.* Facts should not be adulterated by opinion, advertising should not appear as unprejudiced news, editorials should not be for sale to the highest bidder. No competent newspaper man will deny this first principle of my code.

Secondly, *that commodity which the newspaper offers for sale should be gotten honestly.* Theft, bribery, breach of confidence—none of these may escape condemnation under any such alias as "newspaper hustle," "up-to-date journalism," or the like. The editor who allows his reporter to steal private letters from an office waste basket, or knowing that they are so stolen publishes them; the editor who permits a reporter to secure documents by bribery; or one who publishes statements given to him or his reporters in confidence; such men are the pariahs of journalism, lepers who walk abroad constantly tinkling their own little bells of warning.



Please do not think of me as dreaming, in my remote and comfortable chair, of some fanciful Park Row establishment where St. Peter has become city editor and Gabriel goes abroad crying his papers. The graduate of a very earthly and sinful Park Row tells us of how he went forth as a reporter to get an advance statement of the Hughes Insurance Committee which was to be given out the following day. The committee had adjourned, but a friendly attaché let fall the hint that a stack of the coveted reports lay ready printed in the locked committee room. Five dollars to a scrubwoman ought to get you one, he added. The reporter carried the suggestion to his chief. "The man who turned that trick would get fired," said the city editor. "There is enough news that can be gotten honestly. Let the rest go." It is safe to assert that a majority of real newspapers would be content to have this emblazoned in their city rooms. As for the others—they only prove the rule.

These two commandments, then, sum up certain fundamental requirements of clean journalism. Your own pen, free from the jurisdiction of any office, nevertheless finds much of this same code imposed upon it by accepted social standards and your own ethical sense. For, firstly, it may not exploit its writings under false labels. It may not, for instance, write salaciously under the pretense of sermonizing, but actually impelled by a desire to win the attention of the prurient. Another common example of false labeling is furnished by the writer who sells his pen, whether it be to a breakfast food or a foreign government, and then denies, by every method of implication, that his product is hired propaganda. There is no law against any of these things—just as there was for years no law against bottling bad whisky and labeling it "nerve tonic." But the public conscience has an increasingly clear sense of their impropriety.

ON the whole, I think it amounts to this: your reader is entitled to know your motive in writing. You may write to amuse, to entertain, to preach, to teach, or to combine them all; you may sometimes ask him to guess. But you may not deceive him by *asserting* one motive while you harbor another.

Secondly, what my pen has to offer it must secure honestly. Greatly have I dreaded the approach of this assertion. It has shimmered before me as I wrote, like a distant sea of unknown depth; and now I am upon its brink, brought here by some faint hope that I might wade across! Breach of confidence, bribery, theft—committed in the struggle to get good copy—these were the sins that violated our journalistic code, and they have their parallels in the behavior of an individual writer. Using your friends and acquaintances as "copy" in ways [*Continued on page 48*

THE WOMEN BEHIND THE GUNS

BY JANET PAYNE WHITNEY

At the outbreak of the war Mrs. Whitney was one of the organizers of a bureau for women's service in London, which acted as a clearing-house for women's activities, gave free advice on all new and old openings for women's work, paid and voluntary, and endeavored to open new channels for women and to safeguard them from exploitation in untried fields. The bureau was in touch with the British War Office, the Red Cross, and centers of commercial, professional and agricultural opportunity.—THE EDITOR.

THE war burst upon England when the woman's movement in that country was at the hight of its struggle for the emancipation and enfranchisement of women. The papers were full every day of the sensational doings of the militant suffragets —their attacking of West End London shop-windows with hammers, their attempts to enter the House of Commons, their burning of empty houses, and struggles with policemen, their sufferings in prison; tucked away in inconspicuous places, as not such good "copy," were little paragraphs recording the meetings and processions of the constitutional suffragists; and the Anti-Suffrage League stormed in many a headline about "the unsexing of women" and how "woman's place was the home." That good old war-cry! How often one met it, from men and women up and down the country of the healthy old conservative English type, who really believed that a woman's charm depended upon her being sheltered and protected from the rough and tumble of the world, and refused to look the facts of the labor market in the face! But one never hears it now. War shatters men and cities, shatters life itself, but it shatters illusions too. May it shatter them so effectually that the cataclysm may never need to be repeated, because all the lessons it can teach have been burned into the heart of humanity for ever!

THE shock of the war was like a sudden, overwhelming silence in a noisy place. It brought women and men of every party and class shoulder to shoulder in a common interest, a common sorrow, a common effort. The old party cries died away. That passionate love of country which lies so deep in the English nature burst forth like a hidden volcano, and bore rich and poor, old and young, conservative and progressive alike on one ardent torrent of desire for service.

At first that torrent met every kind of barrier that red-tape and slow-moving English habits of thought could place in its way. I had occasion, early

Munition works were opened to women first

in the war, to do a great deal of interviewing at a bureau which was opened by the London Society for Women's Suffrage to give free advice to every kind and class of woman who wanted to find her right outlet in service. Particulars of all kinds of work, paid and voluntary, and of all courses of training, open to women, were obtained and filed, and we did our best to sort out the right woman for the right work. It was astonishing to find at first how far women were ahead of the opportunities open to them. They poured in full of original ideas. "Look here, I've done no end of hunting—ridden ever since I could walk, almost!—know all there is to know about a horse, sick or well. Can't I help with remount work?" Or—"Please 'm, I've been a cook, fifteen years' experience, good references. Can't I get a place to cook for the soldiers in some o' them camps?" Or—"I was born and brought up on a farm, and I'd like to get back to the country. I'm twenty-five years old, and very strong. I'd like to quit domestic service and work on the land. Won't they be wanting women for that?"

AND one regarded the athletic-looking young sportswoman and the motherly old cook, and the bonny, buxom housemaid and thought them well suited for the work they asked for, and was sorrowful to tell them—"We will keep your particulars for reference, but none of that work is open to women at present. No doubt it will be presently—or ought to be!—but not yet!" Clerical work, trained and untrained, there was abundance of; and some dairy work, and a little gardening, and of course, munition work.

The first detachments of the Women's Volunteer Reserve Corps, who went in for more or less military drill, and paraded the streets of London in khaki uniform, with slouch hats, and skirts to the knee, were covered with ridicule in many quarters. The "average man" was very much annoyed at the sight of them. "What on earth are these women up to?" he remarked. "Do they want to do the bally fightin'? It's those wretched militants again on another stunt. They only want to be stared at!"

WHEN I left England a few weeks ago there were fifteen thousand women, members of this corps and others, working behind the lines in France, and more were going. Every hoarding bore an appeal for "10,000 more women to work on the land." Women were in remount work and doing magnificently. Corps of women cooks were being organized for work in the military concentration camps up and down the country. Women were acting as van drivers, railway porters, bus conductors, commissionaires, postmen, booking clerks, ticket collectors, window cleaners, street cleaners, chauffeuses—even for heavy motor-lorries—house painters and decorators, carpenters, farm laborers and bank clerks. In all except law-protected professions such as that of the chartered accountant and the barrister-at-law, it is no longer an answer to make to an applicant—"You can't take this job because you are a woman!" She is likely to reply—"Oh, but let me try!" —and to gain her point, because the harassed employer can find no good enough reason, in the topsy-turvy England of 1917, for *not* letting her try! And when given a trial, she generally makes good.

This sudden opening to women of innumerable careers hitherto monopolized by men has caused a great revolution in women's working attire. In the early days, an enterprizing employer in a big

More chauffeurs for trucks are needed

West End store decided to have women instead of men to work the lifts and for safety and efficiency he required them to wear a neat suit of knickerbockers and a tunic to the knee. Some of the girls he was intending to put onto this work at once resigned, much offended at being asked to do anything so shocking and unmaidenly as to wear this uniform!

But this squeamishness is dying a natural death at a rate which would bring our great-grandmothers to tears, and must nearly kill with bottled anguish the pre-war advocate of the subjection of women. Suitability of costume to work is the law of the period. Where skirts are suitable, trust a woman to wear the more graceful garment! But where skirts only serve to collect dirt and impede movement, even to be a source of positive danger, the combined common sense of men and women who are out for efficiency has availed to abolish skirts during working hours, or to abbreviate them to a minimum length. The woman railway-carriage cleaner, in loose coat and trousers, and the farm lass in blouse and breeches and heavy boots, excite now no particular attention or comment; much less the bus conductor, in her workmanlike dark blue uniform, with skirt barely to the knee and long, dark gaiters to meet it. One wonders why the "women postman" does not don masculine attire, with its greater freedom for walking, and its infinitely superior qualities in wet and muddy weather. But if she has come to stay, no doubt even the Post Office will move with the times, and use its red tape to adorn necessity!

ONE of the problems of the hour is—*has* the woman-worker in these various fields come to stay? And if so, what will be the effect on the labor market, and on that apparently secondary consideration to hurried governments—the future generations?

There is at present a wave of exultation running over the women of England, a kind of intoxication of opportunity. The joy of adventure and experiment is theirs, and the delight of being *wanted—needed.* They no longer need to knock, doors are opening wide to them on every hand. They are indeed, in the expressive vernacular, having "the time of their lives." And in young women of the rougher sort—and some others, too!—it has roused something blindly iconoclastic, something that desires to kick over all the traces of accepted conventional rules for women's behavior, just for the fun of feeling and testing the new freedom that is theirs. Do clothes affect character? Watch the young carriage cleaners on an English railway station in their loose masculine suits, or a gang of young munition makers in theirs. They kick high in the sheer joy of unimpeded physical movement; they play leap-frog; they wrestle with each other like boys. The men porters joke with them in camaraderie, or give them a wide berth. It is not good to offend them. They will take their chance to mob and bully the man who does like a gang of young hooligans.

And yet of what good stuff these same rough girls are made! They will come thru radiantly and womanly triumphant if rightly handled at this difficult transition time between the old age and the new. Liberty, equality—watchwords of war; and then—Fraternity!—the banner of eternal peace.

I traveled in a railway train with one of these girls not long ago, the daughter of simple fisher-folk, going home to her people at Grimsby, "invalided out" of munition work, stricken with the dread "T.N.T." poisoning. She told her story very simply—how her brother went into the navy, and how she had wanted to "do her bit," and had

© *Underwood & Underwood*

Women ambulance drivers at the front

registered at the Labor Exchange for munition work; how she had been drafted to work at Woolwich, tho there were munition works much nearer her home, and had gone up alone to London; and how she had loyally volunteered to do her turn at the "danger shops." "What were they like?" I asked. "Oh, they were just little huts, all lined with white, like a hospital," she said, "and just two girls worked in each hut. They let you choose who you would go with. It was so shining white and clean you could eat off the floor! We worked at little white tables, putting the yellow powder into the cases. We had to keep the door and the window open all the time, and clean up every speck of the powder when we had done. The first day I was in there I fainted twice."

Press Illustrating

Red Cross nurses sew for soldiers too

"Couldn't you stop then?" I said.

"Oh, yes," she said, "the doctor advised me not to go again after I'd fainted the second time. There's always a doctor somewhere on the place for you to be taken to. But when I told the girls in my hostel at night they said—'Well, *I* wouldn't be a funk! I would finish out my week!' You only work at the danger-shops one week in four. So I went back and finished my week, and got the poisoning. You see, I thought our boys at the front were running risks, and why shouldn't I? I wanted to do my bit. But the pain was dreadful at first, and I went quite yellow all over. I was ill like that for weeks and weeks. But that's over now, and I've come pretty nearly ordinary looking again, except my hair. That's still yellow, you see. It was brown before."

"Will you soon be all right?" I said, "*quite* all right?" "Oh, no, miss!" she said, simply, "the doctor said I might never be able to work again. I can't sleep and I can't eat properly."

"Then have you been pensioned by the Government?"

"Oh no, miss." But she was not resentful. It was all in the day's work. She had volunteered for the danger-shops and she had had bad luck. She had no medal and no pension. She was going back to br ezy, fishy Grimsby a physical and nervous wreck, this rough daughter of the people, but she was apparently unregretful. She had done her bit.

That she would have done a much better bit for England by becoming a healthy and happy wife and mother is just one of the ironies of self-sacrifice—especially in war-time!

It is an indisputable fact that many more English women will be denied the rich experiences of marriage and motherhood after this war than was the case before it, owing to the increased disparity of numbers between men and women, and also owing to the increasingly high standard of marriage which is a result of the greater freedom and wider experience of women. When a woman demands of a possible husband not only that he shall be "in love" with her, but that he shall be equal to being her friend and comrade for life, she may well choose to go thru life unwed rather than descend to any second-best. These two

RUG BEAUTY IN THE SMALL HOUSE

BY CHURCHILL RIPLEY

A wave of enthusiastic determination to make the humblest home attractive is sweeping over the country. Whether it is because the war is filling their minds with such serious thoughts that for relief women are turning to the peaceful arts and taking thought of each detail in the house, it is definitely true that thought is fastened at the moment on beauty as well as war.

Woman's clubs are largely responsible for rounding out the interests of women, by awakening them to an intelligent comprehension of all that is meant by home economics and household betterment. While willing to serve in every possible way, and to be useful, they are determined as well to make useful things beautiful.

Among other questions that have been asked those who are endeavoring to guide the popular taste is one that appeals to many, "How can rug beauty exist in the small house?"

With every department store in the country offering rugs and carpets for sale, the modern small house is apt to become filled with incongruous floor coverings spread about for utility with no thought of harmonious effect.

If one were not restricted in any way it might be desirable to use Oriental handmade rugs thruout a small as well as a large house, as they wear longer and are beautiful as long as they last. But there are many small houses in which ornate Oriental rugs would be as much out of place as a large oil painting in a massive gold frame. Moreover, it is an expensive thing to cover the floors of a house with even the cheapest rugs and an Oriental one would be quite out of the question for a young housekeeper of small means.

A good rug for the living room—the Persian floral design in both field and border

How then may taste be used in the selection of what the market offers? Is there any way in which better results may be attained than is generally the case? A hopeless situation sometimes offers the best opportunity for individual experiment, and so in this matter the solution rests with the ingenious housewife. Why not think out some way of making use of modern domestic rugs that will at least show that a plan was followed in placing them, for rugs may be selected and arranged in such a way that one room will look quite unlike another, and different from the rooms in the house next door.

Suppose, for example, you confine yourself to what the stores offer as "art squares." These, if they are bought indiscriminately, will have a far less attractive look than if some thought is followed in their selection. Suppose you confine yourself to floral designs and do not allow any geometric patterns to appear in the house. Or admitting geometric, exclude all floral designs. The effect of repose is noticeable at once. It is possible to obtain very good copies of Persian rugs in the modern domestic machine-made product. You will find the so called palm leaf design as well as others of historic interest in these rugs that carry Oriental names, made in soft rich colors that will give quality and unity to the furnishing of living room, dining room and hall, for the modern manufacturer is alive to the needs of the moment and is making carpet rugs in shapes and sizes to fit any space with designs alike. The soft shades of rich red of Serebend rugs is reproduced very creditably in domestic rugs with flecks of blue, green and yellow in the repeat design of palm leaves. When floral designs have been used on the ground floor it might not be amiss to use geometric patterns upstairs.

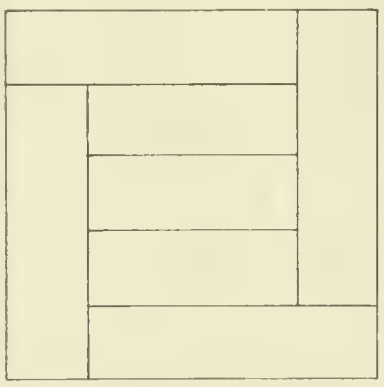
The Caucasian rugs of the Orient give a never failing supply of ideas to manufacturers. and good results are obtained. Ask for Daghestan, Cahistan and Shirvan patterns. They are often copied correctly and are much better than mongrel use of motifs by designers who know nothing of originals. Knowledge of Oriental rugs costs nothing, and is of immense assistance to one selecting copies of the varied designs that make them beautiful.

When there is a plain self-colored rug on the floor patterns may be used in the curtaining and furniture covering. It is amazing, however, to see how much a rug with elaborate design is helped by using

Don't combine floral and geometric patterns in the same room

Caucasian designs like this can be found in machine-made rugs

plain colored materials for furnishings. This is the A B C of success in selection of objects for adornment of the home.



Holding to a single general tone in the rugs as in the Serebund plan, the hangings might be either of some soft shade of red that will harmonize, or of either one of the colors in the design.

Bokhara and Afghan patterns are prevalent in domestic rugs as they have been most successfully reproduced. The rich tones and shades of red and brown are easily handled. With the floor stained a deep old Indian red, almost black, these Turcoman designs are most effective. There are so many dark tones in the rugs that they subdue the bright crimson red and the entire ground floor of a house is rendered attractive and livable by holding to this single style.

Several domestic reproductions of Samarkand rugs. They prove to be very satisfactory

If it is impossible to procure even domestic copies of Oriental rugs, there are still ways of covering the floor that will prove satisfactory and novel. Let no one be discouraged while matting exists. Its charms have yet to be sounded. An idea may be taken from the *mats* used in Japan, and in modest homes in America matting may be handled in an attractive way. When it is used the floor need not be stained and so expense is saved.

An ingenious way to lay floor matting — Diagram A

In diagram A the single width of matting is carried entirely around the room and not laid in strips as has been the custom in American homes. Short lengths are then fitted into the middle space inside the border width.

In diagram B the matting is carried across the ends of the room, and shorter lengths are fitted at the sides between the top and bottom or end widths. The central space is filled with widths placed at right angles from the side widths of the matting.

Never make a miter joining of matting or single breadths of carpet out of which a thrifty housewife sometimes endeavors to make her own carpet rug. Learn from the borders of old Oriental rugs to let the borders extend in frank fashion along the sides as far as necessary and then finish the ends across from side to side.

The possibilities of cocoa matting have not yet been exhausted. Even in an ambitious house a rug made of breadths of brown cocoa matting laced together with heavy brown cord lacings would not be amiss. In a cottage dining room such a rug would be very appropriate, and when the room is embellished with brown sacking curtains laced with the brown cord, and various bits of brown pottery and old brass the effect is good. The distinctive air about such a room defies all attempt to discern the details of the decorative scheme.

Sometimes the addition of a single feature will give an entirely original effect even to a product that is in itself commonplace. For example, the "hit or miss" rag rugs that may be bought for very little money can be made unique and attractive by binding them all around with a solid color drilling or Canton flannel. The flimsy fringe which is generally of thin unsubstantial cotton is thus confined and full value is given to the colors in the rug by thus controlling them with solid color. Orientals have much to teach us in the use of bindings. They use them to protect the edges of fabrics, and at times they are most ornately attached with ornamental and very beautiful stitches to the fabrics they bind.

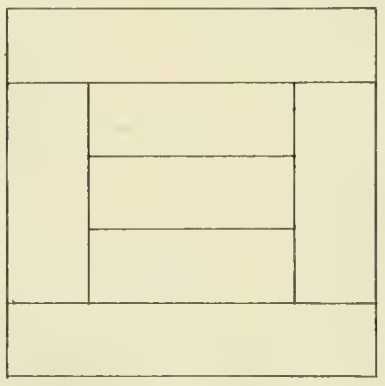


Diagram B—another good pattern for handling matting

It is somewhat the vogue at present to use dull colored linoleum on the entire floor of a small house, in tile effects of deep rich red, blue or green alternating with black squares. Mats of black sheepskin thrown here and there combine with the tile effect in giving a somewhat Italian appearance. In homes where there are growing children running in and out with sandy shoes it is both a practical and sanitary method of covering the floor.

There are many different sorts of machine made rugs good in themselves. There are all wool Wilton rugs which have a pile surface. Competing with them is an ordinary product made of cotton which is not durable. The Body Brussels rug is generally reliable as the colors in the design are woven of dyed yarn, while in Tapestry Brussels the design is simply stamped or printed in colors on the surface.

Chenille rugs are made without seams and are reversible. They are soft and pliable and in solid colors sometimes lend themselves to a scheme, as hard surface rugs do not. Jute rugs are made by the Japanese who are at present catering to the public taste for Chinese designs. Jute rugs are perishable, but give a most artistic effect when properly placed.

Well-distributed geometric designs—this style of rug is much copied

Two rugs are better than one in this case—the designs are similar

MOVING INTO WINTER QUARTERS

BY HUGH FINDLAY

A tomato vine with fruit, pruned and ready for packing in straw. You can keep tomatoes this way thru most of the winter

A WISE gardener is not satisfied to have a supply of fresh vegetables during the summer months and then depend on canned foodstuffs during the winter; he plans to have fresh vegetables practically all the year round. This can be done if only the essential principles are observed in regulating temperature, moisture and ventilation.

If the vegetables are stored in a storage building, root cellar or outdoor pit, the temperature should be about 32° to 34° F. Some vegetables, like cabbage, can stand 25° above zero and even lower, but for general purposes the temperature should be a little above freezing. If the temperature goes much above 35°, decay may set in. If the air is too dry the vegetables shrink and become useless, but if kept moist they retain their plumpness. When root crops, such as turnips or carrots, get wet and the temperature goes up decay is sure to make its appearance and it spreads rapidly.

No part of storing is so important as ventilation. The air must be fresh, cool and clear. After a severe cold night or several days and nights of bad weather, open the ventilator a crack the first chance you get in order to let out the foul air and admit fresh. There is considerable heat in vegetables and steam may be seen escaping from the ventilator early in the morning especially if the storehouse has been closed for several days. This is an indication of proper circulation.

Roots should be fully grown before storing and all badly bruised roots should be thrown out. The taps should be cut off about an inch above the root. Do not expose the roots to the air too long before storing them. Never wash the soil from the root crops or cut the roots from cabbage or celery.

There is no better way to store vegetables than in the soil out of doors and this method of storing may be practised successfully where the winter temperature does not go too low. Where the temperature frequently drops to 20° below zero do not attempt to store the pithy vegetables. Such crops as turnips, parsnips, salsify, beets, carrots, cabbage and potatoes may be kept until late spring if stored in a well-drained strip of soil.

1. The wrong way to cut the top. The wounded flesh of the root usually decays. 2. Beets that are too small to store. 3. Beets with the tops properly cut; the right size

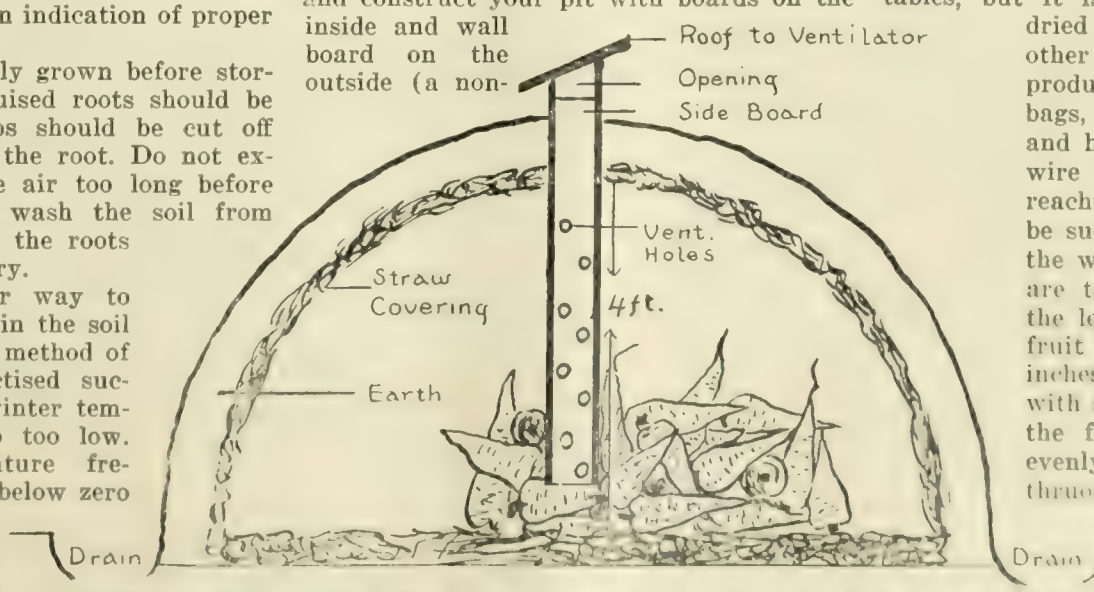
THE OUTDOOR STORAGE PIT

WHERE the soil is more or less level, dig two trenches eight inches deep on each side of the mound-base, which should be about six feet wide and long enough so that the vegetables may be piled four feet deep. Place on the surface of the ridge about six inches of clean straw. Make a ventilator of six inch boards, like the one shown in the illustration, and place one of these shafts along every five feet after the vegetables have reached a hight of 12 inches over the floor of the pit. If the pit is only 5 feet long place a ventilator in the center. Pile the vegetables around the ventilator to a hight of 4 feet and cover the mound shaped pile with 6 to 8 inches of straw. As the weather grows colder cover the mound with sufficient soil to keep out the frost.

It is not a bad idea to throw a strip of canvas over the mound early in the fall to keep out the rain until sufficient soil is added to shed the water. Open the pit at one end, and stuff the hole with sufficient straw to keep the frost out after the desired vegetables have been removed. Cabbage may be buried three tiers high by standing the cabbage head down in the straw. Cabbage should be the last crop to store for it decays quickly in warm weather. Remove only the partly decayed leaves and do not disturb the root.

THE VEGETABLE CELLAR

THE great difficulty with most cellars is that there has been no forethought for a vegetable storeroom and the furnace and pipes are so placed that it is a problem to construct the proper type of storage room. Select a part of the cellar under a window and construct your pit with boards on the inside and wall board on the outside (a non-conductor of heat and cold). While the shape may not be ideal, yet it will answer the purpose. Bins may be constructed to divide off the potatoes from the roots. Onions may be stored with other vegetables if placed in crates. Shelves may be constructed on the walls for winter squash, pumpkins and fruit. Roots and potatoes keep better if covered with burlap and if the room is kept dark and cool. Such a vegetable cellar must be ventilated carefully, for one night's neglect in closing the window may mean the loss of the entire winter supply. A pail of water placed in the center of the room will supply sufficient moisture. Keep a good thermometer hanging from the ceiling in the center of the room. Keep water in the furnace and a pail of water near so as to absorb the gas. Never allow the furnace gases to get into the root cellar.



A ventilator placed on the ground before the cabbage is packed around it. The roots are just as they were pulled from the soil

If you have room for only a few large boxes line the outside of each with wall board, place a ventilator in the center, fill in the roots and cover them with five inches of soil. Place the box as far from the furnace as possible. Place two strips of boards for the box to rest on so that the air can circulate under it.

THE VEGETABLE ATTIC

FOR general purposes the attic is too cold and dry in winter to store vegetables, but it is just the place to store dried corn, beans, peas and other dried foodstuffs. The dried produce should be put in strong bags, tied tightly about the top, and hung from the ceiling by a wire to prevent mice from reaching them. Tomatoes may be successfully kept for most of the winter if the fruit and vine are taken before frost, part of the leaves cut off, the vine and fruit carefully placed in six inches of straw and covered with sufficient straw to keep out the frost. The tomatoes ripen evenly and at various times thruout the winter. If covered, they retain their plumpness. But remember that the tomatoes should never be picked from the vine.

Diagrap of a vegetable pit. It should run east and west and the mouth of the ventilator should slant north. Have eight inches of straw at the base of the pit. As the weather grows colder add more earth, as indicated, to keep out the frost

These tiny broché and diaper effects are the safest patterns for all-over papering. They combine well with a stenciled frieze

THE ALL-IMPORTANT WALL PAPER

A PLEA FOR GENTLENESS IN ITS USE

BY GEORGE LELAND HUNTER

WALL papers are the most universal form of domestic ornament. At a minimum of expense they gratify the American love of novelty and change. Landlords even supply them free at the beginning of leases, thus encouraging new tenants to express their decorative personality on the walls that are to encage them.

Fearlessly the responsibility is assumed. Furniture and rugs demand prayerful consideration because of their high cost. But wall papers are so cheap that in selecting them even the poorest do not hesitate to use their own judgment.

Yet wall papers are the dominant decorative feature of most homes. As far as there is any style, it is the style of the paper covered walls. The wall papers overshadow the other furnishings so completely that a new wall paper means practically a new room.

Unfortunately sample books of wall paper or even sample rolls, mean little to the layman. They seldom give him the slightest idea of how the papers will look when hung. So he usually chooses them without much consideration of where they are to go, just as if he were pulling them blindly out of a grab bag.

Fifteen years ago the result was worse than it is today. At that time American wall paper manufacturers in the constant search for "originality," made necessary by the annual production of "new lines," were exploiting the sinuous and asymmetrical shapes of Art Nouveau. Of course these shapes didn't go with the other furnishings, but nobody bothered about that. The decorative penny-a-lines announced that Art Nouveau papers were "all the rage this season"; and the salesmen whose livelihood depended on disposing of the goods, cheerfully confirmed the announcement.

A large percentage of the very cheap papers are still distinctly bad. This is due not only to inferior materials and execution but also to ugly combinations of color, and patterns that echo crudely and brokenly those from which they are copied. Some of them are merely stupid and vague because of lack of character; others are noisy caricatures.

Number 19, a hand blocked reproduction. These examples of good wall papers at moderate prices were selected by Mr. Hunter

I do not propose in this short article to waste much space on bad papers. All of those I have illustrated are well printed on good paper in excellent designs, and range in price from 40 cents to $1.25 a roll, except number 19 which is hand blocked and consequently dearer.

Colonial is not only the patriotic and popular, but also a safe and sane style to follow and develop. Largely English before 1800, and French after (provided we are allowed to continue to use the name Colonial during the first part of the nineteenth century), it possesses such infinite variety that every room in the house may be different and yet represent our American forbears truly.

Wall papers being a development of the eighteenth century, the majority of our Colonial papers are Georgian Rococo or Georgian Classic. In both the Chinese influence often manifests itself, not only in pattern papers like those illustrated, but also in picture and scenic papers like those so delightfully portrayed in Miss Sanborn's "Old Time Wall Papers." One of the most effective of these Chinese papers is "The Canton" (number 8), resurrected from the walls of the Lee mansion in Marblehead. Other historic Colonial papers are those from the Stanwood-Mansfield house in Gloucester, Massachusetts, number 10, and from the Stoddard house in Ithaca, New York, number 15. Another interesting Chinese paper with floral stripes and quaint Chinese buildings simply presented is number 11. Distinctly later in style are number 1 with its Greek refinements; "The Pastoral," number 7, which betrays its French origin; "The Quincy," number 16, a Swiss lace effect; number 2 with its large grayed roses. Distinctly earlier in style are the English needlework effects of number 14 and number 6, as well as the pomegranate patterns of number 17 and number 3. Number 9 has a border in crewels.

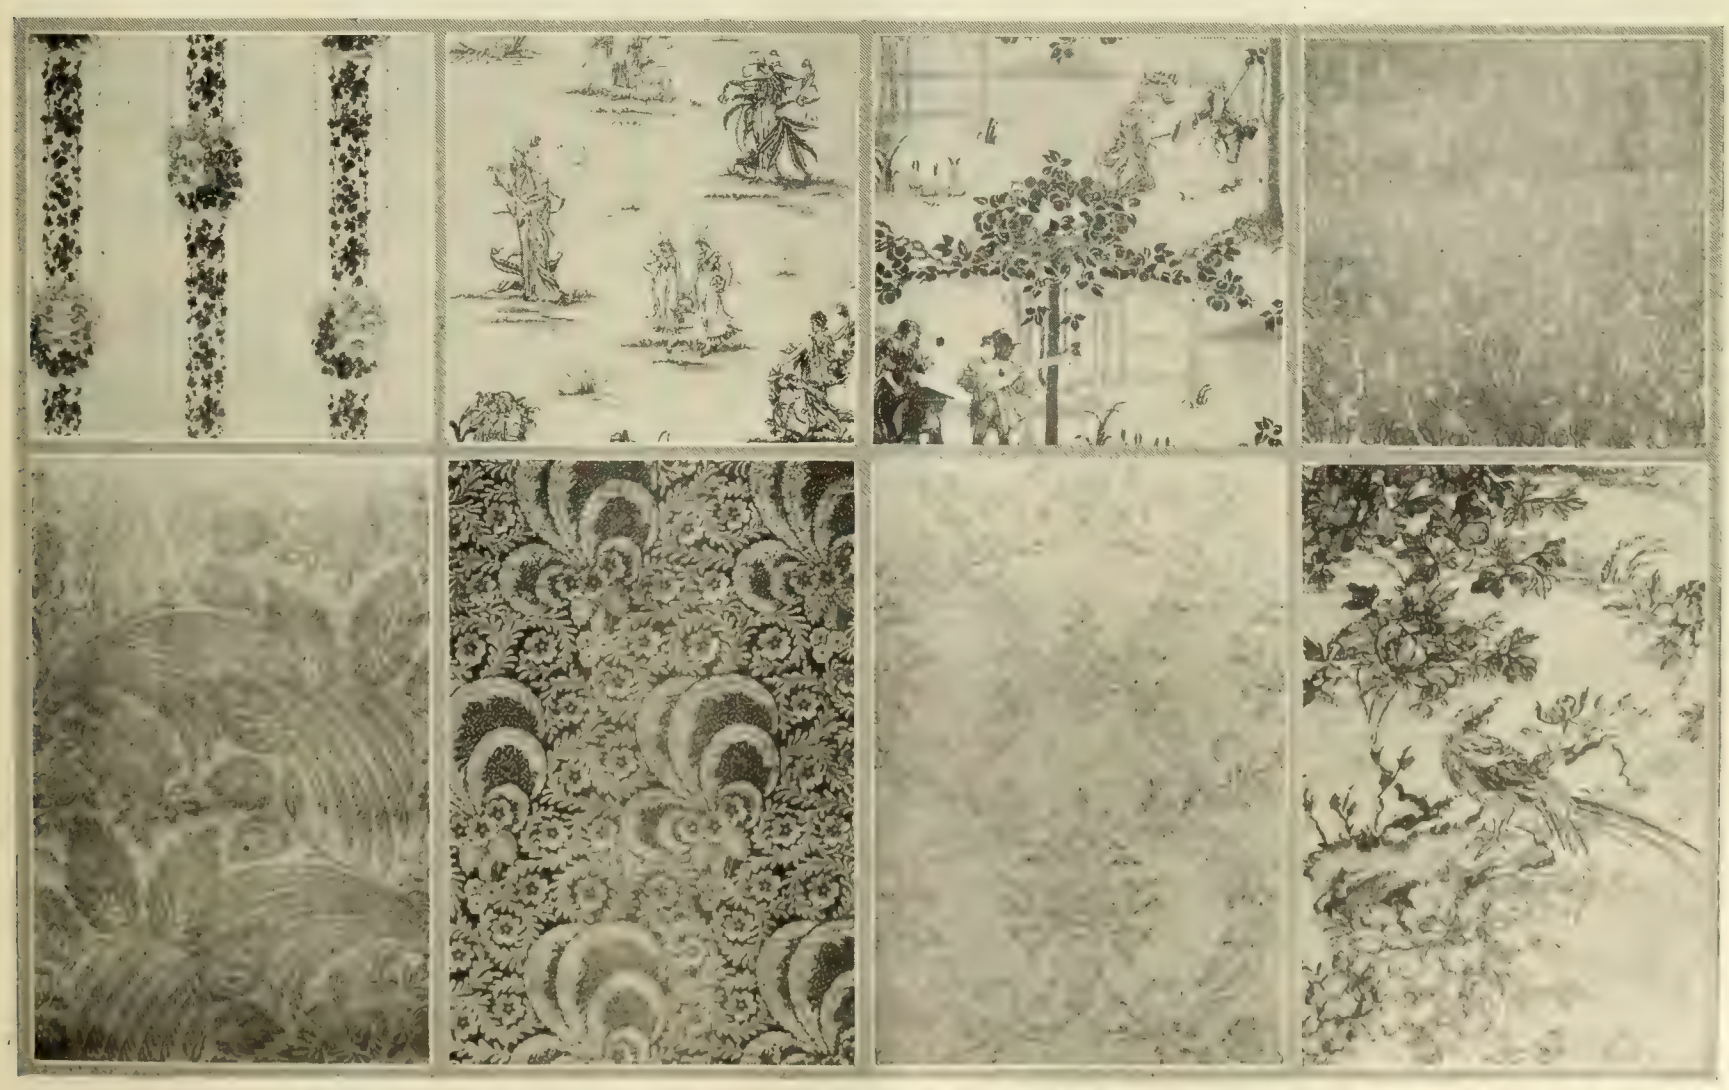
The question of borders is one that should be seriously considered in papering a room. While many of the appliqué borders and friezes are often terribly misused

Verdures, ancient and modern: Numbers 1, 2, 3 and 4. The pomegranate pattern of 3 is a particularly pleasing grayed effect

to create overheavy panel and crown effects, a simple border is sometimes indispensable, especially where the woodwork is negligible. It is, of course, easier for the paperhanger to paste the walls completely over with a solid pattern, but the result is frequently displeasing, particularly if the motif is strong enough to seem to stand out in relief against the background.

The patterns safest to use in all-over papering are tiny broché and diaper effects like those illustrated at the head of the article. Such patterns are also safest with the stenciled picture friezes that are made in both England and the United States, and that lessen appreciably the apparent hight of a room that is too high for its other dimensions.

A half dozen Colonial patterns which show Chinese, French, Swiss and English influences. Reading from the top to the right: Numbers 5, 6, 7, 8, 9, 10



Fortunately the texture or almost absence of texture of wall papers is such as to render their effects less pronounced than those of other wall hangings. The lines and stipplings simulate only faintly the surface of tapestry and needlework and burlap and grasscloth. The designs that come from the loom accentuated by contrasting threads in color and in relief are in roller-printed wall papers so toned down by the process as to give little offense.

Many of the worst wall papers are printed in strong and solid colors. Avoid them. Nothing could be worse than some of the cartridge papers and heavy stripes. The genius of wall papers is gentleness, and the best makers appreciate this by their choice and blending of colors, using soft grays such as predominate in the papers illustrated, or graying down the bright colors by printing them homeopathically.

With the expensive hand-blocked scenic papers the dangers of repetition do not exist. Scenic papers open out the walls wonderfully. With them the danger is quite the contrary. Too often hung around a room without any repeat, they lack balance and symmetry and seem to "travel" unceasingly.

Above all do not use dark and gloomy papers such as were once so popular for Mission and rustic interiors and for dining rooms. It is part of the genius of wall papers that they reflect light generously, and every advantage should be taken of their natural tendency.

The William Morris inspiration is illustrated in Walter Crane's "Flora," number 12, and in "Troubadour," number 13, which owes its charm to Kate Greenaway.

American wall papers of quality in patterns and coloring. Numbers 11, 12, 13, 14, 15, 16, 17, 18, reading from the top to the right

The House Livable

SIXTH ARTICLE IN THE SERIES

A brick house of excellent proportions is the Gregory residence at Hartford, Connecticut. Smith and Bassett, architects

OF late there is an increasing tendency to build country houses of fireproof construction, and a house which is fireproof thruout is unquestionably the most satisfactory, even aside from the point of its being non-inflammable. Masonry walls do not shake; plaster applied to masonry walls does not crack, and while the cost is still somewhere above that of wood construction, the difference between them is, with the increasing cost of wood, steadily becoming less; some of the new methods of constructing fireproof floors by means of terra cotta and concrete arches, reinforced with iron, are very little in excess of the cost of wood, even today. The main difference between the cost of a wood house and a fireproof house is not so much in the actual construction as in the added cost of attaching wooden trim, doors, floors, etc. to the masonry work, a factor which will probably not be disposed of soon, since there are few masonry floors as pleasant to walk upon, or as satisfactory as wood, and the cost of metal trim and doors in the average country house is almost prohibitive.

The only fireproof material used at all in its natural state is stone; all others are either manufactured or artificially colored and, while stone is rarely used without some cutting, its effect is dependent less upon artificial treatment than is the case with any other material. Most varieties are extremely durable and fairly waterproof, altho some sorts are porous and liable to make the interior of a house damp unless it is waterproofed either inside or out. Probably no other material requires so much intelligence in its use; a stone wall can be either the most beautiful or the ugliest of all exterior surfaces, in accordance with the way it is cut and laid to conform to the general style of the house. Tho no hard and fast rule can be made as to how to cut it, it may be said in general that the individual pieces of stone should be small and the mortar joints not too narrow. One requisite of good stonework is that the wall should not appear to be held together by the mortar; or, to say it another way, the stones in the walls should be so laid that they would retain their positions without mortar. A wall which has this characteristic will usually be handsome in itself, whether or not it is appropriate to the design of the house of which it forms a part. Walls built of bulging cobblestones for instance, look as if they would roll apart were it not for the mortar, and walls made of stones with the joints fitted together at all sorts of angles, like mosaic, are also inappropriate. The basis of artistic success is sound structure. Many things which please us, do so primarily because they are structurally correct and only secondarily because of their decorative qualities. Thus the stonework in the old house at Hackensack is well shaped and laid and has a comfortable sense of fitness, regardless of its color or texture.

It is not necessary, however, for stone to be cut into regular blocks to make it appear stable. In fact, to build a wall of as regular stonework as in the old Hackensack house and not produce an effect of chilling formality is something of an achievement. Country houses in general need a freer and less obviously labored treatment of stone. We know that most of the stone walls around farm fields stand up pretty well, and any house wall in which the stone is laid as in these field

Stone and brick were used together in this house designed for the Amsterdam Building Company by Frederick Strener, architect

stone walls will be satisfactory, but do not forget that where mortar is used it must not be concealed. A house wall of fieldstone with the mortar kept far back of the surface or colored like the stone in an attempt to hide it is instantly, tho sometimes subconsciously, recognized as tricky construction, and the mind resents deception of every kind. Therefore, when a wall is built of small, rough fragments of stone the mortar must be used in the most natural way, wide or narrow, as the interstices between the various stones require, and finished practically flush with the surface of the stone. Nowhere has work of this variety been better done than in the neighborhood of Philadelphia, where the stone naturally splits into long, narrow pieces and, when laid with the beds horizontal and wide white mortar joints, is most attractive.

THE surface of stone will, of course, vary with the design. The house with a profusion of delicate detail demands a negative surface to set it off, while a house in which the detail is bold and rough will require a treatment of its wall surfaces of corresponding vigor. The texture of the wall as a whole is dependent upon two separate qualities, color and relief, and both the stone and mortar joint influence these things. It must not be forgotten that from a distance the colors of the stone and the mortar blend together, fuse in the eye like an impressionistic painting, so care must be taken to secure two colors which are mutually harmonious. The combination of deprest mortar joints with smooth stone will give a wall of generally rough character, and, conversely, rough stone may be brought into harmony with dainty detail by the use of plenty of smooth mortar.

The worst feature about the use of stone for exterior walls is its cost, which, even where stone is plentiful, is greater than that of any other kind of wall. This is mainly because all work upon it must be done by hand (except in the case of limestone and marble) because of the great quantity of cement required to completely fill all joints.

THE commonest objection to stone walls on the part of the public, however, is not the cost but the alleged dampness of stone houses. This attitude of mind is doubtless a legacy of old times when mortar—even lime-mortar—was too costly to be used except for outside finish, and the walls were laid up in clay or mud, so that much water did undoubtedly penetrate the walls. Also, these old houses were plastered directly on the back of the stonework, and as all building materials except wood are somewhat absorbent, the inside of the walls invariably contained some moisture. Nowadays stone walls are laid in cement mortar thruout; their backs are painted with some sort of tar product to keep out dampness and the plaster work, instead of being applied directly to the stone, is done on lath nailed to vertical strips of wood secured to the wall, thus leaving an air-space between the plaster and the wall so that there will be some circulation of air to dry out any

Brick and Stone

BY AYMAR EMBURY II

Stone with stucco. Residence of Mr. G. H. Culvert, Hampton Township, Pennsylvania. Janssen and Abbott, architects

dampness which may penetrate the stone. As to the particular type of house to which stone is best suited, it need be said only that it is suited equally well to all. It is a material which is found everywhere and has been in consequence universally used, altho with different methods of jointing and cutting. In Italy, in England and in the United States it was a common material in the times to which we look for precedent, and was employed with freedom and vigorous design. It has, moreover, one quality peculiar to itself: where native stone is used it automatically helps to tie the house to the surroundings. No one will dispute the assertion that a house should look native, and it seems to be a fact that the use of local materials, and especially local stone, assists the design in conveying that impression.

Terra cotta as an exterior finish for walls is of two kinds: the first where a block is burned and then glazed with a superficial finish of any desired color and texture; the second where the unglazed block, made for use under some other material, is employed as a finish. For country work neither has much advantage. The glazed variety is economical only when there is sufficient repetition of a single pattern to pay for the cost of molding the pattern, which in country houses makes it cost more than the stone it pretends to imitate. Further, there are grave doubts as to its permanence, since any fault in, or crack thru, the glaze admits water to the porous interior block and the frost then destroys the surface.

The unglazed kind is much cheaper, but is made in a very few fixed sizes only, and as the unit is not so small as brick, one constantly encounters ugly cuts or the necessity of using small pieces to fill out between windows.

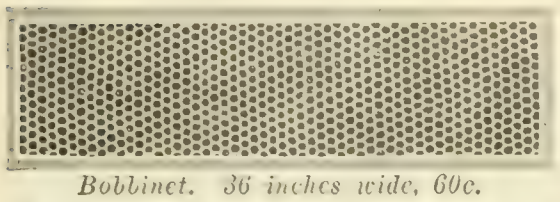
Brick is unquestionably in many respects the best of all building materials for exterior walls. It is strong, fireproof, easily handled and made in a wide range of colors and textures. It is the most durable of all walls, needing no painting or even renewing of the mortar joints (called pointing) because it offers so excellent a surface for mortar to cling to that it seldom falls out as it sometimes does in stone walls. Windows and doors are easily built into brick walls and can readily be made weather-proof. The walls themselves do not transmit much moisture if the exterior face brick is fairly dense but sufficient dampness will strike thru the mortar-joints to cause trouble if no circulation of air is allowed between the brick and the plaster.

This seventeenth century Dutch farmhouse at Hackensack, New Jersey, shows a simple but effective use of cut stone

Brickwork in Flemish bond. Residence of Mr. William H. Davidge, Westport, Connecticut. Murphy and Dana, architects

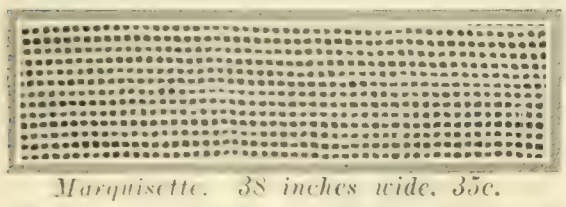
Brick is suited to practically all architectural styles and blends readily with almost all varieties of landscape, altho when a house is built in a bleak, barren setting, brick looks worse than anything else. A brick wall ought not to be used without a judicious admixture of other materials in the cornices. sills and lintels of the windows and piazzas or porches, for the uniformity of its color and the monotony of its surface, due to the repetition of small elements of uniform size, demand relief.

There is probably no other material in which the processes of manufacture and the artistic excellence of the product have been so greatly improved during the past few years. Even ten years ago there were but two kinds of brick available: one the soft, permeable common brick and the other the so-called "pressed brick" of hard outline, smooth surface and uniform color. The common brick is too soft for exterior use; it absorbs water, making a damp house in summer, and, when cold weather comes, the water in the brick freezes and the surface peels off. The prest brick, on the other hand, was mechanically excellent but its uniformity robbed the surface of all textural interest.



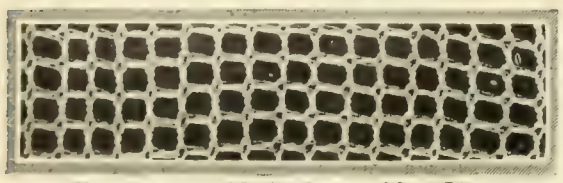
In the new products no attempt has been made to get the color uniform. Bricks of various shades of red, brown and buff are built into the same wall, so that from a little distance they mingle together in a soft, quiet hue which is not that of any individual brick but rather a mean between them all. The effect has in general the same pleasant quality which we associate with old work, and which architects had despaired of ever producing in new work, believing that the softening hand of time alone could work such miracles of coloring, tho how they expected the hard, smooth prest brick ever to change to the soft surface of old English or Colonial brickwork one cannot guess.

As with stone, the method of laying has much to do with the appearance of a brick wall, and the size, shape and color of the mortar-joint should be considered before deciding how it is to be laid. The outside layer of bricks is, of course, the only one that shows, but this must be connected into the backing-up brick if the wall is to be substantial. This is accomplished in various ways which considerably alter the appearance of the surface. Bricks are generally two inches high. four inches wide and eight inches long, and are laid lengthwise of the wall, so that the exposed surface is two inches by eight inches. Now if all the outside brick were laid in this way there would be no "bond" (or connection) between the face brick and the rest of the wall, except by the adhesion of the mortar, and the wall would act as two independent elements, two thin walls built side by side. To unite them some of the face brick are run crosswise into the wall, so that their ends only show. The general practise in rough brickwork in this country is to make each sixth course a "header" course. This course is different from the others and often forms a sort of decorative line calling attention to the wrong points. When every second row of bricks is laid endwise (which is called "English bond") the repetition becomes constant and does not attract attention. and a somewhat greater variety of surface is obtained.



As said before, the color of the bricks themselves only partially determines the color of the wall in which they are used. the mortar does the rest. If dark red bricks with a wide white mortar-joint, are used. the whole wall will be a light pinkish color; with gray mortar in joints of the normal size (about three-eighths of an inch) the wall will be a rich purplish red; with black joints it will appear a rather oppressive brown; so the color of the mortar is important. In choosing the color of the brick, the color of the trim and roof must be considered so that the parti colored house will blend into a harmonious whole.

GOOD CURTAINS AND ECONOMY



BY ABBOT McCLURE AND HAROLD DONALDSON EBERLEIN

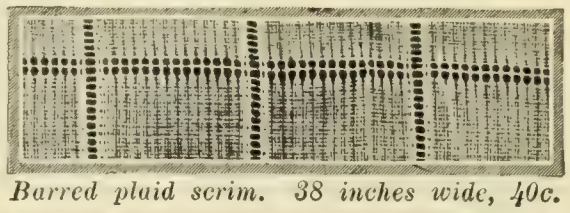
Cotton gimp, 8c. Black and white, 10c.

Cotton gimp, 10c. Cotton edging, 3c.

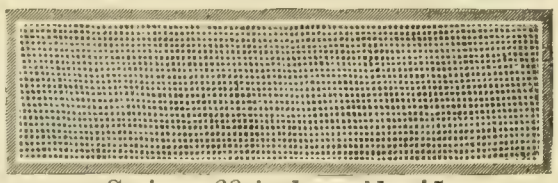
Scrim. 38 inches wide, 30c.

Fine scrim. 38 inches wide, 25c.



THE practise of economy is just now a patriotic duty and one that seems to be getting pretty general and consistent observance. But practising economy does not mean letting things gradually run down in condition and go without attention until they are ready to drop to pieces. It is not economy, but sheer shiftlessness, to withhold a pair of shoes from the cobbler until the heels are all worn down and their unevenness has spoiled the set of the whole shoe which, when finally repaired, will probably avenge the neglect by developing a disconcerting squeak. If the heels are kept in proper shape, the shoe lasts longer. In quite the same way, it is invariably more economical in the end to keep everything else in good condition and prolong its usefulness by a moderate and timely expenditure. Economy means good management, keeping things up to the scratch, efficiency and saving in the long run.

Curtains, like shoes, are conspicuous by their very position and neglected or worn-out curtains will create as unfavorable an impression of the aspect of a room as neglected footwear will of an individual. And the mere *impression* is not the only thing; bad physical surroundings exert a real and actively mischievous effect upon the psychological attitude. That is one reason why military and naval regulations require everything to be kept scrupulously trim and neat and cheerful. In view, therefore, of the reduction in personal efficiency proceeding from depressing surroundings, it is not a piece of unpatriotic extravagance but rather an evidence of patriotic thrift—to see that windows in need of attention are not further neglected but freshly curtained with inexpensive but appropriate materials, for no single feature in the equipment of a room can contribute more than curtains to an atmosphere of cheer and genuinely active and wholesome inspiration.



AT first thought, perhaps, it may not seem especially inspiring to run thru a list comprizing cheesecloth (more euphoniously called *Euclid batiste*), scrim, bobbinette, swiss, cotton crepe, unbleached muslin, carriage-makers' scrim and a few other kindred materials, but when one stops to consider that many of the so-called "smart" decorators constantly resort to them and that more than half the battle is in the way the curtains are made and hung, the matter takes on a different complexion, especially as so much can be accomplished at a trifling cost.

Cheesecloth—call it *Euclid batiste*, if you must—costs from 12½ to 18 cents a yard and comes both white and cream colored or unbleached in 24, 27 and 36 inch widths. It is frequently doubled to give it more body and make it hang better. The bottom hems should be two and a half to three inches wide and weighted at the corners or else all the way across with lead tape; side hems may be of the same or less width. If one wishes the relief of color, an edging of cotton gimp in several colors, or in black and white, may be used, in which case the hems at bottom and sides should be a little less than the width of the gimp and the fringe of the gimp should show free of the edge of the hem. Such gimps cost from 5 to 15 cents a yard. When using it, weight the bottom hems with narrow lead tape. Instead of gimp, colored borders of sateen, two and a half or three inches wide, may be sewed on.

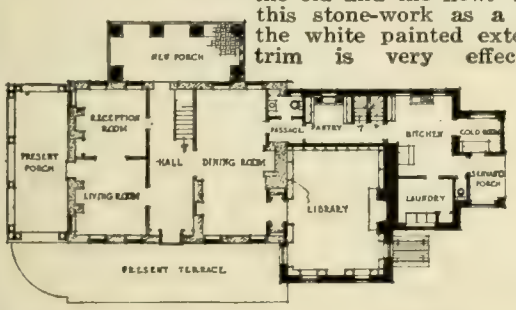
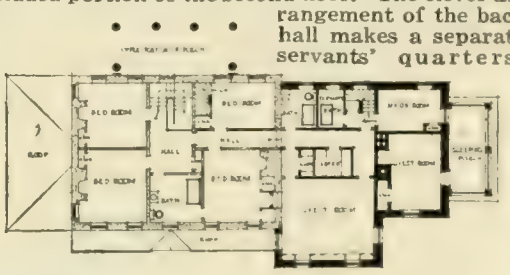
Pennsylvania Stone and Washington Pine



RESIDENCE OF MR. L. D. LEWIS, THE HIGHLANDS, SEATTLE, WASHINGTON.
W. R. B. WILCOX, ARCHITECT.

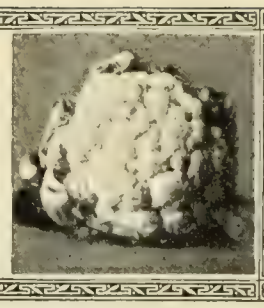
Tho it is designed along the lines of a Virginia plantation of ante-bellum days the Lewis house is perfectly adapted to its very different from Virginia setting, two hundred feet above the shore of Puget Sound with a background of hills and primeval pines. A broad curving road leads from the main highway to the side of the house which faces the garden and the grove. The entrance has a white Doric pillar and a trellis on each side. The reception hall, in cream color, has an open stairway with a landing nearly at the top, where windows cast light into the room. Thru French doors at the right is the dining room; at the left, the living room, dark blue and mahogany, with an entrance onto the big pillared porch and lawn. The library is paneled with woodwork of San Domingo mahogany in the natural color. French doors lead out on the broad porch facing the Sound. The sun room at the extreme south end is used as the children's playroom. Above are two large sleeping porches opening from the owner's room. in the north wing are the servants' quarters. All the rooms on the second floor are finished in white. On the third floor is a large ballroom in pure white running the full width of the house. At each end is a huge gray fireplace in monastery style.

Part of this Pennsylvania house was built a century ago, part of it very recently, but so skilfully have the modern improvements and additions been made that none of the original character and charm has been lost. The walls were made of gray local stone, probably from necessity rather than intent but with the happy result—always produced by an intelligent use of local material—of making the house seem to belong in its particular location and nowhere else. The gray stone is irregular in size but laid in a generally horizontal manner, with strongly marked, wide, raked-out, white joints that give to each individual stone a distinct color value and to each wall surface a wealth of texture. The same material was used for the addition that there might be perfect continuity between the old and the new. With this stone-work as a foil, the white painted exterior trim is very effective.



Material and color-scheme are both essentially of the Pennsylvania type of Colonial architecture, and so is the Germantown hood, which partially shadows the brick-paved terrace in front of the house.

The darker portions of the plans indicate the new work. The house was not so much made over as added to. Tho it was virtually doubled, the old partitions were not touched and the old rooms remain practically intact. The arrangement of the rooms in the new portion of the house is particularly admirable. The built-in features are well placed, and the exposures did not simply happen but were carefully planned. This is particularly evident in the Jacobean library, which is not only blessedly and unusually isolated from the conversational part of the house, but is lighted from three sides. The walls are lined with built-in bookcases. Guests are favored with a secluded portion of the second floor. The clever arrangement of the back hall makes a separate servants' quarters.



RESIDENCE OF JUDGE JOHN M. PATTERSON, LANGHORNE, PENNSYLVANIA. HARRY GORDON McMURTRIE, ARCHITECT.

What To Do In October

A GARDEN GUIDE BY HUGH FINDLAY

PROFESSOR OF HORTICULTURE IN SYRACUSE UNIVERSITY COLLEGE OF AGRICULTURE

IN THE GREENHOUSE

Roses Keep a close watch for mildew this month. Dust the foliage and paint the heating pipes with sulfur. Fumigate by burning tobacco stems to keep in check the green aphides. Spray on bright days to destroy the red spider. If the temperature is kept even and the plants healthy by keeping the insects and disease under control, you will not be troubled much with these pests during the following winter months.

A watering of liquid cow manure about once each week is very beneficial. Also a little bone meal and sheep manure worked into the surface of the soil every two or three weeks is advisable.

Late Bulbs For a late bloom, bulbs of hyacinths, tulips, etc., may be potted the last of the month and stored for the necessary period of from six to eight weeks, so they may develop a strong root system before bringing them to light.

Chrysanthemums After cutting the late varieties, select the best clumps for stock plants and plant them in a cool house in flats or in a ground-bench. Give these plants several weeks' rest before encouraging growth so that cuttings may be taken. Label each variety carefully. Do not trust to memory.

Plants for Christmas This is the month to pot cyclamens, primulas, fancy ferns and other plants used for Christmas. Cinerarias for early spring bloom should have their first shift of pot. Apply a little dried blood to each pot of poinsettia. Stir this into the surface of the soil and water freely. The foliage will be greener and the bloom redder if this is done every two weeks until the holidays.

Spring Pansies Sow the seed now. transplant the seedling into flats about 2 inches apart each way. When they grow large enough, transfer to the permanent bed. Scatter a few tobacco stems between the plants to keep the green aphides in check. Dust them with tobacco dust. Keep them growing slowly all winter, and very early in the spring they will gain an abundance of bloom.

Vegetables If cucumbers or tomatoes are started in the back of a bench close to the glass, 6 inch pots of beans may be placed in the front. All three of these plants do well in a warm house. Lettuce, radish, Swiss chard, parsley, and beets require a cool house. Radishes may be grown between rows of lettuce. A few choice vegetables are sometimes grown in the same house with flowers.

IN THE FLOWER GARDEN

Wild Flowers Just as soon as the autumn leaves begin to fall it is time to gather the roots of wild flowers. First prepare the soil in your home garden by using a foot of wood earth so that the plants may have their natural environment as near as possible. Such plants as trillium, violets, hepatica, and ferns should be moved after the first light frost but before the ground is frozen.

Roses Cut out the three year old canes of the rambler roses. If the rose bush is exposed to the north winds and the climatic conditions are changeable. it is safe to protect the plant over winter. If the rambler is on a lawn, cut the grass in front of it and remove it. Place about 6 inches of excelsior on the ground, bring the rose down and peg the canes close to the excelsior. Then place 8-12 inches of excelsior on the bush and add straw or leaves as a covering as the winter advances.

All tender varieties of roses should be protected by wrapping the plant in excelsior and inverting a peach basket over it. Peg the peach basket close to the ground so that the wind does not shift it. Excelsior is recommended because mice do not favor it so much in making their nests in early spring, and so there is less danger of these vermin eating the bark.

Hardy Perennials This is the last call for mulching canterbury bells, columbine, foxglove, hollyhock, pyrethium, gaillordia, and hardy chrysanthemums. The freezing and thawing of both October and November may mean death to many of these plants if they are not protected.

Bulbs If the soil is not yet frozen and properly prepared, such bulbs as the golden jonquils, snowdrops, blue scilla, Spanish iris, crocus, narcissi, Darwin tulips, grape hyacinths and anemones may be set out. Protect the bed with straw manure. The bulbs should be set below the frost line.

Dig and store in a cool, dry place in a box or barrel of soil, dahlia, gladioli and canna roots. It is a good practise to let the frost destroy the tops before digging the roots. Cut off the stems about one inch above the roots before storing.

Pansies If the pansies are first year plants they may be mulched with manure about the fifteenth. If the mulch is removed very early in the spring they will be among the first plants to bloom in the garden.

IN THE WAR GARDEN

Potato Dig the potatoes before the ground is frozen. Sort out the bruised ones and use them first. Small potatoes may be boiled and fed to the chickens. Do not store the small, immature tubers with the ones selected for table use. Throw out all potatoes that are diseased except those that may have a little scab on the skin. Expose the tubers to the air and sun long enough to have them dry before storing. If piled while wet there is danger of soft rot. Do not allow the potatoes to be exposed to the sun for several days. It has a tendency to spoil the flavor and in some cases the tuber becomes poisonous.

Late Celery Before digging the celery, prepare the cold frame in which it may be stored by digging out the center so that after the plants are set close together there will be a space of six inches above the plants to the top of the frame. Pack a little sand about the roots as the plants are set and protect the tops by placing boards, hotbed sash, or a storm window on the top. Ventilate each clear morning, but make sure that the plants are protected from severe frosts. On very cold nights cover the boards or frames with leaves or straw and place a few branches on this litter to keep it from blowing away.

Celery that is hilled and left in the row should also be covered with leaves and straw. If the air is not allowed to circulate thru the plants on bright days, the plants soon rot.

Lettuce The Grand Rapids variety may be transplanted to the hotbed the first week of this month. Keep the temperature between 45° and 55° F. The soil should be one-half decayed manure and kept moist. Care should be exercized not to get water on the foliage while watering the plants. As the plants advance lift up the lower leaves and scatter a few tobacco stems under them to check the green aphides. Thrifty plants should mature in about four weeks.

Rhubarb and Asparagus Both of these crops should have a heavy mulch of manure before the last of the month. Fall grass and other weeds should be removed from the asparagus bed before covering the plants for winter.

Storage Pit This is the month to pit or store beets, carrots, parsnips, salsify, rutabaga and turnips. All root crops to be used during the winter should be removed from the garden before the soil freezes.

A Fall Drive If your garden has been overrun with quack grass this is the month to spade or plough it. Leave the clods in the rough so that the winter weather may have a chance to destroy the roots of this much hated weed. This practise also destroys many insects that have hibernated in the soil.

WAR GARDEN BUREAU

The Independent-Countryside War Garden Bureau, 119 West Fortieth Street, New York, will answer your garden questions freely and promptly and will give you expert advice about any of your garden problems. The dates given on this page are for the latitude of New York City. For every hundred miles north or south subtract or add from five to eight days.

FRUITS AND BERRIES

Fruit Harvest Pick Baldwins, Northern Spies, and Rhode Island Greenings before the hard frosts set in. A light frost does not injure these varieties. Never pick them on wet days or when the dew is on the fruit. Apples should be dry before storing. Use the windfalls first, make jelly out of the defective apples, and store only the best. The apple crop is short this year. Handle the fruit as you would eggs.

The late varieties of pears should be picked before they are fully ripe and stored in a cool, dark cellar. Pick out the ripe ones two or three times each week.

Ventilate the fruit cellar on clear, warm days. Pure air is very essential in keeping fruit.

The Apple Tree If you have not already placed wire guards about the trunk of your young trees this is the month to do it. Just as soon as the clover and other green food dries, the rabbits and woodchucks begin to skin the young apple trees.

Strawberries This is the last call for mulching the strawberry bed. Allow the foliage to ripen thoroly before mulching with manure, but do not allow the soil to be frozen more than a half inch in depth.

Blackberries and Raspberries All of the old wood should be cut out and burned. A thoro cleaning of the berry patch this month will be appreciated next spring when other things demand attention.

AUTUMN IS PLANTING TIME

BY H. E. HOLDEN

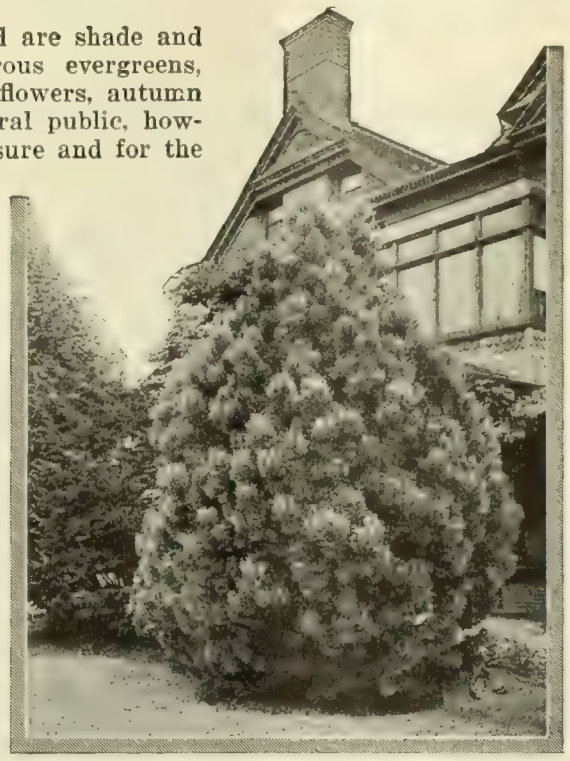
THAT fall planting can be done to advantage is an accepted fact among experienced and professional horticulturists. Whether the species to be planted are shade and ornamental trees, flowering shrubs, coniferous evergreens, fruit stocks or the hardy herbaceous garden flowers, autumn is the ideal season. Among the greater general public, however, who delight in their gardening for pleasure and for the beautification of their residential grounds, there is unfortunately not the same keen interest in fall planting as is shown in the spring, a condition due, perhaps, more to general practise and custom than to any reluctance to take advantage of the fall season for planting.

NATURAL ADVANTAGES

Practically all plant forms have reached their mature growth with the approach of autumn. They are then in their most vigorous condition, and in the very best shape for transplanting. At this season, while the ground is still warm, new roots will form quickly, and the plants are thus firmly established before the heavy freezing weather begins.

Hardy trees, shrubs and plants which are set out in the fall are as far advanced, generally speaking, as had they been planted during the preceding spring, an entire season being gained by planting them in the fall.

This fact is frequently taken advantage of by those who, with the rapidly advancing spring, have had insufficient time to make necessary preparations to plant then. In recent years especially the springs have been so very late and interrupted by frequent heavy rains and generally unfavorable weather for planting, that the season has seemingly advanced in a few weeks into hot summer weather before its work could be fairly started. The difficulty of successful planting under such conditions is obvious, for the stock comes rapidly into growth.



No time can be lost in planting after the stock is dug in the nurseries, and delays en route, a frequent occurrence under the present transportation congestion, or any delays after the stock has been received are often fatal. These conditions are practically eliminated in the fall, when all plant life has completed its growth instead of just beginning it.

A COMPLETE PICTURE

In the early fall before the leaves have fallen your grounds represent a complete picture. This picture has been before you all summer, thus it is quite easy to form in your own mind a change here, a few plants and specimens to be added there, or perhaps a complete additional group or border planted in positions otherwise somewhat bare. In the spring little but the mere frame is left to work from and very little time is available to properly mature a definite plan.

WHEN TO PLANT

The proper time to plant may be divided into two groups. Evergreens, the first group, should as far as possible be planted during August, September and early October, the middle month being preferable. Most of the hardy herbaceous garden flowers can be planted beginning with September, and continued right up to November. One exception is to be taken in respect to the evergreens. August is frequently a very dry, hot month, and unless water can be provided easily and freely one should wait until ample rains have moistened the ground. This is equally true as far as the nurserymen are concerned, as they are unable to dig evergreens during periods of drought with a sufficient ball of earth, or with any assurance that the dry soil even were it obtained would hold together during shipment. Reliable nurserymen will always await good rain before taking the stock from the ground. The second group covers the shade and ornamental trees, flowering shrubs, vines and hardy garden plants, as well as the various species of fruits. Most of these are ready for planting by about the first of October, and can be successfully planted from then until the end of November, sometimes into December if the weather continues open.

Wait for a good rain to set out evergreens

SOME EXCEPTIONS

A few species, such as Oaks, Birch, Beech and Magnolias in the shade trees should always be planted in the spring, never in the fall. They do not mature their wood until very late, and experience has shown them to transplant more successfully in the spring. It is well in all cases to be guided by the advice of the nurserymen, who may be depended upon in turn as being guided by their own experience and best judgment. As a general rule, where a few species may be ordered which do not readily transplant in the fall, they will send them in the spring.

LABOR TROUBLES

It may be said with equal truth from the planters' standpoint, as well as from the nurserymen's, that labor conditions are not so pressing or difficult in the fall as in the spring. The fall planting season is longer, the weather usually more open and favorable, so that the nurserymen are not compelled to rush as in the spring. They are able to give more time and care, not only in the selection of the plants ordered, but in preparing them for packing and shipment.

Furthermore, large additional stocks are grown during the summer, consequently plenty of everything is available, and orders when placed are filled complete. Frequently in the spring the early rush of orders is so heavy that some species are entirely sold out, or reduced so that only inferior plants are left. "Order early and get the best" seems to be the slogan, which means that those who do their planting in the fall not only get the best, but get in a season ahead of their neighbors. When the spring rolls around, they have everything planted and growing, while their neighbor, who has waited until spring, is annoyed by delays in the general rush, by possible omissions of certain plants wanted, and more than likely by a combination of bad weather and unreliable labor. And perhaps a month or six weeks will pass after the stock is planted before it shows up in anything like its true form, while the fall planted stock will have started with the first warm days of spring, and soon be in full growth and vigor.

MULCHING

By mulching is meant a covering or protection over the ground after the plant is set and the soil filled in. Well rotted manure is preferable for this. This covering or mulch helps to hold the moisture in the soil after planting. It will also aid in holding the ground firmer, when, after the frozen ground thaws in the spring, the soil "bulges," loosening both the ground and the plant.

WAR PLANTING

Never before has America realized the need of the strictest economy as now when we are at war. In this we have been able to learn much from our Allies. The past spring saw "war gardens" come into being as if by magic. During the general rush to plant something many mistakes were made. The problem of insufficient time was always present. Everything seemingly had to be done in a hurry. What is true of the vegetable garden is even more true of the fruit garden, and no garden is complete without a supply of fresh fruits. This fall will undoubtedly see enormous interest along these lines. Autumn is the ideal time for planting all manner of fruits. Strawberries, for instance, may be planted from now on. Pot-grown plants should be used to obtain a good crop of fruit next [illegible]. Apples, pears, peaches and cherries. [Continued on page 42]

By planting shrubs in the fall you gain nearly a whole year

FROM GARDEN TO TABLE

BY ANNA BARROWS

INSTRUCTOR IN FOODS AND COOKERY IN TEACHERS COLLEGE

THRUOUT the northern section of our country frosts have probably put an end to most of our favorite vegetables. Some of us take risk with a few seeds and if the frosts are late, receive tenfold for our venture in string beans and late sweet corn.

Night after night we watch the thermometer, mindful of the old warning that "fifty at nine o'clock with the wind northwest means a frost." Sometimes we go out after that hour to cover the most promising tomatoes or melons. We appreciate the value of the garden as people never can who live where a succession of crops is possible and where frosts are six months apart instead of three.

The Cabbage Family Thus far we have rather neglected the cabbage family which has many members different enough to provide variety on our tables even if they are used often: Brussels sprouts, cabbage, cauliflower, collards, kohl-rabi, mustard, radishes and turnips of many kinds. A new kind of cabbage is slowly finding its way into this country from China. This is *pe-tsai*, or, as it is easier to say, Chinese cabbage or celery cabbage. It is said to resemble a dense head of lettuce more than it does either mustard or cabbage. It may be used either raw or cooked.

All the cabbage race are better if cooked uncovered and, strange as it may seem, do not leave as disagreeable an odor in the house as when they are cooked closely covered.

Cabbage The three principal types of cabbage are the solid white heads, the wrinkled, curly green Savoy and the purple Dutch varieties which are excellent in salads and sweet pickles. Here, as with beans, you can get variety by using the different colors which also differ in flavor.

Sauerkraut, coleslaw and the names of some of this plant family show that they were cultivated by the Dutch and Northern Europeans. The preparation of sauerkraut is probably of very ancient origin, and indicates the primitive methods of preserving foods for winter use. It has some resemblance to the making of ensilage for cattle.

Uncooked cabbage is thought to be quite as digestible as cooked, certainly more so than when it is overcooked. A division of a cabbage head, something like that suggested last month for celery, is best. Instead of cutting out one chunk for salad and cooking the rest, take the heart to serve raw and cook the tougher leaves.

Some characteristic Russian and Turkish dishes are combinations of meat and rice rolled and tied in the larger cabbage leaves and then cooked in broth or with tomato. Kolcannon is a dish said to be of Irish origin, where potatoes and cabbage are combined. It is most often made of the cooked vegetables chopped together and cooked with a little fat like any hash.

Sometimes a cabbage is stuffed, the outer leaves being rolled back from the stem, the inner part is then removed, chopped and seasoned and a few breadcrumbs and an egg added, the cabbage filled, tied or skewered together and steamed until it is tender.

Cauliflower Do you agree with Dr. Samuel Johnson, who is said to have remarked that of all flowers the cauliflower was his favorite, or with Mark Twain, who classed it as a cabbage with a college education? In either case there is a good deal to be said for it as a food, tho from the nutritive standpoint the cabbage leads.

Formerly cauliflower was far less common than it is today, and its cultivation is not beyond amateur gardeners. Its preparation is something like that of cabbage, and either may be cooked according to recipes given for the other. Where they have been stored for any length of time it is wise to cut off the stalk and put this fresh surface in water; if left there over night every tissue will be freshened like wilted flowers. Insects are likely to be hidden in any of this group of plants, but plunging them in cold salt water for an hour will bring out such undesirable inhabitants.

The head of cauliflower is often boiled and served whole. In that case it should be placed stem down in the kettle, in enough salted boiling water to cover it and cooked for about a half hour. It is better to divide a large cauliflower in portions suitable for individual serving before it is cooked. The midribs of the leaves and indeed all white leaves should be saved and cooked with the rest if gas is the fuel or separately where cost of fuel need not be considered. Such portions may be served with the rest, or, better yet, added to any left-over and the water in which it was cooked for a soup or scallop.

For the variety which is desirable when one vegetable must appear often on the family table, add a sprinkle of grated cheese to the sauce or put crumbs with the cauliflower. The red *pimientoes* also add to the flavor and color. Cauliflower is an addition to a vegetable salad, or it may be used in that way by itself.

Mustard pickle is usually better if it contains a large proportion of cauliflower. For this purpose the vegetable is first parboiled in salted water and then scalded in the mustard sauce until tender.

Kohl-rabi Kohl-rabi is worth while merely for its decorative effect in the vegetable garden, the blending of greens and purples being most attractive. If gathered when very small, it is more delicate than either cabbage or turnip. When it is allowed to grow until woody it is almost impossible to soften it by any process of cooking. It should be prepared like white turnips, either boiled and mashed or cut in cubes stewed in very little water, which with milk added is thickened for a sauce. Then it may be scalloped by covering the creamed cubes with buttered crumbs and baking until brown.

Brussels Sprouts Brussels sprouts are much like little cabbages, which grow above the leaves around the stalk of a tall plant. They vary in size but are seldom as large as an English walnut. It is fairly hard work to trim them and be sure that they are free from insects, but they are delicate in flavor and give the effect of a garnish around meat. Or they may be served in the Swedish timbale cases.

After inspecting, trimming and soaking in cold salted water, cook uncovered, in rapidly boiling water for about twenty minutes, until tender but not until they lose their shape. Drain and, if desired to remove more of their flavor, rinse, but this of course means a loss of substance and seasoning. Cold sprouts may be added to any vegetable salad or prepared with French dressing and used to garnish cold meat.

Pumpkins If the shell is very hard the pumpkin should be steamed and the pulp scraped out when tender, otherwise pare first and cook in as little water as possible without danger of burning. Finally uncover the kettle and let the water evaporate, leaving all the sweetness. The drier the prepared pumpkin the more milk it will take up and the less egg is required for a pie.

For all uses of the pumpkin, long, slow cooking seems an essential to secure the best flavor, tho some of the small modern varieties are good with less attention. Marmalade or "butter" was made from pumpkins, but perhaps only when other fruits failed, as additions of acids and spices are needed to overcome its sweetness.

The pumpkin seems to harmonize especially well with the corn meal, and there are many recipes for Johnnycake where about one-fourth as much sifted pumpkin as meal is used.

Farmers' Bulletin 565, "Corn Meal as a Food and Ways of Using It," contains a good collection of recipes, and may be obtained free from the United States Department of Agriculture.

Turnips Potatoes have so long occupied a prominent position in our diet that it is hard to realize that a century or more ago the turnip held a similar place. It was not until after the Revolution that potatoes were raised to any extent in the United States. A survival of the early Dutch housewives' custom of mashing turnips and potatoes together still prevails in the middle states, tho now the turnip is rather a despised vegetable, and many persons seem to pride themselves on not eating it at all. But there are turnips and turnips, and if the soil is of the right kind and the roots do not grow in misshapen forms with corky tissues, they are delicious, if properly cooked. They must be washed and pared, since the skin is much thicker than that of a potato or carrot. Then cut them in thin slices or dice them, removing corky portions and inspecting carefully for insects or their trails. Cook uncovered in boiling, salted water, until tender. The water will contain so much of the sweetness of the turnip that it should be saved to add to soups. A cream of turnip is not to be despised, or the juice may be added to a potato soup. A combination of turnip and potato is good in either soup or salad.

The yellow turnips, or rutabagas, are best mashed and seasoned with butter, salt and pepper like mashed potato. White turnips may be mashed or cut in cubes before cooking and served in a cream sauce. White turnip cubes are good in a vegetable salad with peas or string beans. To disguise the taste of the turnip for those who have not learned how good it is, the cooked slices or cubes may be accompanied by a tomato sauce or a white sauce highly flavored with peanut butter, or a sprinkle of any chopped nuts may be used as a garnish on the mashed turnips.

Onions The same plan that was suggested with cabbage may be followed in dividing an onion between two dishes; using the center raw for salads and the coarser outer portion for cooking. Often the outer layer of all is quite good for flavoring a soup, tho it would be tough if left on for boiled onions.

The coarser varieties of onions may be made more tender and less strong by parboiling them in water to each quart of which one-fourth teaspoonful of soda has been added. This water is thrown away and of course with it is lost some of the valuable food material of the bulb, but it is better to get people to eat even an attenuated onion than to refuse it altogether. It should be our endeavor, according to most dietitians, to get people to eat onions freely. They seem to possess an invigorating property for which even chemical analysis cannot wholly account.

A small group of Antique Ghiordes and Koula Prayer Rugs displayed in our Galleries

XVI and XVII Century Mosque Rugs

In the development of all the fine arts of the earlier formative periods, the religion of the people has always exerted a dominant inspirational influence.

The people of the East, with their more primitive environment, naturally developed a utilitarian art, in which textiles, particularly Rugs, became a great medium of artistic expression.

The Rugs of the Mosque were woven with patience and a zeal inspired by the devotional use for which they were intended. Ornamented with designs evolved from an inherent love of nature, they stand today as examples of the highest art of that time and that people.

We cordially invite you to inspect our collection of these masterpieces, which in number and merit, stand unrivalled in this country. We shall be pleased to give any further information desired.

KEEPING CARBURETORS THRIFTY

BY CLARKSON LLOYD

DIRECTOR OF THE INDEPENDENT MOTOR SERVICE

LAST month I explained the fundamentals of carburetors and described several parts whose functions every motor car or truck owner should understand. Those parts were: the float, float-valve, needle valve, nozzle, or jet, mixing tube, main air inlet and auxiliary air inlet. It is these parts which, separately, or in collusion, make your carburetor a money eater or a thing of economy.

If you should ask what is an economical carburetor, the answer would be a carburetor which feeds to the engine so much air and so little gasoline that with every explosion the gas charge is completely burned, leaving no carbon residue. But this definition would have to be amended to include a proviso regarding power. Because while it is easy to adjust carburetors to give an extremely lean mixture, lean mixtures are not necessarily powerful and an engine without power is worse than none at all.

With a perfectly adjusted carburetor the float valve admits exactly the right amount of gasoline into the float chamber, and the level of the float is such that the level of the fuel in the jet (nozzle) is exactly right; and the needle valve, controlling the amount that reaches the jet, is opened just enough and the main air inlet lets in the proper proportion of air and the auxiliary air valve responds accurately to the engine's demand for still more air at high speeds.

All this, tho it sounds romantic, is possible.

JUST why complete combustion is essential to economical motor operation is more or less obvious. If the mixture in the cylinder is too rich—contains too much gasoline in proportion to air—it will have a tendency to burn slowly. In fact it will burn so slowly that the piston will get ahead of it and will discharge it from the cylinder before it can be entirely consumed.

This brings about waste in two ways: first, raw fuel which is exhausted and lost, second, a sluggish engine which requires more fuel than usual to produce adequate power.

It also causes the formation of carbon deposit, which further impairs the performance of the engine. The formation of carbon from an excess of fuel has been aptly compared with the deposit of soot on an oil lamp chimney when the wick has been turned too high. The combustion space is not large enough to accommodate sufficient oxygen to unite with the carbon in the oil, hence the soot.

How can you secure perfect carburetion with its consequent economy and lack of carbon? Only by perfect adjustment of the carburetor.

That sounds so elementary and simple that right here I am going to put you off the track for a moment with a warning:

NEVER meddle with your carburetor until you have made sure that it and it alone is to blame for the condition of your engine.

There are so many factors, aside from your carburetor, which may make your engine lame and halt, and they are so much easier to fix than a carburetor is that you should always leave the carburetor severely alone until by a process of careful elimination you are finally convinced that therein the trouble lies.

If your engine becomes heavily laden with carbon investigate your piston rings, perhaps they do not fit the cylinder tightly enough.

There is the possibility, also, that you are using the wrong grade, or a poor grade, of lubricating oil. Carbon deposits would result from these two circumstances. Satisfy yourself on these points before attacking the carburetor.

If the engine fails to start and you have gasoline in the tank, make sure that it is flowing to the carburetor. If it is, leave the carburetor alone—provided it be not flooded—and go look at the ignition. Test your battery for strength. Look for loose connections, burned out fuses and short circuits.

Take out the spark plugs and see if they are fouled. Maybe their points are too far apart. Until you have examined all these things, do not touch the carburetor at all.

IF the engine gradually loses power it may be due to the carburetor, but discover first whether or not the cooling system is in working order. Engines lose power when they become too hot. This may be caused by a broken water pump, by clogged pipes, loss of water thru a radiator leak, a slipping fan belt and by driving with spark too much retarded. Overheating may be caused by a lack of sufficient oil in the crank case.

It may also be caused by too rich a mixture. But it is wise to presuppose that the other causes are responsible. Leave the carburetor till last.

If the engine misses, it may be due to the carburetor. But then again, it is more likely due to defective or dirty spark plugs, an intermittent short circuit, weak exhaust valve springs or leaks between the carburetor and the cylinders.

If the engine misses at high speeds, but not at low speeds, then the plugs are not to blame. The trouble probably lies with the coil or the contact screw in the magneto breaker box.

If the missing occurs at low speed, but not at high speeds, there is probably a leak in the intake pipe between the carburetor and the cylinder block. Or, if your car is equipped with a magneto see if the interrupter points are as they should be. The carburetor, of course, may be to blame, but give it the benefit of the doubt as long as you can.

If the engine seems feeble carbon is probably the reason. The valves are most likely leaking and compression has been lost. Inlet and exhaust valves, also, may not open at the correct time. Then again, the spark may for some reason be weak, or your brakes may be dragging, or the clutch slipping.

Of course, a weak engine often comes from too rich a mixture. But before adjusting the carburetor examine the other points.

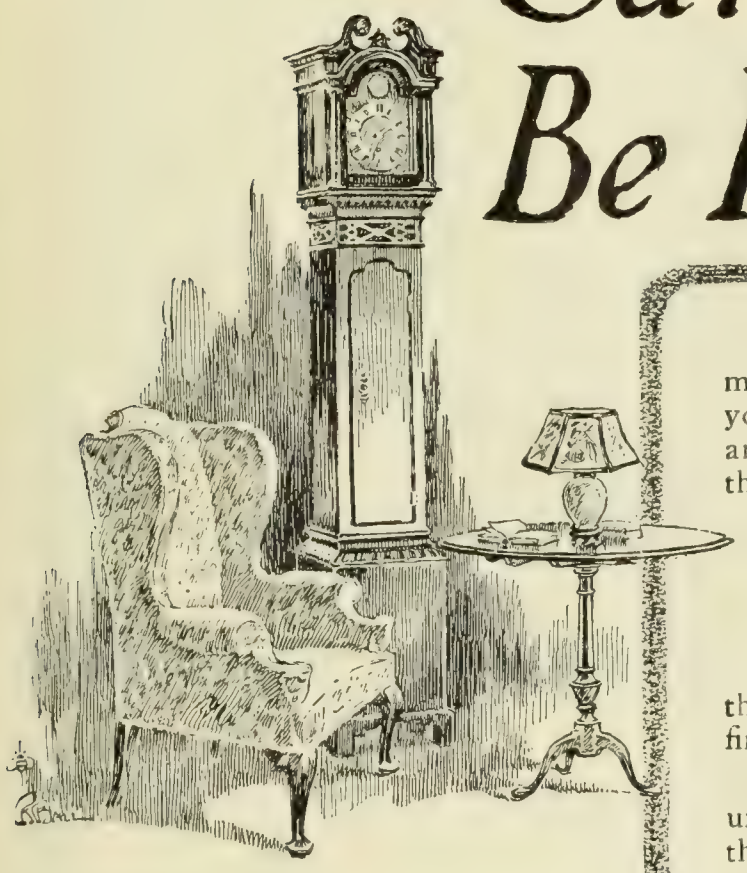
I have laid stress on the importance of leaving the carburetor alone because the matter of proper adjustment is rather an art. It takes a long time and much fiddling with little thumb screws and a lot of riding with one foot on the running board and the other pointing in the direction of the north star.

Nevertheless, carburetor adjustment is possible. So, assuming that you have tried every expedient already mentioned and have finally proved that the carburetor is at fault, let us explain how really simple carburetor adjustments are when approached with the proper spirit of reverence.

In the average carburetor there are two major adjustments. One regulates the opening of the gasoline needle valve. The other regulates the auxiliary air intake valve.

The gasoline needle valve adjustment is to be found—as a rule, in the form of a thumb screw, located at the bottom of the float chamber—of course on the outside. Turning this screw anti-clockwise pushes the needle into its seat, closes the aperture and reduces the amount of fuel which reaches the mixing chamber. Turning the screw clockwise opens the needle valve and admits more fuel.

Your object in adjusting the needle valve is to obtain the maximum amount of power from a minimum quantity of fuel. And your problem, therefore, is to close the needle valve as much as you possibly can without impairing the performance of the engine at all.



TO make the adjustment accurately you really need the help of another person. For it should be done when the car itself is running. The engine must be under load. This is important and most people overlook it: you cannot adjust a carburetor when the engine is running idle. To be adjusted for perfect operation under running conditions it must be adjusted under those conditions.

Get a friend who knows how to drive, put him at the wheel and perch yourself on the running board, hanging over the mudguard so that you can reach the offending part with both hands. After the car is started and in high gear, tell your accomplice to set the hand throttle so as to give a speed of about ten miles an hour. Then turn the needle valve so as to close it. Turn until the engine misses and threatens to stop.

Then quickly—but very gradually—open the valve. Open it only a trifle at a time, and when the engine fires regularly, without jerking or missing, try driving it—with the throttle still set and spark retarded—up a small hill. When you have given it a properly adjusted carburetor the car should be able to negotiate moderate hills on high at from ten to fifteen miles an hour. If the hill slows you up considerably open the needle valve a little more until the car picks up. But do not open the throttle. You have now adjusted your carburetor for low speed running.

Ask the Motor Editor anything you want to know concerning motor cars, trucks, accessories or their makers. While The Independent cannot undertake to give in this department an opinion as to the relative merits of various makes of cars or accessories, it is always ready to give full and impartial information about any individual product.

Can These Things Be Replaced?—

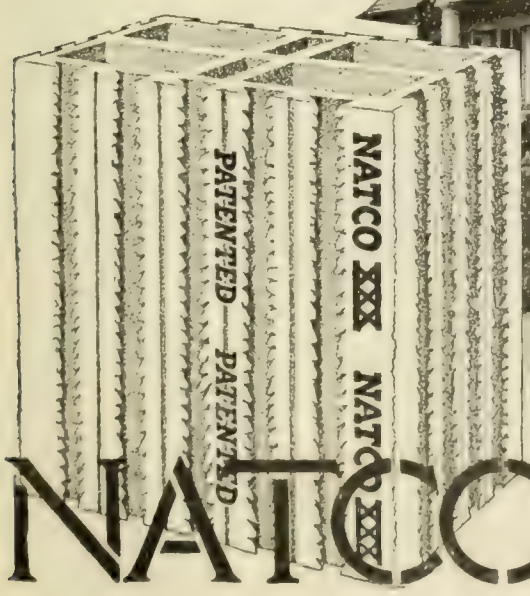
The arm-chair, where perhaps you sit as you read this magazine—how comfortably it conforms to the curve of your back. How often you have thought of its welcoming arms as a haven at the end of a hard day—and the side-board that has been in the family for more than one generation.

You can remember how you had to stand on tip-toe to reach the sugar bowl on its shelf—and the old secretary in the corner.

Old friends, these.

Could they ever be replaced? Is there any insurance in the world that could cover them in case of destruction by fire?

You can safeguard them as well as all the other home treasures made priceless by association—*if you* build your house throughout of Natco Hollow Tile—Fireproof; damp proof; vermin proof; age proof; warm in Winter; cool in Summer.



The house built of Natco *throughout*—walls, partitions and floors—is constructed rapidly and economically. Its cost of maintenance is low; it is durable and interior fire risks are absolutely controlled. Its use means absolutely fireproof construction.

While it costs more than criminally dangerous wood construction, with Natco you buy everlasting safety for a sum so low that in a few years you get it back in lower coal bills and lower maintenance cost. Can there be any question in your mind—now that you think of it in time? And it is building for a lifetime—for safety, beauty and comfort too. For your protection NATCO is stamped on every tile.

Send for our 32 page illustrated free book—"Fire Proof Houses." It contains photographs and description of beautiful Natco houses designed by leading architects for wise home builders.

A GREAT OPPORTUNITY

From present indications (September 17) it appears that the intending planter of *Holland Bulbs,* Hyacinths, Tulips, Crocus, etc., will be grievously disappointed this Fall.

None of these bulbs, which usually arrive here in late August, has yet appeared, and while it is claimed that one bulb steamer sailed before the embargo was placed, there is no further definite news of it, and one report has this steamer recalled.

At best, this country will receive but a portion of its usual allotment if any, and planted late as they must necessarily be, the planter's success will be in diminishing measure.

Your beds being ready, why not plant this Fall at least a few modern Peonies, and by planting

PETERSON'S PERFECT PEONIES

(acknowledged the world's standard) from now until the ground freezes, you will be assured of having a splendid display of superb flowers early next Summer.

And if you place these in your permanent bulb beds, they may be safely transplanted next Fall if desired. *And, too, unlike Holland Bulbs, they will not "run out," but will continue to increase year after year.*

THE POULTRY YARD IN OCTOBER

BY E. I. FARRINGTON

ONE might as well pay a high price for grain and have eggs from his own flock of hens as to pay a high price for eggs at the store. If a little care is exercized the eggs from the home flock can be produced at a comparatively low cost and they are certain to be fresh. It is important, tho, not to carry over any hens which are not going to produce their full quota of eggs, because grain is too scarce to be wasted on fowl which do not lay.

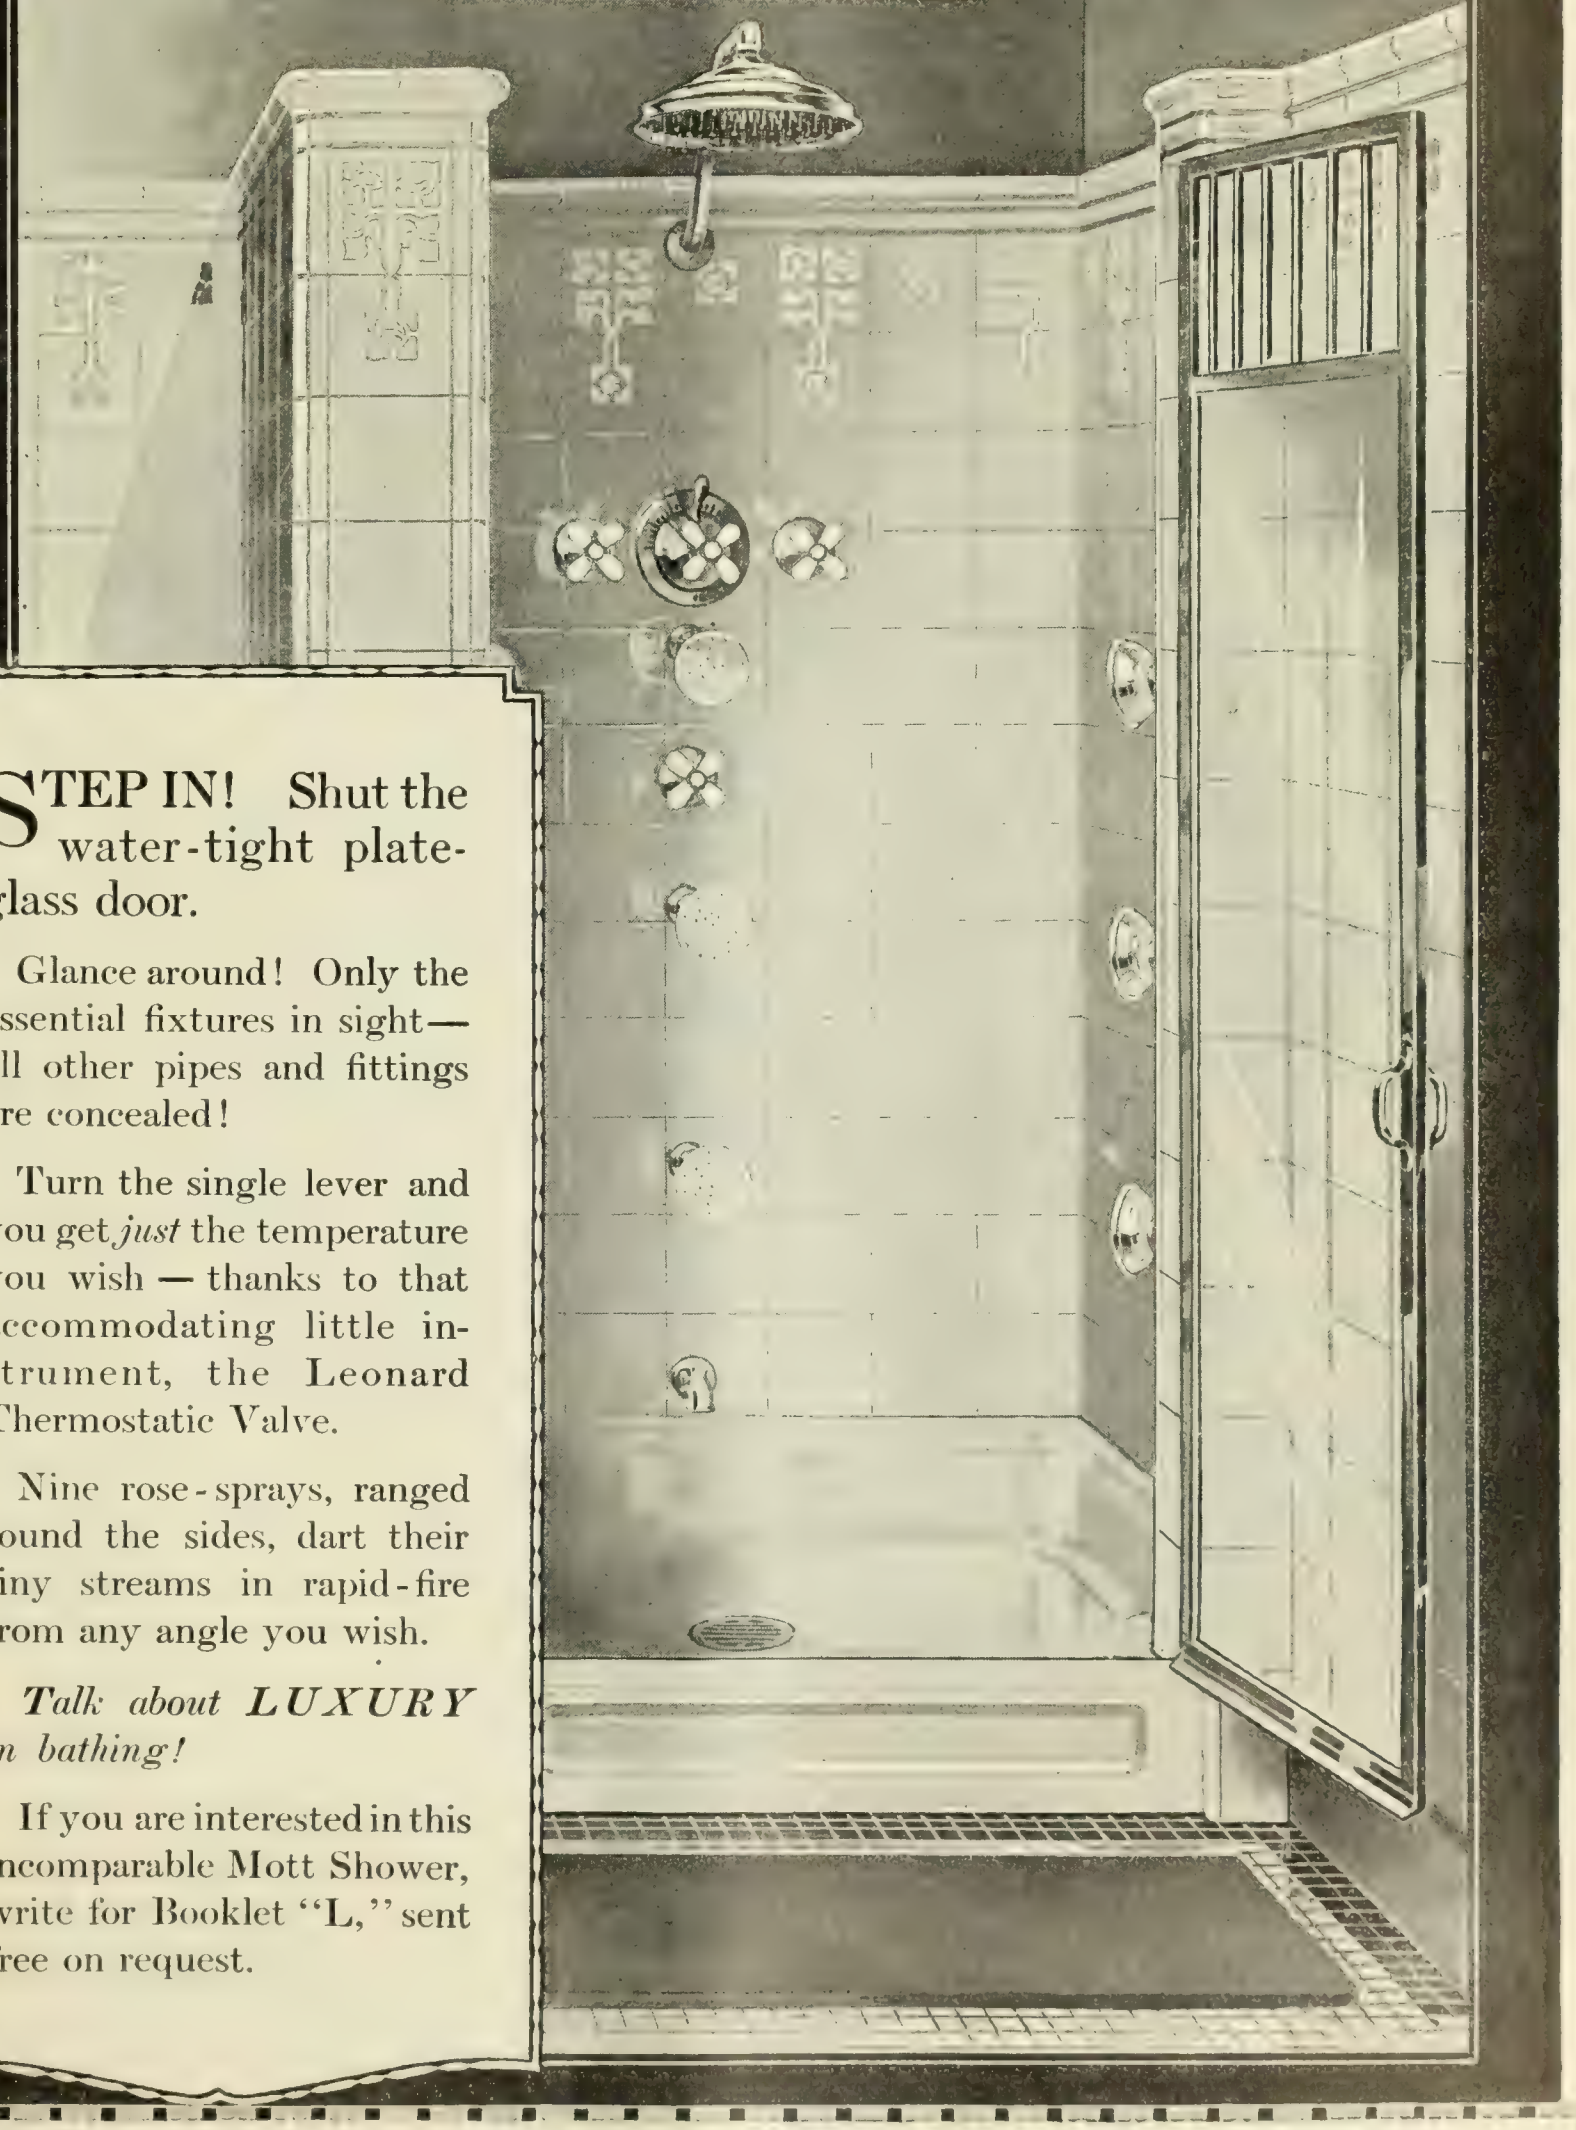
Of course the one certain way to cull out the boarder hens is to use trap nests, but the average amateur will not take the time which their use involves. There are certain other tests, however, which go a long way in distinguishing the layers from the non-producers. To begin with, a hen which molts early is not likely to be worth keeping. The late molting hens are almost invariably the best layers. If a hen is found to be laying in October of her second year, the chances are good that she will lay well all thru the winter. By the same token the pullets which begin to lay early are likely to be the most persistent egg producers. In a general way it may be said that hens which go to roost with full crops and are active all thru the day, are likely to lay well. The hen which stays on the roost until late in the morning, and goes to roost early at night, must at once be held in suspicion. If she is also found to have only a half filled crop, it is pretty safe to say that she is not worth keeping. If in addition to activity, a hen does not molt until October or November, she may be set down as a good hen to carry over.

There is one other test which is well worth making, when the year old hens are being sized up. If two fingers or more can be laid between the pelvic bones, there is every reason to believe that the hen is laying, especially if these pelvic bones are rather soft and pliable. If the test shows that these bones are so close together that there is no room for more than one finger between them, the owner may conclude at once that the hen is not laying.

If one keeps hens which have yellow shanks, he can gain considerable information by observing them as the season progresses, because the color is likely to have faded out to a large extent after the birds have been laying for a considerable time.

All the laying stock should be in winter quarters before the end of the month. It is a good plan to watch the pullets so far as possible, and to put a leg band on all those which are found to be laying before the first of December. Then they will be especially valuable for breeders in their second year.

All the fowl should be fed indoors from now on, the floor of the house being covered with a litter of hay, straw or leaves, six inches deep. This will give the birds all the exercize they need. The days are growing shorter and they should be kept busy as long as daylight lasts.



It is a mistake to close up the poultry house, even on rather cool nights at this time of year. If kept in cool houses the birds will put on a heavy coat of feathers and be prepared for real winter weather when it comes. If the modern fresh-air house is used, it should not be necessary to drop the curtains over the windows or in front of the perches until the temperature gets down to zero or below.

Birds that have had rather free range during the summer will miss their green food if some ration of this kind is not given to them now. Cabbages, mangels and similar root crops are good, tho cabbages have a tendency to make the eggs watery.

The scratching shed, where the hens can get fresh air and exercize even in winter

Living Room in E. L. Cutler's Kelsey Health Heated residence at Milton, Mass. H. B. Little, Architect, with Cram & Ferguson.

A Heat Linking Of the Desirable Visible With the Invisible Desirable

THE fireplace is the *desirable visible*, Kelsey Health Heat the invisible desirable.

In their linking, the sentiment of the fireplace is not marred by the insistent presence of obtrusive heating apparatus.

The Kelsey freshly heated fresh air, automatically mixed with just the right moisture, comes directly into the rooms through the inconspicuous floor or side wall heat openings.

Ample ventilation and abundant heat are combined in the one system.

The fireplace unviolated holds its sentimental sway as the desirable visible.

The Kelsey in its practicalness — the invisible desirable.

AUTUMN IS PLANTING TIME

(*Continued from page 35*)

the smaller fruits such as raspberries, currants, grapes and blackberries, etc., may be successfully planted this fall, and a full season gained by so doing. The young trees while they are coming on need not interfere with the vegetable garden, as the ground between them can be fully utilized until the trees are large enough to be in the way.

PLANNING THE WORK

No time should be lost now in planning for the season's work. Strive to make your fall season one of keen interest; you will be surprized to find it a genuine pleasure and a repetition of the spring's work, bringing with it the same measure of anticipation, with much of the labor completed before the next season approaches. You have before you now a full picture of your grounds. Is there a little "retouching" necessary? Was there anything left undone in the rush of last spring? Was your residence just completed last spring, too late to put your grounds in order? Or perhaps you would like to add a "fruit department" to your war garden. Whatever it is, do not let the fall season go by without taking full advantage of the valuable time it offers. After your plans have been made, and you have decided what is to be done, arrangements should be made at once for procuring the necessary material. Early planting, while not such a potent factor as in the spring, is nevertheless a matter worthy of consideration, as the earlier the stock is put into the ground the quicker it will become established. Frost will not interfere with your plans in any way, and it will "ripen" up the stock in the nurseries all the quicker. Only when the ground has become frozen so hard as to prevent digging is it necessary to stop planting. In other words the universal rule is to "plant while you can dig." Many of our largest parks and cemeteries and extensive private estates complete a large part of their planting in the fall; the practise of autumn planting has been thoroly tested and its advantages proven by expert planters. Fall planting is not an experiment. It is a practise as old as the hills, and tried and proven by many generations of professional plantsmen. It is becoming more and more popular among those who "garden for pleasure," and the time is undoubtedly coming in the near future when fall planting will command fully as much attention as is given now to spring work; and this is as it should be.

WITH THE BOYS IN CAMP

(*Continued from page 17*)

continued: "I am going to talk more plainly to you tonight than you have ever been talked to before. Some of you won't like it. Some of you will. Those who don't may step up here and tell me so. Those who do will keep quiet!"

As I looked into that mass of youthful faces my courage grew to a point that worked up to a heated pitch. I stripped the moral issue to the naked bone. I handled the plain man-issue with a verbal club. I defied them. I pleaded with them. I admonished them. I schooled them with a world of medical facts concerning the ravages of venereal diseases upon the human body—told in a personal way that they could not but clearly understand. I touched upon their lives as individuals, as civilians; I sneered at them for lacking the moral courage to fight the common tendency in the army to level down to the lower element, for letting that element dominate them. I reminded them that in putting on the uniform of the United States army they had voluntarily assumed to uphold an honor which their moral fiber, unless considerably strengthened, could not properly support. I justly accused some of them with doing things that would afford civilians an opportunity to "throw mud." I told them how they could avoid such friction. I appealed to their regimental honor. Before long they were virtually as pliable as putty. It was then that I delivered the Government's message. The psychological moment had arrived. I told them of the infinite suffering caused by venereal diseases to all mankind infected by them, of the ravages of those diseases upon generations yet unborn; of the thousands upon thousands who suffer untold misery because of man's brutal leanings. Finally I told them that they had to be one hundred per cent efficient in order to win this war, and that Uncle Sam expected them to be in fighting trim four months from the present time, and that only by guarding their health and morals could they attain such a standard.

I glanced at my watch and discovered that they had been listening to me without a murmur of protest for thirty minutes. To test the sincerity of their silence, I said very quietly: "I am sorry I have kept you men so long. I really had more to say to you, but I guess I had better stop." Cries of "Go on! Spill it!" came from all sections. So I told them how I sympathized with the problems they had to face—I begged them for fair play—and I got it!

When I had uttered the last words of my message they gave me "a hand" that could be heard far into the forest. They cheered me as I passed back into the camp. They came to me in groups and shook my hands. I was almost unnerved by their demonstration, and it gave me the courage which has spurred me to tackle almost insurmountable difficulties.

Two days later I repeated my lecture to the first battalion of the Iowa Field Artillery. The circumstances were the same with the exception that I talked to five hundred men instead of two hundred and fifty. It was there that I won the soldiers' confidence. Today, Battery "A" of the artillery is solidly behind me. I have many personal friends among them. I eat with them, joke with them; I entertain them and I am entertained by them.

A soldier from Battery "A" is sleeping on my "bunk" now. He has been with me daily since my talk to his division several weeks ago. The boys call him "Army." He is representative of them all, and he is probably one of the most popular men

in his battery. Clean cut, young, full of life and mischief, a single glance at his face is sufficient to drive home to me Sherman's immortal phrase— war *is* hell!'"

So it was I won the soldier. I have talked to more than 6000 men since my arrival here. I am going to enforce the Federal laws governing prostitution by reaching the men before they reach the prostitute. By so doing I am dealing with causes instead of effects.

Until this stage of my tale, I have purposely neglected some mention of the drafted men who are to occupy Camp Pike. It has been but a short time since the first increment of the Eighty-seventh Division of the National Army was called. My opportunities to study the several thousands of men who were the first to arrive have been limited. To begin with, they have been in quarantine for ten days following an inoculation of typhoid serum. But this much I can report: I have entered the barracks of fifteen provisional companies and talked to 2250 drafted men and boys. Their morale is simply splendid, a thing at once magnificent and unique. They are being drilled in the elementary stages of military tactics. They are well cared for, properly housed, adequately fed, and those to whom I have spoken have been comparatively happy.

Camp Pike, Arkansas

"It's no use," sighed Freddy, "I never can learn to spell."

"Why not?" inquired his anxious mother.

"How the dickens can I ever learn," he demanded hotly, "when the teacher changes the words every day?"—*Harper's Magazine.*

"Yes, auntie," said one of Pershing's men, invalided home from France, "we captured the first-line trenches, and the very same day the French took 400 meters from the Germans."

"That was splendid, my boy. It ought to put a stop to those dreadful gas attacks we hear so much about!"—*Ladies' Home Journal.*

He had opened a fishshop and he ordered a new sign painted, of which he was very proud. It read, "Fresh Fish Sold Here." "What did you put the word 'fresh' in for?" said his first customer. "You wouldn't sell them if they weren't fresh, would you?" He painted out the word, leaving just, "Fish Sold Here." "Why do you say 'here'?" asked his second customer. "You're not selling them anywhere else, are you?" So he rubbed out the word "here." "Why use 'Sold'?" asked the next customer. "You're not giving them away, are you?" So he rubbed out everything but the word "Fish," remarking: "Well, nobody can find fault with that sign now, anyway." A moment later another customer came in. "I don't see the use of that sign 'Fish' up there," said he, "when you can smell them a mile away."—*San Francisco Argonaut.*

Dr. L. O. Howard, of "typhoid-fly" fame, told this fly story:

"A Washington man went for his vacation to a fly-haunted hotel in Connecticut. There was a hammock in the grove behind the hotel, and one afternoon our friend climbed into it with pipe and book. But the flies tormented him unmercifully, so he climbed out again in disgust.

"'Look here, landlord,' he complained, as he entered the office, 'what's the good of a hammock in such a fly-ridden spot as that grove?'

"'Oh,' said the landlord, 'you didn't use the hammock during hammock hours.'

"'What are hammock hours?' asked the guest.

"'Twelve to two, sir,' said the landlord. 'You'll find no flies in the grove then, sir.'

"'And why not?' demanded the puzzled guest.

"'Because,' said the landlord, '12 to 2 is dinner, and they're all in the dining-room then.'"—*New Idea.*

"BEGINNER'S."

THE PARADOX OF PRUSSIAN PEACE

(*Continued from page 15*)

Government, would be some plan of reciprocal disarmament, or at least some real international organization which would furnish a possible, if distant, alternative to German military power as a means of national security. When Germans in the mass see in internationalism a means of defending German rights and interests, Prussian militarism will be doomed.

And so it is to the interest of the German Government to prove to its people that we are not sincere when we speak of such things as disarmament and arbitration. It wants to create the impression at home that so far as it is concerned it would be perfectly willing to abandon militarism for international organization as a means of security for Germany, but that when it is really offered to the Allied governments they refuse to consider it.

And that argument on the part of the Central governments will be quite possible if, as stated above, the debate is left in its present stage. The Central Powers have in fact made what will appear to their people as an offer to go into the question of disarmament and arbitration, a new international order. Silence on our part will be interpreted as a proof that when it comes to the point we want to avoid the subject; that our talk of it is mere diplomatic bunkum.

The situation must be reversed. We must show that we are serious in our talk of internationalism, will consider even disarmament, but on the basis of respect for the rights of all nations, small as well as great, not on the basis of the right of great states to override the will either of subject peoples, or of their own peoples; and we must make it plain that in such a world the German people, like any other, would be secure.

But there is a further reason why the German Government have every motive for desiring at this juncture to prove that our talk of internationalism is insincere and that any attempt to realize world arbitration is impracticable. Its only hope of obtaining the support of its people to a program of annexations is to show that such annexations are necessary to national security. While the Reichstag vote of July 19 makes it plain that the Government could never hope to secure popular sanction for annexations as part of a pan-German or Industrialist policy, it might conceivably do so as part of a policy of self-defense: by the argument that Germany has nothing to depend on but her own resources in men and material, and the strength of her frontiers.

Indeed the truth is that unless the problem of security, by means of some reasonably feasible plan of international organization is on a fair way to solution *before* we come to deal with nationality and territorial readjustment, these latter will prove to be well nigh insoluble. It is not alone the claims of the Central Powers that will make them so. Nations among the Allies are presenting claims that do violence to the principle of nationality on the ground that they are compelled to consider first their own national safety. Italy or Serbia or Rumania may regret that such and such a claim will bring alien populations under their rule but, they argue, unless the frontier goes just that way their position will in the future be menaced. Most powers are moved by two great considerations: national security and the need for economic expansion. Those things, it is felt, must come first, and so long as a League of Nations or other similar plan for

preventing aggression of one nation upon another is merely a vague possibility in the background and not a political reality, every nation will attempt to make sure of its own safety and right by the increase of its power and territory, even at the cost of some violence to the principle of nationality. If this determination is reflected—as it is—in the claims of certain Allied governments that are honestly striving to respect national right, how much more is it likely to operate in the case of the Central Powers?

Until we have made some approach to solving these problems of national security and freedom for economic expansion, the problems of territory and nationality will be sure to baffle us. Not only that: it will make any league of nations subsequently impossible. For if we fix our "strategic frontiers" with a view merely to military advantage, disregarding the claims of national groups, and creating Ulsters over a large part of Southeastern Europe, any attempt to crystallize that settlement will be resented by the aggrieved peoples, who will work subtly and ceaselessly to upset it.

The Pope's note, with the Austro-German reply thereto, at least does this: it places the discussion for the time being on the major problem of security by international organization. It is to the interest of the Allies not to let it slide from that plane until the German Government has made it quite evident where it really stands. If that issue can be forced we shall have accomplished one of two things: have proved to the German people that their Government is not sincere in its professions of attachment to internationalism (and that will help the fight of German Liberalism against that Government), or have compelled that Government really to repudiate its militarist elements, by repudiating militarism. Either result will bring us nearer to the accomplishment of our real war aims.

New York City

Barbara was leaning out of the window. "Shoot, if you will, this old gray head. Your bullets can't hurt me," she said.

The general pondered. "Why not?" he asked, and his voice trembled as he choked back a sob of disappointment.

"Because," she answered, "I wear Paris garters, and no metal can touch me."—*Pitt Panther.*

What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints the news of the whole world and tells the truth and only the truth; now is the time to subscribe. A dollar bill fills the bill without emptying the purse. If you have a friend who you want to keep posted on what is going on in the world, but are short of time or money, this is your chance. If you want a paper which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would like to receive a paper which tells the truth clearly, fairly, briefly—here it is. A dollar bill mailed at our risk will bring you the Pathfinder for a full year, or 15c to show that you might like such a paper, and we will send the Pathfinder on probation **13** weeks. The 15c does not repay us, but we are glad to invest in new friends.

Pathfinder, Box 39 Washington, D. C.

Make Every Room an All-Weather Room

WITH this new type trouble-proof casement window you can instantly adapt any room to any weather. In hot weather you can make your living room, dining room and bedrooms like open porches—with a clear sweep for every breeze and an unobstructed view. In cold or stormy weather you'll be much more comfortable than with ordinary windows—Whitney Windows are absolutely tight and storm-proof when closed. Double-glazed sash can be used, which does away with the need for storm windows.

Whitney Windows are not like the ordinary hinged casement windows. They never rattle or slam shut, always work smoothly and quietly. They open outward, out of the way of shades, curtains and furniture. Give perfect control of ventilation. We manufacture only the patented

WHITNEY CASEMENT WINDOW HARDWARE

and screen fittings—use any style sash you wish. If you cannot get the sash locally, we will quote you on your requirements complete, f.o.b. Minneapolis.

Our service department will help you, without charge, to adapt Whitney Windows to any unusual requirements, furnishing you with drawings and specifications that will enable your contractor or carpenter to make successful installation.

FREE—Write for interesting portfolio of artistic and practical casement window designs for different types of homes.

MAKING MY PEN BEHAVE

(Continued from page 18)

that will make them recognizable, and expose some bit of confidential life history, or some frailty for the public entertainment—that is a breach of confidence which, while not quite so bad as selling the love-letters of one's parents, is fully as heinous as the crime of a reporter who prints interviews gained under promise of silence. Yet friends and acquaintances may be the best copy in the world for your romancer; to build a wall for him between the legitimate and the illegitimate use of this material is more than I know how to do, beyond saying that he must protect them in their right to anonymity. His own good taste must erect that barrier.

After breach of confidence, theft, in its various degrees. A short and ugly word! Plagiarism has a better sound, particularly since we are discussing something less than crime in these pages.

What is plagiarism? How far may a writer go in the use of material formulated by another? It is not worth while to cite even a small proportion of those eminent writers who have admittedly found their raw material in pages produced by another and then served it up with some sauce of their own making. Arguments on this subject have raged since there ever was a body of written literature, and whatever the ruling might have been in any particular age or decade, always there would arise a genius of that day who took what he wanted wherever he found it and by the miracle of his skill gave it rebirth; and that public which is the final arbiter, after giving some hearing to the case, would render its decision in favor of Genius.

"An' what 'e thought 'e might require
'E went an' took—the same as me."

"A great poet may really borrow," says Landor; "he may condescend to an obligation at the hand of an equal or an inferior; but he forfeits his title if he borrows more than the amount of his own possessions . . . the lowlier of intellect may lay out a table in their field, at which table the highest one shall sometimes be disposed to partake; want does not compel him."

"The man of genius," says Dumas, "does not steal, he conquers, and what he conquers he annexes to his empire. He makes laws for it, he peoples it with his subjects, and extends his golden scepter over it. And where is the man who, on surveying his beautiful kingdom, shall dare to assert that this or that part of his land is no part of his property?"

If Landor and Dumas and others of their opinion be right, is there anything left of the sin of plagiarism? Not if you are superior in genius to the man you rob! And as you yourself must decide it is apparent that you may steal with the greater freedom as you gain the greater self-esteem.

It is pleasant to gather ideas in the garden of nonsense, but dull duty requires me to seek some pathway of reason leading out. "Plagiarius," says the Latin dictionary, "—a man stealer or kidnapper; one who gives himself out to be the author of another man's book." Clearly, the matter which is stolen must be the property of another. Yet no writer has a private right to any particular situation: otherwise the public storehouse would now be empty.

Paralleling another's situation may not prove plagiarism, but what of borrowing his style? Peculiarity of style may be a man's own, yet if imitation of it be theft, all amateur writers and most of their betters are kleptomaniacs. "No actress," says E. F. Benson, "can help wriggling after seeing the Divine Sarah, no actor can help ranting after seeing—somebody else." But I will not allow this path to lead me toward any cumbersomely exact assertion, as that plagiarism is committed when one repeats some particular combination of situations, or handles them in a certain fashion. How do I know? The charge of plagiarism is so easily and so readily brought by any writer who thinks himself aggrieved. And yet it is so difficult to prove because the intent must be there. A thief must have the intent to steal. A plagiarist must "give himself out to be the author of another man's book." In the many interesting discussions of this subject that I have read, there is always the assumption that the degree of the crime lies in the amount of the injury that one writer, wittingly or unwittingly, has done another. To my mind, the sin of plagiarism lies chiefly in the writer's betrayal of his reader's confidence. It is just another question of false labeling.

If this argument of mine leaves no room for so-called "unconscious plagiarism" it is because I believe there is no such thing. There is no unconscious thievery. The interesting coincidences which sometimes do occur, and those which are so often discovered by meticulous "penny-a-liners," do not long mislead the fair-minded. There is an atmosphere about real theft that generally is unmistakable when the arguments are heard. The writer who keeps faith with his reader, giving full credit whenever failure to do so might by any possibility mislead; being frank whenever he distrusts the spontaneity of his own invention, may go ahead with the assurance that honest critics will find little difficulty in distinguishing between crime and coincidence.

Honest labels on wares honestly secured. A compact code, to be sure, but a good deal of kernel hides in that small shell. The only other restraints that good morals and good manners impose upon your pen are those that common courtesy or human sympathy compel you to exercize in any of your dealings with your fellows, intensified by that great distinction which lies between the freedom of the tongue and the freedom of the pen. "While I did perhaps more than any other man to drive So-and-so out of public life," said a certain journalist—and he spoke truly—"it is a source of pleasure to me, and of real pride, as I look back over it all, that I was never unfair to him personally. I liked the man, and I tried, all the while that I was exposing his inefficiency for his public office, to acquaint my readers with his oddly likable traits. As a matter of fact, I think that thru it all he rather liked me." The courtesy of the pen is so easily forgotten in the heat of any controversy, or its lack of a sheath to cover its cutting edge is so readily overlooked! Let me but use a little humor as a means for attaining an end, and behold I seem to be having fun at my subject instead of with it. Prove to me that you are able to write humorously of a man without thereby implying your own superiority to him, and I will grant you at once a place among literary gentlefolk.

The limitations upon our pens are many, but after all most of them would never occur to us as restraints if our instincts were sound. I imagine that the writer who thinks of each written word as a means of communication between him and a fellow—some one he would like to know, between whom and himself he would like to establish a good understanding, I imagine such a writer has little difficulty in making his pen behave.

Poughkeepsie, New York

The New Plays

The Very Idea, by W. H. Gilmore. A eugenic farce-comedy for the sophisticated. Funny and vulgar in spots. (Astor Theater.)

Maytime, by Rida Johnson Young—a pleasing play, with music, of old and modern New York. Light and entertaining. (Shubert Theater.)

Laurence Langer's farce, *The Family Exit*—pert, outspoken, improper, but let us paradoxically add neither coarse nor unentertaining. A pretty good imitation of Bernard Shaw. (Comedy Theater.)

Pebbles

"Who was the first man, Bobby?" asked the teacher.

"George Washington," answered the young American promptly.

"Why, no, Bobby. You ought to know better than that. It was Adam."

"Oh, well," said Bobby, self-righteously, "I wasn't counting foreigners."—*Ladies' Home Journal.*

There was an explosion of one of the big guns on a battleship not long ago. Shortly afterward one of the sailors who was injured was asked by a reporter to give an account of it.

"Well, sir," rejoined the jacky, "it was like this: You see, I was standin' with me back to the gun, a-facin' the port side. All of a sudden I hears a hell of a noise; then sir, the ship physician, he says, 'Set up an' take this.'"—*Arms and the Man.*

Little six-year-old Allan, scion of a bookish family, had mastered reading so efficiently that his first glimpses of story-land were growing hazy in his memory. One afternoon he confided to his mother:

"Mildred was showing me her new book today, and it's the queerest thing you ever saw! Why, it just says: 'Is it a cat? It is a cat. Can the cat run?' and a lot of stuff like that! 'Course I was too polite to say so, but it didn't seem to me the style was a bit juicy!"—*Harper's Magazine.*

She was an admirable person and never lost an opportunity of pointing a moral to her small nephews and nieces. She took them to the museum for a treat.

"This," said the guide, "is Nelson's vest, worn at the battle of Trafalgar, and this is the hole where the fatal bullet went thru."

"There, children," said their aunt. "You remember what I said about a stitch in time saving nine. If that hole had been mended the bullet wouldn't have gone thru." Then she capped it by adding, "And Nelson might have been living yet."—*New York World.*

Mrs. Skinner keeps a boarding-house where it is whispered the guests are by no means too well fed. One of her neighbors attempted to point out to the lady the error of her ways.

"I should think," began the neighbor, "you'd do well to feed your boarders a little better. You can't expect them to say a good word for you when they leave."

"Oh, but they do," was the quick reply. "Almost every one of them has a grudge against some friend or other, and he invariably recommends my house to him. I get lots of new boarders that way."—*New Idea.*

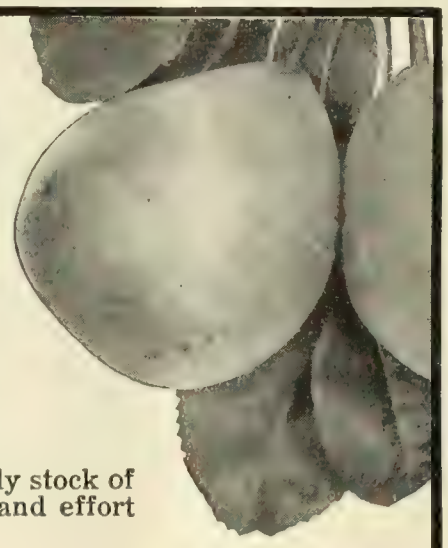
There is ***no charge*** to you for this service. Our remuneration comes from the shops. Our service will serve the purpose of a journey to New York and save the time and expense the journey entails. A wealth of expert shopping experience fills your every requirement.

"New York Department Store Bulletin" FREE



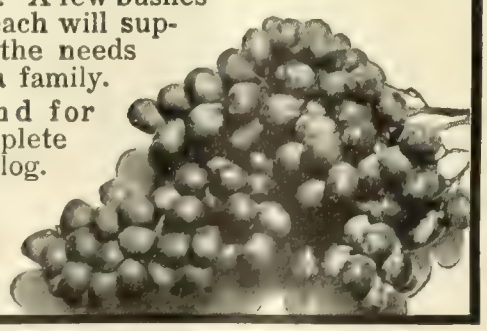
Contains latest Fall Fashions in New York Department Stores—publishes news about SPECIAL SALES in leading stores, including Wanamaker's, Lord & Taylor's, Arnold Constable's, Macy's, Gimbel's, McCreery's, etc., at ***savings*** from 10% to 50%. The right kind of shopping is an art—to us it is a profession. Goods sent on approval. Satisfaction or money back is our unqualified guarantee.

DREXEL, ROTHSCHILD & WHITNEY
505 Fifth Avenue - - New York City

Don't pay a nickel each for

Peaches and Pears

when you can pick them off the trees



Go into partnership with Nature and let her provide winter luxuries for your table. Grow your own fruit and enjoy jams, preserves and jellies when fruit is scarce. Your home grown, home made preserves are infinitely superior to the higher priced "canned" varieties.

But when you plant, take care to plant sturdy stock of proven merit, that your forethought, expense and effort may not be expended in vain.

Hicks fine fruit trees, berry bushes, grape vines and strawberry plants are all of pedigreed strain. They are now in prime condition to transplant.

Hicks fruit trees planted this fall will *gain a year's* growth over those put out next spring. You take no chance of loss because *Hicks trees, big and small, are guaranteed to grow satisfactorily.* Be sure to plant currants, gooseberries and raspberries. A few bushes of each will supply the needs of a family. Send for complete catalog.

THE WOMEN BEHIND THE GUNS

(*Continued from page 23*)

prime factors will certainly tend to keep a certain proportion of women permanently in many, if not all, of the new avenues of work which the unwonted times have ruthlessly thrown open to them. But I think the men who regard the innovation of women with horror, and a fear that is not all selfish lest their livelihood should be endangered by the overstocking of the labor market, might in the main set their hearts at rest. Women are learning now, and will have learnt altogether soon, the crime and folly of undercutting, and if they are allowed the same facilities of training as men, will ask the same pay for the same work. And also there is much work that will always, in normal times, be mainly done, and better done, by men.

I believe that "woman's work" is anything that a woman feels she can do and enjoy doing: but when it begins to overtax her strength, and therefore set her nerves on edge and sharpen her voice and take away from her the graciousness and sweetness of life, then surely it is time for her to find some other calling. And this is what is happening already to some Englishwomen who are doing men's work—as indeed it has happened to many before the war in long and arduous labor over the wash-tub, or sewing in some sweater's den, or match-box making for fourteen or more hours a day. And these were supposed to be womanly occupations!

"After the war" has become a phrase in England for a heavenly kind of time, a sort of millenium when all wrongs shall be put right, and the whole world shall be reconstructed on a new and glorious pattern—"reshaped nearer to the heart's desire!" And one of the reforms that are to come then is that, by some miracle of organization and readjustment, woman shall be allowed her full scope as a home-maker.

Home life all over England has been sorely broken into. The sweetness and the value of it shine all the clearer in perspective, against the dark background of the present. Ways in which it could have been deepened and enriched come into the imagination of all those, at home and abroad, who dream of it and long for its renewal. And thousands of upper and middle-class wives and mothers have learned, by work in Soldiers' Wives' Clubs and Munition Workers' Canteens, how thousands of their poorer sisters know nothing, have never been able to know anything, of real home life, in their overcrowded rooms and their overcrowded days. Health visitors and welfare workers are trying now to spread the gospel of home—the clean and wholesome and happy place it should be for elders to come back to day by day, and for little new lives to start the world in.

For this reform those whose hearts are most in it look eagerly to the new and untried leverage of the women's vote. At last, tardily and not very graciously, the British Parliament is to allow the Englishwoman to perform the shockingly unfeminine act of recording her political opinions by making a little cross on a ballot-paper opposite the name of the parliamentary candidate who she believes will do best service to his country in the House of Commons. It is a little pitiful that in the year of grace 1917 an intelligent and cultured body of men should decide that the average woman is not fit to be trusted with a vote until she is thirty years old, when the average man attains one at twenty-one. But this will pass. It merely stamps with an unintelligent discour-

tesy a Parliament which needed to give with eager grace, with both hands, generously, the right it had so long withheld. The worst stigma is removed. A woman is no longer denied the franchise because she is a woman, but only just because, being otherwise qualified, she is not yet thirty! That is a disability that can be outgrown. And in any case, the heart of England is too sound to let such a glaringly unequal measure long disfigure the statute book and belittle English chivalry and sense of proportion.

The Englishwoman of 1917 is progressive, experimental, patriotic, democratic. War-weary, heartsick and overstrained, there yet shines undimmed a clear ideal in the hearts of gentle and simple, educated and ignorant—the ideal of service. And I believe that it has come to stay. It is an ideal that is pursued thru many morasses of mistake, but that must guide earnest feet onto the highroad at length. It began in the ideal of service of the nation, it is broadening into the ideal of service of humanity. The spirit in which the women of England today are finding themselves, finding each other, finding their true powers, and, thru much experiment, their possible vocations, will yet be abroad and working in the world when this war also has burned itself out and gone with those before it into the ashes of the past; for it has within it the breath of the spirit of eternity—the breath of freedom, the joy of effort and of adventure, the glory of giving and spending oneself for one's fellows.

New York City

A sign in a restaurant has this variation of an old idea:

PIES LIKE MOTHER MADE, 5 CENTS.
PIES LIKE MOTHER TRIED TO MAKE BUT COULDN'T, 10 CENTS.
—*New Idea.*

It was nearly noon when the irate traveling man found the night clerk of the little hotel in a North Carolina town.

"I told you to call me for the seven o'clock train. Now I have to lose twenty-four hours' time. Why didn't you call me?"

"I couldn't very well," explained the clerk, cheerfully: "I just got up myself."—*Everybody's.*

Sandy had returned to his native Scotch village after a visit to London. When some one asked him what he thought of the great city he said:

"It is a grand place, but the folks there are not honest."

"How is that?" asked his friend.

"Well, I bought a box of pins labeled 'a thousand for a penny,' and coming home in the train I counted them, and I found they were seventeen short."—*Ladies' Home Journal.*

Nothing is to be said in commendation of the spirit of the man who recently advertised, in a London newspaper: "Loud, second-hand gramaphone, wanted for reprisals." Many people, however, not only in London, but in many other towns the world over, are only too familiar with the circumstances which provoked this vengeful and mistaken determination. Such circumstances certainly constitute one of the things which will need to be "seen to" sooner or later.—*Christian Science Monitor.*

Henry's father was a golf enthusiast; therefore Henry knew all about the game. One time he was asked:

"Henry, why is it that men that play golf always yell 'fore' instead of 'look out' or some such thing?"

Henry thought for a second before an inspiration came from looking at his young sister, who was diligently getting her arithmetic.

"You see," he replied, "it takes too long to yell 'toot-toot,' and that sounds so much like 'two-two' that they just add them together and yell 'four'."—*Good Sport.*

KING
GREENHOUSES

are as different as the settings in which they are placed and with which they are made to harmonize. Yet, they are all alike in one thing—they are intensely practical.

In King Greenhouses heating, ventilating and the location of the benches are a scientific study. Around these features is built the stately house of glass. A special type of construction is used which permits this to be of rare beauty and grace.

Write today for our greenhouse literature and tell us what you would like. Our experts, without any obligation will put your ideas into practical shape and submit plans and estimates.

YOUR ORGANIZATION

may need toning up—it may be running a bit slack—it may have gotten in a rut.

If you think it has—if you are considering what is best to do—write the Plan and Purchase Department of The Independent for their free Check List. Look it over, considering the several departments of your office or plant, the work done in each and what appliances you think could be used to advantage.

If you want to know how nearly some of these devices come to filling your requirements, write out on the blank pages provided, a clear statement of your trouble —showing just where results fail to satisfy you, and naming the machines or devices you want to know about.

We probably can help you—if you give us a detailed statement to work on. We have helped many executives in many branches of business throughout the country.

The Independent Efficiency Service

Plan and Purchase Dept.
119 West 40th Street, New York City

Independent Opinions

We wonder why plain words should be so hard to understand. Here is a letter from a correspondent whose good will we value because his sympathy with the cause of labor is that which The Independent has always shown. Now read what he says:

"Break the I. W. W. Now" is an interesting caption over a startling editorial in your issue of July 21. Your exhortation therein is so anarchistic that it deserves the sternest rebuke. This organization may have its faults and be extreme in its methods, but so have all heretical and progressive movements seemed to the "standpatters." If it is violent, the burden of proof rests upon its enemies to show that the violence and anarchism of capital in dealing with labor are not wholly responsible for a similar attitude on the part of labor. The I. W. W. seeks to organize for collective-bargaining, in order to obtain juster wages and decent living conditions, a class not reached by the orthodox trade unions. Should they not be accorded a place in the sun? If not, then other labor organizations should not be. Is that what you intend to imply? If not, why then, ignoring the merits of the I. W. W., seize upon its faults and waving them aloft call down destruction upon the organization?

To put it mildly your editorial indicates lack of comprehension both of the I. W. W. and your own position. Out of one issue proceeds denunciation of anarchy in the East St. Louis riots and out of the very next praise of anarchy in handling the I. W. W. At least that is what it amounts to, for you studiously ignore the fact of mob action in dealing with the I. W. W. at Bisbee, Arizona, and elsewhere. By what consistency or logic do you deplore the mob in one case and glory in it in the other? In the one, of course, it was the labor-unionists who mobbed the "niggers" while in the other it was the "respectable citizens"—store-keepers, bankers, preachers, editors, etc.—who mobbed the laborers. I know it makes a difference—to The Independent—for middle-class and capitalistic interests are sacred. You must defend them, but why not be honest and admit that none of us is independent? Wouldn't it sound better? To be sure I am not independent. Tho I am a Congregational clergyman and a professor in a university, I am still frankly biased. I am a Democrat—anti-capitalistic, anti-militaristic, anti-autocratic, anti-anarchistic, etc. I am really dreadfully prejudiced in my sympathies, and honestly avow it. I used to like The Independent because I thought it, too, was honest.

NEWELL L. SIMS.

Angola, Indiana

We cannot recall a single word in our editorial that approved or condoned mob violence by any one. We do think, however, that the I. W. W. can and should be suppressed by law; but not because, as our correspondent thinks, we disapprove of a particular type of labor union or because, like other labor unions, its members sometimes deal in violence. The reason the I. W. W. must be crushed is because the avowed program of its leaders is to make secret civil war on the nation, to destroy property and wreck industry at every opportunity, and to commit any crime that may further its ends. It is not we who make this charge, it is the organization that boasts its truth. Surely our correspondent must have heard of "sabotage," "the general strike," "propaganda by deed" and other favorite terms of these anarchistic revolutionists.

Bobbink & Atkins

500 ACRES OF NURSERY

500,000 FEET UNDER GLASS

Plant in the Autumn:

This is the most pertinent advice a nurseryman can give his customers. It should be printed in letters 10 feet high.

Nature prepares herself well in advance. *She* plants in the Autumn and so is ready for the first warm rains of Spring.

You can't improve on Nature. Plant in the Autumn and you will save time and money, and secure better results. Weather, soil, labor conditions and prices are *right* NOW.

Take advantage of natural conditions and always buy where variety and stock are abundant. Thus you will secure selected quality, and your plantings will always please and satisfy.

Visit our Nurseries—only 8 miles from New York.

GOOD CURTAINS AND ECONOMY

(*Continued from page 32*)

38 and 48 inch widths, is white, cream or ecru in hue, is of various textures and weights and is plain, drawn or barred. According to quality and width, the price of scrim ranges from 15 to 55 cents a yard. After washing, scrim does not have to be stretched, altho there will inevitably be a slight shrinkage. Plain scrim has the advantage of not wearying the eye by a pattern. Either hems at bottom and sides or a simple cotton Cluny edging may serve for finish. The marquisette, bobbinet and Brussels net, shown in the illustrations, bear more or less resemblance to certain qualities of scrim but, unlike scrim, they must generally be stretched after washing. Figured net occurring in 38, 45 and 50 inch widths, should not be overlooked as an agreeable possibility. These materials range from 30 cents to $1.85 a yard, according to width and quality. In the category of thin materials, Swiss, either plain or dotted, must be accounted a valuable resource. It comes in 36 and 50 inch widths and varies in price from 18 to 50 cents a yard. By way of adding both color enlivenment and body, bands of sateen a couple of inches wide may either be applied an inch or more from the bottom and side edges or doubled and sewed on as a hem or border, as previously suggested in the case of cheesecloth. For a large window, the sateen band or hem should be fairly wide and the bottom weighted.

Sateen and kindred materials may, of course, be used for whole curtains but, unfortunately, it is extremely difficult just now to get fast colors and in a large piece of goods the fading will be irregular and blotchy according to folds and shadows. For a curtain with body, casement cloth is a far more satisfactory material. It is, to be sure, more expensive than the aforementioned goods with a more or less open mesh, but its longer life and greater body compensate for the difference. The width is usually either 33 or 50 inches and the price ranges from 90 cents to $3.25 per yard. Satisfactory casement cloth in either width, however, can be had for from 90 cents to $1.50 a yard. It comes either plain, slightly figured or with a self-toned stripe and can be had in various hues, but it is safe to say that white, cream or a soft putty color, without figure or stripe, are almost invariably preferable. Casement cloth curtains may be finished either with a hem or with a short-fringed gimp and they possess the double advantage of being fine enough to take the place of thin glass curtains and yet heavy enough in body to do away oftentimes with the requirement of inside hangings.

Where the general character and decorative composition of the room will admit of its use, one of the most agreeable as well as serviceable curtain materials is Japanese cotton crepe. It possesses the manifold advantages of being inexpensive, varied in its color and pattern possibilities, fast in color, soft and pliable in texture and easily laundered as it is better left unironed and unstretched. The tones are singularly mellow and the colors are either solid, such as soft blues, pale greens, saffron or pink, or else there are bars and stripes in such combinations and dispositions as indicated in the illustration. Plain white can also be had. The colored and finely striped crepe can often be effectively edged with some of the narrow gimps in several colors if one is ingenious at making combinations; it is always safe, however, to use merely a hem. The crepe is 30 inches wide and 35,

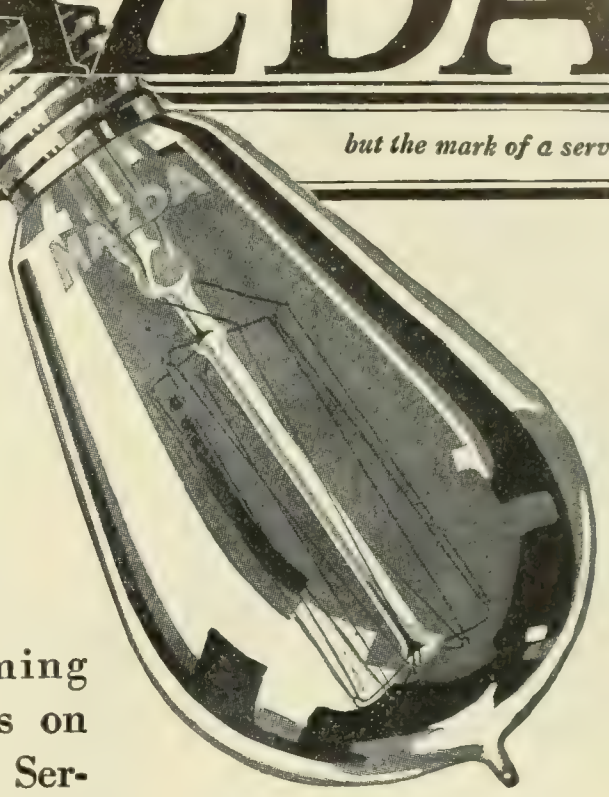
LE PAGE'S CHINA CEMENT
STANDS HOT AND COLD WATER 10¢

45 and 85 cents a yard. It deserves to be better known and more widely utilized for curtaining purposes and not restricted to merely shirts and frocks.

Another little used but admirable and inexpensive curtain material is theatrical linen or carriage-makers' scrim—it is known by both names—equally pleasant in tone and texture, which softens the light without appreciably excluding it. It is 36 inches wide and costs 75 cents a yard. Despite its sheerness, it has sufficient body to hang well and not get stringy. Unbleached muslin is still another inexpensive curtain possibility not to be despised and may suitably be hemmed or else bordered with either fine cotton Cluny edging or gimp.



Scotch Madras, sundour, sunphast and a great variety of curtaining materials made of cotton or mercerized cotton, and possessing more or less sheen, are to be had in plain colors and textures or with self-toned figures. They vary in price from 40 or 50 cents a yard to $3 and upward. And now a few words of advice about hanging. To begin at the very beginning, above all things, be generous with the allowance of material. This does not mean be prodigal or wasteful, but it does mean allow plenty of width for ample folds, especially if the material is thin and has a tendency to become stringy after hanging. A curtain of sheer material that may seem sufficient when first put up will often appear skimped after it has been hanging for a while, and nothing makes a window look so poverty stricken as skimped curtains. Better no curtains at all. It is generally better to have sash curtains end at the sill. In measuring for this remember that curtains weighted at the bottom will pull down to some extent after they are hung and make allowance for it. When possible—and it usually is possible—it is desirable to hang curtains so that they will not hide the window trim. Two curtains for each sash—four for a whole window—makes it more convenient to regulate the light and also corrects the aspect of extreme hight in a high, narrow window. Whether this arrangement is followed or whether two full length curtains are used, traverse rings and draw cords should be used for the top of the window so that the sides of the curtains will not have to be seized and pulled and jerked this way and that. The rings and pole can easily be hidden by the heading. For casement windows, the curtains may be hung on rods attached to each casement. It should be noted that where casement windows have stone or heavy wooden mullions, it will always be more in keeping to use curtain material with plenty of body, such as casement cloth.

For bow windows with casements, for ranges of windows or wherever there is a large expanse of glass in one place to be curtained, the question of shades necessarily comes up and, along with it, the inseparable question of cost. In this connection it is worth suggesting that a split bamboo roll screen, such as those often used on porches, will generally answer all requirements of modifying too intense light, looks quite as well as or better than the ordinary shade and costs far less.

One last word anent price and relative merit in the matter of curtains. Too many of us are obsessed with the false notion that the price of a thing has some definite relation to its decorative or artistic excellence and that something which costs but little will necessarily look cheap. This is a serious mistake and one of the surest ways of exposing the fallacy is to make use of some of the less expensive curtain materials and apply good taste and common sense to the making and hanging.

MAZDA

"Not the name of a thing, but the mark of a service"

From the incoming host of new ideas on lighting, MAZDA Service selects for the makers of MAZDA Lamps, only those developments in design, materials and methods that will improve the light you enjoy : :

The Meaning of MAZDA

MAZDA is the trademark of a world-wide service to certain lamp manufacturers. Its purpose is to collect and select scientific and practical information concerning progress and developments in the art of incandescent lamp manufacturing and to distribute this information to the companies entitled to receive this Service. MAZDA Service is centered in the Research Laboratories of the General Electric Company at Schenectady, New York.

The mark MAZDA can appear only on lamps which meet the standards of MAZDA Service. It is thus an assurance of quality. This trademark is the property of the General Electric Company.

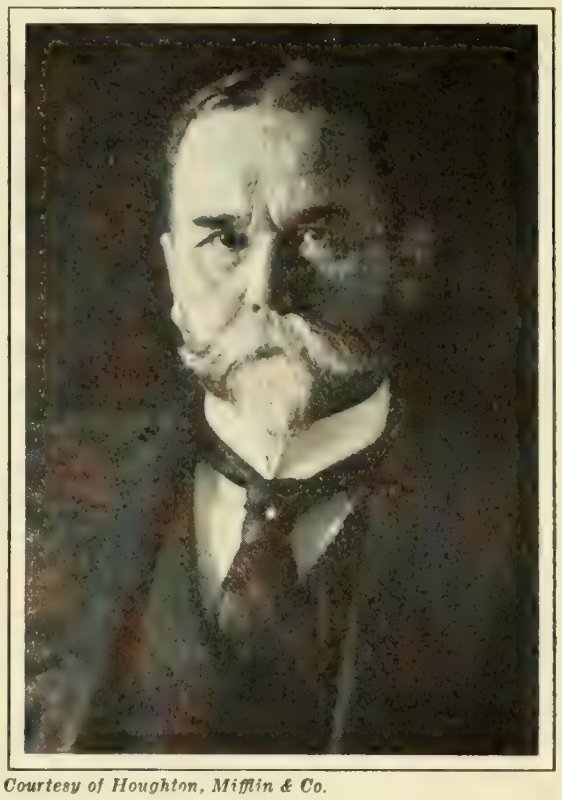
NEW BOOKS FOR AUTUMN READING

© Paul Thompson

The president of the American Academy of Arts and Letters, William Dean Howells



Men of Mark

RUSSIAN fiction is so detailed and realistic that it always suggests biography, but Russian life, in past generations at least, is so strange and barbaric to western eyes that it gives biography the color of fiction. *A Russian Gentleman*, translated from the Russian of Serge Aksakoff by J. D. Duff, is a biography of the author's grandfather, Stepan Mihailovitch Bagroff, a land owner and the master of many serfs. The hot-tempered but strictly honorable country squire of eighty years ago is splendidly portrayed; he was indeed a man to attract the interest and loyalty of a literary grandson. The picture of the times in which he lived, however, is the picture of a nightmare; after reading any number of Russian novels and biographies, the American is still shocked by each fresh glimpse behind the dark curtains that shrouds the Russian past.

In the field of American biography there are, as usual, sketches of men prominent on both sides of the great sectional conflict that marked the middle of last century. William Day Simonds in his brief account of the work of *Starr King in California* shows how near the state on the Pacific coast came to leaving the Union and how great an influence on the side of the North was the patriotic oratory of a single individual, the Reverend Thomas Starr King. We have also the life story of a gallant guerrilla warrior in the cause of the South, *The Memoirs of Colonel John S. Mosby*, edited by Charles W. Russell. The narrative of the war is lucidly and interestingly written and his defense of General Stuart's strategy is a valuable contribution to the military history of the times. Colonel Mosby's recollections of General Grant, who was a warm personal friend of his redoubtable foe, will also be of interest to many readers.

The distinguished French Socialist, whose assassination at the opening of the Great War removed from the political life of France one of its most sincere and respected leaders, *Jean Jaurès*, is very sympathetically portrayed in the short study of the man and his opinions by Margaret Pease. Of particular interest at present is the discussion of the opinions of Jaurès on military policy, for this zealous pacifist had made a special hobby of army reorganization on democratic lines.

My Reminiscences, by the illustrious Hindu poet, Rabindranath Tagore, is a spiritual autobiography that will attract even those who have not had the courage to undertake the reading of Tagore's mystical poetry. Very charming are the scenes of his early childhood and the vivid little glimpses of people and nature as seen with the fresh eyes of an imaginative child. It is also interesting for the Western reader to take a look at his civilization from the outside by the help of some one native to another race and tradition. We learn that "uncontrolled excitement" is the quintessence of English literature, and this Tagore traces to the severe self-repression of the English, leaving literature as the only outlet for their emotional life. Tagore contrasts European with the native Hindu

John Hay "who was all the better statesman for being a very good poet"

music: "In our country the virtuoso is satisfied if he has heard the song; in Europe they go to hear the singer." His book of essays, *Personality*, is less appealing to the average taste because of the curious vagueness, like a luminous fog, with which Tagore enwraps his philosophical ideas. The chapter devoted to the school which he established and in which he has successfully worked out his theories of education is most interesting.

Professor Calvin Thomas, of Columbia University, has given us a very thoughtful and sympathetic study of the life and work of *Goethe*. The first part of the book is mainly biographical, but the later chapters are an estimate of Goethe as critic, philosopher, poet, scientist, novelist and dramatist, concluding with a study of "Faust." Professor Thomas ranks Goethe high as a man of whole and rounded genius, but seems to think that in certain particular fields, notably as an experimental scientist, he has been overrated by many of his admirers. William M. Salter has attempted the more difficult task of making a coherent philosophy of the thoughts of Friedrich Nietzsche; more difficult, because Goethe was the supreme German poet of order and lucidity, while Nietzsche was the supreme

GOOD·BOOKS
THE ABINGDON PRESS

VICTORY chants the song of triumph on the misty mountain tops. It thrills our knights as they sail for the lists and gives them surpassing courage under the skies of France. Some day they will come back to us, chanting it themselves over the smiling seas.

Fashion the thoughts of the forces abroad or in training here with books that help them fight the good fight and quit them like men.

And you—read wisely yourself these hours when time must be conserved, these days of new-born issues and changing ideas. Choose from the works of THE ABINGDON PRESS. For over a century and a quarter this house of distinction has met the problems of a growing nation. Complete suggestions are yours for the asking. A few of our late issues follow:

THE PEACEFUL LIFE: A Study in Spiritual Hygiene
By OSCAR KUHNS

In this day of feverish activity the author reveals the beauty and power of the quiet and serene life and how it may be attained and maintained. Enriched with apt quotations and illustrations from the best writers, the book will be a joy to all lovers of good literature and a stimulus to the highest thinking. *Price, net, $1.00*

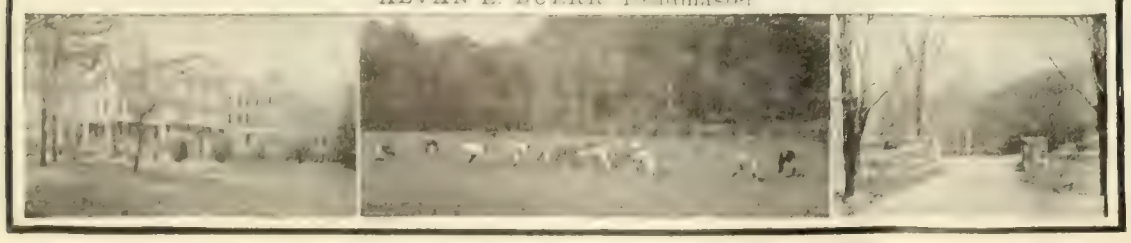
THE OTHER SIDE OF THE HILL: And Home Again
By F. W. BOREHAM

If in your reading you enjoy being challenged by suggestive, stimulating, original and striking ideas and their forceful expression, you will find nothing better than "The Other Side of the Hill." *Price, net, $1.25*

JAMES MONROE BUCKLEY
By GEORGE P. MAINS

A real study and interpretation of this many-sided and truly remarkable man who for fifty years has been the outstanding man in Methodism. A graphic and picturesque portrayal. *Price, net, $1.50*

THE CYCLOPEDIA OF TEMPERANCE, PROHIBITION AND PUBLIC MORALS
DEETS PICKETT, Managing Editor



Revised and enlarged both in size and contents. Brimful of most useful information on every phase of the temperance question. The definitions, statistics, stories and rulings included will prove reliable ammunition for everyone battling for the temperance cause.
Price, net, 50 cents. By mail, 55 cents

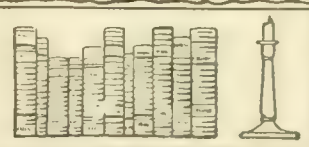
ALVAN E. DUERR, Headmaster

German poet of chaos and paradox. Mr. Salter can hardly be too much commended for the skill with which he has done the work. Interpretations of Nietzsche are many, but usually they are nine parts comment to one of exposition, whereas Mr. Salter effaces his own opinions and lets Nietzsche explain himself by placing in logical relation to each other the thoughts which Nietzsche sprinkled at random over his works. For those who prefer to take their Nietzsche straight the new English translation of *Thus Spake Zarathustra*, with a preface by his sister, will have much value. The book is one of the excellent "Modern Library" series of nineteenth and twentieth century classics.

William Dean Howells, by Alexander Harvey, is an interesting book, but it is hardly biography or even a literary criticism of its subject. The critic's own opinions cover every page and these wander far from the matter at hand. Almost as much space is devoted to Poe as to Howells, and many pages are devoted to proving that the great curse of the literary world is "the low intellectual level of the Anglo-Saxon."

A Russian Gentleman, by Serge Aksakoff. New York: Longmans, Green & Co. $2.10. *Starr King in California*, by William Day Simonds. San Francisco: Paul Elder & Co. *The Memoirs of Colonel John S. Mosby*, edited by Charles W. Russell. Boston: Little, Brown & Co. $3. *Jean Jaurès*, by Margaret Pease. New York: B. W. Huebsch. $1. *My Reminiscences*, by Rabindranath Tagore. New York: Macmillan. $1.50. *Personality*, by Rabindranath Tagore. New York: Macmillan. $1.35. *Goethe*, by Calvin Thomas. New York: Henry Holt & Co. $2. *Nietzsche*, by William M. Salter. New York: Henry Holt & Co. $3.50. *Thus Spake Zarathustra*. New York: Boni & Liveright. *William Dean Howells*, by Alexander Harvey. New York: B. W. Huebsch. $1.50.



The War and Its Issues

THOSE who wish to know what England, or, at least, the so-called governing class of England, is thinking about the future may profitably examine *After-War Problems*, a symposium of British statesmen, divines, professors, jurists, physicians and social workers on the readjustments which will be necessitated by the war. Of particular interest is the study of imperial federation by the late Earl of Cromer, altho it comes to no particular conclusion except that federation is desirable and that the way to federate has not yet been worked out, and the discussion of national education by Viscount Haldane, who recommends taking hints from Germany's secondary and technical schools. Most of the essays in the volume deal with the condition of the poor and the possibility of bettering it after the war.

Of recent discussions of the Great War one of the most interesting, tho rather from the prominence of the author than from the novelty of the views presented, is Senator Henry Cabot Lodge's *War Addresses*, including not only speeches made on the floor of the Senate but many miscellaneous addresses on questions of foreign policy and preparedness. Not every one will share the opinions of the distinguished Senator, but fortunately one need not do so to enjoy the force and neatness of expression in which he clothes them. Most writers on internationalism are more optimistic than Senator Lodge, who sees no counsel for the future but trust in God and good care that our powder remain dry. Malcolm Quin discusses *The Problem of Human Peace* from the standpoint of Roman Catholicism. He admits that the Catholic Church has not been in human history a power for peace but he still believes that the only road to a lasting peace is by the agreement of mankind on a common program of in-

BOOKS OF THE MONTH
THE WAR · · FICTION

AUSTRIA-HUNGARY: The Polyglot Empire
By WOLF VON SCHIERBRAND

The present condition and probable future of this anomaly among Empires, set forth by the Associated Press man who knows Europe so intimately. From 1912 to 1916 the author lived and traveled in Austria-Hungary and knows whereof he writes. *Illustrated. Cloth, 8vo. Net $3.00.*

FREDERICK A. STOKES COMPANY, New York

CARRY ON
Letters in Wartime

By LIEUT. CONINGSBY DAWSON

Author of "The Garden Without Walls," etc.

"To those Americans who are preparing to take their place at the front, to those fathers and mothers who must stay at home and wait, this little volume bears a fine, an inspiring message. Here is the spirit we want to have, the spirit which should animate us as a nation, expressed very clearly and very simply."—*New York Times. Frontispiece. Cloth. Net, $1.00. (Tenth edition.)*

JOHN LANE COMPANY, Publishers, New York

FAITH, WAR AND POLICY
By GILBERT MURRAY

There have been few war books of deeper permanent interest than this interpretation of the best liberal thought of England by one of her greatest scholars. Americans who are looking for light on such questions as How Can War Ever Be Right, The Evil and the Good of the War, Democratic Control of Foreign Policy, The Future of Ireland, America and the War or The Sea Policy of Great Britain will find it in this book. *Net, $1.25.*

HOUGHTON MIFFLIN COMPANY, Boston and New York

FOR FRANCE

In response to a request for a tribute to France, the best known of America's authors, painters, musicians, sculptors—in fact, distinguished men and women from every walk in life—have answered with pen and brush, and given of their best. The result is a remarkable book. Some of the contributors are: Tarkington, Garland, Howells, Sothern, Walter Hale, Sargent, Flagg, Ellen Glasgow, etc. There are many illustrations, some in color.

At all bookstores. Net, $2.50.

DOUBLEDAY, PAGE & Co.

THE UNPOPULAR HISTORY OF THE UNITED STATES
As recorded in Uncle Sam's own words

By HARRIS DICKSON

Straight talk from Uncle Sam about the wars he has fought, with startling facts that will surprise those who have relied on ordinary school histories. But every fact comes direct from Government records. A book to make us realize that old-time ways of running wars will not win the war we are now engaged in. *Cloth, 12mo. Net, 75 cents.*

FREDERICK A. STOKES COMPANY, New York

One of the biggest things of our time.—London Bookman

SONIA: Between Two Worlds
By STEPHEN McKENNA

"One of the biggest things of our time"—the London *Bookman* says of this novel of a world in the convulsions of transition—"a political novel finer than anything since Disraeli." A story repeatedly declared to be the greatest event in the fiction of the war. Linking the ante-bellum world and the world to be, is a flaming figure, idealist, patriot. *12mo. $1.50.*

GEORGE H. DORAN COMPANY, New York

THE RED PLANET
A Romance of Wartime but Not of War

By WILLIAM J. LOCKE

Author of "The Wonderful Year," "The Beloved Vagabond," etc.

"Three really great works of fiction in English have now come out of this war: H. G. Wells's 'Mr. Britling Sees It Through,' St. John Ervine's 'Changing Winds,' and now this book of Locke's. For this 'Red Planet' is going to live. It is a splendid *tour de force*, if not Locke's masterwork, at least worthy of a place alongside his 'Beloved Vagabond,' just as romantic, just as tender. The one great charm of 'The Red Planet' is that once having started it you never put it down."—*Brooklyn Eagle. Cloth. Net, $1.50.*

JOHN LANE COMPANY, Publishers, New York

THE REBIRTH OF RUSSIA
An Epic of the War

By ISAAC F. MARCOSSON

Author of "The War After the War," etc.

This is the only first-hand account of the Russian Revolution to be published so far in the United States. Mr. Marcosson was in Petrograd during the whole drama of reconstruction, and he enjoyed an intimate personal contact with the men who made the astounding upheaval possible. His character-study of Kerensky is a brilliant analysis of the Russian Lloyd George. The book discloses a drama of color and action as thrilling as romance. *With 28 illustrations. Cloth. Net, $1.25.*

JOHN LANE COMPANY, Publishers, New York

Even at this day worthy of the historian's confidence.—Review of Reviews.

THE LAND OF DEEPENING SHADOW
Germany at the Third Year of War

By D. THOMAS CURTIN

"Better than any other war-time writer, Mr. Curtin has given the measure of the German people."—N. Y. *Times.* "Contains information which has been but hinted at."—Phil. *Press.* "The clearest and least imaginative account yet given of the temper and conditions of the people as three years of faith have left them."—Phil. *Public Ledger. 12mo. Net, $1.50.*

GEORGE H. DORAN COMPANY, New York

FANNY HERSELF
By EDNA FERBER

Author of "Emma McChesney & Co.," etc.

Edna Ferber's best work—her first novel since "Dawn O'Hara." It is the story of what happens when a woman, equipped with an eager spirit and a driving force of human energy, plunges into the business game. How she works out her destiny along original lines makes the rest of an absorbing story. *4 illustrations. Cloth, 12mo. Net, $1.40.*

FREDERICK A. STOKES COMPANY, New York

GRENSTONE POEMS
By WITTER BYNNER

Author of "Young Harvard and Other Poems," etc.

"Many American poets can turn a lyric deftly, and embody in it a pleasing image. But there are few poets who, like Witter Bynner, can do all this, and in addition put into their lines genuine feeling, the passion of beauty, which is the authentic mark of true poetry."—*Literary Digest. Cloth, 8vo. Illustrated. Net, $1.75. Cloth, 12mo. Not illustrated. Net, $1.35.*

FREDERICK A. STOKES COMPANY, New York

A book for the thoughtful consideration of every American.

THE FOES OF OUR OWN HOUSEHOLD
By THEODORE ROOSEVELT

A soul-rousing war creed for every American who would make his Americanism effective at home and abroad. Fearlessly and warningly Colonel Roosevelt speaks to his own people—pointing the way to the great place which is theirs, urging them to ensure by the very strength of our right that all men may be free. *8vo. $1.50.*

GEORGE H. DORAN COMPANY, New York

THE TRIUMPH OF THE MAN WHO ACTS
By EDWARD EARLE PURINTON

In this book are gathered together a number of essays on various problems of life which will go a long way toward clearing the vision of many who are now struggling along without guidance or hope. There is nothing mysterious about efficiency; it is merely a combination of work, common sense and experience. The work is your job; but here is the result of Mr. Purinton's many years of experience as a student and teacher of efficiency methods, plus his inspired sanity—to help you. *Cloth, $1.35 net; leather, $1.60 net. Postage, 10 cents.*

EFFICIENCY PUBLISHING COMPANY, 233 Broadway, New York

EFFICIENT LIVING
By EDWARD EARLE PURINTON

The book that tells you how to make the most of yourself physically, mentally and commercially

"No man can read this book in a fair spirit willing to assimilate what will best help him, without getting ideas and helpful suggestions that will enable him to improve the greatest and most complex and most important of all machines he will ever use—himself."—*Melvil Dewey, President, National Efficiency Society. Cloth, $1.35 net. Leather, $1.60 net. Postage [illegible]*

Do Germs and Climate Cause Catarrh, Coughs and Colds?

R. L. ALSAKER, M.D.

By R. L. Alsaker, M.D.

Dear Doctor Alsaker: I have had catarrh since boyhood, and now my two children have it. During the fall and winter months my wife suffers with bad colds and the children frequently have a bad cough or sore throat.

We have taken treatment from local physicians, using the medicines prescribed; we have used sprays and salves, but have derived no lasting benefit.

We live well, eating and drinking whatever we want, but we do not dissipate in any way. Our family physician tells us that catarrh is caused by germs. Another doctor told us to blame it on the climate. If germs and the climate are the cause of these annoying troubles of the nose, throat and lungs, I don't see how any of them can be prevented, or even cured. What have you to say on the subject?

J. B. W.

THIS family is no exception. The majority have catarrh, either chronic or acute. Catarrh of the head is annoying—and filthy. In the throat it causes irritating cough. When it is seated in the chest it is called bronchitis. If allowed to continue, the bronchitis becomes chronic and robs the individual of refreshing sleep, comfort and health. It weakens the lungs and paves the way for pneumonia and consumption.

Catarrh of the stomach and intestines points toward indigestion. So does catarrh of the liver, which produces various ills, such as jaundice and gall-stones, often ending in disagreeable and painful liver colic.

Catarrh sometimes causes earache, headache and other forms of pain, and it lays the foundation for many diseases.

This gentleman says that he lives well, but no one lives well who is ill. That is poor living. He can continue to eat what he likes, and grow healthy, if he will only learn how.

He thinks that germs and the climate are to blame, and as germs and climate are everywhere, we are helpless. It is a tragic fate, or would be, if it were true, for we can't escape the omnipresent germs and climate.

But neither germs nor the climate cause catarrh. Catarrh is due to improper eating—so are coughs and colds—and these conditions can be prevented and cured through right eating. And here is how it happens:

When people eat as they should *not*, they get indigestion, which fills the stomach and bowels with acid, gases and poisons; a part of these abnormal products are absorbed into the blood, which becomes very impure and the whole body gets acid. The blood tries to purify itself, and a lot of the waste attempts to escape by way of the mucous membrane. This irritates the mucous membrane, and the result is colds and catarrhs.

The right kind of food, properly eaten, makes pure blood and produces health, vigor and strength. The right kind of food builds a sound body, puts catarrh, pimples and blotches to flight, and paints roses on the cheeks.

Catarrh can be conquered quickly, surely and permanently. It has been done in thousands of cases. *If you have catarrh you have eaten your way to it.* You can cure yourself—you can eat your way out of catarrh into health, and while you are losing your catarrh you will rid yourself of other physical ills: The dirty tongue, that tired feeling, the bad taste in the mouth in the morning, the gas in the stomach and bowels, the headache, the rheumatism, and the creaky joints, and other aches, pains and disabilities will clear up and vanish. It is marvelous what proper eating will do, when other means fail. Don't take my word for it, but prove it in your own case and on your own person.

Realizing the universal need of definite and practical information on the cause and cure of disease and how everyone, even children, may prevent sickness by observing certain simple rules, I have published several small volumes on the cause, prevention and cure of Catarrh, Coughs, Colds, Consumption, Diabetes, Bright's Disease, Rheumatism, Constipation and Appendicitis; also a book of 100 scientifically balanced meals for people of all ages. These books run from 100 to 150 pages each. They are entirely free from fads and are written without the use of so-called scientific words such as calories, vitamines, etc. There is no attempt to exploit anything in them—except the truth. Each book outlines a plan of living that will teach the sick how to get well and keep well. For instance, *"Curing Catarrh, Coughs and Colds"* tells you in plain English the true cause of these annoying troubles and it gives you the true cure—a cure at home. There is nothing mysterious or technical about my instructions. A plain, simple, dependable plan of living is given you that includes eating, drinking, breathing and thinking that any one, young or old, can understand and follow. No hospitals, no sanitariums, no drugs, or serums—Just a pleasant, common sense home treatment that harmonizes with and helps Nature.

I have instructed the publisher to price these books so low as to place them within the reach of every reader of this article. The price is less than my office fee for a single consultation—less than your druggist would charge to fill your doctor's prescription, or the price for a patent "cure all" *that doesn't cure*—less than the loss of a day's pay on account of sickness—less than the cost of an evening at the theatre. Think of it! For less than the cost of a few hours' pleasure you can learn how to live so as to *prevent* disease—get well if you are sick—stay well, and live to a good old age after you get well. Health is your greatest and most productive asset. You can have health if you want it, and you have the knowledge right at hand that will show you how to get health and keep it if you follow the simple instructions in these little books. *Disease is a luxury, not a necessity.*

PUBLISHER'S ANNOUNCEMENT: R. L. Alsaker, M.D., is an eminent authority on the subject discussed in the above article. He has a large and constantly growing practice: his patients come from all corners of the globe and they learn from him how to get well and stay well. He has put the net result of his many years of professional experience with sick people into his writings and it is a real pleasure for me to recommend them, because I know from personal experience and observation that good results *always* follow an observance of his simple instructions. Here are the titles of Dr. Alsaker's remarkable books: "Getting Rid of Rheumatism," "Curing Catarrh, Coughs and Colds," "Dieting Diabetes and Bright's Disease," "Conquering Consumption," "Curing Constipation and Appendicitis" and "How to Live on 3 Meals a Day"—The book of 100 meals that please. Descriptive literature on request. Don't risk another day's sickness. Send $1.10 now for the book that interests you most and learn quickly how you can get back to health and happiness. Money returned if you follow instructions for one month and are not entirely satisfied with your improvement in health. Frank E. Morrison, Publisher, Dept. 64, 1133 Broadway, New York.

Advertisement

ternational righteousness such as religion may teach. George Louis Beer, in *The English-Speaking Peoples*, sympathizes with all internationalist movements, but maintains that a close and permanent alliance of the British Empire and the United States is the most practical first step toward world peace. He reënforces his conclusion with an effective array of citations from public men of many countries who have discussed the growing unity and fellow feeling of the English-speaking world.

The controversial volumes on the Great War are not so numerous this year as in the earlier years of the war; there seems to be a general feeling that everything that can be said has been said, an opinion which is not changed by the new books which do appear. A very sensible plea for the cause of the Entente Allies is Christen Collin's *The War Against War*. The author is a professor in the University of Christiania and his main appeal is to his fellow Norwegians. George D. Herron's *The Menace of Peace* is an eloquent appeal to the Allies to endure to the end and win a complete victory for the sake of the spiritual values of humanity.

Greater Italy, by William K. Wallace, is an exceptionally full account of the ambitions of Italian imperialism and of the political situation in Italy on the eve of the entrance of the nation into the Great War. The author finds little idealism in Italy's conduct, but the very absence of it seems to attract him as a "realist." The book contains a map of what the author conceives to be Italy's projected sphere of influence in Asia Minor and in Austria. *Japan in World Politics*, by K. K. Kawakami, is a decisive answer to those who profess to dread an impending war between Japan and the United States. What particularly impresses the American reader is not the review of Japanese world policy; the particular reasons assigned for friendship with Russia, for enmity with Germany, or for aggrandizement in China; as the unaffectedly frank and good natured tone of the whole discussion. Mr. Kawakami does not paint Japan as the one infallibly just nation in a world of scoundrels (as the German apologists, for example, laud Germany) but photographs Japan exactly as she is, with all her superficial faults and errors as well as her fundamental desire to be honorable and decent in her international dealings. Another special problem, one of interest to all financiers, is treated in *The Effect of Wars and Revolutions on Government Securities*, a statistical study by E. Kerr.

Sir Arthur Conan Doyle's second volume of his history of the Great War, *The British Campaign in France and Flanders, 1915*, covers the important year when the German advance had been halted but the best the Allies could do was to prevent its renewal. The author shows vividly by how narrow a margin the British escaped defeat, for they had not yet mastered the technique of trench building or provided themselves with an adequate supply of high explosives and only after a terrible and almost disastrous experience was the remedy found for the German "gas." Nothing but almost superhuman valor and tenacity held the line, and this was done only at a frightful cost of life. "For the greater part," he tells us, "it was not a contest between men and men, but rather one between men and metal, in which our battalions were faced by a deserted and motionless landscape, from which came the ceaseless downpour of shells and occasional drifting clouds of chlorine."

Among the personal narratives of war two are of exceptional interest. Captain Gilbert Nobbs's *On the Right of the British*

Line is the story of an officer who was blinded in battle, captured by the enemy, lived for months as a prisoner of war and was in the meantime reported to the people at home as dead. Its value lies in the first hand account of conditions in German prison camps. The author of *A Hilltop on the Marne*, Mildred Aldrich, has written a sequel to that wonderful book, carrying the narrative of her life in the French country house on the Marne down to the entrance of the United States into the Great War. *On the Edge of the War Zone* has nothing quite so thrilling to relate as the earlier book, but it lacks neither interesting incidents nor charm of style.

As hereafter American interest in the Great War will be largely concerned with the doings of the soldiers from this side of the Atlantic, Robert C. Richardson's study of the daily life of the cadet at *West Point*, his work and play, is timely. When the small body of regular army officers that have graduated from that distinguished institution are swallowed up in the mass of new officers from the training camps or promoted from the ranks we wonder how much will be left of the present traditionalism, etiquet and distinctions of seniority in the West Point of, let us say, 1920?

After-War Problems, by the Earl of Cromer and others. Edited by William H. Dawson. The Macmillan Company. $2.50. *Japan in World Politics*, by K. K. Kawakami. Macmillan. $1.50. *War Addresses, 1915 to 1917*, by Henry Cabot Lodge. Houghton, Mifflin Company. $2.50. *The Problem of Human Peace*, by Malcolm Quin. E. P. Dutton & Co. $3. *The English-Speaking Peoples*, by Geo. L. Beer. The Macmillan Company. $1.50. *The War Against War*, by Christen Collin. The Macmillan Company. 80 cents. *The Menace of Peace*, by Geo. D. Herron. Mitchell Kennerley. $1. *Greater Italy*, by William Kay Wallace. Charles Scribner's Sons. $2.50. *The Effect of Wars and Revolutions on Government Securities*, by E. Kerr. New York: William Morris Imbrie & Co. 50 cents. *The British Campaign in France and Flanders, 1915*, by Sir A. Conan Doyle. Geo. H. Doran & Co. $2. *On the Right of the British Line*, by Captain Gilbert Nobbs. Chas. Scribner's Sons. $1.25. *On the Edge of the War Zone*, by Mildred Aldrich, Boston: Small, Maynard & Co. $1.25. *West Point*, by Robert C. Richardson, Jr. G. P. Putnam's Sons. $2.

Perennial Bobby Burns

IN 1919, will fall the one hundred and sixtieth anniversary of the greatest songwriter that ever yet came to birth, suffered, made merry, loved, labored and died. Not the one hundredth anniversary, nor the one hundred and fiftieth, nor the two hundredth, no centennial nor semi-centennial numbers, merely the one hundred and *sixtieth* anniversary of a singing ploughman's birth. Just the same, it ought to be celebrated! Burns's latest critic, without putting such sentiments into his reader's head sledge-hammer fashion leaves him with some such impression. William Allan Neilson, to judge just from his *Burns, How to Know Him*, is, first of all, a man of breadth, and only secondly a digger in booklore. Born in Scotland and a graduate of Edinburgh University, Professor Neilson is steeped in Scotland's (and Burns's) lore and loveliness and humor and humanness and rough-and-readiness. Here is a "prof," shaken with love and laughter and an understanding deeper than dust logic; shaken in the true companionship of a loved and very loving ploughman, songtinkerer, and flattered society favorite; shaken out of any rule-made mobilization of facts and "unities" into big-hearted understanding by (we may guess) his own recurrent visions of real cotters, real "braw" and "bonnie" lads and lassies, and "jolly beggars," real highlands and real "banks and braes," real "teats o' hay and ripps o 'corn," real "rashes O!"

He is not afraid of Burns's democracy,

OF IMMEDIATE INTEREST

HOW TO LIVE AT THE FRONT

By HECTOR MACQUARRIE, A.B., Cantab., Second Lieutenant Royal Field Artillery. 8 illustrations. $1.25 net.

This English army officer writes for his new allies, the American soldiers, and from the first page to the last he takes up subjects the understanding of which will be of great value to both the body and soul of the reader. The information given regarding the formal matters of life in and behind the trenches will be of inestimable value.

IF I WERE TWENTY-ONE

By WILLIAM MAXWELL. 8 illustrations in black and white. $1.25 net.

This is a snappy book with a punch, by a man with wit, experience, and enthusiasm who expresses his belief in the ability of a young man to attain success. The experienced old fellow will enjoy the whole just as much as the youngster who desires to win his spurs.

SUCCESSFUL CANNING AND PRESERVING

By OLA POWELL, U. S. Dept. Agriculture. 4 colored plates. 164 illustrations in the text. Octavo. $2 net.

This addition to Lippincott's Home Manual Series is a practical yet scientific working handbook for the individual woman and for clubs upon all steps in the successful canning and preserving of fruits, vegetables and meats. It is a book the American woman needs.

Selected Timely Publications

ARTISTIC AND LIMITED EDITIONS

EARLY PHILADELPHIA: ITS PEOPLE, LIFE AND PROGRESS

By HORACE MATHER LIPPINCOTT.
120 illustrations. Octavo. Decorated cloth. Boxed, $6.00 net.

A LIMITED EDITION.

The city of many institutions and unimpeached traditions is presented in its varying aspects by one who knows the people of to-day and yesterday. The public places with the learned institutions, the unique sporting life, the financial and business concerns, the social clubs and associations are written of in a way that will make the book a fund of valuable information to all who are interested in the beginnings of America.

COLONIAL VIRGINIA: ITS PEOPLE AND CUSTOMS

By MARY NEWTON STANARD.
93 illustrations. Octavo. Decorated cloth. Boxed, $6.00 net.

A LIMITED EDITION.

A Virginia book presenting the very spirit of the Old Dominion; the indoor and outdoor life, the houses in which the people dwelt and the pleasures which they pursued, the relations between the classes and the happy humanness of their entire existence are presented in text and illustrations in a manner that makes the book unique among Virginia volumes.

OLD ROADS OUT OF PHILADELPHIA

By JOHN T. FARIS.
117 illustrations and a map. Demi octavo. Decorated cloth. Boxed, $4.00 net.

The old roads out of Philadelphia are the most historic in America. Profuse illustrations and suggestive text mark the book as a prize for the automobilist, walker, and historian. Such names as The Battle of Brandywine, Valley Forge, and Militia Hill suggest the fascination of the subject. The author presents the past and the present of ten of the great highways.

THE DWELLING HOUSES OF CHARLESTON, SOUTH CAROLINA

By ALICE R. HUGER SMITH and D. E. HUGER SMITH
128 illustrations. Octavo. Decorated cloth. Boxed, $6.00 net.

A LIMITED EDITION.

Charleston is one of the richest cities in the country in the number of her unique and wonderful dwelling houses of earlier days. It is a perfect delight to look through the pages of this volume, dream over the sketches and photographs, and read the interesting and historical and personal incidents associated with her homes and streets. Completeness in every particular is a feature of the work.

THE BATTLE WITH TUBERCULOSIS AND HOW TO WIN IT

By D. MACDOUGALL KING, M.B.
6 illustrations. $1.50 net.

The author, a doctor and a patient, has become increasingly convinced that the great number of deaths occur, not because the disease is terribly virulent, but simply because the majority of patients do not understand the reasons underlying the only treatment that will bring success. This book is written in the hope of setting forth in a simple, interesting, and convincing manner the fundamental facts which help to answer the patient's constant "Why must I do this?"

NEW FICTION

THE RACCOON LAKE MYSTERY

BY NEVIL MONROE HOPKINS, Ph.D., Electrical and Mechanical Engineer
4 illustrations in color by Gayle Hoskins. 12 mo. $1.35 net

A more thrilling and original detective story you will not find. There is humor, romance, wilderness life and a gripping love interest to make this book a winner.

THE TWICE AMERICAN

By ELEANOR M. INGRAM.
3 illustrations in color by Edmund Frederick. 12 mo. $1.35 net

A cracking good novel for these days in which the United States is [illegible] in the world's politics. The hero wins fame and fortune in South America and [illegible] in New York makes for fascinating romance.

When Home Is Heaven

The various aspects of domestic life, the right training of children, the value of the home in which God's name is honored, etc., in Dr. Chapman's best vein. *Net* $1.25.

P. WHITWELL WILSON.

The Christ We Forget

A Life of Our Lord for Men of To-day.

A book with scarcely a peer in contemporary publishing. The author, an English University man, presents a picture of Jesus which, while actually new, is astonishingly convincing. *Net* $1.50.

humanity, broad humor, whole-souled sanity. Recognizing that in the great Scotch poet's verses is purged away all suggestiveness, all lewdness barnacled inevitably around jig-songs centuries old, he refuses to omit such sterling humor as "The Duke's Dang o'er My Daddie," "Wha Is That at My Bower Door?" "Willie's Wife," "Whistle, and I'll Come to Ye, Lad," whether they are as "poetic" or as acceptable to the hypercritical as they might be or not. He is equally appreciative of "The Cotter's Saturday Night" and "A Man's a Man for a' That," of the joy, the color, the youthful singing romance in such old favorites as "Comin' Through the Rye," "Green Grow the Rashes," and of the same qualities, sometimes even more innately poetically, in such exquisite things as "My Wife's a Winsome Wee Thing," "For the Sake o' Somebody," and "Bessy and Her Spinnin'-Wheel." He is not blind to the marvelous maidenly psychology in the simple "O for Ane an' Twenty, Tam," "Ye Banks and Braes," and in "What Can a Young Lassie." Humor of word, as well as humor in a critical sense and understanding of the poet's and the man's heart, pervades these well-printed pages. A first class practical idea is that of the glossary. Properly limited to just the really troublesome Scottish dialect words it runs along the margins, instead of being tucked away off somewhere in the back of the book.

Burns, How to Know Him, by William Allan Neilson. The Bobbs-Merrill Company, Indianapolis. $1.50.

A Flock of Songsters

POETRY, like her sister arts, seeks always the limited and personal. Those writers who have attempted to bring the Great War within the scope of their verse have suffered much the same fate as a violinist who attempts to imitate a thunderstorm on his instrument, the painter who strives to throw the midnight sky on canvas, or the sculptor who would carve in marble a replica of the Himalaya Mountains. The only poems of the Great War which have really attained a permanent place in the world's literature have been personal expressions of sentiment, like the sonnets of Rupert Brooke, or such sketches of the individual soldier in the trenches as make up the section "Battle" in Wilfrid Wilson Gibson's *Collected Poems.* Readers of The Independent will remember some of these vivid little pictures of soldier life which have been printed in our pages at various times since the beginning of the Great War. They are so brief, so compact, so single in their purpose that every lyric suggests the flight of a bullet. And, like bullets, these war poems either hit altogether or not at all. They are all perfect; tho three or four of them are perfect failures. In Gibson's volume there are also a number of long poems which do not treat of war, unless we may so term the silent struggle for daily bread. The best of these are "The Machine" and "The Shop," which appeared in his earlier collection of poems, *Fires.* In war and peace alike, Gibson selects by preference the themes that are commonplace or even disagreeable and makes them splendid not by ornament or sentimental treatment but by revealing the heroism and kindliness which lie deep in the hearts of common folk.

A selection from the *Poems* of John Masefield has been made by Professors H. S. Canby, F. E. Pierce and W. H. Durham, of Yale University. It includes two of his long narrative poems, "The Everlasting Mercy" and "Dauber," together with a few of his shorter lyrics. His poem "August, 1914," ranks with the war verses of Rupert Brooke and Gibson at the head of

English poetry of the Great War. All three poets may be said to ignore the enemy and even the battle while thinking of the homeland for which the English armies are fighting. Brooke sings of "hearts at peace. under an English heaven"; Gibson "of flowers in an English lane, of hedgerow flowers glistening after rain"; Masefield of "the fields of home, the byres, the market towns . . . the dear outline of the English shore." Is this coincidence or is it national psychology?

An American statesman, who was all the better statesman for being a good poet, has also attained the honor of an anthology. Clarence Leonard Hay has collected *The Complete Poetical Works of John Hay* and contributed to them a sympathetic introduction to his father's verses. John Hay cannot be ranked among the greatest poets, perhaps because he was compelled to leave Pegasus in the stable for so many years while he was serving the Ameican people in the fields of international politics, but there have been few poets whose work maintained a more consistent average of excellence. He was always the competent master of his craft, alike in the delightful "Pike County Ballads" and in historical verse of classic dignity.

If the highest reaches of war verse can only be attained by very few, this does not, of course, imply that the other poets who deal with what is today in all men's thoughts should seek their inspiration in the past or silence the lyre entirely. *The Spires of Oxford*, by W. M. Letts, contains some poems on the war which we should be sorry to have missed. Most of these celebrate the heroism of the British lads who went from the "spires of Oxford" or the playing fields of the public school to the blood-soaked fields of Flanders. The volume is a tribute, sincere and understanding, which is not unworthy of "these golden boys" in whose honor the verse is written. Equally good, tho in a more sophisticated and ironical vein, is *The Unseen Host and Other War Plays*, short dramas in poetic prose, by Percival Wilde. The point of view is cosmopolitan rather than simply patriotic, and the dialogs between enemies who have found out that, after all, they share a common humanity light up the tragedy and absurdity of war with far greater skill than any deliberately purposed pacifistic play could hope to attain. Perhaps less subtle and polished, and certainly more partizan, are the war poems in John Oxenham's *The Vision Splendid*, which have, however, a sincerity and a vigor that command the attention and respect of the reader.

Witter Bynner's *Grenstone Poems* are far removed from war and, for the most part, from every form of conflict and stress. Love lyrics, songs of childhood, wayside glimpses of pleasant landscapes and interesting people, all held together by a very tenuous thread of narrative, these little verses are ideal for the hour of leisure and of relaxation. Those for whom even Witter Bynner is too austere (it must be admitted that while his verse is always light in form it is sometimes grave in mood) will find just what they want in S. E. Kiser's delightfully humorous *Love Sonnets of an Office Boy*.

Granny Maumee and other plays for a negro theater, by Ridgely Torrence, will repay examination. They represent the attempt to create a racial drama and the attempt bears promise of success. The most powerful play, "Granny Maumee" is a tragedy of race hate, witchcraft and family affection of such terrible intensity that few readers will be able to take pleasure in it. "The Rider of Dreams" is in a softer key and somehow suggests the mingled realism

Best reference work for young folks; and best for their elders, *of course*

24 Volumes
80,000 Articles

STRONG POINTS:

1. **Accuracy:** every important article *written by a specialist.*
2. **Authority:** can be quoted *on any subject* without fear of successful contradiction.
3. **Comprehensiveness:** covers a wider field that any other general reference-work. It contains 80,000 articles *—30,000 more than any other encyclopaedia.*
4. **Lucidity:** written in language so plain that *even the young folks can understand.*
5. **Illustrations and Maps:** carefully prepared to *illuminate* and *explain* the text.
6. **Convenience:** printed on thin paper—not *too* thin but easy to *handle* and to *leaf.*
7. **Arrangement:** all subjects alphabetically arranged and *easy to find.*
8. **Pronunciation:** all except the most common words made clear by a simple phonetic system. *Derivations also indicated.*
9. **Bibliography:** every important subject supplemented by a *full list of books* that may be consulted.
10. **Courses of Reading and Study:** afford specialized help toward *self-instruction* in leading branches of knowledge.
11. **Research Bureau Service:** provides subscribers the *free privilege* of information from our Editors on *any encyclopaedic subject.*
12. **Attractiveness:** monthly prizes stimulate use of the volumes, thus *increasing their interest and value.*

There is one general reference work that not only affords unequalled aid to educators, clergymen, business men and women, librarians, judges, lawyers, physicians and those belonging to other professions and callings, but which, as Amelia E. Barr says, is *"a family reference book of the highest order."* That work is

The New International Encyclopaedia

Second Edition; Just Completed

REVISED, REWRITTEN AND RESET FROM A TO Z
SIZE OF PAGE ENLARGED NUMBER OF VOLUMES INCREASED
PRINTED THROUGHOUT FROM NEW PLATES

Editors: FRANK MOORE COLBY, M.A. TALCOTT WILLIAMS, LL.D., L.H.D., Litt.D.
More than 500 Contributors and Office-Editors

Professional and business people buy THE NEW INTERNATIONAL because it helps them do *more* work, do it *better*, and do it *easier*, while parents buy it for the home because it is pronounced by those who know it to be

Of great value to help the boys and girls in their school work

That's because they can not only *understand* it, but because they become *really interested* in reading the volumes. (See "Strong Point," No. 4, at left.) In order to gain an adequate idea of the value of the work for the whole family

HELPS YOU TO GET OTHER GOOD BOOKS

Those who know THE NEW INTERNATIONAL *best* prize it *most.* To *know* it one must *use* it. We want every owner of the work to *use* and *know* and therefore *prize* it, so we've arranged to mail each new subscriber a monthly list of ten questions which may be correctly answered from the ENCYCLOPAEDIA, thus entitling the subscriber to any $1.25 book in the catalogue of DODD, MEAD & CO., Inc.

You Can Easily Win a New Volume Each Month
SEE COUPON MAIL IT TO-DAY

Send in the Coupon

You will receive promptly our 80-page Illustrated Book about the *new knowledge*, showing *Specimen Pages, Color Plates, Engravings* and *Maps*, with list of subjects covered by the *Courses of Reading and Study*—a valuable educational adjunct for personal use or to *help the young people along the knowledge-road.*

The Coupon Brings the Illustrated Book. Tear Off and Mail it To-day

The Book is especially impressive with respect to the *new knowledge*, which most other encyclopædias do not contain.

Turning Real Estate Into Cash

The Story of a Successful System of Making Quick Sales

THIS is a short tale about a quick sale.

It tells of a modern method of selling property without paying big commissions to agents.

It tells how this system sold my property—quickly, and for cash—and how it can do the same for you.

It gives information of immense value to every man and woman who has real estate for sale.

Through a business deal I became the owner of a property in an adjoining State.

The place was so run down that it would have required $500 or $600 to make the house habitable.

As the property was so located that I could not live on it, and, being unoccupied, brought me no income, I was, of course, anxious to dispose of it as quickly as possible.

Never having tried to sell any real estate, and knowing no better method to pursue, I placed the property in the hands of a local real estate agent.

This agent, following out the usual methods of the average small-town real estate man, put a "For Sale" sign on the property and then sat down and waited for some one to come along and inquire about it.

After several months had elapsed without any word from the agent, I wrote and inquired as to the prospects of a sale. He replied that he had been unable to do anything with the property and had come to the conclusion that it was impossible to sell it in its present run-down condition, and advised me to spend $500 in repairs.

Not having any money to spend on the place, and having lost all faith in the agent's ability to find a buyer, I decided that if anything was done I would have to do it myself.

Fortunately for me, about that time, I learned of "The Simplex Plans for Selling Real Estate" that had just been brought out by a New York publishing house. These I secured, and much to my delight, I found they contained *seven definite plans* for advertising and selling just such a property as mine.

Selecting from these seven selling plans the one that seemed best suited to my requirements, I immediately put it into operation with the following gratifying results:

Within three days I had eighteen people interested in my property, and within two weeks I made a satisfactory sale, having received three cash offers and two offers of exchange.

And what is of the utmost importance, the cost of advertising and selling my property by the Simplex System was *less than $15*, whereas if I had followed the agent's advice I would have been compelled to spend $500 in repairs, and pay him $125 commission when he made the sale.

That my experience is not unusual is evidenced by what others say who have availed themselves of this method of selling. Here are some extracts from recent letters:

"Sold my Maryland property promptly."—*George W. Billings, Ohio.*

"Closed a deal on my mill property at $4,500."—*H. T. Luff, Delaware.*

"Sold my property within ten days, and for cash. Gladly recommend your methods."—*Wm. H. Cartland, Massachusetts.*

"Through your methods I secured a very satisfactory deal for my 30-acre place in Orange County, California."—*F. B. Schwenther, Arizona.*

"Your method of turning real estate into cash sold a farm for me that I had been trying to sell for a long time—sold it in a few months, and for cash, too."—*Mrs. L. A. Childs, Minnesota.*

Every reader of this publication with any real estate to sell should get the Simplex Selling Plans at once. They are complete, simple and practical, and are for the express purpose of selling homes, farms and building lots located anywhere in the United States and priced at not more than $15,000.

The Plans are contained in 8 pocket-size booklets, in a special library case, and they are so plain and easy to follow that anyone who can read and write English can use them.

The best proof of the efficiency of this system of selling real estate is the fact that through its use more than 5,000 properties in the 48 States have already been sold.

If you will write to the publishers of the Plans at once, you can share in their special free-examination offer.

Send no money. Just fill in and mail the coupon and a complete set of these copyrighted Plans will be sent to you by parcel post, prepaid, with convincing evidence of what they have done for others, and what they can do for you.

In this way you take no risk, as you may examine the Plans in your own home without cost or obligation. Then if you want to keep and use them, send the publishers $5 in full payment for them. If you do not wish to keep them—if you are not convinced that they are just what you need to make a quick, cash sale of your property—simply return them and you will owe the publishers nothing.

As the publishers reserve the right to withdraw this special, free-examination offer at any time, better cut out, fill in and mail the coupon right now to THE SIMPLEX COMPANY, Dept. L, 1123 Broadway, New York, or, if you prefer, copy the coupon on a post card or in a letter.

THE SIMPLEX COMPANY, Publishers, Dept. L, 1123 Broadway, New York

You may send me, postage prepaid, a complete set of the SIMPLEX PLANS FOR SELLING REAL ESTATE, in 8 pocket-size booklets in library container. After receiving them I am to have five days in which to examine them, at the end of which time I will either remail them to you or send you $5 in full payment for same. I agree not to show them to any one, except members of my own family, unless I keep them.

and mysticism of the modern Irish drama. "Simon the Cyrenian," the last play in the volume, is an allegory of the African race placed in a Biblical setting.

In the field of literary criticism, Professor Raymond M. Alden, of Leland Stanford, has contributed a very sympathetic study of the poetry of *Alfred Tennyson.* He seems to feel that the poetry, or at least the point of view, of the great Victorian is more or less put on the defensive by recent criticisms, and his conclusion is interesting: "Speaking, not as a Tennysonian, but as one whose business is the study of the history of literature, I say deliberately that it is to be expected that some of the very things which at this moment obscure the worth of Tennyson's poetry are those which go far to insure it a place in the regard of the future." Much sensible advice to the young poet, and every young man ought to be something of a poet, is included in the brief manual of *Verse Writing* by Professor William Herbert Carruth, also of Leland Stanford. The university is to be complimented on these two volumes.

Collected Poems, by Wilfrid Wilson Gibson. Macmillan. $2.25. *Poems*, by John Masefield. Macmillan. $1.60. *The Complete Poetical Works of John Hay.* Boston: Houghton, Mifflin. $1.50. *The Spires of Oxford*, by W. M. Letts. E. P. Dutton. $1.25. *The Unseen Host and Other War Plays*, by Percival Wilde. Boston: Little, Brown & Co. $1.25. *The Vision Splendid*, by John Oxenham. New York: Geo. H. Doran. $1. *Grenstone Poems*, by Witter Bynner. New York: Frederick A. Stokes. $1.35. *Love Sonnets of an Office Boy*, by S. E. Kiser. Chicago: Forbes & Co. *Granny Maumee*, by Ridgely Torrence. Before the Day of Vers Libre

SINCE the death of Watts-Dunton in 1914 recollections of the quiet house at Putney Hill have come from all sides. To these have been added Watts-Dunton's own reminiscences and the two volumes of his life and letters. Lately we have Mrs. Disney Leith's reminiscences of her cousin, the poet Swinburne, and again what is no doubt his definitive biography, by Edmund Gosse. Mrs. Leith's book is mainly made up of family letters, delightful to receive but of no particular literary value. Their easy intimacy, however, leaves us as familiar with the households of the great London literary and art circles of Swinburne's youth as we are with our own neighbors. Now and then a few words give a lively characterization of an incident or a friend, and Swinburne was one who saw his friends with very friendly eyes. For its gaiety and vividness a letter to his mother is worth quoting:

From the Gaskells we went on to call on Mrs. Proctor—who being a year or so further from eighty and nearer ninety than when we last met was naturally rather more bright, active, witty and amusing than before. I begin to believe that old body is immortal. There is not an atom of show or pretense about her; she walks like a girl . . . has the eyes of a hawk, and I wish I had half her hearing. She . . . talks of Charles Lamb and his sister, Coleridge and Wordsworth till one feels as if one might and ought, to call on them or at least leave cards for them on the next landing. Keats and Shelley seem too young for her to have known—and when one remembers that Byron was her husband's schoolfellow and knew him at Harrow one feels inclined to say "Dear me I didn't think Lord B. was so young a man (or would be if he were alive."

Mrs. Leith's picture of her kinsman is wholly pleasant. One could almost say the opposite of the portrait drawn by the painstaking work of Mr. Gosse. Yet this was certainly far from Mr. Gosse's intent. Indeed he is extraordinarily careful to leave to the general term "extravagances" whatever would be likely to prejudice the reader. The book is full of scholarly criticism and

of interesting facts, intelligently collected, sifted and compiled as could be done only by one who has the double advantage of personal knowledge and all the records. But somehow this very elimination and evident effort at fairness gives the impression that the biographer's own admiration is a bit shaky and that to save our feelings he dares not paint the whole man. The facts lie ready in due order to the building of a character, but the reader must do that building for himself. One reads, for instance, the incidents of Jowett's friendship for his wayward pupil, but one has to vision for one's self the extraordinary picturesqueness of that friendship and one is quite without the key to the wonderful affection and patience on the one hand and to the submission on the other, a submission leading Swinburne even to share Jowett's work on a "Child's Bible."

Sometimes the description is in the distant historical method, as "the mental and moral characteristics that distinguished this singular being were no less remarkable than his physical," but commonly a slyly satiric manner is used in describing the youthfully excessive appreciation of the Pre-Raphaelite group. An openly humorous treatment would be more sympathetic. The description of an evening at the studio of Ford Madox Brown, while neither sympathetic nor humorous is yet direct, almost photographic, and is an excellent example of what the book gives us generously. It introduces one to an amazing company with Swinburne the most amazing member.

> Every now and then, without breaking off talking or bending his body, he hopped onto this sofa, and presently hopped down again so that I was reminded of some orange crested bird—a hoopoe perhaps—hopping from perch to perch in a cage. The contrast between these movements and the enthusiasm of his rich and flute like voice was very strange. In the course of a little time Swinburn's oddities ceased to affect me in the slightest degree, but on this first occasion my impression of them was rather startling than pleasant.

For Swinburne's critics, however, this literary scholar has a fine wit. He thus describes the literary England of 1862:

> Propriety had prevailed and once more British poetry had become a beautifully guarded park, in which, over smoothly shaven lawns, where gentle herds of fallow deer were grazing, thrushes sang very discreetly from the boughs of ancestral trees, and where there was not a single object to be seen or heard which could offer the very smallest discomfort to the feelings of the most refined mid-Victorian gentlewoman. Into this quiet park, to the infinite alarm of the fallow deer, a young Bacchus was now preparing to burst, in the company of a troop of Maenads and to the accompaniment of cymbals and clattering kettledrums.

Mr. Gosse gives us so much that we cavil at his not giving us more. He has a way of alluding to this and that good story of Swinburne told him by this or that acquaintance, but he does not divulge the story, leaving the reader to peer curiously into darkness and wonder if the tale be too undignified for the eyes of gentle readers, tho excellent to the biographer's ears.

Swinburne's later years were as little to the taste of his friend and biographer as were his earlier. In their absolute placidity they seem as unnatural as the tempestuous, irrational years of youth. The *deus ex machina* is, in this later period, to blame. Mr. Gosse does not like Mr. Watts-Dunton, who was apparently far too much of a duenna to suit some of Swinburne's friends. He describes the poet as Icabod, his glory departed, meeting admiring visitors at Putney Hill.

> It is however essential to say that the very gentle punctilious old gentleman who received them after some delay in the unvarying presence of Watts-Dunton, was very far indeed from being the brilliant being the scarlet and azure macaw among the birds of the forest who had

been the wonder and delight and sometimes the terror of an earlier generation. He was the shadow of that splendid high flyer.

One lays down this scholarly work with an increased knowledge of Swinburne's career and interests, of course; with no change in the feeling—legacy doubtless from our mid-Victorian ancestors, that his writings are too exotic to take permanent place in a mighty literature; but with a notion that he, himself, was perhaps more odd than shocking. Still we do not perceive the personal charm that was undoubtedly his, and that bound to him thruout a long life the devotion of noble and talented men and women.

Algernon Charles Swinburne, by Mrs. Disney Leith. G. P. Putnam's Sons. $2. *Life of Algernon Charles Swinburne,* by Edmund Gosse. The Macmillan Company. $3.50.

From California

IN collecting and preparing for publication the *Poems* of Charles Warren Stoddard, Ina Coolbrith has performed a service to American literature which no one could perform better than herself. Miss Coolbrith was a co-worker with Stoddard and Bret Harte on the staff of *The Overland Monthly* in the days of its glory, and, as she is, herself, a lyricist of unquestioned merit, and laureate of "The Golden State," crowned at the recent exposition, she is well equipt to judge which poems of all that Stoddard wrote should be collected and preserved. The volume includes poems written in Stoddard's honor by Joaquin Miller, Thomas Walsh, George Sterling and others, and also the best of his own verse, the famous "Bells of San Gabriel," "Tamalpais" and the sonnet "Yosemite."

Poems, by Charles Warren Stoddard. John Lane Company. $1.25.

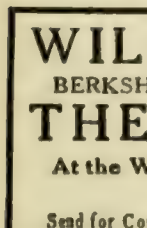
A Jewish Version of the Bible

SINCE America has become the second greatest, if not the greatest, center of Jewish population in the world, and these millions mainly from Eastern Europe have become assimilated to American ideals and English speech, the need of a Jewish translation of the Old Testament scriptures into the vernacular has become an urgent one. To be sure there have been the noble versions made by Christian scholars to which the pious Jew might resort, but even the best, the American Standard Edition, is more or less modified in the translation to favor Christian ideals. The large numbers of English speaking and worshiping Jews in our country have deserved to be supplied with a version made especially by Jewish scholars and representing the best modern biblical learning. This need has been met by a new translation of *The Holy Scriptures According to the Masoretic Text,* the work of a very able board of Jewish translators containing such men as Dr. Cyrus Adler, the late Dr. Schechter and Dr. Joseph Jacobs, with Prof. Max L. Margolis as editor-in-chief.

The work was first devised some twenty-five years ago, but its execution was not taken thoroly in hand until 1908. Great care has been exercized in bringing the language of this new version into perfect harmony with the best English style. Besides the version of Leeser, about the middle of the nineteenth century, the translators have taken into consideration the great English versions of 1611 and 1885 as well as the American version of 1901. All previous efforts for the translation of the Bible into the English language by Jewish scholars have been the work of individual translators. The present work is the first for which a group of men representative of Jewish learning among English speaking Jews assume joint responsibility.

The work has a character of its own,

The Substance of Gothic



By RALPH ADAMS CRAM, Litt.D., LL.D., etc.

Crown 8vo., gilt top, with Portrait, $1.50 net.

As the recognized authority on Gothic architecture, any book by Mr. Cram, whose work in connection with the West Point Military Academy and the superb St. Thomas Church in New York has achieved world-wide admiration, commands attention. This volume, however, has a very special interest to-day as it discusses in a most illuminating manner the civilization of the Middle Ages and incidentally of our own period. It will be read with much interest not only by students of Gothic architecture, but by all who are thinking deeply of the present world crisis and of what is to come after.

aiming as it does to combine the spirit of Jewish tradition with the results of modern biblical scholarship. There are many places in which this spirit distinguishes the translation from Christian versions. For example, in the Twenty-fourth Psalm, instead of following the text reading "Who hath not lifted up his soul unto vanity," the new version reads, in accordance with an old tradition, "Who hath not taken My name in vain." The translators have deemed it best to use thruout "the Lord" instead of "Jehovah," which latter reading was adopted by the American revisers.

In many passages the new reading is preferable to any of the great English versions preceding it, as, for example, "straight paths" instead of "paths of righteousness." In Isaiah 7:14 "young woman" is no doubt the correct translation which Christian tradition has influenced the great versions to read "virgin." There are cases, however, in which the Christian versions, either for accuracy or felicity of expression, must be preferred. For example, in Isaiah 40:2, "Bid Jerusalem take heart" may be just as accurate in its translation of the Hebrew, but "Speak ye comfortably to Jerusalem" has a superior English cadence quite its own.

A delightful companion volume to this version of the Old Testament has been prepared by the editor-in-chief. Professor Margolis. Here he gives *The Story of Bible Translations* with special emphasis upon the work that has been done by Jewish scholars from the days of Saadya, Rashi and David Kimhi down to the present time.

The Holy Scriptures According to the Masoretic Text, A New Translation. Cloth $1, leather $5. *The Story of Bible Translations*, by Max L. Margolis. 75 cents. The Jewish Publication Society of America, Philadelphia.

Philosophy in the Making

TO look into the mind of a thinker, to watch the mysterious process of creative activity, that is what draws us to study the lives or seek the acquaintance of authors and artists. But when we meet them we get no nearer to them and biographers usually shunt us off on to trivialities and externalities. Even autobiography is misleading, unless like Pepys the writer uses a cipher, for a man is as self conscious in posing before an autobiography as he is before a camera.

That is why *The Journal of Leo Tolstoi*, now appearing in the Borzoi translations from the Russian, has a distinctive, almost a unique value. Tolstoi was very sensitive about any one's looking at the volumes and well he might be for he jotted down from day to day just what he thought about everybody and everything. It might serve as a case-book in the psychology of literary construction. We can here trace the origin and painful growth of those thoughts that in their final form seem so clear and convincing. We can in these pages follow the ebb and flow of inspiration. What strikes him one day as the revelation of a great truth may later seem false or incomprehensible. For instance take these two entries:

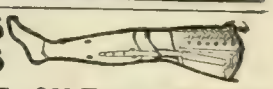
December 7. I made a note "Violence frees" and it was something very clear and important and now I don't remember what it was at all.

December 23. I have remembered Violence is a temptation because it frees us from the strain of attention, from the work of reasoning: one must labor to undo a knot; to cut it, is shorter.

Tolstoi was a type of true mystic as James pointed out in his "Varieties of Religious Experience." Wells might have used him as a model for his "Soul of a Bishop." Tolstoi's visions of the infinite came to him in flashes with long intervals of doubt and depression between. For instance:

Not long ago, in the summer, I felt God clearly for the first time; that He existed and that I existed in Him; and that the only thing

DANERSK
OAK and WALNUT FURNITURE



is made of beautiful wood that is sawed in our own mill in the mountains of North Carolina. We specialize in doing interesting interiors for entire apartments at modest prices, including the draperies and upholstering, as well as the solving of problems at a distance, such as Hunting Lodges—and the furnishing of homes worked out from architects' plans.

We have every modern facility for immediate decoration of your choice from our complete line. Tell us the pieces you desire and we will send samples of fabrics and suggestions for color schemes.

CON-SER-TEX

Save Money, Secure Satisfaction
Avoid Future Expense

USE
Con-Ser-Tex

It makes a neat, attractive, durable surface which will last as long as the house itself

This roofing material costs less than most others, is inexpensive to lay and for years has been giving satisfactory service.

Wherever a neat, artistic waterproof surface is wanted CON-SER-TEX should be used. It will not leak, buckle, crack, stretch, peel or rot.

CON-SER-TEX is a canvas roofing chemically treated to protect the fiber from mildew and the detrimental action of the oil in paint.

Water-proof, Weather-proof, Wear-proof

Investigate its merits. Send us the dimensions of your roof, porch floors, sleeping balcony, or the surface you want covered. We will mail you samples showing quality, width, weight, and complete information on cost of laying this material.

that existed was I in Him: in Him, like a limited thing in an unlimited thing, in Him also like a limited being in which He existed.

(Horribly bad, unclear. But I felt it clearly and especially keenly for the first time in my life.)

Like every mystic, and every person who has a vital religion is in some degree a mystic, Tolstoi felt himself to be an instrument in the hands of God.

Man is a tool of God. At first I thought that it was a tool with which man himself was called to work; now I have understood that it is not man who works, but God. The business of man is only to keep himself in order.

I am a self-moving saw or a living spade and its life consists in this, to keep its edge clean and sharp. And it will work well enough, and its work will be useful. To keep it sharp, and to sharpen and sharpen it all the time, that is to make oneself always kinder and kinder.

During the period covered by this volume, 1896-9, Tolstoi was suffering from dyspepsia and weakness. Altho he lived for more than ten years after, he was then in daily expectation of death. In closing a day's record he writes after the date to come the initials of the words "If I live." But this expectation was rather hope than fear of death for he was soul-weary and body-weary and was longing for that other life which he saw at times so plainly:

Man dying little by little (growing old) experiences that which a sprouting seed ought to experience which has not yet transferred its consciousness from the seed to the plant. He feels that he grows less, but he is not conscious of himself there where he increases; in another life. I am beginning to experience this.

Death is a change of consciousness, a change of that which I can recognize as myself. And therefore fear of death is a horrible superstition. Death is a joyous event standing at the end of each life. Suffering is sent to people to hold them back from death. Otherwise every one understanding life and death, would struggle toward death. But now it is impossible to go toward death unless thru suffering.

But Tolstoi allowed neither lassitude nor illness to stop his reading, thinking and working for others. He was constantly writing letters to people all over the world who wished to follow his teachings, but did not know how to go about it and, worse still, he had to receive the succession of such disciples who made the pilgrimage to Yasnaya Polyana. He was busy writing not for fame or pleasure, but to raise money for the famine sufferers and the Dukhobors, the conscientious objectors who thru his aid found a refuge in Canada—where, alas, they did not escape militarism for they are now again liable to conscription. The books that were incubating in his mind were chiefly his last great novel, "Resurrection," and his drastic criticism of modern art, "What Is Art?" The themes and thoughts of these are mingled with details of his health and family life, records of visits and letters, metaphysical discussions, social criticisms, meditations and prayers. It is a volume that will be valued by the lovers of fragmentary thought as they value the *Pensées* of Pascal, the *Journal intime* of Amiel and the *Encheiridion* of Epictetus. There are quotable passages like these on every page:

I have often wanted to suffer, wanted persecution. That means that I was lazy and didn't want to work, so that others should work for me, torturing me and I should only suffer.

Church Christians do not want to serve God, but want God to serve them.

My body is nothing else than that piece of everything existing which I am able to govern.

There is no "woman question." There is the question of equality for all human beings. The "woman question" is only quarrel-hunting.

Prayer is directed to a personal God, not because God is personal. (I even know as a matter of fact that He is not personal, because the personal is finite and God is infinite), but because I am a personal being. I have a little green glass in my eye and I see everything green. I cannot help but see the world green, altho I know that it is not like that.

Even if that which Marx predicted should happen, then the only thing that will happen, is that despotism will be passed on. Now the capitalists rule but then the directors of the working people will rule.

There is nothing that softens the heart so much as the consciousness of one's guilt, and nothing hardens it so much as the consciousness of one's right.

The voluminous notes by Chertkov form a veritable cyclopedia of contemporary biography and literature for they explain every proper name mentioned.

In this connection we should mention that Nathan Haskell Dole's *Life of Count Tolstoi* has just been reprinted in Crowell's pocket edition of Tolstoi's works. This is a convenient biography for the general reader, altho not particularly inspiring or profound.

The Journal of Leo Tolstoi, 1895-1899, trans. by Rose Strunsky. New York: Alfred A. Knopf. $2. *The Life of Count Tolstoi*, by N. H. Dole. New York: Thomas Y. Crowell Company. $1.

A Boy's Russia

THE second volume of Gorky's autobiography is entitled *In the World*. The first volume, "My Childhood," left the little fellow kicked out to earn his way at thirteen in a world that seems very cruel as we follow his boyish history. There is something curiously intriguing in the idea of Gorky as an assistant in a fashionable boot-shop, and, later, as a maker of icons; he the iconoclast! His voyages on river boats seem more in keeping with his restless nature that even as a lad made him morbid and unhappy. Everywhere there is a crowd of figures etched by the acid of an unsparing critical faculty. Children see thru disguises but few boys of thirteen would be capable of sharply analyzing every one they met. The reader wonders if there are really more coarse and brutal people in Russia than in other lands, or would Gorky have found the bad and repulsive anywhere he might have lived? His eyes see the world as tho it had no atmosphere, and its outlines are harsh and ugly. We feel as never before the depressing part that winter plays in Russia. The long and bitter cold shuts people up together too long and is too bare of wholesome out-of-door recreation. The boy seemed to come alive anew with every spring, and the happiest pages in the book describe the days in the summer woods with his wonderful grandmother as his sole companion. The cook on one of the boats incessantly urged the little Pyeshkov to read, and the lad read everything that he could lay hands upon, getting in that way a desultory education. But his world is a horrible one.

The vast melancholy of Russia is in these pictures, but a nation capable of loving and dying for freedom is not hopeless but full of noble possibilities which Gorky may see realized.

In the World, by Maxim Gorky. The Century Company. $2.

The Soul of a City

NEWARK is a business-like municipality. When she celebrated recently her 250th anniversary she had to have a prize poem, of course, to fit the occasion. A civic committee of one hundred, under the chairmanship of Franklin Murphy, thereupon started an advertising campaign thruout the country to induce every American bard to enter the lists on his own particular Pegasus. Each poem was submitted under a pseudonym in order that it might be judged without reference to the author's previous fame. The prize winners and the poems judged worthy of honorable mention have been compiled in *The Newark Anniversary Poems* with a foreword by Henry W. Wack, editor of *The Newarker*.

The experiment was a success. It pays to advertise; or, in the more refined phrase of one of the competitors, "Ye have done well to hang harps in the wind." The poetry included in this anthology of New-

ark is much above the average level of anniversary verse and form a worthy tribute to the great city. Our chief criticism is that so many of the bards celebrant found it necessary to apologize for their task; they too frequently assumed that writing poems to the eyebrows of fair Newark was an act that required explanation. One begins his verse: "Write a poem of Newark? I think you are mad!" He goes on to remark: "A city of America in this conglomerate era is a huge and writhing indigestion." Even the first prize poem has a mournful antichorus which points out that factory conditions in the city are dismal and dehumanizing. Some few poets fly for refuge to the sleepy, semi-rural Newark of Puritan days; nearly all dip into the future and prophesy that by and by Newark will be a wonderful place, but they seem a little frightened of the whirr and clangor of the big industrial town of the present. But Newark cannot be as bad as she is painted or she would not have placed so high a premium on poetry. It is a refreshing sight to see the poets of a nation paying court where

Puritan Newark,
The Martha of cities,
Careful and provident
Sits at her spindles.

The Newark Anniversary Poems, with introductory chapters by Henry Wellington Wack. Laurence J. Gomme, New York. $1.25.

On Being Twins

THERE is something weird about being twins, quite apart from the relative infrequency of the phase or predicament—approximately 1:90.6. The condition, among humans, arouses wonder as to the extent of the identity in the matter of "soul" and secret thoughts. Those of us who are not twins are also inclined to treat the rest of us rather flippantly; they do not seem to be able to take us seriously. But Dr. Newman has made a serious study of the problem of twins among mammals—especially armadillos, which have a way of producing multiple offspring as a regular thing. He has also gathered up the results of other people's studies and has presented them in a very interesting way.

Wilder's theory of duplicate twins, that they are derived from the same fertilized egg, is supported by a variety of evidence. Newman's studies introduce several new factors into the speculations and interpretations of the problems. For example, the fact that mirror-imaging sometimes appears among human twins, so that one is a left-hand duplicate of the other, suggests a separation of the two halves somewhat later than that which results in two identical but independent systems of symmetry.

These studies have a bearing on many general and special biological problems—such as the determination of sex; the difference between sex as a physiological fact and sexual differentiation of bodily characters; the heredity of the tendency to produce twins, and as to whether this is transmitted by the paternal or the maternal element in reproduction; the nature and the significance of symmetry reversals; the modes of inheritance in various types of twins. The bulk of the book is devoted to the armadillos, first because the author has made an extensive study of this group of animals, and second because these studies furnish the largest mass of direct evidence on the problems. The book is necessarily technical in parts, but the portions of concern to the general reader only can be read by a judicious skipper with great interest.

The Biology of Twins (Mammals), by Horatio Hackett Newman. University of Chicago Press $1.25.

No. 8753

A luxurious English lounging chair which shows the careful Karpen workmanship. The legs are of solid mahogany; the cushions are down filled.

There is solid comfort in Karpen Furniture —the comfort of luxurious lines that fit every curve of your body and of thick, soft cushioning into which you sink deep and restfully.

Hundreds of tiny, wonderfully flexible springs, hidden in softest cotton or down, give you that velvety buoyancy of complete restfulness. This Karpenesque upholstery is a vital part of

Karpen Furniture

WHAT THINK YE OF CHRIST?
by Rev. E. E. HALE. D. D., and other Unitarian literature Sent FREE. Address P. O. M., Arlington St. Church, Boston, Mass.

Oh, You Skinny!

Why stay **thin** as a rail? You *don't* have to! And you *don't* have to go through life with a chest that the tailor *gives* you, with arms of childish strength; with legs you can hardly stand on. And what about that *stomach* that flinches every time you try a square meal? Are you a *pill-feeder?*

Do you expect Health and Strength in tabloid form through pills, potions and other exploited piffle?

You can't do it; it can't be done.

The only way to be well is to build up your body—all of it—through nature's methods—not by pampering the stomach. It is not *fate* that is making you a failure; it's that poor, emaciated body of yours; your half-sickness shows plain in your face, and the world loves healthy people. So be *healthy—strong—vital.* That's living. Don't think too long, send 6 cents in stamps to cover mailing of my book, **"Intelligence in Physical and Health Culture,"** written by *the strongest physical culture instructor in the world.*

A Number of Things

BY EDWIN E. SLOSSON

The correct statements found in an examination paper are of no value to the teacher, but he can learn something from the mistakes. For that reason the schoolboy "howlers"—to use a Briticism—should be taken seriously. In looking over a list of humoristic answers recently given in the Regents' examination of the State of New York I find that they can be readily referred to a few simple forms of misunderstanding. The majority come from the use of a wrong word similar in sound, such, for instance, as the following:

A blizzard is the inside of a hen.
When Cicero delivered his oration he was a prefix.
Sixty gallons make one hedgehog.
When the British got up in the morning and saw the Americans on the opposite hill they threw up their breakfast (breastworks).
A permanent set of teeth consists of eight canines, eight cuspids, two molars and eight cuspidors.
Climate is caused by the emotion of the earth around the sun.
Pompeii was destroyed by an eruption of saliva from the Vatican.
The Government of England is a limited mockery.
Georgia was founded by people who had been executed.
Geometry teaches us how to bisect angels.
Achilles was dipped in the river Styx to make him immoral.

These are simply malapropisms. They are always funny, especially when the wrong word is more appropriate than the right one. We are any of us liable to make such "lapis lazuli" at times in speaking or —if we are ear-minded—in writing. It is sometimes a symptom of mental disease, the Freudians would give it a sinister significance, but we all know of persons addicted to such mistakes, who are certainly not defective either mentally or morally. The trait is so marked that it is used as the distinguishing characteristic of comic personages, such as Shakespeare's Dogberry in "Much Ado About Nothing," Sheridan's Mrs. Malaprop in "The Rivals," and Shillaber's "Mrs. Partington" in quite too many volumes.

In most of the cases under consideration the mistakes result from defective hearing on the part of the pupil or defective enunciation on the part of the teacher, perhaps the latter as often as the former. Can you catch a strange name or a foreign word the first time you hear it casually uttered? Then remember that the technical terms you are using are strange names and foreign words to your pupils and pronounce them as such distinctly.

"Blizzard" is just as sensible a word for crop as gizzard if people only thought so, and Cicero might have been called a "prefix" as well as a prefect. Such mistakes then are no indication of irrationality. The last two are probably mere misspellings. Poor Achilles has a bad time in the examinations. A British schoolboy wrote that "his mother dipt him in the river Stinks and he became intolerable."

The blunders of the next class are more serious, for they show confusion of ideas or mismatched definitions:

A vacuum is a large empty space where the Pope lives.
The alimentary canal is located in the northern part of Indiana.
The rosetta stone was a missionary to Turkey.
A mountain pass is a pass given by the railroad to its employees so that they can spend their vacation in the mountains.
A mountain range is a large cook stove.
The qualifications of a voter at a school meeting are that he must the father of a child for eight weeks.
The first Governor of Massachusetts was Mr. Salem Witchcraft.
The stomach is just south of the ribs.

But the last of the above is the natural result of the one-sided view of the world that geographers persist in taking. The only way to avoid giving the erroneous impression that we are living on the upper half of the world is to have the maps turned over occasionally as tennis or chess players change sides alternately. I don't remember what Miss Stone's Christian name was but I don't believe it was so pretty as "Rosetta."

The last category is small, unfortunately, for it does not indicate stupidity, but rather the contrary:

The skeleton is what is left after the insides have been taken out and the outsides have been taken off.
A circle is a round straight line with a hole in the middle.
Gravitation is that if there were none we should fly away.

These are funny because of their oddity. They really are ingenious attempts at extemporizing a definition of something which evidently is quite clearly conceived. No scientist has yet been able to tell what gravitation "really is" any better than is done here. To go farther and say that "gravitation is the force which" is to dip into mythology. One might well pick out these three students for the making of future scientists.

*
* *

A good pun is better than a bad epigram.

*
* *

A lady friend of mine has become an esoteric Buddhist. She's so tenderhearted that she would not kill a living creature for food, not even a spider or a fly.

*
* *

A four year old youngster of my acquaintance was naughty and his mother told him, "Go upstairs and ask God to forgive you." After a little while he came down and his mother asked: "Did you?" The boy's reply was somewhat evasive: "God wasn't in but I called up Mrs. God and told her and I think she will tell him when he comes in." Evidently the need of a feminine intercessor is a natural one.

*
* *

What a pity the cinematograph was not invented in the sixteenth century. Henry VIII could have taken a picture of his wife.

*
* *

The Russian revolution is a recent event, yet the fertile soil of Holy Russia has already brought forth legends of it. Here is one as told by Paul Claudel in the *Mercure de France:*

Not long ago a peasant woman of the village of Budnia in the vicinity of Wydranka, gave birth to a son. All went well. The father of the little one was gone—gone where all our men are gone—but the neighbors gave advice and aid. The godfather and godmother were called and, as the parish was some miles from the village, they took the newborn child and carried it to the priest for baptism. When the party

arrived at the priest's house the godmother began to unwrap the babe, but what was her horror to see that it had been transformed into a butcher's cleaver! She shrieked and the priest gave it to the godfather and thrust them outside his door.

Confounded and chagrined, they took the homeward road to tell the child's mother, but as they entered her house the cleaver again took the form of a baby. The mother refused to believe the story they told and insisted upon the child being carried again to baptism. So they undertook the journey again, and this time the child was changed into a bundle of cords such as the peasants use for tying the loads on their carts. This time the priest was less rude but nevertheless he sent the good people away. On their return the child regained his natural form, and the patient godmother said: "We must try a third time, for so the Trinity ordains."

The third time the child became a beautiful plant with purple flowers. The priest then said: "Since this is a thing living and blossoming, baptism must be tried as the only safety against the wiles of the devil." No sooner said than done, and when the sacrament was completed the flower became a human being. Then the infant spoke and said:

"Good father, thou hast done well to baptize me in spite of all, for this is the truth of it: If I had remained an ax, Holy Russia would have seen bloody days, altho it would have gained freedom. If thou hadst baptized the bundle of cords the Germans would have enslaved it. But thou hast baptized a living flower—and that means that liberty shall flourish!"

* * *

Each age is entitled to think its own fashions are the most comfortable and beautiful. The *Quarterly Review* of 1864 says:

We are inclined to think that female attire at the present day is, upon the whole, in as favorable a state as the most vehement advocates for what is called "nature and simplicity" could desire. It is a costume in which they can dress quickly, walk nimbly, eat plentifully, stoop gracefully, and, in short, perform all the duties of life without let or hindrance.

Ever see a fashion plate of the sixties or a stage scene of that period?

* * *

The more one takes of a soft drink the more temperate he is.

* * *

The maverick quatrain is branded. It was corraled in Cuba.

"Maverick quotations" mentioned in The Independent of September 1, beg to inform you the author is Edmund D'Haraucourt and it is set to music by Paolo Tosti—happily untranslated. The quatrain is misquoted being the first line of thirteen, and three next to the last. The full poem reads:

Partir, c'est mourir un peu,
C'est mourir à ce qu'ou aime
On laisse un peu de soi-meme
En toute heure et dans tout lieu.
C'est toujours de deuil d'un vœu,
Le denier vers d'un poeme
Partir, c'est mourir un peu,
C'est mourir à ce qu'ou aime,
Et l'ou part, et c'est un jeu,
Et jusqu'à l'adieu suprême
C'est son âme l'ou séme,
Que l'ou séme en chaque adieu;
Partir c'est mourir un peu.

Tosti's music is equal to the beautiful words.

A. DE TARTAS.

Habana, Cuba

I have received several versions in response to my challenge but I hesitate to publish them. If they are better than mine I should be jealous. If they are poorer they would not deserve publication. The entire poem which Mr. Tartas so kindly furnished us would be easier to translate than the quatrain because it is less epigrammatic.

Market Place Talks

BY LUIGI CRISCUOLO

THE NEW HAVEN TANGLE

THE position of the New York, New Haven & Hartford Railroad is of particular interest at this time because of recurring rumors of a receivership which would affect the holdings of many hundreds of widows and orphans in New England and elsewhere. New Haven is beginning to appear somewhat in the same position as that of the once-prominent man who did not succeed in acquiring a competence in his youth and tried to live on his past reputation when he became aged and had no earning capacity. New Haven has been held by so many families for years and years that they refuse to believe that it is not a good security fundamentally and it would not be surprizing if sentiment played a great part in the opinion of some bankers with respect to it.

It is a fact that few people seem to want to approach the New Haven situation without the aid of a whitewash brush. The tendency prevails that stockholders should try and forget the past and make the company exist in spite of the cancer which is gradually destroying it. The New Haven is afflicted with too many expensive parasites which have undermined its resources, yet those in charge of its finances seem to persist that if the ship can be kept afloat a while longer the leaks can be mended. Perhaps they can, but in the meantime the delay causes the stockholders to suffer.

Just before the two issues of notes of the New Haven and the New England Navigation Company, aggregating $45,000,000, matured in May, 1917, there were many rumors of a receivership which deprest the market value of the stock so that it sold off from 52⅞ in January, 1917, to 37½ in February, and even after the financing was assured the stock sold at 32⅝. Afterwards there was a rally to around 47 but it has declined since to around 22. Whenever disturbing rumors deprest the market value of the stock, the financial press was almost vehement in its statements to the effect that it was known on the *best authority* that the rumors of a receivership were without foundation, that the maturities in May would be taken care of and that nothing short of very drastic legislation could take the property out of the hands of its stockholders.

The $45,000,000 notes matured on May 1 and were paid thru the proceeds of a new issue of Collateral Trust 5 per cent notes due on April 15, 1918, sold by a strong syndicate of bankers at 99.04, on a 6 per cent investment basis. The uncertainty about the maturity now over, the stock had a rally but it was only temporary for, as has been stated, when the question of maturity in 1918 loomed upon the horizon, again fresh rumors of a receivership began to go their way. Last April, the announcement was made that tentative plans were being made to finance the New Haven's requirements thru the sale of a new issue of preferred stock if the necessary authorization could be obtained from the several state legislatures and the company's stockholders. The company asked for permission to sell at par not more than 500,000 shares of the new preferred stock which would be a 7 per cent cumulative issue. It was planned to sell the stock before the new issue of notes matured in 1918, so that the company would have a clean slate as far as refunding was concerned at any rate.

THE CAUSES

The New Haven situation is such an involved one that volumes could be written on it which would make interesting reading. Let it suffice for us to say that the cause of all the trouble is conceded to have been the purchase of many electric traction and power properties at exorbitant figures. The New Haven proper is in physically good shape and is a modern railroad, essentially well-fitted to serve the needs of a growing manufacturing territory. The company's capitalization is divided between $157,000,000 stock, $157,000,000 debentures, $58,000,000 in mortgage bonds and $45,000,000 in notes, besides contingent liabilities in the form of guaranteed securities of subsidiary companies.

The New Haven increased its capitalization from 1903 to 1915 by $363,000,000 and by the sale of securities representing this increase was obtained the sum of $388,000,000. During the same period there was acquired additional property with book values of $226,000,000 for properties in the railroad system and $167,000,000 for "outside" properties, including $100,000,000 for traction lines, making a total of $393,000,000 in book values. The New Haven's outside investments have been the cause of all its troubles. While their possession eliminated competition, they must have been acquired at fabulous prices, as properties of that sort go, or else they would show an earning power somewhat commensurate with the cost. And this is said advisedly, with due consideration for rising costs of material, wages and taxes. There is a point where we can say that low rates have helped to cause receiverships, but in this case there seems to be no doubt that the usual conditions are less of a factor than the cost of the properties at prices beyond all reason.

For instance, the Rhode Island Company is carried on the New Haven's books at a value of $24,352,336 and represents stock of the par value of $9,685,500. The Rhode Island reported earnings in the calendar year 1916 amounting to $303,318 after all charges, or approximately 3¼ per cent on the stock's *par* value. The New Haven issued in payment for the $9,685,500 stock, the 4 per cent debentures of the Providence Securities Company in the amount of $19,899,000, which it subsequently assumed.

The New England Navigation Company $49,405,500 stock is owned by the New Haven and carried on its books at over $53,000,000. In the calendar year 1916, the company earned a surplus of only $28,942, but even this showed an increase of $141,448 over the year 1915. The Connecticut Company's $40,000,000 stock is owned by the New Haven thru the New England Navigation. The Connecticut Company is the only important subsidiary which appears to show a respectable surplus, reporting in 1916 a balance after fixt charges

amounting to $1,678,488, or sufficient to pay 4 per cent on its capital stock.

The New York, Westchester & Boston has $5,000,000 stock, $4,924,937, or 98.49 percent, of which is owned by the New Haven. This road was built in the hopes of securing such traffic as would come from the development of suburban communities in Westchester County, New York, and extends from 177th Street in New York City to White Plains and Larchmont. The company has $21,390,000 First Mortgage 4½ per cent bonds which are guaranteed as to principal and interesting by the controlling company. The stock is carried on the books of the New Haven at a value of $6,241,952. The New Haven also owns $5,462,888 book value of this company's notes and has made advances to it amounting to $3,727,325. This property has barely earned its operating expenses since completion and in 1916 showed a net income of but $22,553 against fixed charges for interest, etc., amounting to $1,565,802. The company's first mortgage bonds sold recently at 38 altho they were originally issued at 96¼.

Does any one wonder that people worry about the New Haven? Is it a marvel that even bankers try to postpone the event of bringing this patient to the operating table? It is believed that there are valuable equities behind the New Haven stock, irrespective of the company's losses. to warrant the interests of its partners being protected. This is in spite of the adverse action of the stock market, which would seem to indicate otherwise. But the stock market is not infallible, which assertion is proved by the fact that while the price of New Haven stock forecast a receivership in February, 1917, there was none and the maturing notes were paid. It has been proposed to sell all of the New Haven's outside properties just as soon as a favorable price or arrangement can be made with responsible parties.

While the various interests have been studying plans which were intended to save the situation, the great obstacle in the path of a speedy readjustment of the company's affairs has been the Federal and state governments. and the courts. First a court decree ordered the dissolution of the New Haven as a holding company, when the Massachusetts courts declared illegal a plan which guaranteed $67,000,000 in cash to pay floating debts and make needed improvements. Then followed the depression in business which began with the war in 1914 and continued until early in 1915. Everything has tended to hamper the company and even public opinion was greatly adverse so that operating efficiency was greatly lessened.

The chairman of the board, Mr. Howard Elliott, made a statement early this year in which he said that for several years efforts had been continuous to have the laws affecting the company in Massachusetts, Connecticut and Rhode Island made uniform, and, he felt that as there was a chance of securing this change it might be possible to adopt a plan for taking care of the company's floating debts. Mr. Elliott pointed out that the balance after fixed charges had increased from $182 960 in 1914 to $5,554,977 in 1916, that the various departments had been reorganized and strengthened and that new methods had been introduced.

THE PROBLEMS

The problems of the company are many and involved. There must be adopted some adequate plan for handling the large floating debt and to take care of maturing obligations, expenditures for improvements and additions. It was the consensus of opinion among the

Buy Sound 6% Bonds

Based on the Daily Life and Daily Work of the People

HERE is offered you a truly fundamental investment, based on the daily life and work of the people of the United States—a first mortgage on the first necessity of existence, a roof over head. The earnings of each property mortgaged to guard your invested funds, are earnings that grow directly out of the housing and the industry of the nation.

This is the firm and secure basis of every bond safeguarded under the *Straus Plan* and offered under our recommendation. Each bond is a direct first mortgage on a high grade income-earning office or apartment building in one of the largest cities in the country.

6% with Safety

We emphasize the soundness of these bonds rather than the attractive interest rate they bear—6%. This yield is the logical rate under war time conditions. It aids investors to meet advancing living costs and burdens caused by the war. It averages up the return on government war bonds and other low interest rate securities.

Write today for our booklet, "Acid Tests of Investments in War Time," and our current Investment List, describing a variety of these sound bonds, in $1,000 and $500 amounts, maturing in two to ten years.

HOW TO STUDY THIS NUMBER

THE INDEPENDENT LESSON PLANS

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.
HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. ORAL AND WRITTEN COMPOSITION.

The Story of the Week.

1. In what respects is "Only One Lump, Please" a most effective title?
2. Write a composition on "How My Class Can Assist Mr. Hoover in the reduction of the consumption of sugar."
3. Read the item concerning the impeachment of the Governor of Texas. Write an exposition on "The Characteristics of an Ideal Governor."
4. Unite with two of your fellow students in writing a symposium on woman suffrage. The first student should write on "Is the Woman Suffrage Cause Nearing Success?" The second, on "Reasons that Prompt One to Believe in Woman Suffrage." The third, on "Reasons that Prompt One to Disbelieve in Woman Suffrage." When the three papers have been read to the class, the class should appoint a student to write a short concluding paragraph which sums up the series of papers.
5. Prepare a speech in which you show that it is equally unpatriotic for employers to demand excessive profits, and for workmen to take part in strikes in time of war. End your speech by showing what methods the Government is taking to end the labor troubles.
6. Prepare a speech in which you show your fellow students what they may say to their parents in order to interest them in buying the second issue of Liberty Bonds.
7. Read "Copperheads and German Gold." Then prepare a speech suitable to be given to an assemblage of voters in your district, on "Reasons Why the Soap-Box Orator, the Anti-American Periodical, and the Alien Suspect Should Be Suppressed with a Stern Hand."
8. Write a paragraph of argument designed to show that the Germans are certain to lose in the U-boat war.
9. Prepare a speech on "The Character of the German Military Government as Shown by the Rumanian Plot."

Editorial Articles.

1. Write a brief of "Counting Our Blessings." Point out the ways in which it is a remarkably well organized composition.
2. Write a précis, or summary, of "Paying for the War."

The Countryside.

1. Consider the various articles concerning the exterior appearance, and the interior furnishings, of artistic houses. Then write a short article on "A Beautiful House, Within and Without."
2. Consider the various articles concerning gardening and poultry keeping. Show in what ways these articles fulfill the rhetorical demands for popular technical articles, and for directions.

The Paradox of Prussian Peace. By Norman Angell.

1. Show in what way the article is an example of the use of cause and effect.

The Women Behind the Guns. By Janet Payne Whitney.

1. Write a short exposition on the theme, "The war has made many changes in the conditions of women in England."

SECTION II. LITERATURE.

The Cult of the Bad Boy.

1. What criticisms of fiction are emphasized in the article?
2. Tell something concerning the following books mentioned in the article: "Poor Richard's Almanac"; Aldrich's "Bad Boy"; Hughes's "Tom Brown"; "Tom Sawyer"; "Penrod"; "Sandford and Merton."

A Bill for the Promotion of Sectionalism.

1. What is the influence of books and periodicals on national life? How may your choice of reading affect your own life decisively?

Making My Pen Behave. By Burges Johnson.

1. Sum up the points that the writer makes on honesty in literary work. Tell how you may apply these points to your own work in composition.

SECTION III. WORD STUDY.

1. Give the meaning and the derivation of every one of the following words prominent in The Story of the Week: conservation, impeach, amendment, judiciary, badgering, compromize, commodities, atrocious, corruption, inheritance, adjourn, Sinn Fein, Rumanian, Copperheads, U-boats, strikes.

SECTION IV. GRAMMAR.

1. Point out examples of the following in the first editorial article: three different types of sentences; four different uses of adverbial modifiers; four different uses of nouns; an adjectival clause; an adverbial clause; a clause used as object.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.
PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Nationalism and the Public Press—"A Bill for the Promotion of Sectionalism."

1. "It was not the Constitution that united the United States." Can you prove this? And this: "It was the railroads and the uniform postal rate."
2. "There is danger of another 'Mason and Dixon line,'" etc. Explain the allusion. Study the evidences in your own community that justify this statement; that prove that the danger is exaggerated.
3. "The proposed zone rate may prove to be as great a blow to the Union," etc. Analyze the paragraph which follows; does it justify this statement?
4. "*Fas est et ab hoste doceri.*" In what sense is this quotation appropriate?

II. Free Speech in Peace Times and During War—"Copperheads and German Gold."

1. What is the significance of the word "copperhead" in the above title?
2. What justification, under the Constitution, does the "soap box orator" find for himself? What is the answer to this justification?
3. Suppose the Senate takes up the request for the expulsion of Senator La Follette, what charge would be brought against him? What would his answer probably be?
4. Study President Wilson's letter to Max Eastman. In your opinion has the President covered the case?

III. Financing the War—"Paying for the War," "A Wide Open Loan."

1. What proof is usually offered in defense of the statement, "The world is going bankrupt"?
2. Note the last sentence in the second paragraph of the editorial. If this is so, how do you account for the national debt which will exist after the war?
3. "All nations, even the richest of them, live from hand to mouth." What does this mean?
4. Discuss the increases in taxation proposed in the new War Revenue Bill from the point of view of (a) the wisdom of the individual sections of the bill, (b) the effect of the taxes upon public opinion, (c) the amount of revenue the taxes will bring in.
5. Compare the preparations which are being made for floating the second Liberty Loan with those which were made for floating the first.

IV. International Alliances and the World Peace—"Counting Our Blessings," "The Paradox of Prussian Peace."

1. Quote three or four sentences from Norman Angell's article that justify the title "The Paradox of Prussian Peace."
2. Of the "Blessings" discussed in the editorial, how many may be called "insurance against future war"?

V. The Economic and Political Emancipation of Women—"The Women Behind the Guns," "Suffrage Progress."

1. Summarize the Woman's Suffrage Movement in England from its origin to the present time. Do the same for the movement in America.
2. What is the argument in favor of the adoption of woman's suffrage by Federal amendment? by state action?
3. What has been the effect of the war upon the economic position of women in England. Illustrate your statement by pictorial clippings taken from several newspapers and magazines.
4. What are the evidences that the same movement will take place in this country. Illustrate your statement as indicated above.
5. Study the paragraph: "'After the war' . . . woman shall be allowed her full scope as a home maker." What organization and adjustments will be necessary to bring this situation about?

VI. Railroad Organization and Finance—"The New Haven Tangle."

1. From a study of this article draw up a schedule of the various forms of financial obligations which a railroad usually issues.
2. A receivership for the New Haven road is discussed several times in this article. What is the purpose of a receiver? What are the arguments in favor and against such a receivership in this case?
3. "The New Haven's outside investments have been the cause of all its troubles." What are the facts upon which this statement is based?
4. "The great obstacle in the path of speedy readjustment . . . has been the Federal and state governments and the courts." What does this mean?

DIVIDENDS

WELLS FARGO & COMPANY

ANNUAL STOCKHOLDERS' MEETING.

Notice is hereby given that the Annual Meeting of Stockholders of Wells Fargo & Company will be held at 10:00 o'clock A. M. Thursday, October 11, 1917, in the office of the Company, No. 51 Broadway, New York City, for the purpose of electing directors to serve for one year and until their successors are elected, and for the transaction of such other business as may be brought before the meeting.

The Stock Transfer Books will be closed at 3:00 o'clock P. M., September 29, 1917, and will remain closed until 10:00 o'clock A. M., October 13, 1917. C. H. GARDINER, Secretary.

New York, September 17, 1917.

WELLS FARGO & COMPANY

QUARTERLY DIVIDEND.

A quarterly dividend of $1½ per share upon the capital stock of this Company has been declared payable October 20th, 1917, to stockholders of record at the close of business September 29th, 1917. Checks will be mailed.

C. H. GARDINER, Secretary.

New York, September 18, 1917.

UNITED FRUIT COMPANY

THE NEW HAVEN TANGLE

(*Continued from page 73*)

management that the stockholders should come to the company's rescue by supplying it with funds so that it need not rely upon banks and bankers for temporary loans, a very dangerous form of financing.

The outside properties are to be disposed of as advantageously as possible so that the money so raised can be used for improving the railroad property and paying its debts. An effort should be made to obtain rates—freight, passenger and mail—that will enable the company to meet the steadily increasing wages, price of materials, supplies, etc., and to perfect every detail of the management so as to save the maximum amount of money. Mr. Elliott exprest a wish to spend from earnings or from new capital enough money in the next five years to modernize the plant still more and to make it adequate to the needs of New England, which is growing, to provide better working conditions resulting in substantial economies. All of this was in the hopes of paying a return to the stockholders.

Last month many students of the New Haven situation were startled by an advertisement which appeared in the daily newspapers over the signature of Mr. Nathan L. Amster, president of the Investors' Protective Association, of Boston, who waged a successful fight in behalf of the stockholders of the Rock Island. Mr. Amster said that he had made a close study of the situation and came to the conclusion that while the situation was critical, it was not as hopeless as many people believed. He is of the opinion that there are substantial equities behind the New Haven stock and that the recent low price of 22 does not reflect the equity nor the value of the stock. He is convinced that the company's condition and financial needs are exaggerated and that the views of people who were optimistic when the stock sold at 250 and pessimistic when it sells at 22 are naturally warped and such views are of very little value to the stockholders.

There may be a great deal of truth in Mr. Amster's "hunch," for a hunch is what it amounts to inasmuch as no one outside of the real "insiders" knows the actual condition in which New Haven finds itself. But, we can assume that if the New Haven problem were a really simple one, at least as simple as that of the 'Frisco, the Missouri Pacific or the Pere Marquette, where the ax was used right and left, the bankers who are sponsors for the financing would not have delayed a financial plan for so long a time. But inferences are easy to make and are misleading. There is only one way to get to the bottom of the New Haven matter and that is for the stockholders to investigate the property for themselves inasmuch as no one else wants to break the news. Once the facts were out, matters might be improved.

The stockholders own the property. At the worst, a readjustment will mean an assessment or a subscription to a new issue of preferred stock. The plan may be underwritten or it may not be. If the stockholders are able and willing, each and every one of them, to stand for an assessment or a subscription, there may be no need of an underwriting and the obvious underwriting commissions. But all of this is up to the partners in the enterprize, not to the railroad officials who are the servants of the stockholders, nor the bankers who are the advisors of the directors. The stockholders should take a critical and intelligent interest in the situation as they are able to see it and then take immediate steps to participate in the controversy that is sure to begin very shortly.

Salt Mackerel

CODFISH, FRESH LOBSTER

FAMILIES who are fond of **FISH** can be supplied **DIRECT** from **GLOUCESTER, MASS.**, by the **FRANK E. DAVIS COMPANY**, with newly caught, **KEEPABLE OCEAN FISH**, choicer than any inland dealer could possibly furnish.

We sell **ONLY TO THE CONSUMER DIRECT**, sending by **EXPRESS RIGHT TO YOUR HOME.** We **PREPAY** express on all orders east of Kansas. Our fish are pure, appetizing and economical and we want **YOU** to try some, payment subject to your approval.

SALT MACKEREL, fat, meaty, juicy fish, are delicious for breakfast. They are freshly packed in brine and will not spoil on your hands.

CODFISH, as we salt it, is white, boneless and ready for instant use. It makes a substantial meal, a fine change from meat, at a much lower cost.

FRESH LOBSTER is the best thing known for salads. Right fresh from the water, our lobsters simply are boiled and packed in **PARCHMENT-LINED CANS.** They come to you as the purest and safest lobsters you can buy and the meat is as crisp and natural as if you took it from the shell yourself.

FRIED CLAMS is a relishable, hearty dish, that your whole family will enjoy. No other flavor is just like that of clams, whether fried or in a chowder.

FRESH MACKEREL, perfect for frying, **SHRIMP** to cream on toast, **CRABMEAT** for Newburg or deviled, **SALMON** ready to serve, **SARDINES** of all kinds, **TUNNY** for salad, **SANDWICH FILLINGS** and every good thing packed here or abroad you can get direct from us and keep right on your pantry shelf for regular or emergency use.

With every order we send **BOOK OF RECIPES** for preparing all our products. *Write for it.* Our list tells how each kind of fish is put up, with the delivered price so you can choose just what you will enjoy most. Send the coupon for it now.

MILITARY INSTRUCTION

Quartermaster and Ordnance Supply

By Instructors in the Supply Service Course in the University of Chicago
400 pages, interleaved; $1.50, postage extra

A guide to the principles of the supply service of the United States Army.

For Use By

Men in training for Quartermaster and for Ordnance Service.
Enlisted men seeking promotion.
Civilian employees of the Quartermaster Corps and of the Ordnance Department.
Officers and non-commissioned officers of the Quartermaster Corps and of the Ordnance Department.
Line Officers.
Business men who deal with the Government.

First Lessons in Spoken French for Men in Military Service

By Wilkins, Coleman, and Huse, *54 cents postpaid*

Widely used in camps and classes. Contains word-lists with English equivalents for all branches of service.

First Lessons in Spoken French for Doctors and Nurses

By Wilkins, Coleman, and Preston, *54 cents postpaid*

Special word-lists with English equivalents to meet the every day needs of physicians and nurses.

Le Soldat Américain en France

By Coleman, and La Meslée, *54 cents postpaid*

A handbook and guide for conversation for those who have some knowledge of French. Should be used in classes as a supplementary textbook or conversation book.

Russian Reader

By Samuel N. Harper, *400 pages; $3.00, postage extra*

Designed for those who have already mastered the alphabet and rudiments of the grammar.

OTHER PUBLICATIONS

Third-Year Mathematics for Secondary Schools

(in the series of textbooks in correlated mathematics)
By Ernst R. Breslich, *With tables to five places $1.50*
Without tables $1.00

Completes the mathematical work ordinarily offered in secondary schools and in addition presents principles of trigonometry as they apply in the other mathematical work covered.

Logarithmic and Trigonometric Tables and Mathematical Formulas

By Ernst R. Breslich, *75 cents, postage extra*

Suitable for use also with other books than Breslich's.

The Anatomy of Woody Plants

By E. C. Jeffrey, *480 pages; $4.00, postage extra*

A textbook unparalleled in its line by the leading authority on the anatomy of plants.

By the Staff of the University of Chicago Press
270 pages; $1.50, postage extra

An authoritative guide on all questions concerning the style of a book or any other printed article. An invaluable handbook for writers, editors, teachers, librarians, ministers, lawyers, printers, publishers, proofreaders—for all who need guidance on matters of propriety in typography.

Linguistic Change: An Introductory to the Historical Study of Language

By E. H. Sturtevant, *$1.00, postage extra*

The University of Chicago Quarter-Centennial Celebration

By David A. Robertson,

To consist principally of notable and significant illustrations and photographs of the University of Chicago designed to accompany the *History of the University of Chicago*, by Thomas W. Goodspeed.

RELIGIOUS INSTRUCTION

Religious Education in the Family

By Henry F. Cope. *$1.25, postage extra.*

Author deals with the real meaning of religious education through the home and its significance to society.

The Religions of the World

By George A. Barton. *$1.50, postage extra.*

Gives a sympathetic interpretation of all the great religions. Sets forth superiority of Christianity.

The Psychology of Religion

By George A. Coe. *$1.50, postage extra.*

A book for the student and general reader.

Recreation and the Church

By Herbert W. Gates. *$1.00, postage extra.*

Discusses place of recreation in life, its value in religious education, and its influence upon the development of character.

Christian Faith for Men of Today

By E. Albert Cook. *$1.50, postage extra.*

Recognizes frankly the modern position, and reconstructs for men of today the essential foundations of Christianity.

The Evolution of Early Christianity

By Shirley J. Case. *$1.50, postage extra.*

Beginnings of the Christian movement are studied in the light of the actual religious situation of the first century.

A Guide to the Study of the Christian Religion

Editer by Gerald B. Smith, *$3.00, postage extra.*

A comprehensive survey by twelve well-known scholars of progress in the new scholarship in its relation to the Bible and theology.

Great Men of the Christian Church

By Williston Walker. *$1.50, postage extra.*

A series of brief biographies illustrating the progress of religious thought in the critical periods of the life of the church.

The Historicity of Jesus

By Shirley J. Case. *$1.50, postage extra.*

A criticism of the contention that Jesus never lived, a statement of the evidence for his existence, an estimate of his relation to Christianity.

The Problems of Boyhood

By Franklin W. Johnson. *$1.00, postage extra.*

A course in ethics for boys of high school age. For individuals and classes in Sunday school and day school.

THE FOOD FIGHT

Under this head, every week, The Independent will print some vital part of the information which is being circulated by the Food Administration and the Department of Agriculture to aid American housekeepers in their patriotic and intensely necessary work of conserving food.

SPEAKING recently at a meeting of State Food Commissioners and his personal staff, Herbert Hoover gave a striking explanation of the part that food control plays in war.

He said that European nations went into war giving little thought to the subject of food. Even Germany with all its preparations had not foreseen the significance of this factor. With millions of men taken from production, and thousands of square miles of fertile fields laid waste by armies, the world's cupboard quickly began developing a bareness like that of Mother Hubbard. Country after country went to the cupboard to get a bone, and found a diminished supply.

This made it necessary to organize food supply and distribution, and the various countries tried various methods. They fixed maximum prices, and minimum prices, regulated the production and distributing trades, and put their people on rations. Those countries which established the earliest and best methods of food control secured the greatest efficiency in war. The best system, on the whole, is still that of Germany. She has been able to maintain efficiency with a food supply which in some of her enemy countries might be most embarrassing. Russia, with perhaps the greatest possibilities of food production in Europe, did nothing at all, and out of Russia's food situation grew her revolution.

Mr. Hoover said, that whether we like it or not, we must deal with the food problem of war in one of two ways. There is not enough food to go around if we stick to the lavish methods of peace times. Rising prices, coupled with depreciation of money, due to issues of war bonds in every country, which make the purchasing power of money shrink, compel us to adjust the food supply to the world's appetite, either by controlling that supply in ways that lead to economy and make it suffice, or by letting wages rise as prices rise, to keep pace roughly with fluctuations. Even an amateur economist can see at a glance that food control is better than wage increase, because wage increase is a crude force operating slowly, unevenly and with great injustice and suffering to millions of workers. The wages of many workers do not rise—the professional men, clerical workers, public employees and so forth. Russia tried the experiment of letting wages adjust themselves to the diminishing food supply, and it did not work. Russia was brought to a state bordering on anarchy by the intolerable pressure of the food situation on the ordinary peaceful citizen.

Therefore, whether we like it or not—this is a favorite phrase of the Food Administrator, and typifies the impersonal attitude he takes toward these great economic problems—whether we like it or not, we must meet the food situation in one way or the other, and food control seems to be the lesser of two evils.

With sensible food control it is possible to handle the other two outstanding problems of food supply in war. One is increased production and the other is economical use of food. With stable prices, absence of speculation and the temporary surrender of individual trade advantages, the farmer can have an assurance of prices ample enough to encourage larger planting and live stock raising. And by these same safeguards, thrown round the food supply, the consumer is made willing to economize in food, and is also able to purchase the necessities of life at prices which are at least reasonable, and what is more important do not suffer wild fluctuations.

This is food control in a nutshell. Whatever fear or hostility there may be in the country over food control arises entirely from misunderstanding of what food control really means, why it is necessary and how it is being carried out. In no case does this feeling persist after real food control has been explained.—*James H. Collins, Editor Trade and Technical Press Section, United States Food Administration.*

REMARKABLE REMARKS

THEODORE ROOSEVELT—I abhor Germany.

MRS. FLORENCE KELLEY—Democracy is dead in America.

EMPEROR WILHELM—God has taught our army a hard lesson.

HENRY MORGENTHAU—William Hohenzollern is responsible.

J. OGDEN ARMOUR—Success is getting whatever you go after.

WILLIAM H. TAFT—It is the side that has the nerve that will win.

JAMES P. SINNOT—New York considers all other cities "sucker" towns.

SECRETARY MCADOO—God has decreed that America should rescue civilization.

HERBERT HOOVER—One looming shadow of this war is its drift toward socialism.

ADMIRAL VON TIRPITZ—It is not wrong, but right, that has been done to Belgium.

VISCOUNT ISHII—Blind loyalty without rational consciousness of the responsibility to self is but another name for slavery.

DR. KAENCH, PRESIDENT OF THE REICHSTAG—He who tries to drive a wedge between the Kaiser and the people bites on granite.

K. K. KAWAKAMI—In Shanghai there is a "foreign" park at the entrance to which is posted a sign "Chinese and dogs not allowed."

CATHARINE BRESHKOVSKY—Altho I am an old woman, I am convinced that I shall see the victory and the internal regeneration of Russia.

WOODROW WILSON—I expect to find the solution of problems before me as President in the proportion that I am faithful in the study of the word of God.

DR. PARKHURST—God's employment of war as a means of dispensing with useless and harmful material is too conspicuous a feature of Scripture to allow standing room to Quakers and men of quaking disposition.

AMOS PINCHOT—Figures furnished by competent statisticians indicate that American profiteers will net between $3,000,000,000 and $4,000,000,000 out of the war over and above the net earnings during the pre-war period from 1911-13.

MRS. SHEEHY SKEFFINGTON—In traveling about your country, of course my view is so far only a superficial one, but it does not seem to me that you have a real democracy here; certainly not enough to warrant exporting any of it.

PROF. SCOTT NEARING—The worst thing one can say about Americans is that they are afraid to die. Americans are afraid to lose their social position; they are afraid to lose their property; they fear poverty; but more than all they fear death.

JOHN M. SIDDELL—Unless an employer is interested in finding, training, holding and dividing with good men, the business he is engaged in can never grow. It will remain the work of one man and the work is bound to be limited despite his profit.

ED. HOWE—I enjoyed a very pleasant game of golf yesterday afternoon with my brother and his son Arthur; we pitched green alfalfa on a wagon and hauled it to the pigs. Then we took a drink of spring water and felt greatly refreshed after the exercize.

Make It Your "War Bread"

You may not go to the trenches, but you will want to do your bit in preventing waste of the great food staples. You can do this by demanding a larger per cent. of whole wheat grain in bread and breakfast foods. The real "war bread" must contain the entire wheat grain —every particle of gluten and mineral salts that are so necessary to the well-balanced ration; also the outer bran coat that is so useful in keeping the bowels healthy and active.

Shredded Wheat Biscuit

is 100 per cent. whole wheat. It is therefore the real "war bread." The whole wheat grain is the most perfect food given to man. It contains every element the human body needs to build healthy tissue and furnish energy for the day's work.

Two or three of these crisp, brown loaves of Shredded Wheat with milk and sliced bananas, peaches or other fruits, make a nourishing, strengthening, satisfying meal at a cost of a few cents.

HARPER'S WEEKLY

THE JAPANESE MISSION

THE welcome that the Japanese mission has been accorded by the American people has been spontaneous, hearty and sincere. The hospitality that has everywhere been showered on Viscount Ishii and his distinguished colleagues ought conclusively to prove to the Japanese people how friendly at heart the American people are toward them. Even California—the spoiled child of the states—fairly outdid herself in the reception she tendered the Oriental delegation, while her labor leaders vied with the representatives of other classes in extending "hands across the sea." Unless all signs fail, the result of the mission will be to restore the historic relations of amity between the two nations that continued unbroken from the days of Commodore Perry's treaty down to the end of the Russo-Japanese war.

Just what the concrete questions are that have been discussed by Viscount Ishii and Secretary Lansing the public has not been told. Of course Japan and the United States want to coöperate fully in winning the war against Germany, and doubtless views were exchanged on this subject. But to what extent the issues that have caused friction between the two nations in the last few years have been brought up for settlement is the important question. These are, after all, a very few in number.

Undoubtedly the most insidious and dangerous has been the charge reiterated again and again in each country that the other was making vast preparations to attack it.

In addition we were told that Japan was determined to close the open door in China, and eventually seize China as she already has Korea.

Japan, on her part, was wounded by our refusal to admit her subjects to citizenship on the terms we freely accord to non-Oriental peoples, and especially by the anti-Japanese laws passed by California.

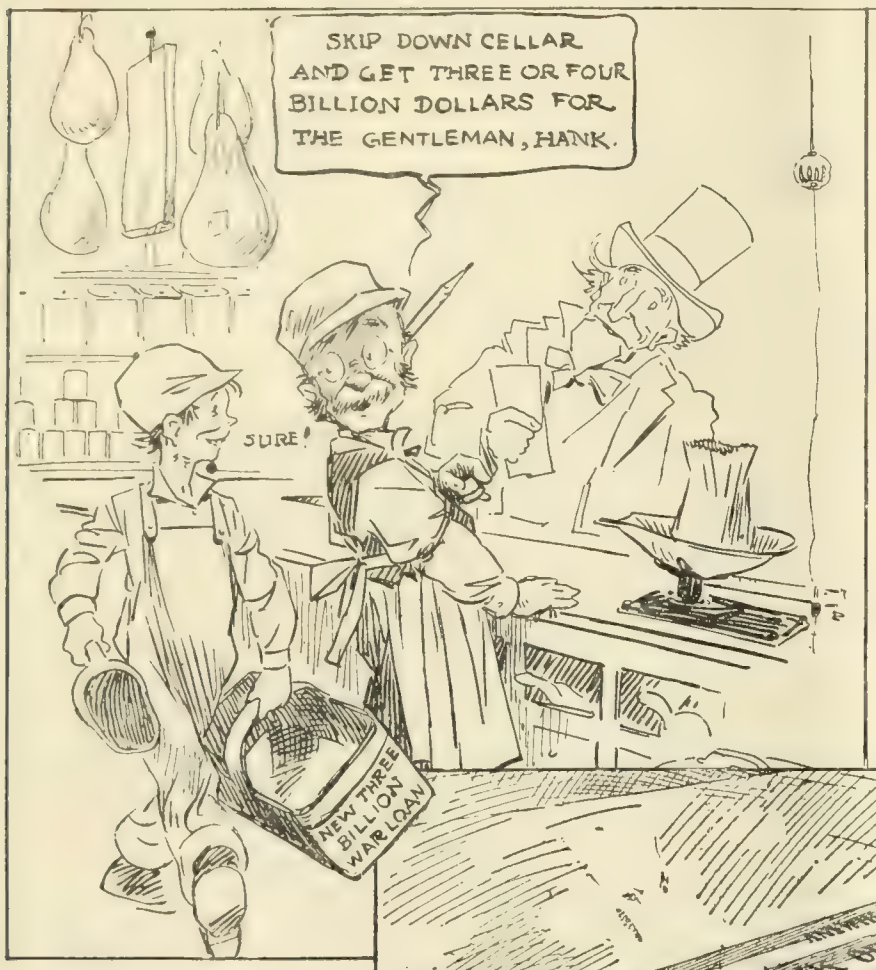
We understand that Viscount Ishii has avoided bringing up for discussion Japan's special grievances against us. In this we think he was wise. The naturalization issue and the anti-alien legislation can well be left to time to solve. As was shown in the leading article in The Independent of September 29, California is now undergoing a great change of heart toward the Japanese, and it would probably be unwise to stir up the question now.

But whether Viscount Ishii has taken up with the State Department the alleged Japanese invasion of America and the question of the integrity of China, he has at any rate discussed these in his public addresses with the greatest frankness and explicitness.

He has officially declared what many of us have suspected for the past decade, namely that Germany has been at the bottom of all the anti-American talk so prevalent in Japan and all the anti-Japanese talk so persistent in the United States. Ever since the consummation of the Anglo-Japanese alliance Germany's chief Oriental policy has been to discredit and ultimately to disrupt it. But at the same time it was necessary for Germany to sow the seeds of dissension between the United States and Japan, for should Germany succeed in breaking up the Anglo-Japanese alliance and should Japan then fly to the arms of the United States, Germany would have jumped from the frying-pan into the fire. In order to be free to dominate China Germany must prevent Japan from working in coöperation with either England or the United States.

But Viscount Ishii's declaration at Mayor Mitchel's dinner in New York, in which he defined Japan's attitude toward China, is even of greater significance. Said he:

> I assure you that a closed door in China has never been and never will be the policy of my Government. The door is open, the field is there. We welcome coöperation and competition all tending to the betterment of equal opportunity. . . . Circumstances for which we were in no sense responsible gave us certain rights in Chinese territory, but at no time in the past and at no time in the future do we or will we seek to take territory from China or to despoil China of her rights. We wish to be and always to continue to be the sincere friend and helper of our neighbor, for we are more interested than any one else, except China, in good government there, only we must at all times for self protection prevent other nations from doing what we have no right to do. Not only will we not seek to assail the integrity or the sovereignty of China, but will eventually be prepared to defend and maintain the same integrity and independence of China against any aggressor.

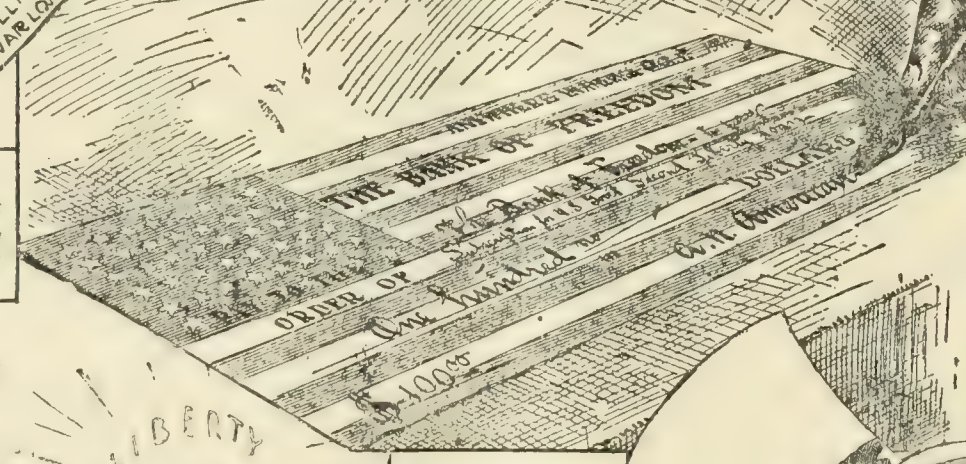


Thus Viscount Ishii defines what has come to be known as Japan's Monroe Doctrine, which, unlike ours, is explicitly a self-denying one. The doctrine enunciated by President Monroe is in effect that we will not permit anybody but ourselves to dominate Latin America. The Ishii Doctrine is that Japan will not let anybody, herself included, dominate China. It will not fail to be noticed, furthermore, that in the enunciation of Japan's Chinese policy Viscount Ishii goes as far as diplomatic etiquet permits in repudiating his predecessor, Baron Kato, whose twenty-one demands on China, made at the beginning of the war, have done more to harm Japan in the eyes of the world than anything done by a Japanese statesman in a generation. If Viscount Ishii, then, represents his Government, and it is evident he does if any one does, Baron Kato's policies will not prevail, and we need not worry any further about Japan's closing the door and gobbling China.

Viscount Ishii has apparently gone as far as he can. It now devolves upon the United States to take the next step. While there are several things that the United States can appropriately do, it seems to us there are two things of prime importance.

First—Let us cordially accede to Japan her Monroe Doctrine as enunciated by Ishii. Japan wants us to be partners with her in the development of the Far East. We ought to be able to do this and retain the friendship of China

CARTOON COMMENT



MOLDING THE SILVER BULLETS

THE MAGIC WAND
McCay of the New York "American" shows what a Liberty Bond will do in the hand of Uncle Sam, magician

at the same time. Indeed, we might be the means of bringing China and Japan into closer relations, which is the one thing just now most to be desired in the Far East.

Second—Let us repair the blunder we have made in refusing privileges of citizenship to the Japanese in the United States. Here are a people who, measured by any qualitative standard, are one of the five great powers of the globe. Yet we refuse them citizenship while we freely grant it to any European or African, however ignorant. It should be self-evident that any person of any race who is permitted to reside in our country for a lifetime, who enjoys the blessings of our free institutions, and who makes a living here, ought to be given the right to become—nay, ought to be compelled to become—an American citizen, so as to protect and cherish our institutions as native-born citizens are obligated to do. This does not necessarily imply unrestricted immigration from the Orient or any other part of the world. That is a separate question.

Then let our Supreme Court reverse the inferior courts, which have decided against Japanese citizenship. Until 1907 the Japanese were granted citizenship here. Then, in response to an anti-Japanese campaign, citizenship was refused, based on an interpretation of the naturalization act of 1875. Or, better still, let Congress enact a special law declaring what the qualifications for citizenship are, and then permit every individual who thus qualifies to become a citizen.

But whatever the United States may be moved to do toward settling this or that specific question, the time has now come for taking up in a thorogoing way all the outstanding questions between Japan and the United States. The mission of Viscount Ishii shows that Japan is ready to meet us more than half way. The responsibility for further delay and discord clearly rests upon us.

PULLING TOGETHER

THREE main tendencies are in evidence all over this country for the winning of the World War. Within each unit-group of economic life, as in commerce for instance, there is a process of integration—a pulling of the commercial forces together, as was the case the other day at Atlantic City when the Chamber of Commerce of the United States met in its War Convention of American Business. There were present then nearly 800 registered delegates from thirty-eight different states, representing the maturity and the youth of the mercantile brain of the nation, asking itself what it might do to win the war. The business Brahmin was not in evidence. It was a democratic body in spirit, and had no place for those little oligarchies in control of local organizations which seldom lower their dignity to send delegates to a gathering dominated by national spirit.

What these men discovered was that, among themselves, the great need was a dominating disposition to coöperate in support of the Government. That is the second deep undercurrent in our national life—the spirit of coöperation among business men and business corporations that have been reared in the school of competition. If the war pays no other dividend it will not have been fought in vain if it awakens the soul of business to the fact that economic prosperity comes quite as much by the grace of coöperation among men as it does by competition. And we, above all peoples, need to learn that, as we hammer away at Congress to pass the Webb-Pomerene bill, for instance.

This coöperative spirit was reflected in the address of A. C. Bedford, President of the Standard Oil Company. Could one have imagined at any earlier period in our national life such a thing as the head of the great "octopus" reading a thoroly prepared exposition of the question of the oil power of the country as a factor in winning the war? Surely times have changed and men with them, when small and great in the commercial talent of the nation come together and pledge each vast unit of power to Government without reserve or limitation. Henry Ford's laconic wire, "Take it—no charge," was the commerce convention's answer to the world.

Last week the bankers of America met at the same seaside resort for much the same purpose. But they stressed rather the third great drift in our life—that of coördinating business and Government in this world-wide aim of ridding the earth of a militaristic mania for exploiting by the power of arms the weak and small by the big and strong. If this world has attained to the level of a moral community, then the brute-power in its national policies must surely die. So these two national conventions decreed, each in its own way. The bankers spoke by experience in listening to the British Treasury's representative, on paying for the war out of savings. The integration of the 2200 state banks with the Federal Reserve system, of which only twenty-eight are members, shows that as a banking power this nation is not yet a unit. Frank W. Blair's Michigan address advising against unification, was by no means convincing, as the recent admission of the Guaranty Trust Company of New York to the Reserve system, amply proves. The trend is for unity among banks, coöperation among commercial corporations in solving large problems, and solid support by correlation with the Government in its stupendous task. In our entire national life there are no more significant tendencies.

STRAWS

ONE after another the brewing companies proclaim with loud encomiums the virtues of new cooling and refreshing drinks which they have begun to manufacture. They are non-alcoholic, but attractive with the peculiar flavor of the hops. The enthusiasm with which their makers launch them upon the world suggests a strong belief in the permanency of their use. We congratulate the brewers on their new project; it is interesting to speculate on what it means.

Brewers are not wont to fail in worldly wisdom.

Can it be that they foresee an approaching time when they will be forced by public opinion to take the adder's sting out of their brewings?

Are they "hedging" against the march of prohibition?

Shall we soon see the brewers making drink without the alcohol and the distillers making alcohol without the drink?

Blows the wind that way?

TOMORROW?

THREE years ago Germany was sure of winning.

A year and a half ago Germany was sure of not losing.

Today Germany is sure of—nothing.

THE NEW YORKER'S CHOICE

WHAT looked as tho it would be a hopeless muddle in the campaign against Tammany in New York this fall promises to clear up. Mr. Bennett, who by an unfortunate accident secured the nomination in the Republican primaries over Mayor Mitchel, is little likely to cut much of a figure in the campaign. The real contest is between Tammany's figurehead candidate, Judge Hylan, and Mayor Mitchel, who has been nominated on an independent ticket. He has the support of ex-Presidents Taft and Roosevelt and Mr. Hughes, and has already received the practical endorsement of the Manhattan Republican County Committee.

There is just one issue in the New York campaign this year—as usual. Tammany or decency, Tammany or honesty, Tammany or good government.

Judge Hylan represents the one, Mayor Mitchel the other. Mr. Bennett represents nothing but himself. There ought to be no question where the votes of the decent and right-minded citizens of New York are cast. A vote for Bennett is a vote against the Mitchel administration, with its marvelous record of achievement and militant honesty; it is therefore a vote for Tammany with its long historic record of plundering, graft and inefficiency.

INFERNOS AND UTOPIAS

ONE of the fifty-seven problems to which we have never been able to find a wholly satisfactory solution is why it is easier to depict darkness than light, evil than good, misery than happiness. That this is true, is all too readily demonstrable. Begin with the cheapest melodrama that ever appeared on the stage or on the screen or the most commonplace historical novel into which you have ever dipped. If the play or story interests you at all it will be thru the deeds and personality of the villain. The hero and heroine will, in all probability, be mere dummies without life or individuality. Then ascend in the scale of merit until you reach the crowning glories of the world's literature. Is not Mephistopheles the real center of interest in "Faust"? Which of Shakespeare's characters are better remembered than Shylock Richard III, Macbeth and Iago? Do not the majority of his heroes seem rather faintly sketched in comparison? Is not "Paradise Lost" a far more widely known poem than "Paradise Regained"? Or take the modern novel as an illustration. Scott's Templar is surely a much better drawn figure than Ivanhoe, altho the book takes its name from the latter. Certainly about the best work Dickens ever did was his creation of Bumble, Pecksniff, Quilp, Fagin, Squeers, Scrooge and the rest of his marvelous collection of ruffians, cheats and misers. In Stevenson's allegory of good and evil, is it Dr. Jekyll that interests us or Mr. Hyde?

The medieval church felt this clearly. Dogma insisted that both Heaven and Hell had a very real existence, but, while it was easy to write a splendidly blood-curdling account of the abode of the wicked, nobody seemed able to describe the abode of the righteous in a manner worthy of the exalted subject. Compare the vivid, definite, unforgetable pictures of human torment in Dante's "Inferno" with the vague cloudscape of the "Paradiso." Mohammed's attempt to depict Paradise in clear detail only succeeded in making it ridiculous, a sort of glorified Harem. Pagan mythology fared no better. Virgil's account of the nether regions is a classic, but none of the Greeks or Romans could make many interesting suggestions as to the life of the gods of Olympus and their idyllic pictures of Arcadia seem to the modern taste intolerably insipid. Who wants to carry a beribboned shepherd's crook and make love to shepherdesses with names suggesting Pullman cars, year in and year out? The Norseman's Valhalla had its points, but the routine of existence seems to have been limited to fighting all day and dining on pork and beer all night. But the ancient Scandinavians knew how to describe the punishment of evildoers in a fashion that left nothing to be desired. They were confined in a hall which was woven of living serpents and waded in the freezing venom forever while the cold blasts of winter poured into the hall from doors open to the Arctic north.

What is true of supernatural happiness and misery is equally true of pictures of the present life. There are thousands of short story writers and minor poets who can deal very effectively with battlefields, slums, maniacs, shipwrecks, disease and a thousand forms of human degeneracy, but they are incapable of making their characters happy without making them bored—and the reader likewise. Think of all the accounts of an ideal social state which men of genius have imagined: Plato's "Republic," More's "Utopia," Bacon's "New Atlantis,' Bellamy's "Looking Backward" and Morris's "News from Nowhere." Is there one of these perfect commonwealths in which you would really like to spend your life? Honor bright?

The pessimist declares that evil, suffering and villainy are the natural materials of literature because they are the fundamental realities of life and happiness is only a mirage which disappears as one approaches it. The only trouble with this theory is that it isn't so. We know plenty of people who have been happy, tho we have yet to meet the first of them who could describe how it felt. The optimist says that happiness and virtue are the normal medium of existence and that evil is interesting because it is the exception, the break in the normal rhythm of existence. But, whether life is good or bad on the average, it is a matter of common experience that it may vary as widely in one direction as in the other. A man may be ten degrees below the happiness norm on the day after election (let us say), but he may be ten degrees above it on the following Christmas. When a man is being burned at the stake for some great principle it is absurd to say that he is only keeping up the human average of virtue. Good men, when we know them, are interesting. It is only when we write about them that they seem tame or commonplace. We wonder why.

AMERICA IN CHEMISTRY

THE National Exposition of Chemical Industries, which occupied the Grand Central Palace in New York for a week, was something that had never and could never have been held here before. The chemical industries of America had previous to the war become more extensive than the public realized, but since this country has been freed willy-nilly from dependence upon Germany they have grown up like magic and have taken root so deep that they bid fair to stand the competition of peace-time. The American Chemical Society with its ten thousand members is now the largest in the world and they all seem to be busy. The American chemist has a hand in the production of five billion dollars' worth of merchandise a year and he is getting his hand in deeper all the time. Since war has become a branch of applied chemistry the diligent but once despised chemist has been called to stand before kings—and behind them.

Some years ago when one of the great American universities received a handsome donation for a chemical building a classical professor in the institution was heard to remark that it was a shame to waste so much money on a place for boys making pills and mixing medicines. If this eminent but limited scholar had walked over the three floors of the National Exposition he would have seen no pills and not many medicines and he would have found it more like a machine shop than a drug store. Even to one who had studied chemistry of the common or laboratory variety it is startling to see things so magnified. His familiar condenser has grown into a tower and his glass retort becomes an iron autoclave capable of hiding half a dozen of the Forty Thieves. Nickel which he knows only as a jitney or a plating here appears in the form of a three thousand ton casting. Elements that to him are mere names and symbols become real and tangible when he meets them in masses; glittering lumps of titanium and silicon, a yard long bar of calcium, pounds of neodymium and germanium salts, columbium and rhodium wire and a bottle containing a liquid metal that looks like mercury but really is gallium, the element which the Russian chemist Mendeleev described but never saw. Any one can study chemistry, but no one can learn it. It grows so fast. Nevertheless it is interesting to follow it, tho at a distance. That is why we are starting in The Independent a series of articles entitled "Creative Chemistry" aiming to acquaint the reader with some of its recent advances.

THE STORY OF THE WEEK

British Victory in Mesopotamia

The British report the capture on September 28 of Mushaid Ridge, a strategic point in Mesopotamia about sixty miles from Bagdad. This ends a long period of inactivity in the Turkish campaign undertaken several months ago with high promise of success by General Maude. After the capture of Bagdad and Samara, the British went into summer quarters, for the heat of Asiatic Turkey, like the cold winters of northern Europe, makes aggressive warfare almost impossible. The chief events in recent months in the Turkish theater of war have been the Russian advance in Armenia and the Russian defeats farther south on the Persian frontier. The British have another army, aided by a large force of Arabs, to the south of Palestine, but this army also has been halted in its advance by hot weather and imperfect means of transportation. While the winter is slowing up the war on the various European battle fronts, there may be very important military operations in western Asia. The British and Russians now have the initiative, but it is rumored that Germany will coöperate with Turkey in an expedition to recapture Bagdad under General von Mackensen, provided, of course, that men can be spared for the purpose.

Major General Maude gave a fairly full account of the battle, which was confirmed in part by the Turkish official statement. Cavalry attacked in conjunction with the infantry; for warfare has a more open character in Mesopotamia than in Flanders and is not wholly comprehended in the science of making and taking trenches. The town of Ramadie with its Turkish garrison was cut off by the British and forced to surrender. Ahmed Bey, the Turkish commander, and several thousand of his troops were made prisoner. A large store of military supplies and a number of cannon fell into the hands of the British.

The Ypres Offensive

The British army continues to gain in Flanders with a regularity and a precision that must disconcert the enemy even more than their actual losses in men and positions. For several weeks the British have been hammering the German lines east of Ypres and making a number of general attacks, with an interval of a few days between the end of each assault and the beginning of the next. It is impossible to advance continuously because the preparation for a battle requires hours or even days of preliminary bombardment. There is no precedent in the entire history of warfare for the intensity of artillery fire which characterzies the present Flanders offensive. Winston Churchill, Minister of Munitions, has stated that the British have been using shells at from two to four times the rate at which they were used during the campaign of the Somme last year. The Germans refer to the recent cannonades as "hurricane fire" and confess to its annihilating effect.

MAUDE OF MESOPOTAMIA

The English general who captured Ramadie, taking several thousand Turkish prisoners

On the morning of October 4 the British launched a great attack on the ridge which extends from Passchendaele to Gheluvelt. Altho its elevation is not great, this ridge is regarded by military authorities as of great strategic importance. Flanders is so flat a country that every slight irregularity of the ground takes on a significance that similar elevations on other parts of the battle front do not possess. Under protection of a terrific barrage fire the British assaulted the German entrenchments and carried their line forward more than a mile. The village of Broodseinde was completely occupied and the new British positions are well astride of the ridge and command a clear view of the Flemish plains to the east. Three German divisions, massed together for an attack, were caught by the British fire and shot to pieces. The British took 4446 prisoners in this single action, including 114 officers. During the first nine months of the present year the British have taken 51,435 German prisoners and have captured 332 pieces of artillery. During the same period, the British lost 15,065 prisoners.

THE TURKISH COUNTERPART OF U. S. ARMY MULES

Supply camels have been an important factor in the Mesopotamian campaign. General Maude's recent advance captured a train of [illegible]

Intractable Russia Premier Kerensky and the Democratic Congress are at odds over the question of a coalition ministry. The Congress has handled the issue in a rather curious fashion. It voted 766 to 688 in favor of a coalition cabinet and then nullified its own decision by adopting an amendment excluding the Constitutional Democrats and other "bourgeois" parties from participation. After some discussion the Congress voted to drop the idea of any coalition. Premier Kerensky entirely disregarded the wishes of the Congress and announced the make-up of the new ministry. It consists chiefly of Socialists but three Constitutional Democrats are given office. The most important positions, forming the inner war cabinet, were left unchanged.

Secessionism has again reared its head within the republic. The Finnish Senate has prepared a plan for an independent Finland with a President elected by direct vote for a five year term and a cabinet responsible to the Diet. It is proposed to send diplomatic representatives to foreign countries and to ask representation at the peace conference when it is held.

Enter Peru The Peruvian Senate and Chamber of Deputies, assembled in joint session, approved by a vote of 105 to 6 the recommendation of the Minister of Foreign Affairs that diplomatic relations with Germany be severed. The diplomatic representative of Germany was at once given his passports to leave the country. Peruvian naval forces have been placed on board five German steamships and three German sailing vessels which have been tied up in the harbor of Callao since the beginning of the Great War. The Peruvian people have thus obtained indemnity for the loss of the "Lorton," sunk by a German submarine.

AMERICAN RAILROADS IN FRANCE

An important phase of General Pershing's campaign—the construction and operation of railroads for the Sammies—has been put under the direction of W. W. Atterbury, vice-president of the Pennsylvania Railroad, and recently nominated Brigadier-General in the new National Army

Uruguay at once followed the example of Peru. The Chamber of Deputies on the night of October 6 approved the resolution to end diplomatic relations with Germany by a vote of 74 to 23 and the Senate at once assented by 13 votes to 3. The President of the republic then decreed the rupture.

Argentina is still neutral. Altho the national Congress voted to break with Germany, President Irigoyen has not, apparently, yet decided to confirm the action of the legislative branch of the Government. The widespread strikes that have tied up the transportation of the nation and virtually placed the capital in a state of siege have also made it difficult for the Government to embark upon a vigorous foreign policy. The people of Argentina are wondering to what extent the general strike was financed by German funds.

Salvador has made a declaration of neutrality "friendly to the United States" and explained officially that the nation considers itself associated in sentiment with the American cause in the world struggle. A declaration of neutrality thus explained will hardly be taken by Germany as satisfactory. Of the twenty Latin American republics, Cuba, Brazil and Haiti may be considered as belligerents; Bolivia, Peru, Uruguay, San Domingo, Nicaragua, Honduras, Guatemala, Costa Rica and Panama have severed relations with Germany; Argentina has voted for a break with Germany, but the President has not yet issued a formal decree to that effect; Paraguay and Salvador are nominally neutral but frankly pro-Ally in attitude; Chile, Ecuador, Colombia, Venezuela and Mexico are probably neutral in fact as well as name.

A $21,000,000,000 Congress On October 6 Congress completed its immediate duties and adjourned, thus closing a most momentous special session. Summoned in April to consider the question of war with Germany, Congress has been at work for half a year on war legislation: the voting of war taxes and bond issues, the authorization of loans to foreign nations, the voting of appropriations for all branches of the military service, the adoption of compulsory military service and the reorganization of the entire army establishment, the extension of the authority of the executive over the industries that support the war and particularly over the production and distribution of food, the voting of funds for the immediate creation of a gigantic merchant marine, and provisions against espionage and other acts endangering the national safety in time of war. Among the last pieces of financial legislation put thru were the military appropriations of the urgent Deficiency Act and the bill authorizing the issuance of war risk insurance policies to the soldiers and sailors in the national service.

The actual appropriations of the first session of the sixty-fifth Congress were $16,901,966,815. Adding to this the $1,977,210,200, voted during the second session of the sixty-fourth Congress and the authorization of $2,511,553,925 to be spent in case of emergency but not yet specifically appropriated, the total cost of the first year of our participation in the Great War comes to $21,390,730,940.

THE GREAT WAR

October 1—Thirteen British ships sunk during previous week. Air raid on London. German attacks repulsed east of Ypres.

October 2—Britain declares embargo on exports to Holland and Scandinavia. Anti-Russian outbreak in Turkestan.

October 3—President signs war taxation bill. Russian Democratic Congress opposes coalition government.

October 4—British attack east of Ypres and penetrate German lines to the depth of a mile. Major General Pershing and Major General Bliss made "Generals."

October 5—Russian cabinet reorganized. Peruvian Congress votes to break with Germany.

October 6—Uruguay breaks with Germany. Congress closes war session.

October 7—Russians capture hill in Rumania. Artillery duel renewed in Flanders.

La Follette Explains Senator La Follette's speech before the convention of the Non-Partizan League at St. Paul, Minnesota, in the course of which he charged that the United States went to war with Germany over a technicality, called down upon him a storm of popular indignation. State councils of defense in many parts of the union, political associations, G. A. R. posts and numerous other organizations petitioned the Senate to expel him. Altho there were several Civil War precedents for the expulsion of disloyal members of Congress, the Senate hesitated to act, since it was doubtful if criticism of the war could be brought within the definition of sedition or treason. A special committee was, however, appointed to inquire into the conduct of the Senator from Wisconsin. Altho six Senators and fifty Representatives had opposed the declaration of war, Senator La Follette was singled out for special criticism because his attitude toward the war has remained unchanged by the fact of our entrance into it.

On the last day of the session Senator La Follette replied to his critics. He practically ignored the charges brought against him and refused to discuss the merits of the war or justify his own attitude in regard to it. The first part of his address was a denunciation of the growing spirit of intolerance in the country and a plea for unrestricted freedom of speech. The rest of his speech was an argument for immediate peace negotiations. Senators Kellogg, of Minnesota; Robinson, of Arkansas, and Fall, of New Mexico, wound up the debate with vehement denunciations of La Follette's lack of patriotism. The committee of five appointed to investigate the pacifist propaganda of Senator La Follette continued its meetings after the adjournment of Congress.

Canadian Parliament Dissolved

On October 4 the Canadian Government dissolved Parliament. There will be a general election for the new Canadian House of Commons about the middle of next January. The coming election will test the popularity of the compulsory military service law, which is already on the statute books but may be greatly amended by a Parliament hostile to the principle of conscription. The old party lines have been swept away by the dominant issue of the draft law. Sir Wilfrid Laurier, the veteran chief of the Liberal Party, has resigned his leadership, and the section of the Liberal Party which supports compulsory service has consented to unite with the Conservative cabinet of Premier Borden. Hugh Guthrie, an Ontario Liberal, has been made Solicitor General. On the other hand, the Liberal faction which has followed Sir Wilfrid Laurier and the French Canadian Nationalist group in Quebec will carry on an active political campaign against any government, whether partizan or coalition, that upholds the draft law.

The legislative achievements of the Parliament which has just ended its work have been very important. The chief measure of the session was the draft law, which called to the colors unmarried Canadians between the ages of twenty and thirty-two. About 100,000 men will be enrolled under the law and a fourth of them will go at once into training. Negotiations are under way between the Canadian Government and the United States to reach an agreement whereby Americans of military age in Canada will be subject to the draft and Canadians living in the United States will be similarly liable to military service under the laws of this country. The wartime elections law was only second to the compulsory military service act as a provoker of controversy. By its provisions naturalized persons born in enemy countries were disfranchised, unless their Canadian citizenship dated back at least to 1902, and the mothers, wives, sisters and daughters of Canadian soldiers or officers on active service were given the vote. Ample provision was made for recording the votes of the Canadian forces now in Europe. In spite of strong opposition from the Liberals, who regarded the bill as an attempt to manipulate the franchise for the benefit of the party in power, the Canadian House of Commons approved it on September 15. An income tax for the whole Dominion was adopted to finance the war, and appropriations of more than $178,000,000 were approved. The Canadian Government also bought, on behalf of the people of the Dominion, a majority of the capital stock shares of the Canadian Northern Railway.

While Parliament was meeting the thirty-third annual convention of the Trades and Labor Congress of Canada met in Ottawa. Altho many of the delegates are opposed to the draft law, they gave a friendly reception to Premier Borden, who addrest them on the war aims of Canada. He declared for the establishment of some international tribunal "by means of which we will be insured against such wars in future" and asserted that "the means to the end lies in that statement which was made by Mr. Lloyd George when he declared for the democratization of the nations of Europe."

British Adopt Reprisal Policy

The British Government has yielded at last to the popular clamor for reprisals against the Germans for their air raids on London and other English towns and cities. Of course, British aviators have for many months been making raids behind the German lines, but these were usually made with a definite military purpose and within the war zone. The French, on the other hand, have punished each German raid with a counter-attack upon some German city. On the night of October 1, for instance, French aviators attacked Frankfort-on-the-Main, Coblenz, Treves and Stuttgart in retaliation for German raids on Bar-le-Duc and Dunkirk.

For many months there has been a hot debate in the British press as to the advisability of bombarding German cities. Opponents of reprisals objected that the German raids had inflicted inconsiderable material damage on England and that English raids on Germany would not be more effective; that airplanes were needed in the war zone and could not be spared for other purposes, and that it would be morally unworthy to copy German atrocities. The advocates of reprisals asserted that Paris had suffered less than London from German attacks and ascribed the fact to the German fear of French counter-attacks on German cities, and they also pointed out that a few score German airplanes were able to compel the English to keep hundreds of anti-aircraft cannon and many airplanes to fight off the raiders, whereas if the Germans could be induced by a policy of retaliation to refrain from their raids, the men, cannon and aircraft now defending London might be released for military use at the front. The latter party appears to have carried its point.

German attacks on London have been a matter of almost daily routine for the past few weeks. On September 29, eleven persons were killed by the Germans and many injured; the following night, nine killed and forty-two wounded. On the night of October 1, a brilliant moonlit evening, four large German squadrons crost Kent and Essex to London. Ten persons were killed and thirty-eight injured before the airplanes could be driven away. This, the seventh attack on London in nine days, was followed by semi-official announcements that the Government had been at last persuaded to try the experiment of aerial bombardments of German cities should further raids on London occur.

British Embargo Tightened

Now that nearly the entire world has united against the Central Powers, it has been found simpler to cut off Germany from the imports needed by her army and her people by means of the embargo than by means of the blockade. While the United States was yet neutral, for example, many commodities were sent to Holland or Denmark, and, if not reexported to Germany, used to replace goods sold across the border. Commercial experts of the Entente Allies figure that in 1916 Holland exported to Germany enough food to support 1,200,000 soldiers; and not out of her own surplus, for the Dutch imported from other countries nearly twice what was exported to Germany. Now that we are at war with Germany, by issuing or refusing export licenses we can cut off Germany from indirect importation

Gilliams Service

CANADA SEES IT THRU

"You conscript! Your time has come at last!"—the message of the volunteers, crippled, blinded, unfit for further service, to the slacker stay-at-homes

more easily than by intercepting goods on their way. The Exports Administrative Board has listed some 600 commodities which may be exported without a license, but they do not include munitions, fuel or staple foodstuffs, and the listed exceptions do not apply to countries allied with Germany or neutral European countries.

Great Britain, too, has discriminated against the northern neutrals. On October 2, the British Government issued a proclamation prohibiting the exportation to Sweden, Norway, Denmark and The Netherlands of any goods whatever except printed matter and personal effects of travelers. This is much more drastic than the American system of licenses for cargo shipments, and it differs from the American regulations also in that the absolute embargo is not applied to Spain or Switzerland. Only the neutrals of northern Europe are, apparently, regarded as probable channels by which goods exported from England might ultimately, in one form or another, reach the Germans. The other Entente Allies, and perhaps South American neutrals as well, are expected to adopt export policies similar to those of the United States and Great Britain, thus making the commercial isolation of the Central Powers absolute. If the present plan goes into full effect no nation will trade with Germany and her allies except the neutrals of northern Europe, and they will not dare to do so for fear of being themselves shut off from the rest of the world by the embargo.

Submarines Do Poorly Another low record of destruction was established by the German navy for the week ending September 30. Eleven large British ships were sunk and two of less than 1600 tons. Not only has no week in seven months shown so poor a record of ships sunk, but only one week, that of September 16, has recorded so few losses of British vessels of more than 1600 tons. September has been a very good month for the British merchant marine, but it is too early to predict that submarine sinkings will continue to decrease thruout the autumn and winter months. The neutrals continue to suffer with the belligerents. During September nineteen Norwegian ships, aggregating more than 30,000 tons, were destroyed by the Germans and twenty Norwegian seamen killed.

The Germans estimate the monthly destruction of belligerent and neutral shipping at nearly a million tons for the whole period of unrestricted warfare, but the Allies say that the real figure is only about two-thirds of the German claim. Three U-boats are said to have been sunk off the Irish coast on September 14 by destroyers convoying transports.

The Shipping Board announces that on October 15 every American vessel of more than 2500 tons capacity available for ocean service will be taken over by the Government for the national service. These ships aggregate over two million tons. In the majority of instances the ships will be turned back to the owners for operation, but will be subject at all times to the disposition of the Shipping Board. Some will be used exclusively for military purposes and will be operated by the army and navy instead of by their owners.

Austrian Eagle Becomes a Dove Count Czernin, the Austro-Hungarian Foreign Minister, consented to outline his peace policy in a recent speech at Budapest. His address contains the most definite statement yet made by any responsible spokesman of the Central Powers on the question of territorial changes. He first emphasized the desirability of "complete disarmament," and explained that with full guarantees of the freedom of the seas "gigantic fleets will have no further purpose" and "land armies will be reduced to the level required for the maintenance of internal order." Should such a desirable condition of affairs be brought about, "we can renounce the enlargement of the Austro-Hungarian monarchy, always provided that the enemy completely evacuates our territory." In other words, Austria-Hungary has officially exprest readiness to end the war on a basis of "no annexations." This is in line with the resolution of the German Reichstag, but it is not known to be the position of the German Emperor and his ministers, who have consistently avoided making any statement on the question of territorial claims and concessions.

Count Czernin was emphatic as to three points. There must be no dismemberment of the Austro-Hungarian realm, there must be no talk of indemnities, and the Entente Allies must relinquish the idea of an economic war after the conclusion of peace. In rebuttal of the claim of the Allies for damages, Count Czernin suggested counter-claims for "the devastation their armies have wrought in Galicia, Bukowina, Tyrol, the Isonzo, East Prussia, in Turkish territories and the German colonies." He declared that this war had shown the strength and soundness of the Hapsburg Empire and that no one in the future would consider it, as it had been considered in the past, a moribund state soon to break up into its constituent nationalities. In conclusion, he warned the Entente Allies that the liberal peace terms which he had sketched were subject to revision if the war were not speedily brought to an end.

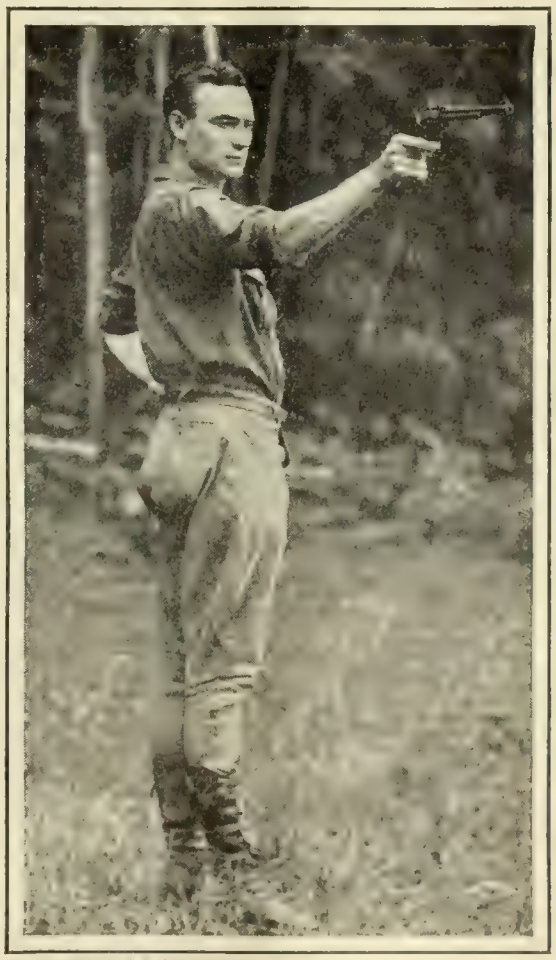
NOW THE WOMEN MARCH AWAY

Twenty-five thousand nurses, trained for service overseas, were the feature of New York's big Red Cross parade last week

Treason in France The great web of German intrigue and conspiracy which covered every neutral country and even some of the Entente nations is slowly being unraveled. One of the most intricate plots thus far unearthed relates to the activities of a certain Paul Bolo, now a prisoner in France awaiting trial for treason and a probable sentence of death. He is said to have been a Frenchman of Marseilles and to have a brother who is a distinguished bishop of the Roman Catholic Church. After seeking fortunes as a financial adventurer in several countries for many years, Bolo entered the service of the Khedive of Egypt, since deposed by the British, and acquired the title of Bolo Pasha, by which he was thenceforth generally known. Since the beginning of the Great War he has, it is charged, been continually in the pay of the German Government. He fomented insurrection against British rule in Egypt, went to Switzerland and organized anti-Ally propaganda in that country and then undertook to subsidize pacifist papers in France with the object of inducing France to make a separate peace. Various seditious papers were started in France during the war, but few of them had any success, and some were suppressed by the Government. He then attempted to purchase, apparently with the aid of German money, *Le Journal* and other loyal French papers of established standing. At one time he visited the United States to obtain funds from the German Ambassador, Count von Bernstorff. He did not, of course, avow this purpose. On the contrary, he posed as a loyal Frenchman, came armed with letters of recommendation from prominent French bankers and dealt with various American and Canadian banks. He dined publicly with Jules Bois, who was lecturing in America in the interest of French propaganda, and with Mr. Hearst, the American newspaper magnate, informing Mr. Hearst that he had come here to buy print paper. This was Bolo Pasha as "Dr. Jekyll." As "Mr. Hyde" he was dealing with the agents of Count von Bernstorff. Evidence of this fact has been furnished by the Department of State in Washington.

Other Frenchmen are more or less under suspicion at the present time of

Paul Thompson



"WE WANT MITCHEL!"—THE PEOPLE'S SPONTANEOUS DEMONSTRATION WHEN THE PRIMARIES "WENT WRONG"

The Republican nomination for Mayor of New York City wavered a day or so between the present Mayor, John Purroy Mitchel, and William M. Bennett, a former State Senator. When a recount gave Bennett the nomination a "protest parade" got together and went to the City Hall to ask Mayor Mitchel to run independently. Later the Republican County Committee refused to indorse the Bennett nomination

having unlawful relations with Germany. M. Duval, manager of a disloyal paper, the *Bonnet Rouge*, is awaiting trial for treason. The editor of this paper, M. Almeyreyda, died recently in prison under mysterious circumstances. M. Malvy, a short while ago Minister of the Interior, was much criticized for his toleration of the *Bonnet Rouge*, and was accused by M. Daudet, editor of *L'Action Francaise*, of being personally a traitor. M. Louis Turmel, a member of the Chamber of Deputies, has been deprived of his privilege of legal immunity as a member of the Chamber and is facing charges of entering into commercial relations with Germany.

Japanese Policy Outlined

Viscount Ishii, chief of Japan's war commission, has been working effectively to counteract the effect of German propaganda in the United States which has for years been quite largely devoted to arousing hatred and fear of Japan, just as, according to Viscount Ishii, the German influence in Japan is in no small degree responsible for the growth of anti-Americanism there. In a series of speeches in New York he outlined and explained the true policy of the nation which he represents. He declared that Japan was pledged to preserve China from conquest by other nations in just the same way that the United States has always been insistent that no part of the American continent should be open to further colonization by any European power. He objected, however, to the term "Monroe Doctrine" as applied to the Japanese policy and pointed out a significant difference between Japan's position in regard to China and that of the United States in regard to Latin America. The United States is pledged only to keep European nations from establishing their rule upon American soil,

© Underwood & Underwood

NEW YORK'S FIGHTING MAYOR

whereas Japan promises not only to preserve the integrity of China from the aggression of other nations but to refrain on her own account from any conquests or annexations. If the Japanese policy is correctly stated by Viscount Ishii, it must, of course, be understood as not applying to annexations already effected, such as that of Kiao-Chow, or to commercial spheres of influence, such as that established by Japan in Manchuria. The Japanese have, however, recently discontinued military rule in the German concession area at Kiao-Chow.

Floods in the Far East

Within the last few days both China and Japan have suffered severely from destructive floods. Late in September the great plains lying between Pekin and Tien-tsin were covered with water from the overflowing of the Hoang-ho and the Grand Canal which extends northward from that river. The railway embankment between Tien-tsin and Nanking had to be cut to permit the escape of the water, and the mud walls protecting the former city from floods were strengthened under foreign supervision. It is estimated that a million Chinese were rendered homeless by the flood.

On October 1 a typhoon struck Tokio bay and forced a small tidal wave, accompanied by wind and rain, across the shore line. The city of Tokio suffered the greatest damage. More than eighty persons were killed and many thousand homes were destroyed. Four cargo boats were wrecked by the storm at Yokohama.

General Pershing

The Senate has voted unanimously to confer upon Major General Pershing, commanding the expeditionary army of the United States, the full rank of "General." The little problem of military etiquet which is here involved illustrates very well how greatly our army has expanded since we entered the war. Only four Americans, Washington, Grant, Sherman and Sheridan, have had the title "General" and only a few have even been ranked as "Lieutenant-General." Not infrequently the chief of the whole American army has had the title of "Major-General," which is the grade below that of Lieutenant-General. But the American army in France will before many months contain many divisions organized into several army corps, and

International Film

FOR OUR SOLDIERS INVALIDED HOME

Columbia University formally presented to the Government last week the big war hospital which it has built and equipt in the northern part of New York City. There are fifty-four wooden buildings, covering nineteen acres, and including laboratory, pharmacy, dispensary, kitchen and laundry as well as wards and operating rooms. The hospital will accommodate 1000 men. It has a staff of twenty surgeons and doctors and seventy-five nurses

a Lieutenant-General should command each corps. Therefore it was necessary to assign a still higher rank to the commander of the whole army, the more so that the army chiefs of the Allies with whom he will be associated command a number of corps and rank as General or Marshal. Major-General Bliss, Chief of the General Staff, with headquarters in Washington, will also have the title of General.

War Taxes Voted President Wilson has signed the War Taxation Act, thus closing one of the longest and intensest political controversies in American history. Before its final passage the bill was remade repeatedly, in committee, on the floor of the Senate, and in conference. The greatest struggle was over the war profits tax rate, but hardly a schedule escaped alteration. Even the total amount to be raised was greatly changed while the measure was under consideration. Early in the summer it was understood that the new taxes would yield somewhat less than two billion dollars, but the latest estimate of the revenue expected from war taxes is $2,534,870,000.

The House of Representatives accepted the conference report and passed the War Taxation Act on October 1. There was no dissenting vote and very little discussion, tho Representative Cooper of Wisconsin criticized the application of the zone system to postal rates on periodicals. On the following day, the Senate likewise accepted the conference report without dissent. A number of Senators, however, used the brief hour of debate to register their opposition to certain particular features of the measure. Senator Pomerene of Ohio and Senators Saulsbury and Wolcott of Delaware objected to the special tax on munitions manufacture, holding that the general war profits tax was a sufficient burden on the industry. Senators Cummins of Iowa and La Follette of Wisconsin regretted that Congress had determined to rely more upon loans than taxes for financing the war. Senator Smoot of Utah objected to the establishment of the zone postage system for periodicals. Senator Wadsworth of New York suggested the advisability of discriminating between earned and unearned incomes in future income tax legislation. Many contested points will doubtless be considered when Congress meets again in December, and perhaps some modifications in the schedules will be made. Congress felt it necessary to get the bill passed in some shape without further delay even if in many details it was unsatisfactory.

Retail Coal Prices Fixed Federal Fuel Administrator H. A. Garfield has brought under his jurisdiction the price of coal to the consumer. Hitherto the Government has concerned itself almost exclusively with the sale of coal at the mine and its distribution by railroad or shipping. From the beginning of October all new contracts must conform to the regulations issued by the Fuel Administration. The principle of the retail coal regulations is the establishment of a fixed percentage of "margin," or the difference between the cost of coal to the dealer and the price at which it may be sold to the consumer. Dealers are permitted to add to their retail gross margins for the year 1915, which was selected as a normal and typical price year, thirty per cent, if the total arrived at by this process does not exceed the retail margin for July, 1917. Since the cost of coal to the dealer has already been regulated, an upper limit of prices to the consumer has been secured and there is no danger of famine prices this winter. In many cases the new price system established means a reduction from prevailing market rates.

Radicals Launch New Party On October 3, representatives of the National Progressive Party, the Prohibition Party, the single-taxers and the Socialist minority that left the party organization because of its opposition to the war, met in Chicago to discuss the possibility of starting a new radical party. Each of the four groups in the conference was assigned twenty votes. Even if no permanent national party results from the conference, the delegates hope to arrange for coöperation in the Congressional elections of next year, and expect to be represented after 1918 by half a dozen Senators and a score or more of Representatives. The National Non-Partisan League, which has been winning many political victories in the upper Mississippi valley states during the last few months, was not represented by any voting delegation but it is very possible that it, too, may enter the merger. Among those who were prominent at the conference were Matthew Hale, chairman of the National Committee of the Progressive Party; Dr. Landrith, Prohibitionist candidate for Vice-President in 1916, and John Spargo, the Socialist author. Mr. Spargo suggested a platform recommending universal suffrage; the initiative, referendum and recall; the short ballot, executive budget and proportional representation; an easier method of securing constitutional amendments; national prohibition; public ownership of mines, railroads, telegraphs and telephones; the extinction of land monopoly; the abolition of secret diplomacy and international federation. He emphasized the entire loyalty of the conference to the American cause in the Great War. Pro-Germans will not be welcome in the new party.

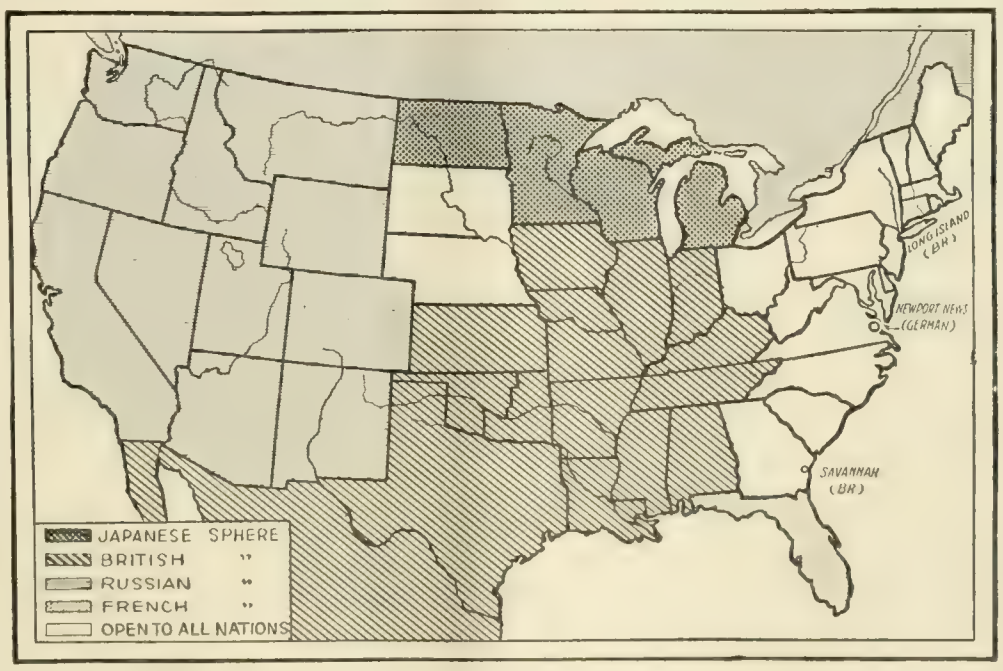
The Market for Stocks Prices in the stock market have been affected by the new taxes and the reports of railroad earnings. On Monday, the 1st, railroad shares were very weak. Reports for August were published, showing that an increase of gross revenue had been accompanied by a decrease of net earnings. This was disappointing because that was the first month in which could be seen the full effect of freight rate advances granted by the Interstate Commerce Commission in June.

On Tuesday the railroad stocks declined again. Industrials also at first showed considerable losses, but for them there was recovery.

Prices continued to move downward on Wednesday, and shares of steel companies were leaders in the decline. This was due chiefly to the fact that shareholders of the Bethlehem Company had taken, at par, only 70 per cent of the corporation's new issue of $30,000,000 8 per cent preferred stock. The day's loss for Bethlehem was 7 points. On Thursday, in a broader and more active market (864,000 shares) there were additional losses. The main cause of depression was the new taxes. Shares of tobacco companies declined sharply. As nearly one-third of all the shares sold were those of the Steel Corporation, their net loss of 2⅝ indicates the tendency of the price movement. For loans the prevailing rate was 5 per cent.

THE CHINESE PUZZLE

BY LINDSAY RUSSELL



Mr. Russell has just returned from a visit to China, and the fact that he has for five years been in close contact with the vital currents of the Far East as founder and president of the Japan Society makes this description of the existing conditions there of peculiar interest now. — THE EDITOR.

THE Republic of China has been for the past six years a mere "camouflage" beneath which a retrogressive class of office holders have manipulated for their own ends the fate of millions of hungry human beings, ever on the verge of revolution. So bitter is the struggle for existence that it is doubtful if any considerable proportion of the Chinese know or care under what form of government they live.

We may say of China, considered as a state rather than as a people, that she is bankrupt administratively because she has failed in self-government; that she is bankrupt morally because graft (which Dr. Reinsch politely terms "the pecuniary by-product of office") has permeated practically every Government or corporate enterprize, and that she is bankrupt financially because she has lost control of the collection of her revenues. Not only present loans but future loans as well will doubtless be made on the express condition that the funds are to be used for specific purposes, and to insure their reaching their proper destination they will be directed and followed up by the creditor banks.

So gloomy is the situation today that many of the ablest foreigners resident in China, men who have consistently supported the republic, are now of the opinion that China cannot regain her equilibrium without foreign aid, and that if left to work out her own salvation she will come to certain and irretrievable ruin. It is not easy for an American to understand the helpless predicament in which China finds herself thru foreign aggression and the jealous watchfulness of rival powers.

LET us suppose that the great Dominion to the north of us were Russian, that Mexico to the southwest were British and that some of our Atlantic seaboard cities were owned or leased by foreign powers. This is the position of China, lying between Russian Siberia and British India, with such important ports as Wei-hai-wei, Kiao-chow and Hong-Kong under alien control. Suppose, furthermore, that the United States were divided into "spheres of influence," nominally under the American flag, but for most commercial and industrial purposes administered by the dominant foreign power. Japan would control some 250,000 square miles in the extreme north. England's sphere would cover about a million square miles in the Mississippi Valley. Florida might go to France. Russia would claim all the Pacific Coast and Rocky Mountain states. In addition to the "treaty port" of Newport News the Germans would own the Virginia Central Railroad, and if they should lose their hold on America as the result of war the advantage would not go to the United States but to victorious Japan. Practically every mile of railroad in the United States would be under foreign management, the customs houses would be controlled by our creditors, and post-offices and banks administered by aliens.

IF WE WERE CHINA?

THIS is China; the China which Americans are accustomed to consider a sovereign nation, and which they are honestly anxious to aid. It is, to all intents and purposes, a receivership; as impracticable a receivership as was ever devised by the mind of man. It is administered by some two thousand foreigners who have no interest in the country except as representatives of national rivalries. Giantess as China is among the nations, in size, in population, in antiquity of civilization and in natural wealth, she is a giantess fettered and enslaved.

If the case were that of an ordinary business corporation the remedy would be clear. The obvious plan would be for the various creditors to select a trustee. On just that principle it is hoped that it will be possible for Great Britain and Japan, the largest creditors and the holders of the predominant trade interests, to find a way out. Is it impossible to select men who would accept international office as an international trust, and reorganize and stabilize China for the benefit of the Chinese. All nations would benefit by her increased purchasing power. Then "the open door," a phrase mischievously misused for the past seventeen years, sometimes purposely and sometimes in ignorance of its true significance, to create ill will between the United States and Japan, would acquire a meaning. In the case of the "open door," as in the case of a bank, the rule holds that you cannot take out unless you have put in. Japan made this discovery early and established the bean industry in Manchuria, now worth $400,000,000 to the Chinese.

THE "open door" policy had a certain plausibility when small merchants were engaged in competition with each other, but its fallacy is apparent in connection with the great corporations. Can any one doubt that the Standard Oil Company, if free to employ the methods that gave it dominance in the United States, could have effectually shut the door on all competitors? As a statement of fact, the "open door" is on a par with "All men are created free and equal."

One of the greatest authorities on Chinese conditions, holding in his hand a report of the Government General of Korea, said, "If I could divest myself of personal sentiment and national interests I should say, here is the remedy for China's ills." Beyond a doubt, the remedy lies in honest government, education, highways, reforestation and sanitation, but how is it to be applied so long as the dominant nations disagree?

The American people, and especially those of us who are contributing to the millions of dollars spent each year for missionary, educational and philanthropic work in the Orient, may well pause to consider how the uplift of the Chinese may best be brought about. Is the reclamation of Asia entirely our burden? Are our resources of wisdom, wealth and power so great that we should reject the proffered aid of those who can reinforce our efforts and multiply their results? Is there no way in which we can coöperate with Japan in educational and humanitarian work in the Far East? We might well ask ourselves whether the Japanese are not better fitted than we for this work, especially in view of their Oriental environment and their proximity to China.

What Japan could do for China is shown by what Japan has done. The British, the German, the French and the Belgians built railways, it is true, but they are merely "transports." In contrast, the South Manchurian Railway is a constructive educational institution. Said William Blanc:

"The Japan- [Continued on page 111

WHY THE NATION NEEDS CHEMISTRY

BY JULIUS STIEGLITZ

PRESIDENT OF THE AMERICAN CHEMICAL SOCIETY, PROFESSOR OF CHEMISTRY IN THE UNIVERSITY OF CHICAGO

THE present war as never before in the history of the world has brought to the nations of the earth a realization of the vital place which the science of chemistry holds in the development of the resources of a nation. Some of the most picturesque features of this awakening have reached the great public thru the press. Thus, the adventurous trips of the "Deutschland" with its cargoes of concentrated aniline dyes, valued at millions of dollars, emphasized as no other incident our former dependence upon Germany for these products of her chemical industries.

The public has read, too, that her chemists have thus far saved Germany from an early disastrous defeat, both in the field of military operations and in the matter of economic supplies: unquestionably, without the tremendous expansion of her plants for the production of nitrates from the air by the processes of Haber, Ostwald and others of her great chemists, the war would have ended in 1915, or early in 1916, from exhaustion of Germany's supplies of explosives, if not indeed from exhaustion of her food supplies as a consequence of the lack of fertilizer for her fields. Inventions of substitutes for cotton, copper, rubber, wool and many other basic needs have been reported.

These feats of chemistry, performed under the stress of dire necessity, have, no doubt, excited the wonder and interest of our public. It is far more important at this time, however, when both during the war and after peace has come, the resources of our country will be strained to the utmost, that the public should awaken to a clear realization of what this science of chemistry really means for mankind, to the realization that its wizardry permeates the whole life of the nation as a vitalizing, protective and constructive agent very much in the same way as our blood, coursing thru our veins and arteries, carries the constructive, defensive and life-bringing materials to every organ in the body.

IF the layman will but understand that chemistry is the fundamental *science of the transformation of matter*, he will readily accept the validity of this sweeping assertion: he will realize, for instance, why exactly the same fundamental laws of the science apply to, and make possible scientific control of, such widely divergent national industries as agriculture and steel manufacturing, governing the transformation of the salts, minerals and humus of our fields and the components of the air into corn, wheat, cotton and the innumerable other products of the soil, governing no less the transformation of crude ores into steel and alloys, which, with the cunning born of chemical knowledge, may be given practically any conceivable quality of hardness, elasticity, toughness or strength. And exactly the same thing may be said of the hundreds of national activities that lie between the two extremes of agriculture and steel manufacture!

Moreover, the domain of the science of the transformation of matter includes even life itself as its loftiest phase: from our birth to our return to dust the laws of chemistry are the controling laws of life, health, disease and death and the ever clearer recognition of this relation is the strongest force that is raising medicine from the uncertain realm of an art to the safer sphere of an exact science. To many scientific minds it has even become evident that those most wonderful facts of life, heredity and character, must find their final explanation in the chemical composition of the components of life producing, germinal protoplasm: mere form and shape are no longer supreme but are relegated to their proper place as the housing only of the living matter which functions chemically.

IT must be quite obvious now why thoughtful men are insisting that the public should be awakened to a broad realization of the significance of the science of chemistry for its national life.

It is a difficult science in its details, because it has found that it can best interpret the visible phenomena of the material world on the basis of the conceptions of invisible minute material atoms and molecules, each a world in itself, whose properties may be nevertheless accurately deduced by a rigorous logic controlling the highest type of scientific imagination. But a layman is interested in the wonders of great bridges and monumental buildings without feeling the need of inquiring into the painfully minute and extended calculations of the engineer and architect of the strains and stresses to which every pin and every bar of the great bridge and every bit of stone, every foot of arch in a monumental edifice will be exposed. So the public may understand and appreciate with the keenest interest the results of chemical effort without the need of instruction in the intricacies of our logic, of our dealings with our minute, invisible particles.

The whole nation's welfare demands, indeed, that our public be enlightened in the matter of the relation of chemistry to our national life. Thus, if our commerce and our industries are to survive the terrific competition that must follow the re-establishment of peace, our public must insist that its representatives in Congress preserve that independence in chemical manufacturing which the war has forced upon us in the matter of dyes, of numberless invaluable remedies to cure and relieve suffering, for the supplies of which we have been dependent on enemy nations, in the matter, too, of hundreds of chemicals, which our industries need for their successful existence.

Unless we are independent in these fields, how easily might an unscrupulous competing nation do us untold harm by the mere device, for instance, of delaying supplies, or by sending inferior materials to this country or by underselling our chemical manufacturers and after the destruction of our chemical independence, handicapping our industries as they were in the first year or two of the great war!

Then, too, the general public should realize that in the support of great chemical research laboratories of universities and technical schools it will be sustaining important centers from which the science which improves products, abolishes waste, establishes new industries and preserves life, may reach out helpfully into all the activities of our great nation, that are dependent on the transformation of matter.

THE readers of The Independent are to be congratulated upon the fact that one of its editors is better qualified than any other man in the country to bring to their attention some of the great results of modern chemical activity as well as some of the big problems which must engage the attention of our chemists. Dr. Slosson has indeed the unique quality of combining an exact and intimate knowledge of chemistry with the exquisite clarity and pointedness of expression of a born writer.

We may anticipate an exposition, shorn of the terrifying and obscuring technicalities of the lecture room, that will be as absorbing reading as any thrilling romance, for the story of scientific achievement is the greatest epic the world has ever known, and like the great national epics of bygone ages, should quicken the life of the nation by a realization of its powers and a picture of its possibilities.

Chicago, Illinois

COLOR

BY MARY CAROLYN DAVIES

Blue sings a lullaby,
Purple rings a knell,
Red is a warrior's cry,
Gold a wedding-bell;
Gray tells of skies and doves,
Green of seas and ships.
White is my own dear love's
Whisper at my lips.

CREATIVE CHEMISTRY

A Popular Explanation of Recent Progress in Chemical Industries

BY EDWIN E. SLOSSON

NITROGEN: PRESERVER AND DESTROYER OF LIFE

IN the eyes of the chemist the Great War is essentially a series of explosive reactions resulting in the liberation of nitrogen. Nothing like it has been seen in any previous wars. The first battles were fought with cellulose, mostly in the form of clubs. The next were fought with silica, mostly in the form of flint arrowheads and spear-points. Then came the metals, bronze to begin with and later iron. The nitrogenous era in warfare began when Friar Roger Bacon or Friar Schwartz—whichever it was—ground together in his mortar saltpeter, charcoal and culfur. The Chinese, to be sure, had invented gunpowder long before, but they—poor innocents—did not know of anything worse to do with it than to make it into firecrackers. With the introduction of "villainous saltpeter" war ceased to be the vocation of the nobleman and since the nobleman had no other vocation he began to become extinct. A bullet fired from a mile away is no respecter of persons. It is just as likely to kill a knight as a peasant, and a brave man as a coward. You cannot fence with a cannon ball nor overawe it with a plumed hat. The only thing you can do is to hide and shoot back. Now you cannot hide if you send up a column of smoke by day and a pillar of fire by night—the most conspicuous of signals—every time you shoot. So the next step was the invention of a smokeless powder. In this the oxygen necessary for the combustion is already in such close combination with its fuel, the carbon and hydrogen, that no black particles of carbon can get away unburnt. In the old-fashioned gunpowder the oxygen necessary for the combustion of the carbon and sulfur was in a separate package, in the molecule of potassium nitrate, and however finely the mixture was ground, some of the atoms, in the excitement of the explosion, failed to find their proper partners at the moment of dispersal. The new gunpowder besides being smokeless was ashless. There was no black sticky mass of potassium salts left to foul the gun barrel.

The author in the laboratory. The readers of The Independent are best acquainted with Dr. Slosson as Literary Editor, so this photograph may serve to remind them that before being called to this position on The Independent he was for twelve years professor of chemistry in the University of Wyoming and chemist of the Agricultural Experimental Station there. Dr. Slosson was given the degree of doctor of philosophy by the University of Chicago for research in organic chemistry. He lectured on chemistry for four years in the Columbia School of Journalism

The gunpowder period of warfare was actively initiated at the battle of Cressy, in which, as a contemporary historian says, "The English guns made noise like thunder and caused much loss in men and horses." Smokeless powder as invented by Paul Vieille was adopted by the French Government in 1887. This, then, might be called the beginning of the guncotton or nitro-cellulose period—or, perhaps in deference to the caveman's club, the second cellulose period of human warfare. Better doubtless, to call it the "high explosive period," for various other nitro-compounds besides guncotton are being used.

The important thing to note is that all the explosives from gunpowder down contain nitrogen as the essential element. It is customary to call nitrogen "an inert element" because it was hard to get it into combination with other elements. It might, on the other hand, be looked upon as an active element because it acts so energetically in getting out of its compounds. We can dodge the question by saying that nitrogen is a most unreliable and unsociable element. Like Kipling's cat it walks by its wild lone.

It is not so bad as Argon the Lazy and the other celibate gases of that family, where each individual atom goes off by itself and absolutely refuses to unite even temporarily with any other atom. The nitrogen atoms will pair off with each other and stick together, but they are reluctant to associate with other elements and when they do the combination is likely to break up any moment. You all know people like that, good enough when by themselves but sure to break up any club, church or society they get into. Now, the value of nitrogen in warfare is due to the fact that all the atoms desert in a body on the field of battle. Millions of them may be lying packed in a gun cartridge, as quiet as you please, but let a little disturbance start in the neighborhood—say a grain of mercury fulminate flares up—and all the nitrogen atoms get to trembling so violently that they cannot be restrained. The shock spreads rapidly thru the whole mass. The hydrogen and carbon atoms catch up the oxygen and in an instant they are off on a stampede, crowding in every direction to find an exit, and getting more heated up all the time. The only movable side is the cannon ball in front, so they all pound against that and give it such a shove that it goes ten miles before it stops. The external bombardment of the cannon ball is, therefore, preceded by an internal bombardment on the cannon ball by the molecules of

CREATIVE CHEMISTRY

The series of articles started in this number is intended to give the reader, whether he has any previous knowledge of chemistry or not, some idea of recent advances in chemical science and industries with special reference to the change in American conditions effected by the war. The articles, which will appear in the second and fourth issues of each month, will deal with the following subjects:

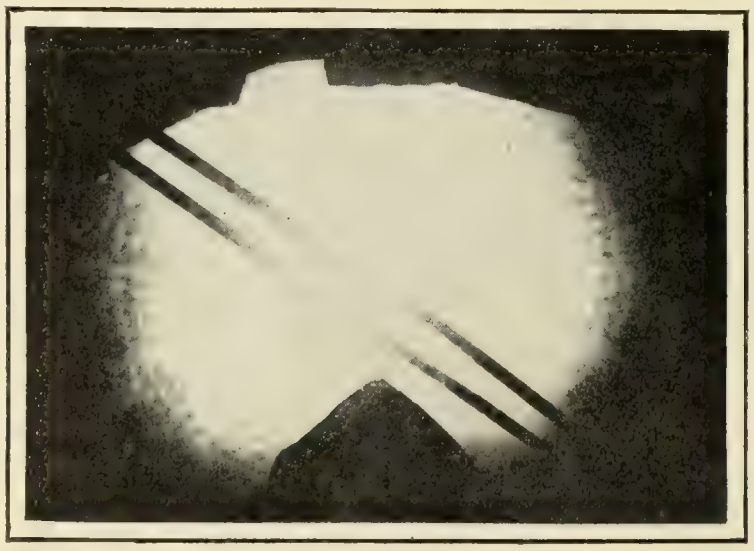
1. *Nitrogen: Preserver and Destroyer of Life.*
2. *Feeding the Soil: Nitrogen, Potash and Phosphate Fertilizers.*
3. *What Comes from Coal Tar: The Problem of American Dyes.*
4. *Synthetic Perfumes and Flavors.*
5. *Electric Furnace Products.*
6. *Rare Metals and New Alloys.*
7. *Cellulose, Celluloid, Synthetic Silk and Rubber.*
8. *Sugar, Candy, Alcohol.*
9. *Corn Products.*
10. *Cotton Products.*
11. *Petroleum Products.*
12. *Radium and the Constitution of the Atom.*

Fixing nitrogen by calcium carbide: A view of the oven room in the plant of the American Cyanamid Company. The steel cylinders standing in the background are packed with the carbide and then put into the ovens sunk in the floor. When these are heated internally by electricity to 2000 degrees Fahrenheit pure nitrogen is let in and absorbed by the carbide making cyanamid, which may be used as a fertilizer or for ammonia

the hot gases, whose speed is about as great as the speed of the projectile that they propel.

The active agent in all these explosives is the nitrogen atom in combination with two oxygen atoms, which the chemist calls the "nitro group" and which he represents by NO_2. This group was, as I have said, originally used in the form of saltpeter or potassium nitrate, but since the chemist did not want the potassium part of it—for it fouled his guns—he took the nitro group out of the nitrate by means of sulfuric acid and by the same means hooked it on to some compound of carbon and hydrogen that would burn without leaving any residue, and give nothing but gases. One of the simplest of these hydrocarbons is glycerin, the same as you use for sunburn. This mixt with nitric and sulfuric acids gives nitro-glycerin, an easy thing to make, tho I should not advise anybody to try making it unless he has his life insured. But nitro-glycerin is uncertain stuff to keep and being a liquid is awkward to handle. So it was mixt with sawdust or porous earth or something else that would soak it up. This molded into sticks is our ordinary dynamite.

If instead of glycerin we take cellulose in the form of wood pulp or cotton and treat this with nitric acid in the presence of sulfuric we get nitro-cellulose or gun-cotton, which is the chief ingredient of smokeless powder.



Now gun-cotton looks like common cotton. It is too light and loose to pack well into a gun. So it is dissolved with ether and alcohol or acetone to make a plastic mass that can be molded into rods and cut into grains of suitable shape and size to burn at the proper speed.

Here, then, we have a liquid explosive, nitro-glycerin, that has to be soaked up in some porous solid, and a porous solid, gun-cotton, that has to be soaked up with some liquid. Why not solve both difficulties together by dissolving the guncotton in the nitro-glycerin and so get a double explosive? This is a simple idea. Any of us can see the sense of it—once it is suggested to us. But Alfred Nobel, the Swedish chemist, who thought it out first in 1878, made millions out of it. Then, apparently alarmed at the possible consequences of his invention he bequeathed the fortune he had made by it to found international prizes for medical, chemical and physical discoveries, idealistic literature and the promotion of peace. But his posthumous efforts for the advancement of civilization and the abolition of war did not amount to much and his high explosives are now being employed to blow into pieces the doctors, chemists, authors and pacifists he wished to reward. Nobel's invention, "cordite," is composed of nitro-glycerin and nitro-cellulose with a little mineral jelly or vaseline.

Besides cordite and similar mixtures of nitroglycerin and nitro-cellulose there are two other classes of high explosives in common use.

One is made from carbolic acid, which is familiar to us all by its use as a disinfectant. If this is treated with nitric and sulfuric acids we get from it picric acid, a yellow crystalline solid. Every government has its own secret formula for this. The British call theirs "lyddite," the French "melinite" and the Japanese "shimose."

The third kind of high explosives uses as its base toluol. This is not so familiar to us as glycerin, cotton or carbolic acid. It is one of the coal tar products, an inflammable liquid, resembling benzene. When treated with nitric acid in the usual way it takes up like the others three nitro groups and so becomes trinitro-toluol. Realizing that people could not be expected to use such a mouthful of a word, the chemists have suggested various pretty nicknames, trotye, tritol, trinol, tolite and trilit, but the public, with the wilfulness it always shows in the matter of names, persists in calling it TNT, as tho it were an author like G. B. S., or G. K. C., or F. P. A. TNT is the latest of these high explosives and in some ways the best of them. Picric acid has the bad habit of attacking the metals with which it rests in contact forming sensitive picrates that are easily set off, but TNT is inert toward metals and keeps well. TNT melts far below the boiling point of water so can be readily liquefied and poured into shells. It is insensitive to ordinary shocks. A rifle bullet can be fired thru a case of it without setting it off, and if lighted with a match it burns quietly. The amazing thing about these modern explosives, the organic nitrates, is the way they will stand banging about and burning, yet the terrific violence with which they blow up when shaken by an explosive wave of a particular velocity like that of a fulminating cap. Like picric acid, TNT stains the skin yellow and causes soreness and sometimes serious cases of poisoning among the employees, mostly girls, in the munition factories. On the other hand, the girls

Burning air in a Birkeland-Eyde furnace at the DuPont plant. An electric arc consuming about 4000 horse-power of energy is passing between the U-shaped electrodes, which are made of copper tube cooled by an internal current of water. On the sides of the chamber are seen the openings thru which the air passes impinging directly on both sides of the surface of the disk of flame. This flame is approximately seven feet in diameter and appears to be continuous altho an alternating current of fifty cycles a second is used. The electric arc is spread into this disk flame by the repellent power of an electro-magnet the pointed pole of which is seen at bottom of the picture. Under this intense heat a part of the nitrogen and oxygen of the air combine to form oxides of nitrogen which, when dissolved in water, form the nitric acid used in explosives

working with cordite get to using it as chewing gum; a harmful habit, not because of any danger of being blown up by it, but because nitro-glycerine is a heart stimulant and they do not need that.

TNT is by no means smokeless. The German shells that explode with a cloud of black smoke and which British soldiers call "Black Marias," "coal-boxes" or "Jack Johnsons" are loaded with it. But it is an advantage to have a shell show where it strikes, altho a disadvantage to have it show where it starts.

It is these high explosives that have revolutionized warfare. As soon as the first German shell packed with these new nitrates burst inside the Gruson copula at Liège and tore out its steel and concrete by the roots the world knew that the day of the fixt fortress was gone. The armies deserted their expensively prepared fortifications and took to the trenches. The British troops in France found their weapons futile and sent across the Channel the cry of "Send us high explosives or we perish!" The home Government was slow to heed the appeal, but no progress was made against the Germans until the Allies had the means to blast them out of their entrenchments by shells loaded with five hundred pounds of TNT.

All these explosives are made from nitric acid and this used to be made from nitrates such as potassium nitrate or saltpeter. But nitrates are rarely found in large quantities. Napoleon and Lee had a hard time to scrape up enough saltpeter from the compost heaps, cellars and caves for their gunpowder, and they did not use as much nitrogen in a whole campaign as is freed in a few days' cannonading on the Somme. Now there is one place in the world—and so far as we know one only—where nitrates are to be found abundantly. This is in a desert on the western slope of the Andes where ancient guano deposits have decomposed and there was not enough rain to wash away their salts. Here is a bed two miles wide, two hundred miles long and five feet deep yielding some twenty to fifty per cent of sodium nitrate. The deposit originally belonged to Peru, but Chile fought her for it and got it in 1881. Here all countries came to get their nitrates for agriculture and powder making. Germany was the largest customer and imported 750,000 of Chilean nitrate in 1913 besides using 100,000 of other nitrogen salts. By this means her old, wornout fields were made to yield greater harvests than our fresh land. Germany and England were like two duelists buying powder at the same shop. The Chilean Government, pocketing an export duty that now aggregates half a billion dollars, permitted the saltpeter to be shoveled impartially into British and German ships, and so two nitrogen atoms, torn from their Pacific home and parted, like Evangeline and Gabriel, by transportation oversea, may have found themselves flung into each other's arms from the mouths of opposing howitzers in the air of Flanders. Goethe could write a romance on such a theme.

NOW the moment war broke out this source of supply was shut off to both parties, for they blockaded each other. The British fleet closed up the German ports while the German cruisers in the Pacific took up a position off the coast of Chile in order to intercept the ships carrying nitrates to England and France. The Panama Canal, designed to afford relief in such an emergency, caved in most inopportunely. The British sent a fleet to the Pacific to clear the nitrate route, but it was outranged and defeated on November 1, 1914. Then a stronger British fleet was sent out and smashed the Germans off the Falkland Islands on December 8. But for seven weeks the nitrate route had been closed while the chemical reactions on the Marne and Yser were decomposing nitrogen compounds at an unheard of rate.

England was now free to get nitrates for her munition factories, but Germany was still bottled up. She had stored up Chilean nitrates in anticipation of the war and as soon as it was seen to be coming she bought all she could get in Europe. But this supply was altogether inadequate and the war would have come to an end in the first winter if German chemists had not provided for such a contingency in advance by working out methods of getting nitrogen from the air. Long ago it was said that the British ruled the sea and the French the land so that left nothing to the German but the air. The Germans seem to have taken this jibe seriously and to have set themselves to make the most of the aerial realm in order to challenge the British and French in the fields they had appropriated. They had succeeded so far that the Kaiser when he declared war might well have considered himself the Prince of the Power of the Air. He had a fleet of Zeppelins and he had means for the fixation of nitrogen such as no other nation possest. The Zeppelins have burst like wind bags, but the nitrogen plants have worked and have made Germany independent of Chile not only during this war, but in the time of peace to come. Germany is now using 200,000 tons of nitric acid a year in explosives, yet her supply of nitrogen is exhaustless.

Nitrogen is free as air. That is the trouble; it is [*Continued on page 103*

The liberation of nitrogen. Every gun fired releases free nitrogen or its oxides from compounds that might be used in manufacture

THE WIDOW NOLEN

An Unofficial University Just Outside Harvard's Gates

THEY call him "The Widow," no one knows why. Whatever he is called he is, in his own single person, Harvard's chief competitor. In moments of indiscreet candor members of the Harvard Faculty have confest that the college has tried, and tried in vain, every possible means of dislodging him—even to flattering him out of the way with the offer of a chair in the college. But he never could afford the honor. The highest paid professors in Harvard get a meagre $5000 a year. "The Widow" is reputed to enjoy an income of $20,000 a year—perhaps more. Nobody knows.

So he remains what he is—president of himself. For he is in his own university, with his own staff of fifteen professors, and his own dormitories, conveniently stationed just outside the famous Harvard "Yard." The one concession he makes to Harvard is to permit his students the use of all of Harvard's facilities—the Bursar, the Yard, the Gym, Soldiers Field, even the classrooms if they please. Even Harvard's degrees. All "The Widow" pretends to supply is the best known substitute for a Harvard education.

If you find that it would be pleasant to be a Bachelor of Arts but for certain annoying obstacles in the way; if you find your studies interfering with the pleasures of the theater or the athletic field; if the exams are approaching and certain to find you embarrassed how to meet them; if you are the son of a rich man, a little spoiled and unaccustomed to work—what do you do? You visit the Widow Nolen.

AND straightway you come under the eye of a remarkable man. Two generations of Harvard men know him, by reputation if not by personal experience of his bewildering fund of knowledge and his even more bewildering gift of handing it out to you in one exquisite, highly concentrated pill of information. In the Harvard records he is William Whiting Nolen, A.B. '84. During five more years in the Graduate School he drew down an A.M. in '86. Then to make a thoro job of it, he put himself thru the Law School besides. No one has discovered why he slighted the Medical School, the Dental School, the Veterinary School, and the Bussey Institute of Agriculture. Except for these trifling omissions, his education is fairly complete.

But in Harvard he learned much more than Harvard teaches deliberately. He learned, besides, the peculiar psychology of the Harvard professor. He learned how the Harvard professor teaches. Most important of all, to himself at least, he learned to gage, and with an accuracy that is uncanny, precisely what questions any given Harvard professor is most apt to ask.

Suppose an exam catches you a trifle innocent of history or literature. Suppose you have never dipped into some obscure book like "Vanity Fair." To repair this natural oversight you join one of the Widow's famous "seminars." It is chiefly by these seminars that the Widow's fame and fortune live.

These meetings are organized with wonderful psychological cleverness. Fifty students will be admitted to a room in the Widow's establishment. The room is stark naked. Not a picture is on the walls to distract your eye. Not a sound is heard, except the Widow's voice, to break your attention. You sit in silence with a pad of paper on your knee. Naturally every man jack in the room is frightened to death for fear of flunking, and the Widow begins with that advantage to himself.

HE needs no other advantage. No one sleeps when the Widow is speaking. One reason why his patients nearly always pass the desired exam is because the Widow has a marvelous faculty for making his talks interesting. Any professor might learn from him there. In an hour he will range over an entire history course. All he pretends to do is spot in the high lights, the main events, the leading figures. But it is all a wonderfully clear and compact digest of the course to be covered. Easy as this may be to remember, and remember even beyond the day of the examination, the Widow will finish by retracing his talk in a still more wonderfully clear and condensed conclusion.

In a literature course he will outline the periods and give the substance of every book required in the course. He will give you the message, the philosophy, the teachings of every author. And all this in the space of one hour! "Around the World in Eighty Days" reduced to sixty minutes! And yet the Widow has been known to lecture for five hours on end without a break.

In a complicated course he may supply a few "keys" for the memory, for he has invented a complete system of mnemonics. With almost hypnotic effect he will hang up a chart laying bare, say, the whole secret of a course in trigonometry. Or he may make the word "Nawb" serve as a symbol for a whole period in history. A fool word in itself, it sticks in the memory by reason of that very fact, and faithfully bobs up in the mind during the exam, to stand for the names of Napoleon, Wellington and Bluecher, and their influence on the nineteenth century.

Or suppose a student on the eve of a German exam finds that he has opened nary a one of the books required for outside reading in the course. The Widow will welcome him to a cubicle in his establishment where he will be made comfortable with cigars or cigarets. The chair is restful. Everything is provided to leave the student's mind open to treatment. Then in comes one of the Widow's faculty of assistants. In the course of a single evening, while the student has nothing to do but sit back and drink it in and try to remember it all, this assistant will go thru that list of books and give a nutshell account of the contents of each one.

It is a college education in capsule form.

The one fault to be laid against a Nolen degree is that this mass of information is not guaranteed to stick in the mind for longer than the three hours of the examination. It is apt to be written on the mind in vanishing ink. Still, there is nothing to prevent a student from remembering it all if he can. The Widow charges his price and offers his commodity, to be taken how you please.

His income is his own business, but he certainly drives a thriving trade. If you want a whole evening with one of his assistants he will charge you $5 for the services rendered. To join one of his hour-long seminars costs each man of the fifty present $2.50. And during the exam period the Widow and his faculty are busy day and night. Another of his rush seasons opens when the boys from the prep schools begin to congregate for the entrance exams. For these the Widow even maintains a dormitory, a nursery, for the fatherly care of the backward. It is a prep school in itself, with a course reduced to three or four weeks. For such services the Widow charges accordingly, with his prices based on the backwardness of the case. Since his patrons come mostly from the rich, his charges are probably in proportion.

Toward his assistants, however, he is reputed to be generous enough. He picks the brightest men he can get, and pays them well. You are taxed $2.50 for an hour with one of them, and of that $2.50 the Widow collects fifty cents. The $2 goes to the assistants.

OUTSIDE his crowded hours of tutoring Mr. Nolen finds time to indulge a nice taste in old furniture and objects of art—and his rooms are thickly strewn with superb specimens. And often, out of an income ample beyond his own simple needs, he exerts himself in behalf of the poor student. More than one man has had from Mr. Nolen other aids to a Harvard degree than great gobs of information only.

Such is the familiar figure of many jibes and of more caricatures than have been aimed at any other college celebrity.

"Dead or dying, drunk or sleeping,
Nolen puts you thru;
But gratitude takes early wings when
Nolen's bill is due."

So runs a famous lyric lampooning the high tax that Nolen levies on laziness. And so he daily and serenely takes his stroll along the Charles, comfortable and corpulent, carelessly drest, with the never-absent Boston terrier that is almost as familiar a figure as he.

THE THEATER THAT COMES TO YOU

BY CONSTANCE D'ARCY MACKAY

AUTHOR OF "THE FOREST PRINCESS AND OTHER MASQUES"

STUART WALKER'S Portmanteau Theater is proof of the fact that if you have something original to offer people it does not matter when or where you offer it.

Mr. Walker is a young college man who received his theater diploma from Mr. Belasco, for whom he was playreader and later play director before evolving a theater of his own.

The Portmanteau Theater is what its name suggests . . . a portable playhouse that has been aptly called "The Theater That Comes to You." It can be set up in a hall or auditorium, in a theater, or in a park or city square. It is a traveling little theater. It is not dependent on bookings. Therefore it is an independent theater. It has the power to create its own circuit.

The Portmanteau Theater is a New York product. It was first set up and gave its first performance at Christadora House two years ago. It commenced its performances in an off season of the year, in a social settlement, in an inaccessible and slum-y part of town. Yet the critics went eagerly to see it and brought it to the attention of the public.

Such was the modest entrance of the Portmanteau Theater, a theater that has now become an established fact. From the time of its first performance it became more and more in demand. It traveled about in New York City. Next it was set up in a regular theater, and finally found itself so in demand that it suddenly had a circuit reaching from coast to coast. When this theater goes on the road it does not send out a second company. The players of the New York Company go with it. It is the only traveling little theater in this country, and even on the road it preserves little theater ideals.

THE spirit of the Portmanteau is uncommercial. This is proved in many ways, but in none more clearly than in Mr. Walker's Christmas gift to the city of New York one year ago. He set up his Portmanteau Theater in Madison Square on Christmas night, and gave a free performance of his play, *The Seven Gifts*. His audience was formed of the homeless of the city. The park benches—those seats of the out-of-work and despairing—were drawn up to form an out-door auditorium. People came early and waited hours to see the play. Snow had fallen. The square and its trees were white with it. And this white background seemed to intensify the deep mysterious colors used in the Portmanteau setting. Mr. Walker will do much in the future, but it will be difficult to equal the emotional quality of this performance.

Simplicity is the keynote of the Portmanteau. It has one scene setting which it uses thruout. This scene setting is painted with different colored lights: is made brighter or darker as the case may be. New backgrounds are added to it, or subtracted from it. But the scene framework remains the same. It is itself the Portmanteau Theater.

The stationary interior scene of the Portmanteau is wrought in four colors: black, blue, gilt and white—tho the note of white is used very sparingly. Half way up the walls of the scene are black—as if they were wainscoted in black. It is a dense black, with no suggestion of wood. Above this black the walls are a deep yet intense blue—the blue that is seen in the skies of Maxfield Parrish pictures. This blue is flecked with tiny disks of white and gold—disks that look like a constellation of faint stars. Where the blue joins the black, a narrow border of gold and black binds the colors together. The constellation of disks are just above this border at the right and left walls of the scene and appear again near the border in background.

There are three entrances. Doors at the extreme right and left facing each other, and made exactly alike have curtains of blue. In the background is a wide square arch, bordered in gold and black. Above it is a curious-looking half-circle design in the four colors of the scene. It is Eastern in its pattern, and might come from Japan or India.

This background arch is the most important thing, scenically speaking, about the Portmanteau Theater. Behind this archway glowing scenes may be placed, tropic in their color. Minarets may soar against a vivid sky, or storm clouds drift against the heavens, or curtains fall in sumptuous folds. Or poplar trees may stand in graceful silhouette, as they do in *The Moon Lady*.

Wide Studio

Stuart Walker as "Agmar," chief beggar in "The Gods of the Mountain," by Dunsany

The scene that is placed in this archway determines the whole atmosphere of whatever play is being produced, whether that play is laid in the Never-Never-Land, in France, in Far Japan, or in the Mountains of the Moon. All these are projected from this background scene. It dominates the play. Its power suggests and creates. It makes the rest of the stage into a palace, a temple, a garden or a street. It collaborates with the imagination of the audience.

Nothing is used on the stage of the Portmanteau that is not necessary to the forward action of the play. Instead of overloading his stage, Mr. Walker strips it. He relies on line and color for his effects. Indeed his stage is so small that any attempt at ornate furnishing would be in the way. It is surprising what an effect of largeness and mystery can be given in so small a space, and it is due to his unencumbered stage and his way of using it. His lighting, too, plays a prominent part in securing these results.

AS to the personnel of the company, Mr. Walker's players are young professionals more interested in gaining a hearing than in receiving inflated salaries. Mr. Walker looks forward to the time when he can charge fifty cents for every seat in his house. At present regular theater prices prevail with the Portmanteau. That is, fifty cents to two dollars a seat. But Mr. Walker gave a series of morning matinees for children, asking only twenty-five and fifty cents for the whole house.

The first plays produced by the Portmanteau Theater in its very early struggling days were *A Fan and Two Candlesticks*, by Mary MacMillan; *The Trimplet*, by Mr. Walker, and *Six Who Pass While the Lentils Boil*, a whimsy, also by Mr. Walker, which has since become celebrated. Then Mr. Walker added the strange parable plays of Lord Dunsany to his repertoire, staging *The Gods of the Mountain* (in three short acts), *The Golden Doom* (one act) and *King Argimenes and the Unknown Warrior* (two acts). Certainly these were not plays expected to appeal to the average audience. Yet Mr. Walker proved at once that there is a public for such dramas. He invested these plays with simple yet curiously lovely scenic effects, and with costumes rich in color and suggestion. Obviously these costumes were dyed under the eye of the director. There are some expensive materials, but in the main they seem to be created from inexpensive stuffs. Canton flannel, cotton crepe and cambric are made to look like fabrics brought from the mysterious East.

Besides the Dunsany plays, Mr. Walker gives Oscar Wilde's *Birthday of the Infanta*, and his own *Lady of the Weeping Willow Tree*, a three act

play of medieval Japan as charming as a willow ware plate come to life!

Another of his productions, *Gammer Gurton's Needle*, a medieval English play, is in direct contrast to his other plays, as it has bluff and hearty humor, and investiture of bluff and hearty colors.

Gordon Bottomly's *Crier By Night* is also given. The rest of the repertoire consists of brief interludes given before the curtain. That is, after the Dunsany play or the Wilde play has been acted, there is a pause while costumes are changed and a new background slipped into place behind the Portmanteau's blue and gold arch. A curtain is lowered and between the shallow space that lies between the curtain and the footlights an interlude is given. Quite in the Elizabethan manner stage attendants bring in a chair, a table, a lamp, or whatever is needed. The actors enter from right to left, and so the play begins.

There are several of these interludes. *Nevertheless, The Very Naked Boy, The Flame Man, The Medicine Show,* by Stuart Walker, and *Voices,* by Hortense Flexner.

White Studio

The Portmanteau Theater's Christmas present to New York—"The Seven Gifts," written by Stuart Walker, given by the players out-of-doors on Christmas Eve in Madison Square

Perhaps the exotic needs the balance of the commonplace. That can be the only reason why Mr. Walker chose these one act plays. The spell of Dunsany's Gods, or Walker's Old Japan, is suddenly broken. Modern clothes and modern chatter blot it out. Then again comes the strange and exotic. But the modern play has broken the atmosphere built up by the first Dunsany play, and it is difficult to become enthralled by the second offering.

Contrast is doubtless desirable, but there are other means by which it might be had. It does seem as if the fantastic play might be a better foil than the modern play. Tagore's *Chitra;* Florence Farr's *Mystery of Timel;* Evelyn Sutherland's *Road to Arcady* suggest themselves in this instance. People go to the Portmanteau expecting the unusual, so that a performance blending the exotic and the fantastic would not be out of the way.

But, after all, little theaters are an expression of personality. Mr. Walker's program expresses Mr. Walker's idea of what programs should be. If there are defects, those defects are slight ones. He has created a theater that is unique; he gives for the most part plays of a high order. There is no doubting his sincerity, his courage, or his artistry. He demands less of his players than of himself, for he is at once actor, regisseur and playwright. He has lent impetus to the Little Theater movement by taking a Little Theater on the road. And he has preserved intact Litle Theater ideals.

New York City

October First in the Great City

By Marguerite Wilkinson

The air is cooler—but it is still warm;
It is still bright—but the darkness comes earlier;
And the gods of October would veil in thin haze
The magic they make in the tops of the trees
Near the winding paths, near the drive by the river.

Yesterday the women were white and fine and starchy,
But today they are dark and furry and fuzzy;
Yesterday the men were tanned and casual,
But today they are all tight-lipped and earnest,
For vacations are over and summer is going.
Yesterday the streets were full of playing children,
But today the children are hidden from the morning,
Hidden in schools with their midsummer beauty,
Spirited away from the gods of October.

Yesterday in hallways of apartment buildings
The hallboys drowsed and the floors were bare;
Today the hallboys are brisk and busy,
Elevators creak and drone and murmur
And the old oriental rugs are brought in
And chained to the floor of the bare white hall,
And the hall seems fuller and darker and warmer.
Yesterday there was no sound in the morning
But the early hurdy-gurdy playing—playing
Tho all the tunes were tired. But today
The radiator sings a squeaky song of steam
And its ten gilded tubes rejoice together.

Yesterday in every towering hive of homes
A few bleak windows glared emptily at life,
Where faces were not nor any living touch
To stir the dull peace of stale white curtains;
But today the streets are choked with moving vans,
Moving hundreds of people to hundreds of places
With their grand pianos and their beds and tables,
With their trunks and carpets and cheap oak bureaus,
Bundles, bric-a-brac, and brutal pictures,
And other strange inhuman human goods,
Alien and strange to the gods of October.
But the streets are freshened by the beauty of lads
And the gayety of girls newly come from the country,
Selling things—peaches and adding machines—
Making things—millinery, music, and—money—
Dreaming things—wealth—fame—love—and the rest—
For the day of their dreaming is never, never done.

The air is still warm, but it is growing cooler—
Tho the darkness comes early it is still bright—
And the trees on the drive are a changeful glory—
Who honors with me the gods of October?

PAY AS YOU FIGHT

BY JOHN J. FITZGERALD

CHAIRMAN OF THE COMMITTEE ON APPROPRIATIONS, HOUSE OF REPRESENTATIVES

FOR eight weeks the House Committee on Appropriations has been in session seven or eight hours a day working out the War Deficiency Appropriation bill for the fiscal year ending next June. The committee, unaffected by any question of partizanship, without prejudice or bias, without desire to embarrass, and with no intention to shirk any duty, finally approved a bill which, with the proposed amendments, carries appropriations of $5,355,976,016.93, and authorized contract obligations of $2,401,458,393.75, a total of $7,757,434,410.

The result of two months' investigation on this bill and of five or six weeks' investigation in connection with the previous emergency bill has led me to believe that we have been remarkably fortunate in having accomplished what has been done, in view of the handicaps under which the departments of the Government have been laboring. I did not enter, and neither did any other member of the committee, upon those investigations with any bias in favor of the departments or with any desire to shield them if errors existed. We entered the investigation in the belief that the most effective service that the House could render would be, if it found errors, if it found inefficiency, if it found incapacity, not to make that the basis of criticism to embarrass, but to make it the basis of recommendations to eliminate inefficiency and incapacity. But, looking at the entire matter from that viewpoint, I am convinced, and I believe that is the view of all who have been connected with this investigation, that the country is fortunate in having accomplished so much in the time and under the conditions that have existed since we entered the war.

NO doubt the readers of The Independent will be interested in a brief review of our financial situation.

The contemplated expenditure during the current fiscal year, without attempting to anticipate conditions that may arise before next June requiring drafts on the Treasury, aggregates a grand total of $18,288,643,452. Of this sum, $1,977,210,200 is the amount appropriated in the regular annual appropriation bills. The pending deficiency bill carries $4,769,583,370. This is an addition to the emergency deficiency bill in the act of June 15, 1917, carrying $3,281,094,451. For the war-risk insurance bill $45,150,000 is provided. The soldiers' insurance bill will involve an expenditure this year of $176,250,000. We have provided $7,000,000,000 to be loaned to our allies, and the estimated interest on the public debt for the current year will be about $200,000,000.

The estimated revenue from ordinary sources for the current year is $1,333,500,000. It is estimated that the revenue bill as it will be finally approved, to which must be added the postal revenues of about $334,000,000, will raise this estimated total to $4,067,500,000.

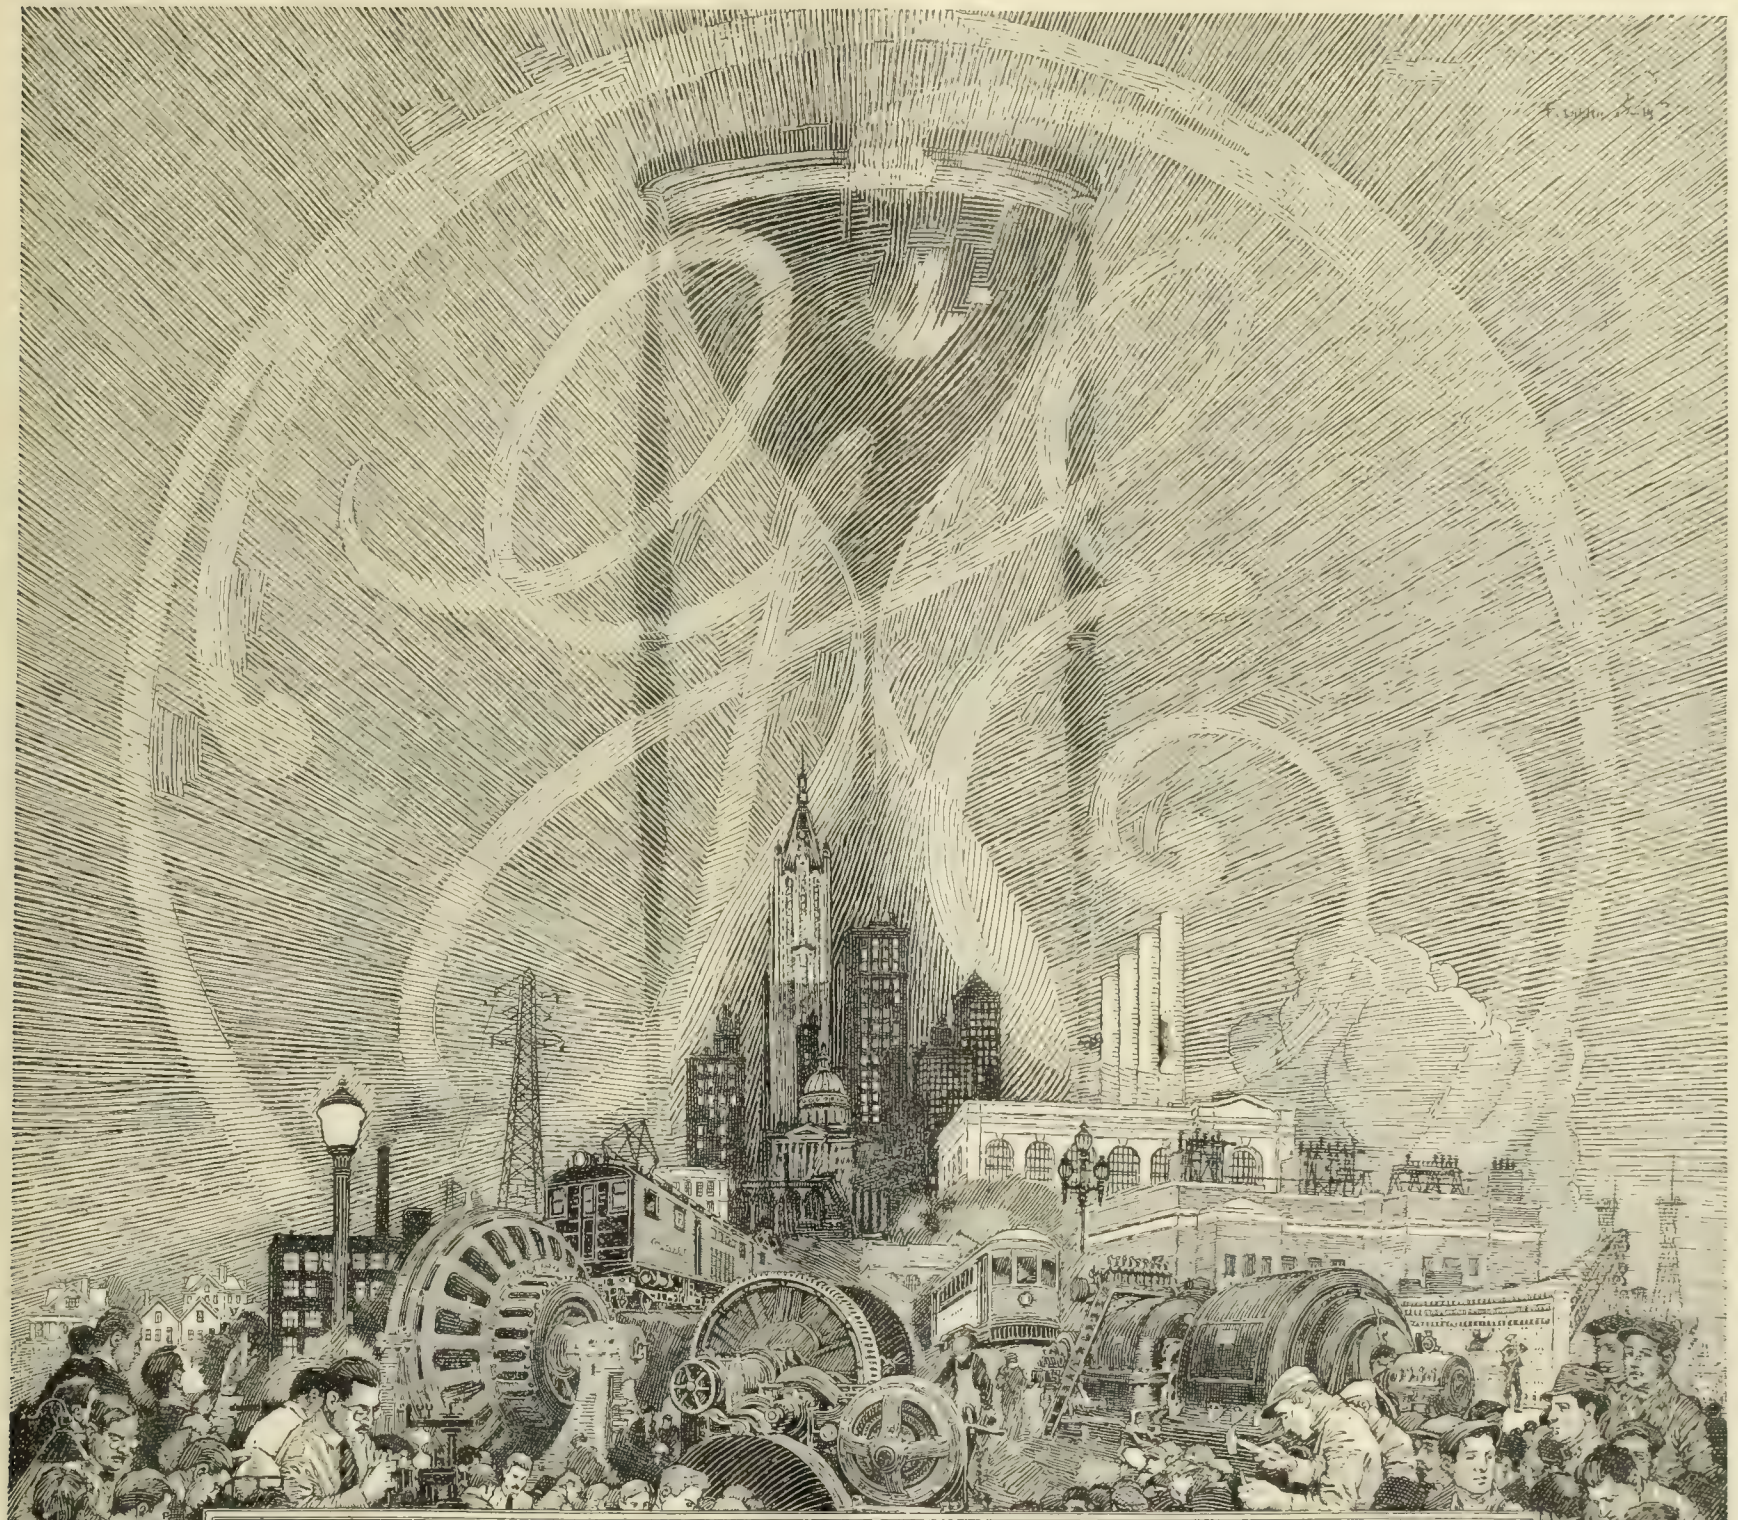
As our bond issue, considering both the financing of our operations and the advance to the Allies, aggregates $11,538,945,460, or a total anticipated revenue from loans and revenue of $15,606,445,460, the amount we propose to spend during the current fiscal year is $2,682,198,092 *more* than our estimated income. It is this very excess of expenditures above income that has led me to believe that before the end of the current fiscal year we will be compelled to take at least eighty per cent of the excess profits, and probably sixty per cent of all incomes above a very ordinary amount.

NOR is this all. One of the inevitable results will be what we are likely to face in the very near future, one of the things that the Congress has not been giving the attention which it ought to give. Under the law the departments of the Government are today preparing the estimates to be submitted to Congress at the beginning of the next regular session—next December—upon which appropriations for the fiscal year beginning the first day of July, 1918, are to be made. No living man can at this time prepare an estimate that has any value as to what the expenditures for the War Department or the Navy Department will be for 1919.

Paul Thompson

CONGRESSMAN FITZGERALD

There are two ways to overcome this difficulty. England adopted one method; France adopted another. The British Government adopted the system of telling the House of Commons that it was impossible to give any information, that they simply had to vote the moneys and let the Government spend them as they determined it to be necessary. The French system requires its grand commissions, of which there are twenty-three or so, to obtain of the Government estimates every three months for the funds required for the conduct of the war, and does not attempt to anticipate the future to an appreciable extent.



The present situation in this country, therefore, emphasizes more than any other period in the history of this Government that all of the appropriations of the Government ought to be in the control of one committee, so that one committee in the coming years will be able to hear and determine the relatively important or unimportant matters, and not put a burden upon the people because of lack of information that will exist and must exist if the eight or nine different committees are to make recommendations for appropriations.

EXCLUSIVE of the American expenditures, the total expenditures by the nations engaged in war since it began three years ago are approximately $90,000,000,000. The United States is proposing the first year it is engaged to expend about $18,000,000,000, which is, therefore, twenty-three per cent of the expenditures of all the nations in the three years they have been engaged in the war.

Great Britain has spent during that period, exclusive of $4,500,000,000 advanced to her allies, $18,500,000,000, and the United States is proposing to expend in one year as much as England expended in three years, more than the French expenditures of $15,327,400,000 by about three billion dollars, and nearly two-thirds of the total expenditures of Germany and Austria-Hungary—$34,100,000,000—in three years. The expenditures of Russia have amounted to about $15,000,000,000, an estimate more or less conjectural because of inability to get figures, but based upon studies of financial experts of the world, while Italy in a year and a half has expended $3,200,000,000.

These figures clearly indicate the necessity for money for financing the war—money in amounts which the mind cannot conceive. It is up to the great peoples of the allied countries, representing the great democracies of the world, to expend it for the sake of the world's combined welfare.

Washington, D C.

ACHIEVEMENT

Twenty-five years ago the General Electric Company was founded.

Since then, electricity has sent its thrill through the whole structure of life.

Eager to turn wheels, to lift and carry, to banish dark, to gather heat, to hurl voices and thoughts across space, to give the world new tools for its work—electricity has bent to man's will.

Throughout this period the General Electric Company has held the great responsibilities and high ideals of leadership.

It has set free the spirit of research.

It has given tangible form to invention, in apparatus of infinite precision and gigantic power.

And it has gone forth, co-operating with every industry, to command this unseen force and fetch it far to serve all people.

By the achievements which this company has already recorded may best be judged the greater ends its future shall attain, the deeper mysteries it yet shall solve in electrifying more and more of the world's work.

7317

GENERAL ELECTRIC COMPANY

SPEAKING OF INSURANCE

BY W. E. UNDERWOOD

DIRECTOR OF THE INDEPENDENT INSURANCE SERVICE

FOR some time past I have carried in my suspense file a brief message from one of our readers in the West requesting me to explain specifically the reason for my uncompromising hostility to the deferred dividend plan of life insurance. "Do you not think," he asks, "that dividends should be conserved?"

It makes no difference who this inquirer is, nor what are his relations to the system. He may be the agent of a company which is transacting that class of business; or his interest in the question may be limited to the holding of a policy of that kind. Whatever his position in the matter, he is evidently prejudiced in favor of the plan and disposed to defend it against criticism. Here is the evidence which I can produce against it.

First, let us dispose of the question he asks: "Do you not think that dividends should be conserved?"

I do. I desire to make the answer as unequivocal as possible. The great mass of life insurance in force, perhaps as much as eighty per cent of it, is for protective purposes, as distinguished from that which exists as savings or as it is improperly described, investments. The annual dividend on the average policy is a very small sum because the amount of the average policy is low—something like $2000. As the purpose is to defend dependents against the death of the bread-winner, all the money devoted to a policy, including the dividends, should be allowed to remain in it year after year, not only for twenty years—the longest term for which deferred dividends are written—but for life. They should be used to buy additions payable at death with the policy.

TO anybody but a life insurance man this would seem to represent me as a believer in deferred dividends; and that would be true but for the stipulations respecting the disposition of dividends contained in the policies issued under that description. My objection to those contracts rests principally on two facts. First, the company does not have to account to the policyholder for dividend earnings until the end of the term for which the policy is issued; second, all dividends are forfeited if the policyholder dies or lapses his policy before the expiration of the term. There are other objections growing out of these two which it is unnecessary to discuss. To my mind these two are sufficient to condemn the plan and, I may add in passing, this was the conclusion arrived at in 1906 by a committee of the New York legislature after a thoro investigation of the system.

It is found that the privilege of non-accountancy at least once a year leads to extravagance of management; and it is obvious that the provision for forfeiture in the event of death or lapse reduces the business to the level of a gambling game, with all the accrued dividends going to those who can stay to the end.

Under this system properly carried out the winnings of those who do stay to the end should be large; and I am of the opinion that the estimates of final distributive dividends made could be realized. But they never have been. There lies before me as I write a letter from a reader of this department (supplementing another written to me more than a year ago) who held a Twenty-Payment deferred policy in a comparatively small Western company. His policy matured about a month ago and he gives me the result of the settlement made. At the time he took the policy, which was for $2000, the company estimated that his dividend at maturity would be $449 per $1000, or a total of $898. Last month when the company settled with him he received a total of $240.10, a little more than twenty-five per cent of the estimate. He adds: "I have paid annually $15 more for this policy than a non-participating Twenty-Year Life would have cost me in any one of several Eastern companies. In other words, the company is returning to me but a portion of my excess payments without interest."

This experience is fairly representative of all the deferred dividend business and—omitting all consideration of the ethical side of the scheme, which alone should condemn it—proves it unprofitable as a commercial venture.

* * *

IT is the duty of citizens at all times to take scrupulous care of that portion of the national wealth entrusted to their keeping; it is imperative that they do so now. We have grown up to be a careless, wasteful and extravagant people. Suddenly confronted with the most destructive war in which the human race has ever been engaged, every ounce of substance counts. Billions of dollars worth of it already has been, is being and will be ruthlessly destroyed before the freedom of the world will be assured. Every ounce of food, every yard of cloth, every foot of lumber, every pound of paper, every ton of metal must be made to go as far as it can be. Nothing that can be saved must be thrown away.

Among our numerous extravagances we must include that which is represented by the property which goes up in smoke, amounting now to about a quarter of a billion a year. Expert fire insurance statisticians tell us that about eighty per cent of this loss is preventable, which means that thru carelessness and indifference amounting to crime we are permitting $200,000,000 of our capital to be destroyed every year.

Destroyed is the word. Do we realize its full meaning? I don't think we do. The actual significance of the thing has been obscured by insurance. A man owns a home worth $5000 and furniture and household goods worth $3000 more. He has $7000 insurance on it. The entire property is consumed by fire. He settles with the insurance companies and gets $7000. He concludes the loss to be $1000, the difference between the total value of the property and the insurance money. His personal loss is but $1000 but the loss to the commonwealth is $8000, the value of the property which has been annihilated.

Here is a grain elevator containing a million bushels of wheat, worth at present prices nearly $2,500,000. There is insurance on it to the amount of $2,000,000. It burns; the insurance is paid and the owners of the grain are out $500,000 net. But if you will take your mind off the dollars for an instant and concentrate it on wheat you will find that the nation's loss is just 1,000,000 bushels of necessary breadstuff. The insurance companies have not saved any of that wheat. Insurance has merely taken up a collection of $2,000 000 and partially reimbursed the owners of it. The wheat itself is gone. The food supply has been lessened to that extent.

We haven't any choice in the matter of this war—we've got to win it. The peace we are fighting for rests on nothing less than universal disarmament. That sounds a long way off, and perhaps it is, but that, I believe, is the only foundation on which it can rest permanently. We have undertaken a big contract, but we are young and strong and rich. We can deliver the goods if we pull together, every man, woman and child contributing his and her pound or ounce to the achievement of the task. This we must do in every department of activity. There can be no cessation, no rest, until the peace treaty we must have is signed. To realize this splendid vision all of us must be policemen and policewomen and policechildren guarding the national wealth. Remember that is the only capital we have to invest in this tremendous and perilous enterprize. Let us eat, drink and wear what we need, not what we want, leaving the surplus for the needs of the people of the nations who are fighting with us for the emancipation of the human race. Waste nothing; permit no one else to waste anything.

Included in this work must be an untiring vigilance in preventing the destruction of property by fire. As already indicated, the annual injury we suffer from that cause is serious and, I regret to report, the record for this year, up to date, is worse than during the same period last year. The fire insurance companies, thru the National Board of Underwriters, are coöperating with the Government by conducting a conservation campaign all over the country, its work having received the aid and support of all state and municipal authorities. Thru an army of special agents inspections are being made of all properties of special importance to the needs of the Government. Recommendations are being made to property owners for the correction of hazardous conditions with the result, says one report, "of correcting a surprizingly large number."

IT is important that every citizen help the National Board in this work. Householders should exercize care in handling inflammables; in seeing that their stoves, furnaces and lamps are kept in good order; that flues are clean and free from fractures; that hot ashes are not dumped into wooden receptacles; that lighted matches are not thrown on inflammable materials; that all electric wires are properly insulated.

Merchants, manufacturers and the owners of buildings in which business of any kind is conducted should respond cheerfully and promptly to requests made by the inspectors of the fire underwriters for the removal of existing hazards. The owners of buildings in which agricultural products, grain and textile materials are stored or manufactured should exercize the same willingness to help this work. From the tenant in the cheapest dwelling to the big factory, and from every person inhabiting or working in them, ceaseless contributions to this cause can and should be made. Our self-interest must be set aside while this war lasts. We must work for the whole country.

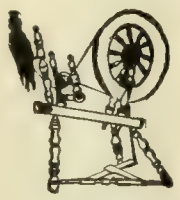
Most of us can't give our lives, but we can do the next great thing—give our devoted services. And let me assure you that much will be contributed in the effort to reduce the waste by fire.

CREATIVE CHEMISTRY

(*Continued from page 93*)

too free. It is fixt nitrogen that we want and that we are willing to pay for; nitrogen in combination with some other elements in the form of food or fertilizer so we can make use of it as we set it free. Fixt nitrogen in its cheapest form, Chile saltpeter, now costs $250 a ton. Free nitrogen costs nothing and is good for nothing. If a land-owner has a right to an expanding pyramid of air above him to the limits of the atmosphere—as, I believe, the courts have decided in the eaves-dropping cases—then for every square foot of his ground he owns 6½ tons of nitrogen worth over $1600 if it were in combination. The air is four-fifths free nitrogen and if we could absorb it in our lungs as we do the oxygen of the other fifth a few minutes breathing would give us a full meal. But we let this free nitrogen all out again thru our noses and then go and pay 35 cents a pound for steak or 60 cents a dozen for eggs in order to get enough combined nitrogen to live on. Tho man is immersed in an ocean of nitrogen, yet he cannot make use of it. He is like Coleridge's "Ancient Mariner" with "water, water, everywhere and not a drop to drink."

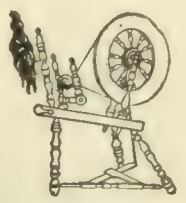
Nitrogen is, as Hood said not so truly about gold, "hard to get and hard to hold." The bacteria that form the nodules on the roots of peas and beans have the power that man has not of utilizing free nitrogen. Instead of this quiet inconspicuous process man has to call upon the lightning when he wants to fix nitrogen. The air contains the oxygen and nitrogen which it is desired to combine to form nitrates but the atoms are paired, like to like. Passing an electric spark thru the air breaks up some of these pairs and in the confusion of the shock the lonely atoms seize on their nearest neighbor and so may get partners of the other sort. I have seen this same thing happen in a square dance where somebody made a blunder. It is easy to understand the reaction if we represent the atoms of oxygen and nitrogen by the initials of their names in this fashion:



$$NN + OO \rightarrow NO + NO$$

nitrogen oxygen nitric oxide

The → represents Jove's thunderbolt, a stroke of artificial lightning. We see on the left the molecules of oxygen and nitrogen, before taking the electric treatment as separate elemental pairs and then to the right of the arrow we find them as compound molecules of nitric oxide. This takes up another atom of oxygen from the air and becomes NOO, or using a subscript figure to indicate the number of atoms and so avoid repeating the letter, NO_2 which is the familiar nitro group of nitric acid ($HO—NO_2$) and of its salts, the nitrates, and of its organic compounds, the high explosives. The NO_2 is a brown and evil-smelling gas which when dissolved in water (HOH) and further oxidized is completely converted into nitric acid.



The apparatus which effects this transformation is essentially a gigantic arc light in a chimney thru which a current of hot air is blown. The more thoroly the air comes under the action of the electric arc the more molecules of nitrogen and ogygen will be broken up and rearranged, but on the other hand if the mixture of gases remains in the path of the discharge the NO molecules are also broken up and go back into their original form of NN and OO. So the object is to spread out the electric arc as widely as possible and then run the air thru it rapidly. In the Schönherr process the electric arc is a spiral flame twenty-three feet long thru which the air streams with a vortex motion. In the Birkeland-

Reg. Trade-Mark

"The Linen Store"
Fifth Avenue
New York

Reg. Trade-Mark

direct attention to the new Fall stocks displayed in their Women's Wear Departments. Like the other sections of the store, these cater only to good taste and deal only in reliable quality. The favorite materials and colors for Gowns, Suits, Coats, etc., in vogue for the coming season are here in abundance, as well as Lingerie, Underwear, Neckwear, etc.

Gowns, Coats, Suits, Etc.

Street Frocks in Serge with smart pleatings in the new styles, $12.95, 15.95, 23.95 and up.

Tailored Suits in Wool Jersey, Oxford Mixtures, Wool Velours, Gabardines, etc., $32.75, 36.00, 38.50 and up.

Afternoon Dresses, Crepe de Chine, Soft Satins, Satin Charmeuse, in fascinating new colors and conceits, $21.50, 25.00 and up.

Evening and Dinner Gowns, Satin Charmeuse, Georgette Crepe, Silks, Chiffon Taffeta, trimmed with figured net, $23.95, 35.00, 36.50 and up.

Coats in the fashionable bulky cut, in Velours, Tweeds, and Plaids, $27.75, 28.50, 36.50 and up.

Blouses of Georgette Crepe, Crepe de Chine, Roman Striped Taffeta, Cotton Voile, $2.95 to $13.75.

Lingerie

Somehow the French still manage to send us attractive Embroideries and new designs in fine Lingerie. We are also showing the beautiful new Hand Embroidery that is now being produced in the Philippines, and a choice assortment of American Lingerie, which constantly improves in beauty.

Night Gowns, $1.95, 2.75 and up.

Chemises (Nainsook), $1.25, 2.50, 3.00 and up.

Envelope Chemises, $1.75, 2.00, 2.50 and up.

Corsets—Newest Fall Styles in Batiste and Coutil Corsets to fit all figures.

Send for new Fall Catalogue.

What 15c Will Bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little matter of **15c** in stamps or coin will bring you the Pathfinder **13** weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center, for the Nation; a paper that prints all the news of the world and tells the truth and only the truth; now in its 24th year. This paper fills the bill without emptying the purse; it costs but $1 a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your means. If you want a paper in your home which is sincere, reliable, entertaining, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. A dollar bill mailed at our risk will bring you the Pathfinder for a full year, or simply send **15c** to show that you might like such a paper, and we will send the Pathfinder on probation **13** weeks. The 15c does not repay us, but we are glad to invest in new friends. **Pathfinder, Box 39. Washington, D. C.**

The Simple Truth About Corns

A corn today is just as needless as a spot of dirt.

It can be ended almost as easily, as simply and completely as a spot of dirt.

The way is scientific. It was invented by a famous chemist. It is prepared by makers of surgical dressings, whom physicians respect.

It is called Blue-jay.

You apply it in a jiffy, and usually but once. There is no muss. The pain stops instantly and forever.

The action is gentle. It affects the corn alone. The corn is wrapped and protected, so you forget it. In two days, usually, the corn is gone. Only very tough corns need a second application.

The results are sure. The method is gentle, but no corn can resist it. Millions of corns are ended every month in this way. Don't use harsh methods —relics of the old days. See what Blue-jay does.

Prove it on one corn tonight.

B&B Blue-jay Corn Plasters
Stop Pain Instantly
End Corns Completely
25c Packages at Druggists

BAUER & BLACK *Makers of Surgical Dressings, Etc.* **Chicago and New York**

How Blue-jay Acts

A is a thin, soft pad which stops the pain by relieving the pressure.

B is the B&B wax, which gently undermines the corn. Usually it takes only 48 hours to end the corn completely.

C is rubber adhesive which sticks without wetting. It wraps around the toe and makes the plaster snug and comfortable.

Blue-jay is applied in a jiffy. After that, one doesn't feel the corn. The action is gentle, and applied to the corn alone. So the corn disappears without soreness.

TYPEWRITERS $10 up. All makes. Completely rebuilt. Five years' guarantee. Shipped on trial. Write today for our Special Proposition No. 115-A—positively *a list of biggest* bargains.

FOR SALE OR RENT: Beautiful home of the late E. P. Powell at Sorrento, Fla. Fourteen room house overlooking a lovely lake. (Miss) Gladys Powell, Clinton, New York.

BE A FARM MANAGER

Get away from the grind, earn big money. Study farming by mail and learn the latest money making scientific methods. You can get that nice little farm you have dreamed of for years. If you haven't enough money to buy it right now, take our Farm Manager's Course, and we'll help you get a position as Farm Manager at $1,000 to $5,000 per year, and you get your expenses paid besides.

STUDY FARMING By Mail
EARN $1,000 TO $5,000 PER YEAR
BIGGEST MONEY MAKING OPPORTUNITY EVER

You can complete our Farm Manager's Course in 6 months time by studying only during spare time. IF YOU ACT QUICKLY YOU CAN GET OUR REGULAR $100 FARM MANAGER'S COURSE FOR ONLY $67. Send $1 with the attached coupon and we'll hold this special low price open for you for six months. Meanwhile, you can look over our nicely illustrated catalog, and take your pick of our 48 different courses in Scientific Farming, all of which have greatly been reduced in price for a very short time only.

$1.00 STARTS YOU OUT ON ANY OF OUR COURSES AND RESERVES OUR REDUCED PRICES FOR SIX MONTHS

We must fill our classes quickly, so in order to do this we have cut the prices on all our courses. Our loss is your gain. Send $1.00 and the coupon below, now at once. You can either start your course, or wait until you get our catalog. Our terms are from $2.50 per month to $7.50 per month, so you can easily make your payments. Send $1 and get started right away, and save big money. If you don't want to take a course after seeing our catalog, we'll gladly return your money. References: Northwestern National Bank, Minneapolis. If You Only Want Our Catalog, Just Mail A Postal.

BE QUICK—MAIL COUPON—SAVE $33.00

The National School of Agriculture
212-47 News Bldg., Minneapolis, Minn.

Gentlemen: Enclosed find $1.00 for which reserve course and enroll me a course at your special reduced prices, for 6 months. I am to get my $1 back if I do not want a course.

SUCCESS ON THE FARM

Eyde furnace there is a series of semi-circular arcs spread out by the repellent force of a powerful electric magnet in a flaming disc seven feet in diameter with a temperature of 6300° F. In the Pauling furnace the electrodes between which the current strikes are two cast iron tubes curving upward and outward like the horns of a Texas steer and cooled by a stream of water passing thru them. These electric furnaces produce two or three ounces of nitric acid for each kilowatt-hour of current consumed. Whether they can compete with the natural nitrates and the products of other processes depends upon how cheaply they can get their electricity. Before the war there were several large installations in Norway and elsewhere where water power was available and now the Norwegians are using half a million horse power continuously in the fixation of nitrogen and the rest of the world as much again. The Germans had invested largely in these foreign oxidation plants, but shortly before the war they had sold out and turned their attention to other processes not requiring so much electrical energy, for their country is poorly provided with water power. The Haber process, that they seem to be making most of now, is based upon as simple a reaction as that we have been considering, for it consists in uniting two elemental gases to make a compound, but the elements in this case are not nitrogen and oxygen, but nitrogen and hydrogen. This gives ammonia instead of nitric acid, but ammonia is useful for its own purposes and it can be converted into nitric acid if this is desired. The reaction is:

$$NN + HH + HH + HH \rightarrow NHHH + NHHH$$
nitrogen hydrogen ammonia

The animals go in two by two, but they come out four by four. Four molecules of the mixt elements are turned into two molecules and so the gas shrinks to half its volume. At the same time it acquires an odor—familiar to us when we are curing a cold—that neither of the original gases had. The agent that effects the transformation in this case is not the electric spark—for this would tend to work the reaction backwards—but uranium, a rare metal, which has the peculiar property of helping along a reaction while seeming to take no part in it. Such a substance is called a catalyst.

But the uranium, osmium, platinum or whatever metal is used as a catalyzing agent is expensive and altho it is not used up it is easily "poisoned," as the chemists say, by impurities in the gases. The nitrogen and the hydrogen for the Haber process must then be prepared and purified before trying to combine them into ammonia. The nitrogen is obtained by liquefying air by cold and pressure and then boiling off the nitrogen at —190° C. The oxygen left is useful for other purposes. The hydrogen needed is extracted by a similar process of fractional distillation from "water-gas," the blue-flame burning gas used for heating. Then the nitrogen and hydrogen, mixt in the proportion of one to three, as shown in the reaction given above, are comprest to two hundred atmospheres, heated to 1300° F. and passed over the finely divided uranium. The stream of gas that comes out contains about eight per cent of ammonia, which is condensed to a liquid by cooling and the uncombined hydrogen and nitrogen passed again thru the apparatus.

The ammonia can be employed in refrigeration and other ways but if it is desired to get the nitrogen into the form of nitric acid it has to be oxidized by the process invented by the German chemist Ostwald. This is the reaction:

$$NH_3 + 4O \rightarrow HNO_3 + H_2O$$
ammonia oxygen nitric acid water

The catalyst used to effect this combination is the metal platinum in the form of fine wire gauze since the action takes place only on the surface. The ammonia gas is mixt with air which supplies the oxygen and the heated mixture run thru the platinum gauze at the rate of several yards a second. Altho the gases come in contact with the platinum only a five-hundredth part of a second yet eighty-five per cent is converted into nitric acid.

The Haber process for the making of ammonia by direct synthesis from its constituent elements and the supplemental Ostwald process for the conversion of the ammonia into nitric acid have been the salvation of Germany. As soon as the Germans saw that their dash toward Paris had been stopped at the Marne they knew that they were in for a long war and at once made plans for a supply of fixt nitrogen.

The chief German dye factories, the Badische Anilin and Soda-Fabrik, put $100,000,000 into enlarging its plant and has raised its production of ammonium sulfate from 30,000 to 300,000 tons. In 1917 the Badische plant is expected to produce 500,000 tons and when the war is over it can afford to sell nitrates "made in Germany" to the American farmer at half what he is paying for nitrates dug in Chile. One German electrical firm with aid from the city of Berlin has contracted to provide 66,000,000 pounds of fixt nitrogen a year at a cost of three cents a pound for the next twenty-five years. Meantime the British and American governments have not been idle. On the contrary they have spent the last three years in actively debating which process is the best and whether it is worth while to invest in any.

A year ago Congress appropriated $20,000,000 for a Government plant designed to supply the 180,000 tons of nitric acid which it was estimated we should need in case of a war "with a first-class power."

It was recently announced from Washington that the Government had decided to spend $3,000,000 of this to erect a plant in Virginia to produce 60,000 pounds of ammonia a day by a synthetic process, said to be superior to the Haber, which the General Chemical Company has developed and offered to the United States Government for munitions, without royalty.

Besides the Haber or direct process there are other methods of making ammonia which are, at least outside of Germany, of more importance. Most prominent of these is the cyanamid process. This requires electrical power since it starts with a product of the electrical furnace, calcium carbide, familiar to us all as a source of acetylene gas.

If a stream of nitrogen is passed over hot calcium carbide it is taken up by the carbide according to the following equation:

$$CaC_2 + N_2 \rightarrow CaCN_2 + C$$

calcium carbide — nitrogen — calcium cyanamid — carbon

Calcium cyanamid was discovered in 1895 by Caro and Franke when they were trying to work out a new process for making cyanide to use in extracting gold. It looks like stone and, under the name of lime-nitrogen, or Kalkstickstoff, or nitrolim is sold as a fertilizer. If it is desired to get ammonia, it is treated with superheated steam. The reaction produces heat and pressure, so it is necessary to carry it on in stout autoclaves or enclosed kettles. The cyanamid is completely and quickly converted into pure ammonia and calcium carbonate, which is the same as the limestone

The Instant Summons

"Instant, through copse and heath, arose
Bonnets and spears and bended bows;

* * * * *

As if the yawning hill to heaven
A subterranean host had given."

The whistled summons of Roderick Dhu, the hero of Scott's "Lady of the Lake," caused his Highland warriors literally to spring from the earth. Ere the echo died away, from behind bush and rock emerged the loyal and ready clansmen. In armed silence they awaited their chieftain's bidding and typified his might.

Today the Commander-in-Chief of our nation's armed forces and the resources behind them, can, by lifting the telephone receiver, instantaneously set in motion all the vast machinery of warfare, munitions, transportation and food conservation.

Like the Scottish mountaineers, the American people must stand in loyal readiness to perform any service in furtherance of the nation's high aim. Such a spirit of co-operation and sacrificing of individual interests can alone make certain the accomplishment of the great task to which our country is committed.

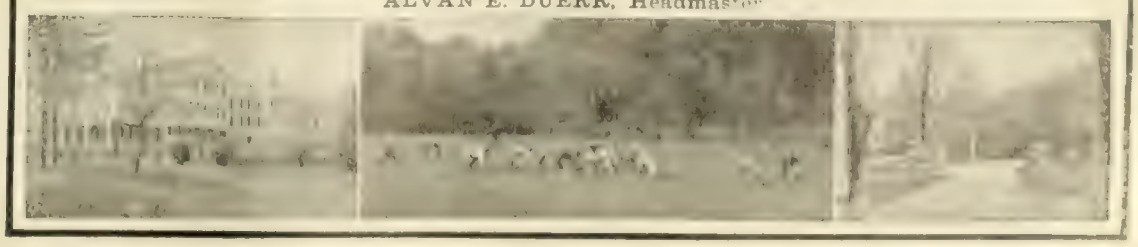
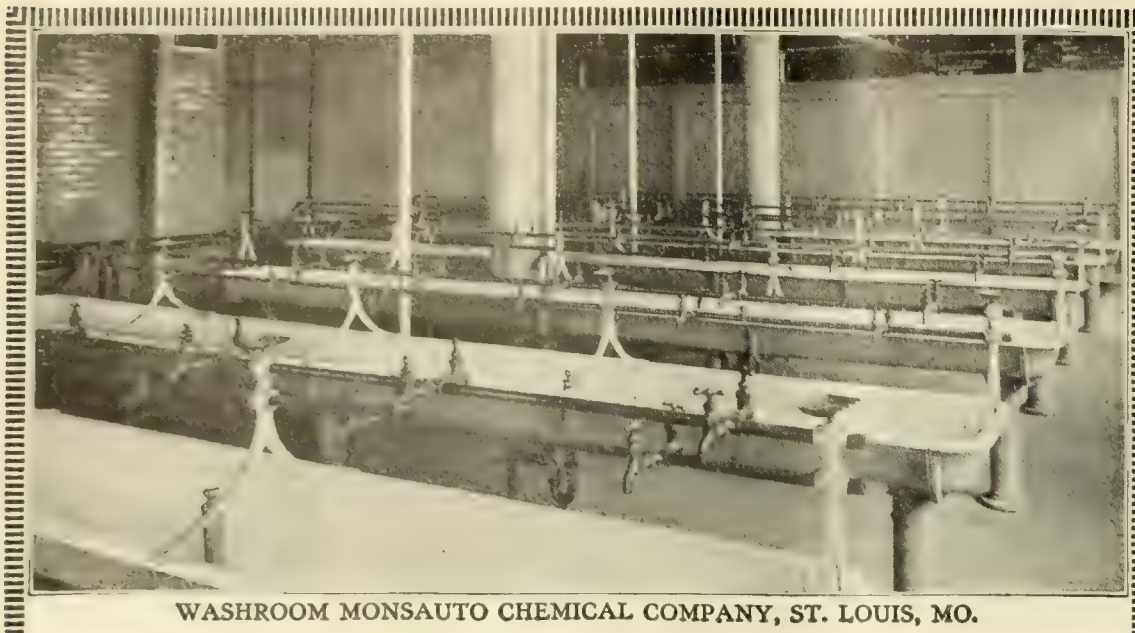
THE STONE SCHOOL

Cornwall-on-Hudson, Box 5, New York
FIFTY-FIRST YEAR

A School in the Heart of the Open Country. For Boys from 9 to 19.



LOCATION: 50 miles from New York on a spur of Storm King Mountain. 900 feet above sea level. Healthful, invigorating unusually adapted to a sane and simple outdoor life.



WORK: Preparation for College or Business Life; recent graduates in 12 leading colleges. Each boy trained physically and mentally to increase individual efficiency. Small classes: A teacher for every six boys.

ATHLETICS: Two fields with excellent facilities for all sports, under supervision; baking, woods life, swimming pool.

You are invited to come and see for yourself. Catalog sent on application.

ALVAN E. DUERR, Headmaster

WASHROOM MONSAUTO CHEMICAL COMPANY, ST. LOUIS, MO.

Treating Men Like Men—

by giving them clean, wholesome, sanitary conditions for their personal welfare and comfort—is as sure an investment for profit as any other part of your equipment. The efficiency of each employe is very materially increased.

"Standard" Fixtures Insure Sanitary Factory Conditions

and these in turn insure more work done, greater enthusiasm and loyalty on the part of employes.

"Standard" service men in most of the manufacturing centers will gladly discuss this matter of sanitary plumbing with you.

Write for a free copy of "Factory Sanitation"—and see "Standard" Fixtures for all uses at our showrooms in principal cities.

Standard Sanitary Mfg. Co., Dept. F-M, Pittsburgh, Pa.

If Your Eyes Are Not Normal

there is a perfectly safe and natural way of restoring perfect circulation of blood, which is all that weak eyes require.

It is in the nature of a gentle massage given over the closed lids for five minutes at a time twice a day, and for twenty years this method had been successfully used in correcting eye troubles and bringing back normal eyesight to young and old——

Many of those whom it has benefited had very serious eye troubles too, as is shown by their voluntary letters on the subject.

Just note what leading authorities say on the subject of eye massage—Doctor De Schweinitz of Philadelphia, Professor of Ophthalmology at Jefferson College, has stated that in treating even so serious a condition as dreaded cataract of the eye, massage of the eye-ball "has been followed by improvement in vision and deepening of the anterior chamber." The Medical Record, in treating the same subject, says that "the most feasible plan seems to be properly applied massage."

This system of massage to which we refer is fully explained in a scientific book on "The Eyes—Their Care, Their Ills, Their Cure," which may be obtained free on request from *The Ideal Masseur Co.*, 870 Broad Street, Newark, N. J., if you will mention The Independent.

The most effective helps for our weaknesses nowadays are often the most simple and safe. Hosts of people have saved themselves from the nuisance of constantly wearing eye-glasses by using this massage (or exercise), so it will probably be well worth your while to at least inform yourself further by writing for the little book which treats the subject so thoroughly.

from which carbide was made. The reaction is:

$$CaCN_2 + H_2O \rightarrow CaCO_3 + 2NH_3$$

calcium cyanamid — water — calcium carbonate — ammonia

Another electrical furnace method, the Serpek process, uses aluminum instead of calcium for the fixation of nitrogen. Bauxite, or impure aluminum oxide, the ordinary mineral used in the manufacture of metallic aluminum, is mixt with coal and heated in a revolving electrical furnace thru which nitrogen is passing. The equation is:

$$Al_2O_3 + 3C + N_2 \rightarrow 2AlN + 3CO$$

aluminum oxide — carbon — nitrogen — aluminum nitride — carbon monoxide

Then the aluminum nitride is treated with steam under pressure, which produces ammonia and gives back the original aluminum oxide, but in a purer form than the mineral from which was made

$$2AlN + 3H_2O \rightarrow 2NH_3 + Al_2O_3$$

aluminum nitride — water — ammonia — aluminum oxide

The Serpek process is employed to some extent in France in connection with the aluminum industry. These are the principal processes for the fixation of nitrogen now in use, but they by no means exhaust the possibilities. For instance, Professor John C. Bucher, of Brown University, created a sensation last January by announcing a new process which he had worked out with admirable completeness and which has some very attractive features. It needs no electric power or high pressure retorts or liquid air apparatus. He simply fills a twenty foot tube with briquets made out of soda ash, iron and coke and passes producer gas thru the heated tube. Producer gas contains nitrogen since it is made by passing air over hot coal. The reaction is:

$$2Na_2CO_3 + 4C + N_2 = 2NaCN + 3CO$$

sodium carbonate — carbon — nitrogen — sodium cyanide — carbon monoxide

The iron here acts as the catalyst and converts two harmless substances, sodium carbonate, that is, common washing soda, and carbon, into two of the most deadly compounds known to man, cyanide and carbon monoxide, which is what kills you when you blow out the gas. Sodium cyanide is a salt of hydrocyanic acid, which for some curious reason is called "Prussic acid." It is so violent a poison that, as the freshman said in a chemistry recitation, "a single drop of it placed on the tongue of a dog will kill a man."

But sodium cyanide is not only useful in itself, for the extraction of gold and cleaning of silver, but can be converted into ammonia, and a variety of other compounds such as urea and oxamid, which are good fertilizers; sodium ferrocyanide, that makes Prussian blue; and oxalic acid used in dyeing. Professor Bucher says that his furnace can be set up in a day at a cost of less than $100 and can turn out 150 pounds of sodium cyanide in twenty-four hours, and it may therefore prove useful in the present emergency. This process also has been placed freely at the disposal of the United States Government for the war.

America will need at least 180,000 tons of nitric acid this year for munitions, and it is hard to get it from Chile on account of the shortage of ships. We have been wasting about twice that every year because we did not use coke-ovens that save the by-products among which is ammonia. Three hundred and fifty thousand tons of ammonia went off in smoke in 1914; enough not only to supply all the high explosives we can shoot, but also to furnish a whole army with food if applied to our fields.

For nitrogen plays a double role in hu-

man economy. It appears like Brahma in two aspects, Vishnu the Preserver and Siva the Destroyer.

Here I have been concerned chiefly with the maleficent aspect, with the use of nitrogen in war. In my next article I will deal with its beneficent aspect, the use of nitrogen in peace.

WHAT TO READ ON THE NITROGEN QUESTION

The reader who may be interested in following up this subject will find references to all the literature of the last five years in the summary by Helen R. Hosmer, of the Research Laboratory of the General Electric Company, in the *Journal of Industrial and Engineering Chemistry*, New York, for April, 1917. Bucher's paper may be found in the same journal for March, and the issue for September contains a full report of the action of U. S. Government and a comparison of the various processes. Send fifteen cents to the U. S. Department of Commerce (or to the nearest custom house) for Bulletin No. 52, Special Agents Series on "Utilization of Atmospheric Nitrogen" by T. H. Norton. The Smithsonian Institution of Washington has issued a pamphlet on "Sources of Nitrogen Compounds in the United States." In the 1913 report of the Smithsonian Institution (sent free to every public library) there are two fine articles on this subject: "The Manufacture of Nitrates from the Atmosphere" and "The Distribution of Mankind," which discusses Sir William Crookes's prediction of the exhaustion of wheat land. The D. Van Nostrand Co., New York, published a monograph on "Fixation of Atmospheric Nitrogen" by J. Knox (75 cents). The American Cyanamid Company, New York, gives out some attractive literature on their process.

The following books on industrial chemistry in general are recommended for reading and reference in connection with this series of articles: "The Chemistry of Commerce" by Robert Kennedy Duncan (Harper, N. Y., $2), "Modern Chemistry and Its Wonders" by Martin (Van Nostrand, $2), "Chemical Discovery and Invention in the Twentieth Century" by Sir William A. Tilden (Dutton, N. Y., $3.50), "Industrial Chemistry" by Allen Rogers (Van Nostrand, $5).

QUESTIONS FOR STUDENTS

What is the difference between a battle fought before the invention of gunpowder and one fought after it? How does a battle fought with gunpowder, like those of our Civil War, differ from one fought with high explosives, like those of the present war? Compare the kind of weapons used, the distance between the combatants and the means of protection in the three types of warfare.

What is said in Shakespeare's I Henry IV about "villainous saltpeter" making war unsuitable for a gentleman?

How is the war impoverishing the food supply of the future?

Was Sir William Crookes right when he said that the world would run short of bread in 1931? (See Smithsonian Report, 1913, p. 555.) Are there any present indications of such a wheat famine? How can it be prevented or postponed?

Which of the four processes for the fixation of nitrogen would be most profitable in your locality? Consider the availability of materials and power and the salability of the products.

As Mr. Holter was walking thru the park one afternoon he noticed a very tired-looking little boy seated on one of the benches with his chin resting in his hands.

"What is the trouble, my boy?" queried the kind old gentleman.

"I wish I was rich," was the answer.

"What would you do with your money if you were rich?" asked Holter.

"I'd buy a great big motor-car, sir," answered the little chap, "so I could fly my kite out of the back of it without running my legs off."—*Harper's Magazine.*

An Irishman was taken before the tribunal as a conscientious objector. The sergeant asked him to state his reasons to the court.

"I refuse to fight for any country that has not a commander in chief for the field, an admiral for the fleet, or a prime minister."

"You are a fool," said the chairman. "Where are there better men than Sir Douglas Haig, Admiral Beattie and Lloyd George?"

"Well," said the Irishman, "Sir Douglas Haig is a Scotsman, Admiral Beattie is an Irishman and Lloyd George is a Welshman."

"The case dismissed. Next, please."—*Postscript.*

How a 23 Year Old Boy Earns $15,000 a Year

A Lesson in Fortune Making

By James C. Rhodes

This is the remarkable story of a mere boy, who jumped from a salary of $20 a week two years ago, to earnings now of $15,000 a year. There is nothing remarkable about him—he is just an ordinary boy, fond of fun, mild mannered, soft spoken, pleasing in appearance. He had only an ordinary education, no capital to start with and was not presented with an opportunity ready-made. Moreover, he achieved his success in a city of 20,000 people, where most other young men said "I'm going to New York—there's no chance for me in this town."

Two years ago this young man went into business for himself. In six months he lost every penny he had saved and about a thousand dollars which he borrowed. He secured a position at $20 a week and began to think about his failure. As is usual in cases like this, he blamed everything and everybody, except himself.

One day in his new position he was confronted with a proposition that had to be accepted or rejected at once. Deep down in his heart he knew his employer would approve of the decision he was about to make, and since only a small sum of money was involved, there was no great risk. *But he took no action.*

Upon his employer's return, the young man was shown wherein he was wrong in not accepting the responsibility of making the decision he knew was right. "It isn't the money," said his employer, "for it is only a small amount; but I like people around me who can decide things for themselves. I would rather have one man who made mistakes by *trying to help* the company, than to have ten men who never made mistakes, because they *never attempted* anything. The trouble with you is that you have no real *spunk*—you have no will of your own—you depend on others too much."

That was the one thing the young man needed most to know. He realized immediately that he had failed previously in business—that he was being held back now because he was afraid of every business man he met. He *expected* to be turned down whenever he wanted anything—and he *was*. He had no nerve. He was easily swayed by every glib talker.

He realized, for the first time, that his will was not strong enough to smash his ideas across, to give him the power of definite and decisive action. He realized that heretofore he gave up too easily—he had allowed obstacles to turn him from his purpose instead of *overcoming* them. From that time on he became a changed person. He began to assert himself—he began to practice the development of his will power. He commanded and demanded and fought where formerly he had been satisfied to accept what was handed to him.

In a short time he left his position to again go into business for himself. During the first year he earned $10,000. During 1917 his earnings thus far indicate a profit for the year of at least $15,000. And he is just beginning.

This is but one case where the tremendous power of the human will has proven to be the greatest single force in business and in fortune-building.

Interesting and inspiring are several other cases that have come to my personal attention, because the same methods are open to us all no matter how young or how old we may be.

One is that of a man who was $6,000 in debt three years ago. Since then he has accumulated $200,000 without speculating and today is earning $1,000 a week. He is only one of many who frankly credit their good fortune to Prof. Frank Channing Haddock and his very remarkable book "Power of Will." Another is a young man who worked in a big factory. One day he met Mr. W. N. Taylor, the noted efficiency expert, who advised him to read "Power of Will." He did so, applied himself to the training of his will, and in less than one year his salary was increased to more than eight times what he had been earning.

Then there is the case of C. D. Van Vechten, General Agent of the Northwestern Life Insurance Company. After his first examination of Prof. Haddock's methods and lessons in will power development, as published in "Power of Will" he told the author that they would be worth $3,000 to $30,000 to him.

Another man, Dr. H. D. Ferguson, residing in Hot Springs, Ark., increased his earnings from $40 a week to $150 a week in a remarkably short space of time after he began the study of will training. Will power training by Haddock's system has enabled thousands to conquer drink and other vices almost overnight—has helped overcome sickness and nervousness—has transformed unhappy, envious, discontented people into dominating personalities filled with the joy of living.

In this new book Prof. Haddock, whose name ranks with Bergson, James, and Royce in the scientific world, has given to the world for the first time a practical, simple system of rules and exercises for will power training that has completely revolutionized the lives of thousands of people. For the will is just as susceptible to exercise and training as any muscle of the body.

"Power of Will" is being distributed by the Pelton Publishing Co. of Meriden, Conn. Any reader who cares to examine the book may do so without sending any money. If, after five days, you do not feel that this book is worth the $3 asked for it, return it and you will owe nothing.

Some few doubters will scoff at the idea of will power being the key to wealth and achievement. But intelligent men and women will investigate for themselves by sending for the book at the publisher's risk.

Among the 200,000 owners who have read, used, and praised "Power of Will," are such prominent men as Supreme Court Justice Parker; Wu Ting Fang, ex-U. S. Chinese Ambassador; Lieut.-Gov. McKelvie of Nebraska; Assistant Postmaster-General Britt; General Manager Christeson of Wells-Fargo Co., E. St. Elmo Lewis; Governor Arthur Capper of Kansas, and thousands of others equally prominent.

As a first step in will training, act on your present impulse to write a letter or address this coupon to the Pelton Publishing Company, 23-S Wilcox Block, Meriden, Conn., and the book will come by return mail. This one act may mean the turning point of your life. Do not hesitate.

PELTON PUBLISHING COMPANY
23-S Wilcox Block, Meriden, Conn.

I will examine a copy of "Power of Will" at your risk. I will remail the book in 5 days or send you $3 in payment for it.

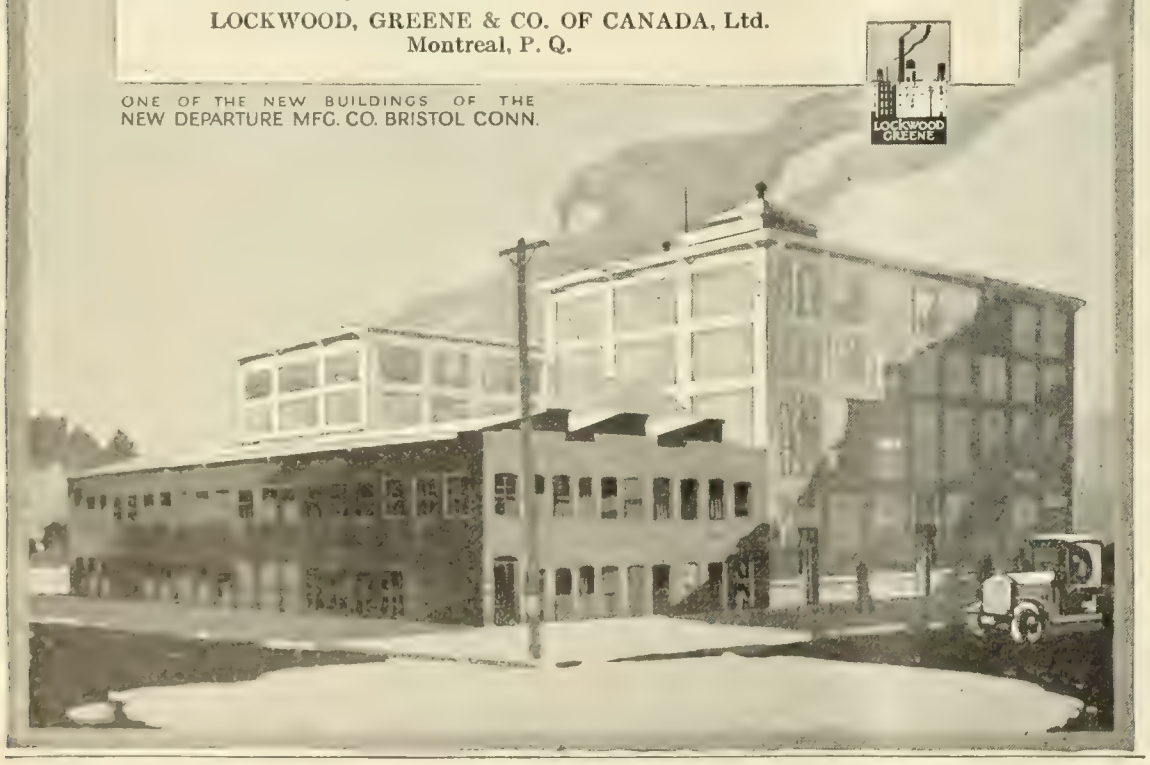
LOCKWOOD, GREENE & CO.
ENGINEERS

THIS country is coming upon new and larger industrial opportunities. War is rapidly modifying conditions, and the man who today proposes a new industrial project must be guided by sound engineering judgment.

The service of Lockwood, Greene & Co. is particularly adapted to modern requirements. It combines the highest engineering skill and a practical knowledge of industrial and business conditions. Our work includes the *planning* of any industrial undertaking, the *designing* of the plant, layout of machinery and equipment in detail and *superintending* the construction.

For 85 years, Lockwood, Greene & Co. have led in the development of industries with which they have been connected. More than 2500 industrial plants in all parts of the country testify to the ability to solve the varied problems of clients.



If you are interested in the development of an industrial enterprise of any kind, write to our nearest office for booklet, "Industrial Buildings."

The New Books

A Boy and Some Kings

UNEASY lies the head that wears a crown. This familiar saying might well be the motto of Mary Roberts Rinehart's charming story of a royal boyhood, *Long Live the King*. There has never been a better picture of the cruel contrast between court life and the heart of youth than this tale of a prince in a petty European monarchy who tries to extract a little boyish fun from a choking atmosphere of foreign intrigue, Nihilist conspiracy, ceremonious etiquet and cold-blooded statecraft. Altho heir to a throne he was not allowed to keep a pet dog or to play with other boys or to neglect his exacting program of studies, and the only real pleasure in his barren life was the day when he escaped from his retinue of guardian servants and played with a little American boy whose parents had come to the country.

But the prince is, after all, the happiest individual at court, for he alone is unconscious of the dangers of war and revolution which surround the throne and his conscience is unperplexed by subtle temptations to treason or by the supposed necessity of making a loveless marriage for "reasons of state." The monarchical system which denies boyhood to a prince denies womanhood in a princess and manhood in a king or courtier. All of the characters of the book are real human beings, not creatures of pen and ink, but their humanity is thwarted by the inhuman political system of which they are a part. But in spite of the stern and penetrating study of character which somewhat distinguishes the book from the lighter fiction of Mrs. Rinehart, there is enough incident and adventure, enough incidental humor and enough straightforward melodrama to please any reader. No one has to bother with the psychology of the book unless he wants to do so.

Long Live the King, by Mary Roberts Rinehart. Houghton Mifflin. $1.50.

Civilizing Cities

ONE of the best recent studies and discussions of American municipal government in the present age of reform is *The Emancipation of the American City*, by Walter Tallmadge Arndt. Among the topics discussed are city home rule, the short ballot, commission government and the city manager, proportional representation, the initiative, referendum and recall, non-partizan administration, municipal ownership and the passing of His Potency the Boss. The appendix contains suggestions for model city charters and a bibliography on municipal reform. We do not think that any course in civics should fail to have Mr. Arndt's book on the list of required readings.

Civilized Commercialism, by Ernest G. Stevens, is a long denunciation of the evils of unrestricted competition which, in the opinion of the author, inevitably lead to monopoly and economic oppression. Mr. Stevens opposes any attempt to solve the problem by breaking up big business, but he advocates a new commercial code which will prohibit any business to fix different prices for different purchasers or in any

other respect to treat buyers unequally. The history of *Workmen's Compensation*, particularly in the United States, is authoritatively related by J. E. Rhodes. The book is carefully documented in relation to legal decisions and gives a summary of the laws of the different states which have enacted workmen's compensation acts. There is a full bibliography.

A special study in a field of unusual interest is *Jewish Philanthropy*, by Boris D. Bogen. This is a complete and detailed survey of all the forms of Jewish self-help represented in American Jewry and especially in the Ghetto of New York City. The special value of the book lies in its intimate acquaintance with the problems facing the American Jew as distinguished from those confronting immigrants of different nationality and tradition. It is impossible to treat a Jewish community, however poor and however greatly in need of help, without reference to complex considerations of history and religion which are best understood by the leaders and philanthropists of the race.

The milk question is one of the greatest problems of our civilization, as milk is perhaps the most essential and irreplaceable of foods and at the same time, when improperly looked after, one of the chief sources of disease. Within four years more than four thousand cases of disease were traced to impure milk in the city of Boston alone and the very fact that such close record was kept shows that Boston looked after its milk supply more carefully than most cities have done. The wonderful system of precautions which has in recent years been called into existence to safeguard the purity of the milk supply is detailed in J. Scott MacNutt's valuable discussion of *The Modern Milk Problem*, and a more special study of Nathan Straus's work for pasteurization is *Diseases in Milk*, by his wife, Lina Gutherz Straus.

The Emancipation of the American City, by W. T. Arndt. Duffield & Co. $1.50. *Civilized Commercialism*, by E. G. Stevens. E. P. Dutton & Co. $1.25. *Workmen's Compensation*, by J. E. Rhodes. $1.50. *Jewish Philanthropy*, by B. D. Bogen. $2. *The Modern Milk Problem*, by J. S. MacNutt. $2. The Macmillan Company. *Diseases in Milk*, by L. G. Straus. E. P. Dutton & Co. $2.50.

Nietzsche or Christ?

NIETZSCHE has often been accused of, or complimented with, the responsibility of leading present-day Germany into a state of mind that made world peace and coöperation impossible. To his teaching has been attributed the German alternative of world mastery or downfall. He regarded himself, and has been regarded by others, as the greatest philosophical foe of Christianity. And yet there is much in his criticism of Christian thought and practise that is not opposed to Christian fundamentals, but might rather be taken as a tonic for the true Christian spirit.

The relation of Nietzsche to contemporary thought and particularly to Christianity, as well as to the prevailing ideals in Germany, are well brought out in Dr. Figgis' Bross Lectures on *The Will to Freedom or the Gospel of Nietzsche and the Gospel of Christ*. The author gives a brief and illuminating survey of the life of Nietzsche and the effects of his physical infirmities upon his writings.. His attack upon Christianity as a decadent religion, or a religion of decadence, "slave morality" and cowardice is well delineated, but shown by the author to have been based largely upon an essential misunderstanding. Dr. Figgis recognizes Nietzsche's originality and charm and regards him as one of the most vital forces in the progress of phil-

Why is the Large Intestine Five Feet Long?

Modern Science Declares that if Nature Had Made the Colon Shorter, Half the Ills of Mankind Would Not Exist—How Medical Science Now Combats this Problem

A VERY remarkable book, "Colon Cleanliness," has recently been published by Martin's Method, Inc. Written by an authority, this book discusses—in a clear and fascinating narrative—what has been called "Nature's big mistake," the large intestine in man. Scientists now agree that poisons emanating from the large intestine are responsible, directly or indirectly, for many of the diseases to which mankind is heir. This book therefore possesses a tremendous interest to every man and woman. Incidentally it describes for the first time, in a popular way, an important invention which steps into the breach left by Nature and repairs some of the ills caused by the length of the large intestine. This invention is now being used in many hospitals and sanatoriums and by physicians in private practise.

Few people realize, this book points out, that the large intestine—coiled around in a small space in the abdomen—*is usually at least five feet long*. It is, in a sense, a long exhaust pipe for the body. The waste matter of our food reaches it in a semi-liquid state. The function of the large intestine is to extract the liquid from this matter, and to discharge the residue from the body. This long exhaust pipe works by a series of muscle-contractions along its five-foot length.

Five Feet Too Much for Lazy Muscles

But very often these muscles work improperly. They are, in plain words, *lazy*. They are so lazy that they are incapable of pushing along the waste matter a distance of five feet. The result is that the colon gets *clogged*. It then becomes a veritable bed of decomposing matter. Not merely millions, but billions of disease germs are generated in it. These are absorbed into the blood, and are carried to every part of the body, producing the condition, so much written about of late in medical journals, known as "auto-intoxication."

"Colon Cleanliness" tells, for the layman, exactly what happens to the various organs of the body when this condition occurs. It is an amazing narrative. Science, like a detective, has now traced many diseases to the clogged condition of the large intestine. Indirectly and directly the lazy large intestine causes more illness; kills more people; affects our health, our happiness, and our efficiency more vitally than all the other organs of the body put together.

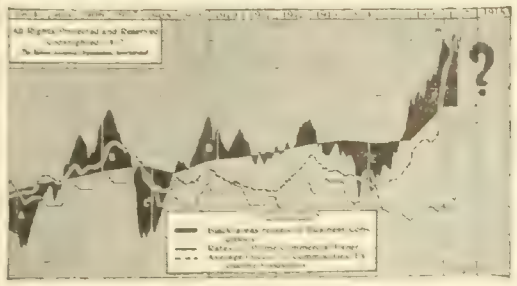
The colon is, in a sense, a traitor to the rest of the body. By lying down on its work, it throws the whole splendid balance of the body "out of gear." It causes many of us to become seriously diseased, and the rest of us it puts into a poisoned half-alive condition. How often do we really feel up to par, really ourselves; with our brains keen and quick; our bodies tingling with vitality? So seldom that most of us talk about it, in surprise, when we feel "fit." Thanks to the lazy, large intestine, it is the unusual condition for us to be *fully alive*. The contrary, of course, should be the case.

How Nature Made the Mistake

Professor Elie Metchnikoff, in the great work in which he first pointed out the method and effects of auto-intoxication, has an interesting theory about the large intestine. Nature made it so long, he theorized, because originally man was an active wild animal. He was often in danger from other animals and would have to run long distances. For his safety it was necessary to have an organ in which waste matter could be stored. There was, however, little danger of clogging of the colon, because continous natural exercise kept man's colon from being lazy. Its muscles functioned normally.

The large intestine which Nature fashioned was perfectly adapted to our former life. It is not adapted to modern life. Man is no longer a wild animal. He is easily the most inactive large animal on earth. He is a sitting animal. He almost never walks when he can ride. The first thing physicians tell him usually, when he is in a run-down condition, is to "get out in the air and exercise." But many of us are *too busy* to exercise; and still more of us, when we exercise; exercise the *wrong* muscles. The most important, the most vital muscles to exercise are those of the large intestine, for the simple reason that those muscles *cause more trouble by their laziness* than all the other lazy muscles put together.

Man's Inventive Power to the Rescue



"Colon Cleanliness," after describing minutely the problem of the large intestine—as discussed by many scientific authorities—deals with the invention that is now used to combat the laziness of the large intestine. This is a simple contrivance which does nothing else but *exercise* the large intestine. It wakes the large intestine to its job. It is called the Kolon Motor, and is a very simple device, since it can be operated by a child. Observations of its effect in hospitals and by private physicians show remarkable results. One merely puts the Kolon Motor on a door or wall, leans up against it and turns the handle for a few minutes. The face rotates with a scientific waving motion, which immediately stimulates the colon and causes proper functioning. Two or three minutes a day is all that is required.

In this simple fashion the colon muscles are exercised as much as they would be in taking a brisk walk of two or three miles. In medical circles it is recognized that this invention meets the problem of colon laziness in a logical, effective fashion. It is without the slightest harmful results, such as follow the taking of drugs, *which usually only have the effect of making the large intestine more lazy.*

This Book is Free

A copy of the book "Colon Cleanliness" can be secured gratis by any reader of this magazine. It is a book every man and woman should read carefully. While written in a popular style, it treats, with scientific precision, of a problem that affects the daily life of every human being. The shortcomings of the large intestine, the diseases that are caused by it, the manner in which these diseases are caused, and other fascinating aspects of this problem—are covered fully and clearly.

The book may be secured by addressing the publishers, Martin's Method, Inc., who are also the manufacturers of the Kolon Motor. They had this scientific treatise, "Colon Cleanliness," written by a physician, so that the public could clearly understand the importance of the many discoveries made of late in regard to uncleanliness in the large intestine. Only incidentally does the book treat of the Kolon Motor, in discussing the different efforts made by physicians to combat this great problem. The book, in other words, is a scientific work, and in asking for a copy one does not need to feel that the purchase of a Kolon Motor is involved. The makers are satisfied merely to set the scientific facts before the public. The book will be sent free to any one who asks for it. Address, Martin's Method, Inc., Dept. 514, 105 East 24th St., New York.—*Adv.*

DIVIDENDS

American Light and Traction Company

The Board of Directors of the above Company, at a meeting held October 2, 1917, declared a cash dividend of One and One-half (1½) Per Cent. on the Preferred Stock, a Cash Dividend of Two and One-half (2½%) Per Cent. on the Common Stock, and a dividend at the rate of two and one-half (2½) shares of Common Stock on every one hundred (100) shares of Common Stock outstanding, all payable November 1, 1917.

The Transfer Books will close at 3 o'clock P. M. on October 10, 1917, and will reopen at 10 o'clock A. M. on October 29, 1917.

C. N. JELLIFFE, Secretary.

AMERICAN TELEPHONE AND TELEGRAPH COMPANY

A dividend of Two Dollars per share will be paid on Monday, October 15, 1917, to stockholders of record at the close of business on Saturday, September 29, 1917.

G. D. MILNE, Treasurer.

PACIFIC GAS AND ELECTRIC COMPANY.

COMMON STOCK DIVIDEND NO. 12.

A quarterly dividend of $1.25 per share, upon the Common Capital Stock of this Company, for the three months ending September 30, 1917, will be paid on October 15, 1917, to shareholders of record at 12:00 o'clock noon, September 29, 1917. The Transfer Books of the Company will not be closed. Checks for the dividend will be mailed.

PACIFIC GAS AND ELECTRIC COMPANY.
A. F. HOCKENBEAMER,
Vice President and Treasurer.

San Francisco, California, September 29, 1917.

UNITED CIGAR STORES COMPANY OF AMERICA

Common Stock Dividend No. 20.

A regular quarterly dividend of 2% has this day been declared upon the Common Stock of this Company issued and outstanding, payable November 15, 1917, to Common stockholders of record at the close of business on October 26, 1917.

The stock books will not be closed.

GEORGE WATTLEY, Treasurer.

Dated, October 4, 1917.

osophy and ethics. As he puts it, "Nietzsche is a good tonic, but a bad food."

As an offset to Nietzsche's emphasis of the will to power, Dr. Figgis would place the Christian doctrine of the "will to freedom" with all of its implications. He evidently believes that the more the writings of Nietzsche are read the more clearly will his neo-pagan attitude of revolt against Christianity spur on Christian teachers to rid our religion of its mere hypocrisy and lip service. When the followers of Jesus become practical devotees of the brotherhood of man, instead of mere acclaimers of its phraseology, while they still live on the Nietzschean basis of treating large classes of men as mere things, then the criticism of Nietzsche will no longer have its present powerful appeal. Until that time comes religion will still need the tonic of Nietzsche's strenuous message, Dr. Figgis' volume is a discriminating and brilliant discussion that will well repay every thoughtful person to read.

The Will to Freedom or the Gospel of Nietzsche and the Gospel of Christ, by John Neville Figgis. Charles Scribner's Sons. $1.25.

What To Grow—And Where

Olin Hyde Foster gives real information to real growers in *Gardening for Little Girls*. It is no book for triflers, and if full of ideas especially attractive to small gardeners it would serve as safe guide to any amateur. (Duffield & Co., 75 cents.)

The Treasure of the Land, by Gerrard Harris, is a novel of the girl on the farm. It conveys a lesson of encouragement to the country girl who can see no prospect before her but a lifetime of drudgery, by showing what scientific efficiency may accomplish when backed by earnest purpose. (Harpers, $1.25.)

Two recent issues of the Rural Science Series are *Strawberry Growing*, by S. W. Fletcher, and *Bush Fruits*, by F. W. Carr. The second is an enlarged edition of what has been for nearly twenty years a standard guide. Both take up all questions of culture and development, and the latest methods of packing and marketing. (The Macmillan Company, $1.75 each.)

Tropical Agriculture, by Earley V. Wilcox, was written for the general reader, business man and agricultural student. It contains an account of about 350 tropical products, giving particular attention to their nature, source and commercial importance. The author was for six years in charge of the Hawaii Experiment Station. His is the first American publication to cover the whole subject of crops, cultural methods and livestock of the tropics in an authoritative and popular style. (D. Appleton & Co., $2.50.)

Onward Christian Soldiers

The Outlook for Religion, by Dr. Orchard, of London, contains some heart searching thoughts on the religious problems raised by the Great War. The author believes that Christianity will survive the fiery struggle it is now undergoing, but it will come forth changed in many respects. Reality, unity and a new catholicity will characterize its future. (Funk and Wagnalls, $1.50.)

Prof. George Albert Coe's handbook on *The Psychology of Religion* is designed as a textbook for college classes and adult study groups. It is a fresh and stimulating presentation of the phenomena of religious experience arranged for those beginning the study of this important subject. The volume is written in a style that will make attractive reading to others than students. (University of Chicago Press, $1.50.)

Forty-five Years in China, by Dr. Timothy Richard, is a record of the life and work of this devoted Welsh missionary. These reminiscences give glimpses of the striking changes that have taken place in the great Empire in the last half century, together with some hints of the forces that have been operating to produce them. (F. A. Stokes Company, $3.50.)

How to Be Strong -and Well

DON'T accept *ill-health, low spirits, excessive flesh* or *unnatural thinness* as a permanent affliction. The most stubborn ailment, nine times in ten, can be overcome, and *any* woman can be made to weigh exactly what she should—*easily, quickly, inexpensively—without drugs*—all in the privacy of her room.

That's a broad claim. But I can prove it. I have reduced 40,000 of the most cultured women and built up as many more, in the privacy of their rooms—scientifically—

Without Drugs

I will send you letters of endorsement from eminent physicians and tell you how I would treat you.

Physicians endorse my work—their wives and daughters are my pupils.

Don't let writing a letter stand between you and *good health, animation,* **correct weight and a perfect figure.** Write me now—today—while this subject is uppermost. Tell me, in confidence, whether you suffer from any of the ailments listed here, and I will tell you how I can help you.

If you have any of the following derangements, run a line through it and send it to me:

Excess Flesh in any part of body	
Thin Bust, Chest, Neck or Arms	
Round Shoulders	
Incorrect Standing	
Incorrect Walking	
Poor Complexion	
Poor Circulation	
Lame Back	Headache
Sleeplessness	
Lack of Reserve	
Nervousness	Irritability
Constipation	Indigestion
Dizziness	Weakness
Rheumatism	Colds
Torpid Liver	
Malassimilation

THE CHINESE PUZZLE

(*Continued from page 89*)

ese brought more than railways. They encouraged native industries and they introduced new ones. They settled to some extent among the people and taught them the utility and profit of modern tools and mechanical appliances. They spent money among them, taught their children, provided hospitals for the sick and employment for the strong. Year by year prosperity spread, new villages and towns sprang up and the harvests increased. Today it is estimated that there are 75,000 Japanese and 300,000 Koreans—all Japanese subjects—in South Manchuria alone. These are not all grouped in settlements like other foreigners, but scattered to some extent over the country. They follow their various callings in close contact with the eleven million Chinese who were there before them.

"A hundred thousand Europeans in South Manchuria or in any other part of China not within sight of a legation would starve. Anything approaching the mixt communities of Chinese and Europeans is impossible. The whole social structures are so essentially different that few points in common could be found by the most adaptable."

To the suggestion of coöperation in educational and humanitarian work in China the objection may be raised that the Chinese are hostile to the Japanese. True, but only in the sense in which the Irish are anti-English. Intelligent Chinese judge a tree by its fruit. They also recognize that ultimately they can and will assimilate the Japanese and their enterprizes in China just as the Southern states absorbed the Yankee enterprizes which migrated there after the war. It is a fact known to history that the Chinese, Koreans and Japanese have for centuries acted and reacted on each other without great bloodshed and with resulting benefit to each. In that fact may we find a clue to the solution of today's appalling enigma. Under unlightened leadership, with America's unchallenged idealism and friendliness toward China linked with the intimate Japanese knowledge of Chinese conditions and characteristics, there can be a peaceful coalition of forces—American, Japanese, Chinese—working with high resolve, with keen intelligence and with certainty of success to save China from herself, to herself and for herself.

New York City

Henry—He may be a great artist—but he has a peculiar way of doing things.

Happy—How's that?

Henry—He says he painted his greatest masterpiece on an empty stomach.—*Cornell Widow.*

"The King of Siam," said a diplomat, "who is the latest power to declare war on Germany, prides himself upon his English.

"When the King last visited London he met the late Lord Kitchener, whose Egyptian triumphs were still fresh.

"Desirous of telling Lord Kitchener that he was born to command, the Siamese monarch said:

"'Brave lord, you was made to order.'"—*Philadelphia Bulletin.*

The teacher was trying to convey an idea of devotion to the members of her class.

"Now suppose," she said, "a man working on the river-bank suddenly fell in. He could not swim and would be in danger of drowning. Picture the scene. The man's sudden fall, the cry for help. His wife knows his peril and, hearing his screams, rushes immediately to the bank. Why does she rush to the bank?"

Whereupon a boy in the rear exclaimed, "Why, to draw his insurance money."—*Harper's Magazine.*

3 Prime Reasons for—

The Supremacy of BISSELL'S Vacuum Sweeper

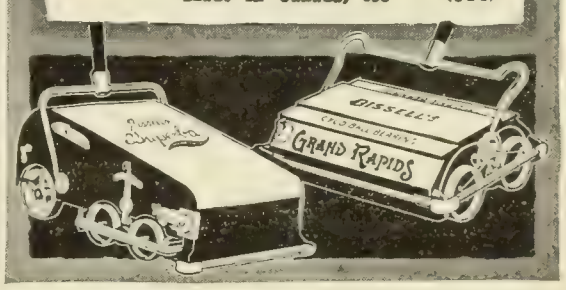
First, the carpet sweeper element, embodying the merit of all Bissell sweepers.

Second, *adequate suction* produced by *three* powerful bellows pumps.

Third, the *mechanically correct* and clever *union* of brush action and suction plus real workmanship. The soft bristle brush gently agitates the nap of rugs and carpets, sweeping the coarser substances into the litter-pan and leaving the fine dust in perfect condition to be pumped up through the suction nozzle.

Used regularly, Bissell's Vacuum Sweeper *keeps* rugs and carpets thoroughly clean in a sanitary manner, preventing the accumulation of dirt which necessitates drastic cleaning methods.

BISSELL'S CARPET SWEEPER is the greatest household convenience ever invented, the device that has saved *millions* of women from the drudgery of sweeping. Except for kitchen or porch, discard your broom and use a Bissell's for little sweeping jobs that must be done two or three times daily. It makes housework easy.



Vacuum Sweepers, $6.00 and $12.50. "Cyco" Ball-Bearing Carpet Sweepers, $3.25 to $6.25. Slightly higher in the West, South and Canada. Booklet on request.

$4 SATIN LINING FREE

Your first suit lined with a guaranteed $4 satin lining without charge—a special proposition to introduce the wonderful values offered by our system of tailoring. We have no agents—no dealers—no traveling salesmen—our values make their own customers—and once a Bernard-Hewitt customer, always a Bernard-Hewitt customer. That's why, to secure your first order, we sell you this high-grade

Blue Serge Suit $15

Made to Your Measure for Only

and line it with a fine grade of satin free.

The suit is hand-tailored to your individual measure, from light blue, black or gray serge (usual $25 value), in any of the latest styles you may select and by thoroughly reliable and experienced tailors.

If you don't care for a serge suit, our Fall Catalog, which we will send, contains generous samples of the latest fabrics, plain and fancy mixtures. **The satin lining goes with any selection.**

All we ask is that you make a trial of our system, that you learn how easy it is to take your own measure and save money on every suit. We take all the risk, you none, for this is our

GUARANTEE

Complete Satisfaction or Money Refunded

You must be pleased in every particular—in fit, in style, in workmanship and materials, or we don't want your money. Could anything be fairer? Write today, wear tailor-made clothes of exceptional style and value—dress better and save money.

Catalog—70 Samples FREE!

Our big, new Fall and Winter Book is ready for you—contains 70 samples of woolens at new, lower prices, on men's hats, shoes and furnishings. It's your guide to correct and economical clothes buying. Write now.

Please mention The Independent so that we can attend to your special offer

HOW TO STUDY THIS NUMBER

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. ORAL AND WRITTEN COMPOSITION.

The Story of the Week.

1. Read "War Taxes Voted." Then write a humorous short story concerning John Anybody's experiences in meeting war taxes. Write the story in such a way that it will end effectively with these words: "Goodness, goodness, me! I'm the man that's paying for the war!"
2. Imagine that you are a coal dealer. Prepare a circular letter to be sent to your customers to explain the recent orders of the Federal Fuel Administrator.
3. Imagine that you are a member of the United States Senate. Prepare a speech urging that Major General Pershing be given the full rank of "General."
4. Write a paragraph of contrast concerning the Monroe Doctrine, and the Japanese policy with regard to China.
5. Imagine that you have been asked by the voters of your district to present a report concerning the new radical party. Give your report in such a way that you will at once explain the principles of the new party, and your own attitude toward those principles.
6. Read "The Canadian Parliament Dissolved." Then write an enthusiastic editorial article on "The Loyalty of Canada," or, if you have read Burke's "Speech on Conciliation," write on "The Loyalty of Canada as a Proof of Some Points in Burke's Speech on Conciliation."
7. Write an editorial article in which you comment on, and answer, the Austrian Foreign Minister's proposals for peace.
8. Your father says: "Who is Bolo Pasha?" Give a clear, oral account of Bolo Pasha's life, and recent intrigues.
9. Some one says: "What a pity to shut off food and commodities from Holland and the other northern neutrals!" Give orally an explanation of the new embargo, and a convincing argument in favor of it.
10. Write a thoughtful, argumentative composition on the following topic: "Which Are Greater—the Reasons for or against Reprisals by the British?"
11. Having read the war news in The Story of the Week write a composition on the topic, "Recent Events That Foreshadow the Defeat of Germany."

The Widow Nolen.

1. Show in what ways the following characteristics aid in making the article interesting: suspense, humor, detail, suggestion.

What Chemistry Means to the Nation. By Julius Stieglitz.

1. Make a very short précis, or summary, of the article.

Creative Chemistry. By Edwin E. Slosson.

1. Make a brief of the article, showing at once the nature of its contents, and the development of its thought.
2. What methods does Dr. Slosson follow in order to make technical matter clear to one who knows little or nothing of the subject?
3. In what ways does the article show extreme originality?
4. How does the author avoid undue use of technical terms, and of details?
5. Sum up the reasons that make the article interesting and instructive.

SECTION II. LITERATURE.

October First in the Great City. By Marguerite Wilkinson.

1. Explain the expressions, "The gods of October," and "The magic they make in the tops of the trees."
2. Prove that the poem is founded on contrast.
3. Point out examples of metaphor and of personification.
4. What impressions does the poem leave with the reader?

SECTION III. WORD STUDY.

1. Give the meaning and the derivation of every one of the following words prominent in The Story of the Week: strategic, reprisal, aggregating, treason, immunity, isolation, moribund, referendum, propaganda.

SECTION IV. GRAMMAR.

The Theatre that Comes to You. By Constance D'Arcy Mackay.

1. Point out the following three different types of sentences in the first column; several different uses of adverbs in the second column; one adverbial clause; three adjectival clauses and a clause used as the object of a verb in the third column.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. Financing the War—"Pay as We Fight," "War Taxes Voted."

1. The Appropriations Act discussed by Congressman Fitzgerald was drawn up by the Committee on Appropriations, the Revenue Act by the Committee on Ways and Means. Compare this system of preparing financial legislation with the English budget system. What are the advantages of each?
2. What national tax collecting agencies exist in your community? What agencies for spending federal appropriations?
3. How will the new Revenue Act affect your family? What advantage, direct or indirect, will you derive from the Appropriation Act?
4. Compare the proposed war expenditures of the United States with those of the other warring nations. Why are ours so much larger?

II. Political Parties in the United States—"Radicals Launch New Party."

1. Study the history of American political parties; note especially the conditions under which these parties originated. Does any one of them seem to have started under conditions similar to those here described?
2. What have the various groups represented in Chicago in common? Why can these groups not support the candidates of the present Democratic party? Republican? Progressive? Socialist?

III. European Interests in the Far East—"The Chinese Puzzle," "Japanese Policy Outlined."

1. "We may say of China . . . that she is bankrupt administratively . . . morally . . . financially," etc. Study the history of Chinese affairs during the past few years in the *International Year Book*, the *Statesman's Year Book*, or some similar manual with a view to confirming this statement.
2. "She [China] is a giantess fettered and enslaved." This process of enslavement began in 1840 and is still going on. Prove that this is so.
3. Explain these two phrases as far as they refer to China: (a) "spheres of influence." (b) "the open door."
4. "What Japan could do for China is shown by what Japan has done." What has Japan done for China during the past twenty-five years?
5. Contrast the present American attitude toward Japan with the attitude of two years ago. How do you account for the change?

IV. Canada a Typical Self-governing British Colony—"Canadian Parliament Dissolved."

1. Describe the Government of Canada. (See A. L. Lowell, *The Government of England*, Chapter LV, or some similar book.) Compare this Government with that of India or of one of the Crown colonies.
2. Discuss the changes which are taking place in the relation between the home Government and the colonies as the result of the war. (See The Independent, April 24, 1916, pages 124-125.)
3. How do you account for the opposition of the French Canadian Nationalist group to the new draft law? What was the attitude of the Australian Labor Party toward the same subject? (See The Independent, May 19, 1917, page 320.)

V. The New Industrial Revolution:

A. Chemistry as a Factor in Modern Industrialism—"America in Chemistry," "What Chemistry Means to the Nation," "Creative Chemistry."

1. From 1750 to 1850, the science of physics revolutionized the world's industries. Discuss some of the inventions that prove the truth of this statement.
2. Nowadays, industry is being revolutionized by the discoveries and the applications of chemistry. Discuss some of the industries in which this is true.

B. Industrial Coöperation—"Pulling Together," "The Food Fight," "Retail Coal Prices Fixed."

1. "Within each unit group of economic life . . . there is a process of integration," etc. Compare this process with that under the older competitive system described in your economics text book.
2. Distinguish between the process of "coördinating business and Government" discussed in the editorial and the process of doing the same thing advocated by the Socialists.
3. Show how the facts given in the article and in the news item referred to above confirm the three principles laid down in the editorial.

Must she wrestle with the old coal range, and struggle with the obsolete broom?

Is she treading away her strength on an old-fashioned machine?

Is she confronted with the everlasting Monday problem?

Are You Giving Your Wife a Square Deal?

As you sit in your office, surrounded by mechanical and electrical devices for saving time, money and labor, give a thought to your wife at home. Has she the right kind of household machinery with which to carry on *her* business, that of making the right kind of a home? Has she any efficient machinery at all?—or is she just a slave to methods which even her mother and her grandmother found tiresome and wasteful?

Take the question of sweeping. Have you given her a vacuum cleaner? You certainly would if you yourself had to go through the house with a back-breaking broom and breathe the dust-laden air. A Western Electric Vacuum Cleaner not only makes home cleaning easy, but also makes rugs last longer by removing the grit that grinds the life out of the fabric. Four cents' worth of electricity runs it six hours.

Who does the laundry work? Surely not your wife! Rubbing clothes to cleanliness is heart-breaking drudgery. The Western Electric Washer and Wringer starts at once to save your clothes. It turns them through the hot suds and dissolves away the dirt. With one, your wife or servant can do the wash easily. A week's wash uses only three cents' worth of current.

Try your hand at washing the dishes tonight and then you will know how tiresome and disagreeable a task this is. Then ask us to tell you how it is made quick and easy by the Western Electric Dishwasher. Four cents' worth of current washes the dishes for a week.

Years ago man made the ox earn his keep in the treadmill. But today it isn't necessary for your wife to treadle her strength away at the old-fashioned sewing machine—a clumsy, unsightly device. Give her a Western Electric Portable Sewing Machine that is no larger than a typewriter and can be carried to the work. Three hours' sewing can be done with a cent's worth of electricity.

You can buy many other Western Electric Household helps—fans, electric irons, toasters, etc., and these will go a long way towards helping your wife solve her servant problem, and meet the rising cost of running your home.

If your electric company or dealer cannot show you these devices, ask our nearest office to send you a copy of the Booklet No. 164-BJ, "Mrs. Bright's Way."

Resinol Soap

will improve most complexions

There can be no luxury for a woman equal to the consciousness that her complexion is clear, fresh, delicately radiant—that it will stand inspection. To keep it so, no amount of cosmetics can equal the *regular* use of a soap which thoroughly cleanses, and at the same time has just the right soothing, healing action to maintain the *natural* health and beauty of the skin.

Resinol Soap does this because it is an exquisitely pure and cleansing toilet soap containing the *Resinol* medication which physicians prescribe in the treatment of skin affections. With its use, the tendency to pimples is lessened, redness and roughness disappear, and the skin becomes a source of pride and satisfaction.

Resinol Soap builds good complexions without making extra demands on your already over-crowded day, and as for expense—at twenty-five cents a cake, Resinol Soap doubtless costs no more—perhaps even *less*—than the soap which you are at present using and which can do nothing but *cleanse*.

If the skin is in really bad condition through neglect or improper treatment, Resinol Soap should at first be aided by a little Resinol Ointment. Resinol Soap and Resinol Ointment are sold by all druggists and dealers in toilet goods. For a trial size free, write to Dept. 4-B, Resinol, Baltimore, Md.

HOW TO STUDY THIS NUMBER

The Independent Lesson Plans

ENGLISH: LITERATURE AND COMPOSITION

BY FREDERICK HOUK LAW, PH.D.

HEAD OF THE ENGLISH DEPARTMENT, STUYVESANT HIGH SCHOOL, NEW YORK CITY

SECTION I. COMPOSITION.

The Story of the Week.

1. You have been asked to speak in your school assembly. Prepare a suitable address on "How the United States Government Is Directing the Distribution of Food."
2. Imagine that you happen to travel for some distance with a radical member of the I. W. W. Give the points that you would present to him in order to make him a full-hearted supporter of President Wilson's policies.
3. Imagine that you are an officer commanding a small body of drafted men. Explain to them the purpose, and the advantages, of the mental tests for soldiers.
4. You are to speak at a meeting of a general literary society. Prove the statement, "The Government should do everything in its power to insure the preservation of the press." Show, incidentally, what the Government is now doing for the press.
5. Your father is editor of a periodical published for sailors, shipbuilders and others especially interested in the sea. Write for his paper an editorial article on "The Week's Nautical News."
6. Read the war news in the Story of the Week. Then write an argumentative paragraph on the theme, "The war is rapidly nearing its conclusion."

Editorial Articles.

1. In a single paragraph explain exactly what is meant by academic freedom.
2. Show in what way "The Passing of National Sovereignty" is an example of climax.
3. Show in what way "To Investors" fulfils the requirements for parody. Why did the author use parody?

Will the German Fleet Come Out? By Park Benjamin.

1. Write a short précis, or summary, of the article.

Peace with Victory. By William H. Taft.

1. Write a brief of the entire article, writing the brief in such a way as to show the progress of thought.
2. Write a short summary of the points made against the Government of Germany.
3. Using the article as a reference, prove the proposition: "Ex-President Taft is a wise and patriotic American."

The Value of Your Vote. By J. Horace McFarland.

1. What proposition does the author emphasize? Show how he uses specific instance as a means of making his thought striking.

The Proportional Manager. By William E. Boynton.

1. Write a short argumentative composition for or against the plan of proportional representation.

War Work for Everybody. By Edward Earle Purinton.

1. Write a topical outline of the entire article.
2. In a letter addrest to Mr. Purinton tell what war work you are doing.

SECTION II. LITERATURE.

Ghosts and the Time. By Arthur Russell Taylor.

1. Show in what ways the theme of the story is like the theme of the Spectator paper called "The Coverly Ghost."
2. What different attitudes are taken toward the supernatural? Which attitude seems to you the most reasonable?
3. Why did Joseph Addison in "The Coverly Ghost," and Mr. Taylor in this story, present serious thought in the form of fiction?
4. Divide the story into six chapters, and make an appropriate title for every chapter.

SECTION III. WORD STUDY.

1. Give the meaning and the derivation of every one of the following words that occur in "Peace With Victory" by ex-President Taft: caste, Chauvinistic, dynasty, status quo, juncture, cynical, cult, Frankenstein, tenacity, memoirs, emissaries, inexorable, decadent, permeated.

SECTION IV. GRAMMAR.

1. Arrange with your classmates for a contest in syntax. The contest may be conducted as follows: (1) The teacher appoints two leaders; (2) The leaders choose sides; (3) All the members of the class look in this number of The Independent for words whose syntax seems difficult to explain; (4) On the following day the sides hold the contest, that side to be declared the winner that, after an equal number of rounds, has given the greatest number of correct answers.

HISTORY, CIVICS AND ECONOMICS

BY ARTHUR M. WOLFSON, PH.D.

PRINCIPAL OF THE HIGH SCHOOL OF COMMERCE, NEW YORK CITY

I. The Electoral Franchise—"The Value of Your Vote."

1. Make a brief statement of the provisions of your state constitution and of the constitution of the United States governing the electoral franchise. What changes, if any, would you suggest?
2. How many times has your father voted during the past four years? In which election did he take the most interest? Why?
3. Several times in the above article the writer compares the officers of the city, the state, and the nation to directors of a corporation. What is the value of such a comparison?

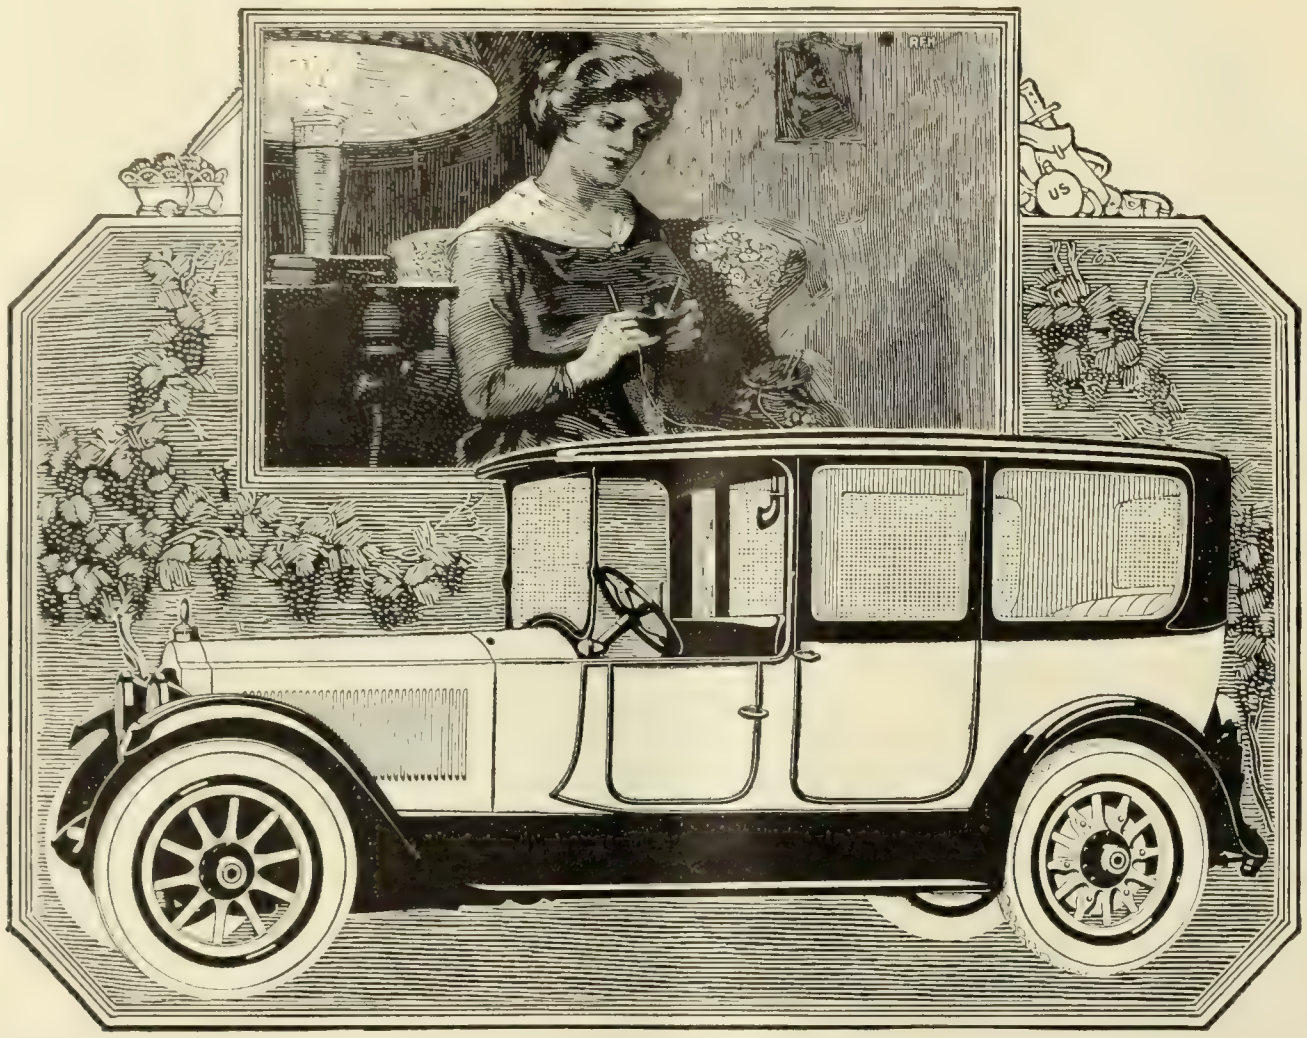
II. The Problem of City Government—"The Proportional Manager."

1. Write a brief account of the newer forms of city government. What are the advantages and disadvantages of these forms? (See The Independent, April 3, 1916, page 40.)
2. What new element in city government has been introduced in Ashtabula? What has been the result?
3. In what respect has the government of your own city improved during the past ten years? What further improvements can you suggest?

III. International Alliances and the World Peace—"The Passing of National Sovereignty," "Germans Debate Peace Prospects," "Peace with Victory."

1. Study one or more of the international alliances of the seventeenth and eighteenth centuries. What was the purpose of these alliances? What did each accomplish?
2. What was the theory of the "Balance of Power" in the nineteenth century? How did it work out in practise?
3. Discuss the origin and development of the "Triple Alliance," the "Triple Entente." How has each been modified in the last three years?
4. Suppose the Clerical and Socialist parties should gain control of the Government in Germany, would peace negotiations result?
5. "He who proposes peace now, therefore, either does not see the stakes for which the Allies are fighting," etc. On what grounds does ex-President Taft make this assertion?
6. Use your text book to check up Mr. Taft's brief résumé of German history contained in the paragraphs beginning: "Germany was long divided into little states," etc.
7. ". . . the verdict of history unquestionably will be that the war is due to Germany's failure to prevent it," etc. What are the facts which justify this statement?
8. How does Mr. Taft interpret President Wilson's statement that the Allies are fighting to make the world safe for democracy?
9. What relation does he see between the war and the League to Enforce Peace?

IV. The Government of Australia and the War—"Direct Action in Australia," "A Slacker Tax."



1. Study the history of Australia during the past ten or fifteen years. Does your investigation justify the statement: "The labor unions became the labor party and the labor party became the government," etc.
2. In the light of the information which you gathered last week and this week explain the following statements: (a) "Canada's difficulty is national," etc.; (b) "Australia's difficulty is chiefly economic," etc.

V. The Laws of Value and Price—"Is Price Fixing Possible?" "Food License Plan Proclaimed," "Senators Urge Paper Control."

1. "Economists have always maintained that it is impossible to solve the price control problem." Why?
2. "Specifically, there are additional reasons for increases in prices." What are they?
3. If the Government cannot prevent the working out of economic laws, what is the use of all of our legislation for the control of production and distribution of such articles as food, coal, paper, steel, etc.?

VI. Industrial Efficiency—"Big Business and the War," "The New Art of Hiring and Firing."

1. Contrast the following statements and show the change in industrial organization that is involved: (a) "The gospel of laissez faire has been the general basis of industry." (b) "Industry for the first time in its history is grasping what team work means."
2. What, according to Mr. Hayward, is the difference between American efficiency and Prussian efficiency?
3. From the point of view of labor efficiency what are the significant facts in the article?

The new Packard Limousine, seven passengers

Why do women knit?

Her burnished steel needles are now weapons of war.

When she turns fiber into fabric, she adds to the vitally necessary output of textiles.

And thereby she helps to clothe the fighting man-power of the nation—and conserve the world's present resources.

To knit is her "bit."

And to conserve that other essential munition of war—*gasoline*—is an important bit for us all.

Enough gasoline for every legitimate need there is sure to be, if it is wisely used and not wasted.

The outstanding fact about the Twin Six motor is that it *saves gasoline.* Its twelve small cylinders turn their charges into smooth, mighty power—without waste. All the force of the fuel is put to work.

And now, with the new model Packard you may have a more beautiful car, a "snappier," speedier car—and wring utmost power from every gallon of gasoline.

The Twin Six is a real factor in *conservation* now.

Seventeen distinctive body styles in open and enclosed cars in the Third Series Twin Six—3-25 and 3-35

THE FIGHTING TOP

DIRECTING THE GUNS. THE MAIN FIRE CONTROL TOP OF THE U. S. DREADNAUGHT "ARKANSAS" DURING ACTIVE FIRING

TO INVESTORS

WE wish to call the attention of our readers to an excellent opportunity for investment. The United States of America, Inc., is offering to the public $3,000,000,000 of 10-25 year 4% convertible gold bonds. A few facts about this corporation may be of interest. It was founded in 1776 by a merger of thirteen different firms, the New York Co., South Carolina Co., etc. Owing to certain administrative difficulties, the concern was reorganized in 1787 and a new charter, commonly called the Constitution, was issued. Geo. Washington, Esq., was the first President of the new corporation. Since that time the business has steadily grown and it now includes no less than forty-eight subsidiary concerns. The corporation includes more than 100,000,000 stockholders and is governed by a board of 531 directors known as the Congress. Woodrow Wilson is now the President of the corporation, having been elected to that position by the stockholders in 1912 and again in 1916. Few persons realize the size and resources of this corporation, but some idea of it may be gathered from the fact that this year's budget amounts to more than $21,000,000,000; that it owns more than three million square miles of real estate, including some of the best agricultural land and the most valuable coal and metal mines in the world, and that economists rate its aggregate assets of real and personal property at more than $187,000,000,000. It has never yet failed to make good on any financial or moral obligation, and unprejudiced foreign experts say that its credit is better than that of any other corporation. How would you like to become a bondholder of United States of America, Inc.?

THE PUBLIC, THE UNIVERSITY AND THE PROFESSOR

THE episode at Columbia University is more than an incident and much less than a crisis. It is a complicated and somewhat difficult moral situation which in all probability will be resolved by wisdom and an unselfish devotion to high standards of patriotism and of academic purpose. Better than any other case of so-called "academic freedom" that has thus far come to public attention, the dismissal of Professors Cattell and Dana and the resignation of Professor Beard present the problem of the interrelated and sometimes conflicting interests of the public, the university and the professor.

To every normal mind the public interest is paramount and always will be. When a nation is fighting for its life, or for human liberty, or to save civilization from the destroyer, the supreme duty of every man and woman worthy of the adjective "human" is to help win the war. For without the coöperation of which the nation is at present the highest and most effective example, without that freedom for individual initiative and development which the nation safeguards, and without that sum of achievements, including humane ideals, which we call civilization, we should not be human, we should be what once our forbears were, as the beasts that perish. The man who can't see, or who will not admit this truth, elects to remain, as Thomas Hobbes put it, "in a state of nature," which is "a war of every man against every man," and he has no rational ground for surprize when his normally constituted fellow-beings regard him and treat him as a public enemy.

It is, therefore, unfortunate that events at Columbia have confounded two distinct issues: one the legitimate freedom of speech of a citizen in time of war; the other the academic freedom of professors in times of peace.

In a republic it is right and necessary, in war as in peace, to assert the rights of minorities and of individuals to dissent and to criticize so long as they do not incite to crime or counsel resistance to any law while it stands unrepealed as law. The charge against Professors Cattell and Dana was that they overstepped these limits, and we understand that they admitted to President Butler their intent and effort to obstruct the intent of the National Government to send drafted soldiers to France. If these are the facts, their dismissal from the University was the plain duty of the trustees, and any colleague, student or citizen who objects to that action and upholds the conduct of the dismissed professors puts himself in the wrong in respect to the paramount duty of loyalty to his Government.

Moreover, if our information is trustworthy, the trustees gave the offenders every reasonable opportunity to take a right position. The suggestion had been made that possibly various members of the university faculties were making inadmissible statements and participating in inadmissible actions because no sharp line of demarkation had been drawn. It was therefore decided and arranged that on Commencement Day, June 6, President Butler should make an explicit statement and give forth an explicit warning on this point, which he did in these words:

> I say, with all possible emphasis, that there is and will be no place in Columbia University, either on the rolls of its faculties or on the rolls of its students, for any person who opposes or who counsels opposition to the effective enforcement of the laws of the United States, or who acts, speaks or writes treason. The separation of any such person from Columbia University will be as speedy as the discovery of his offense.

To give the greatest possible effect to this warning the trustees further agreed that no action should be taken against any professor or instructor on account of any words uttered or conduct alleged pertaining to the war before June 6, 1917. In consonance with this action, the charges upon which Professors Cattell and Dana were dismissed covered offenses committed after Commencement Day and in disregard of President Butler's warning.

Assuming that this is true history, it is regrettable, as we see it, that Professor Beard, whose loyalty is unquestioned, did not explicitly say in his letter of resignation that he could not so stretch his defense of free discussion as to cover the cases of Professors Cattell and Dana; and we think that every loyal instructor at Columbia, every loyal alumnus of the university and every loyal student, whatever position he may take upon the question of academic freedom, should make perfectly clear to the public that he does not stand by men who disobey law and obstruct government.

Next to the paramount interest of the public stand the interest, the efficiency and the honor of the university. The university has a life longer than that of the individual, and a function larger and more varied than any individual can discharge. Its duty is to conserve and to transmit knowledge, to widen the boundaries of knowledge, and to convert knowledge into worthy life and achievement. We intentionally introduce the word "worthy," for it is an essential part of the duty of a university to maintain high standards of manliness, unselfishness and honorable conduct.

These functions of the university cannot be discharged without the effective coöperation of men of affairs, men of learning, men of genius as investigators and discoverers, and a public which gives to the university its confidence, good will and patronage. University activities cost money—a great deal of money. They call for the tireless activities of a highly specialized group of intellectual men, and they must have the approval of a public opinion which is sensitive to both truth and right.

In the development of the American university the board of trustees has become legally responsible for the conduct of all its affairs, and because of the financial knowledge

and responsibility demanded, boards of trustees have more and more in practise become constituted as business men. These men are experts in business matters and it would be folly to question their superior judgment upon questions of university incomes and expenditures. In most instances they are well-educated and public-spirited men, but it does not follow that they are experts upon questions of research, of teaching, or of the probable effect upon human well-being of new theories, or controverted doctrines. It is natural that the men who make discoveries, devote themselves to critical scholarship, lecture and write books, should regard themselves as the real experts in this field.

And in certain parts of the field this judgment is not questioned by business men. Business members of boards of trustees do not undertake to tell professors of physics, chemistry, anatomy, surgery or bacteriology what they shall teach in their respective domains. But perhaps they do cling more tenaciously than sound judgment can justify to the notion that they are guardians of the public interest in the fields of religion, economics and politics.

This they do, we suspect, partly because there is not yet in the public mind a clear perception of the distinction between a university and a college, on the one hand, or between a college and a school, on the other hand. Confusion is apparent in much of the discussion over each new case of "academic freedom." Agitated parents write letters to newspapers upon the impropriety of permitting radical professors to spread heretical doctrines before "immature" minds and so undermine their beliefs. These protests spring from sincere feeling and demand a respectful hearing. Undoubtedly they should be heeded by trustees and by public officials charged with responsibility for the moral and intellectual care of minds that actually are "immature." But by the same token, trustees and the public have a duty to recognize that somewhere in the educational system there must be a place for mature minds and for fearless minds. Somewhere there must be a place for the men who question and discover, unless we are prepared to contend that knowledge has reached its limits, that all the doctrines and theories which we now hold are unalloyed truth, that all error has been discovered and eliminated, and that the intellectual advance of the human race has proceeded as far as it can or ought to go.

If such a contention would be absurd, it would seem that the time has come frankly to recognize that the university, unlike the school and the college, should be regarded and administered primarily as an aggregation of mature persons in which any doctrine, theory, contention, hypothesis or opinion that intellectual men in any part of the world regard as significant or important, may be brought under examination. And if so much be conceded it would seem further to follow that the university professorial body is a body of experts more adequate than the business men of the board of trustees to decide what limitations, regulations and procedures should govern university teaching. Professor Beard, by his courage and self sacrifice, has rendered a great public service in taking a stand which places upon the Columbia authorities responsibility for determining whether or not the university shall be a place for such freedom of study and teaching.

CITIZENS OF THE WORLD

WE sometimes meet the sort of person who declares in a spacious manner: "I have risen above all national patriotism, I am a citizen of the world." He asks to be relieved of the obligations of American citizenship because his only allegiance is due to Humanity.

We, too, believe in world citizenship. But a man is a citizen of the world *because* he belongs to some particular nation, just as a man is a citizen of the United States because he lives in some one of our states or territories. No one living in San Francisco says: "I cannot vote for Mayor because I am not a San Franciscan, I cannot vote for Governor because I am not a Californian but I will vote for President because I am an American-in-general." No idea is more false and mischievous than the theory that there is an opposition between allegiance to one of the members of a federation and allegiance to the federation itself. It has already cost the United States four years of civil war to prove that one need not choose between loyalty to the state and loyalty to the nation; that the liberty of each state and the union of all states are truly "one and inseparable." What will it cost to prove to some of our self-styled cosmopolitans that no resident of the United States can be a good internationalist unless he is a good American first?

THE PASSING OF NATIONAL SOVEREIGNTY

THE Great War, which is now the world war, has proved at least one thing; that physical courage, military skill and zeal for conflict are the heritage of every people. The horrible engines of destruction which science has given to warfare have, indeed, proved effective in killing soldiers but not in frightening them. The sensitive, nervous, elaborately educated European of the twentieth century advances into a storm of shells that have just wiped out of existence thousands of his fellows with as much readiness as if he were taking his daily walk from home to the office. Nor is this true only of those peoples whom German pedantry terms the "master races," such as the Teuton, the Anglo-Saxon and the Japanese. In this war of a thousand races, nationalities and tribes the world has yet to find one that cannot, under good leadership, turn out creditable soldiers. We predict that when peace comes once more we will hear less about the "decadent Latin," the unwarlike Oriental and the submissive African.

But if men are equal, organizations are not equal. The war which has brought out so forcibly that one soldier is about as good as another has also made plain that one army may be so much better than another that there is no comparison between the two. If any people have shown themselves brave beyond the high level of average humanity it is surely the Russians, for their armies have faced attacks that were massacres and have suffered the largest number of casualties of all the belligerents. Yet it is the Russians who have yielded the most ground to their foes. Efficiency in war demands more than individual courage or even individual skill. Nine-tenths of modern war is equipment and organization.

Small nations, or nations economically weak, can achieve a good organization, but they cannot equip themselves with the weight of artillery and ammunition to defend their territories against a great power. It would be absurd to question the valor of the Belgians or of the warlike peoples of the Balkan peninsula, but the German steam roller crushed these nations almost as fast as it could be brought into action. Even such important nations as Italy and Austria-Hungary have had to look abroad for much of the equipment needed by their armies. At the present time only four nations, Great Britain, Germany, France and the United States, combine an effective military organization with the economic resources which can support it for a period of years under the stress of a twentieth century war. All other nations are more or less satellites of these four; and the United States organized its army but just in time to become one of the quadrumvirate which dictates the destinies of the world. After the war, perhaps, Russia may add a fifth to the number of the powers, for she has the resources and lacks only stable political and economic organization. There will not be a sixth for at least a generation and in the meantime, one of the present powers may have dropt out of the race and become an "appendix" nation, as Austria today is to Germany or Portugal to England.

We may look for an even greater degree of centraliza-

tion than this. The powers have abandoned diplomatic isolation and neutrality, perhaps forever. If Germany wins the war, or gains an inconclusive peace, there will be only two sovereign states in the world, the Pan-German Empire and a permanent defensive confederation of all the nations which Germany failed to conquer. Any nation that failed to seek security within this confederation would be an easy prey to the triumphant military machine in central Europe. If the Allies win and fail to use their victory aright there will be four or five independent sovereignties, each with its attendant satellites of little nations. If the Allies are wise they will pool their sovereignties into a common federation arising from the present Entente, which already includes, as President Wilson points out, four-fifths of the world. After the defeat of Germany there can arise no serious opponent to such a world league and there will therefore be but one great power on the planet. But nationality will still exist. By sacrificing sovereignty the small nations and the large as well will obtain eternal freedom and security

WHY NOT?

WHY read Shakespeare? Because he "hits it off." We picked up the Second Part of "King Henry the Fourth" and found, nine lines from the very start, Rumour "painted full of tongues" delivering himself thus:

> I speak of peace, while covert enmity,
> Under the smile of safety, wounds the world.
> And who but Rumour, who but only I,
> Make fearful musters and prepar'd defense,
> Whilst the big year, swol'n with some other griefs,
> Is thought with child by the stern tyrant war,
> And no such matter?

So Rumour lulls the ostrich pacifist to neglectful slumber and rouses the guineafowl militarist to empty clamor.

But Shakespeare said it better.

Why not read Shakespeare? He does hit it off.

DIRECT ACTION IN AUSTRALIA

NOT many years ago Australia was being held up for our admiration and emulation as "a country without strikes." By compulsory arbitration, compulsory unionization, state regulation, and government ownership of public utilities it was said to have solved the labor question. The labor unions became the labor party and the labor party became the government in most of the states and in the commonwealth. The labor governments proved to be at least as good as any other and many of their measures are admirable and worthy of adoption elsewhere. But in stopping strikes and reducing unrest Australia seems no more successful than the rest of the world. Compulsory arbitration turned out to be compulsory for only one side. When it meant raising wages or shortening hours it was effective, but if a decision of the labor court or arbitration board went in favor of the employer a little sabotage or slacking would soon make him sorry he had appealed and willing to concede the point. The chief difficulty has been the continuous reduction in the amount of work accomplished both in public and private establishments. This was due in part to the natural laziness of mankind, but more to the deliberate policy of making more jobs.

Finally, the reduction of output became so alarming that the Government officials began to study American management methods to see if there were not some ways by which the services could be made more efficient without making individual labor any more arduous. But greater efficiency was just what a dominant faction of the Australian union men did not want. They dreaded nothing so much as a stop-watch. The introduction of the harmless necessary time-cards to keep track of job work in the Government railroad shops precipitated a strike which tied up the traffic of the country and put a stop to the most essential industries. All the elaborate machinery for delay, consideration, conciliation, arbitration and maintenance of services broke down immediately and strikes and boycotts spread without authority or warning. When a railroad was declared "black" any goods or persons coming on it became thereby blackened. Any railroad connecting with it was also considered "black." Since coal was "black" everything conveyed by it or cooked by it became "black" also. The butcher, the baker and the candlestick-maker—or to put it in modern terms, the Government abattoirs, bakeries and electric plants—were put out of action. At Townsville the strikers notified the merchants that if they refused credit to any of their present customers they would be declared "black." To call a person "black" is equivalent to a decree of excommunication in medieval times and nobody can house him, feed him or sell him anything without risk of sharing in his ostracism. The extent of this reign of terror can be best shown by a quotation from the proclamation of Premier Hughes of the Australian Commonwealth, who was one of the organizers of the Labor party and first placed in power by their votes:

> The outrageous action of the seamen and wharf-laborers in striking without a moment's notice, and so, by refusing to sail and handle cargo, holding the country up, cannot and will not be tolerated.
>
> The Empire looks to us to do our duty, to send men, food and other products across the ocean. Yet, at the bidding of a handful of irresponsible men, dominated by wild extremists and the secret agents of Germany, transports and even hospital ships cannot be coaled. Vessels awaiting cargoes of wheat and flour are empty.
>
> Today the men engaged in stacking wheat bought by Britain have been called out, and in consequence many hundreds of thousands of pounds worth of this, the veritable staff of life, for Britain and for our own soldiers is now exposed to the rain.
>
> As a culminating point of their reckless and disloyal conduct, they have compelled the watchmen who guard the wheat stacks to abandon their posts, thus leaving millions of pounds worth of the most vital essential to victory at the mercy of the firestick of the I. W. W.

Like everything else that goes wrong nowadays the Australian strike is laid to the Germans. Nothing, of course, could please Germany more than the demoralization of one of the most valiant of her adversaries and no doubt German agents, if such there be in Australia after they have been hunted down for three years, would willingly aid such a movement, yet we may well be skeptical of this easy explanation. The fact is that the volunteer system has worked badly in Australia, for in sending the best of her manhood, 300,000 out of a population of 5,000,000, to Europe and Asia the country has been left defenseless against her most dangerous foes, her internal enemies. The most loyal and public-spirited young men have been sacrificed at Gallipoli and Lens, while the disloyal and selfish, the sneaks and the slackers, left among the remaining population have obtained a temporary ascendency in the labor movement which has hitherto for the most part been conducted in a decent and rational manner.

But the leaders in the present agitation, tho they may not be pro-German, are opposed to conscription and to the further participation of Australia in the war. They have, at any rate, no interest in the extension or maintenance of the British Empire and denounce kings with the same vigor as capitalists. The city, state and federal governments called for volunteers to keep up the supply of food and fuel. Thousands of farmers came in to handle coal and load vessels. College and grammar school boys went into the locomotive shops. Women were enrolled for all sorts of services. In spite of their lack of practise and skill some of these labor volunteers accomplished more in two hours than the former employees were accustomed to do in eight. In this way the railroad and train service was kept up sufficiently to prevent starvation and some of the strikers have been induced to go back to work on condition of receiving their old places and being paid full wages for the time they were out on strike. But for a month Australian commerce and industry were seriously crippled and the trouble is by no means over.

THE STORY OF THE WEEK

And Now Ecuador The Secretary of Foreign Affairs of the republic of Ecuador has sent a cablegram to the national legation at Lima, the Peruvian capital, to the effect that Dr. Perl, the German Minister, will not be welcome in Ecuador. At present Dr. Perl is in Lima, having been accredited to both Peru and Ecuador by the German Government; but after Peru's severance of diplomatic relations with Germany he bethought himself of the smaller republic and attempted to transfer the legation to Quito, the Ecuadorian capital. But the country which he had so long slighted, by spending the whole of his tenure of office in Lima, was no longer open to him. The action of Ecuador is interpreted as a sign of sympathy with the Entente Allies and as virtually an act of hostility to Germany.

The Peruvian Minister of Foreign Affairs has telegraphed to Washington the reasons which impelled his nation to break with Germany. He explained that until the entrance of the United States into the Great War Peru had consistently maintained the duties of neutrality, but that the nation had lost no time in expressing full sympathy with the war policy of this Government. Since joint action of all the American republics, which Peru had favored, proved impossible, there was no immediate step taken to abandon formal neutrality. But Peru was finally compelled to break off relations with Germany because of "an outrage for which it duly but vainly claimed appropriate reparation—the sinking of the vessel 'Lorton' by a German submarine off the coast of Spain while the ship was plying between neutral ports engaged in a lawful trade without infringing even the German rules respecting closed zone unknown to international law." All the Peruvian consuls in Germany have been recalled.

Uruguay, unlike Peru, did not break with Germany on account of any specific national injury. An Uruguayan diplomat in a recent interview openly admitted that the only cause of the severance of diplomatic relations was the general sympathy of the people for the cause of the Entente Allies. "As soon as my Government arrived at the conclusion that Germany was in the wrong in the war it became inevitable that we would break off diplomatic relations with the Kaiser's Government." He referred to the hospitable reception given to American warships on the occasion of a recent visit of courtesy as evidence of the good feeling existing between Uruguay and the United States. In no country of South America has popular enthusiasm for the Pan-American policy of resistance to German maritime aggression been greater than in Uruguay. As soon as the Government had acted, one hundred thousand persons assembled for a public demonstration at Montevideo, the capital of the republic. The adhesion of Uruguay to the Allies is of real importance because the republic is one of the great wheat producing regions of the continent and also does a large export trade in meat. Friendly diplomatic relations will make it easier to regulate the grain and meat exportation in the interest of the nations now fighting Germany.

THE GREAT WAR

October 8—Sixteen British ships sunk in previous week. Ecuador refuses to receive German envoy. German attacks repulsed near Ypres.

October 9—British take Poelcapelle. United States lets naval contracts.

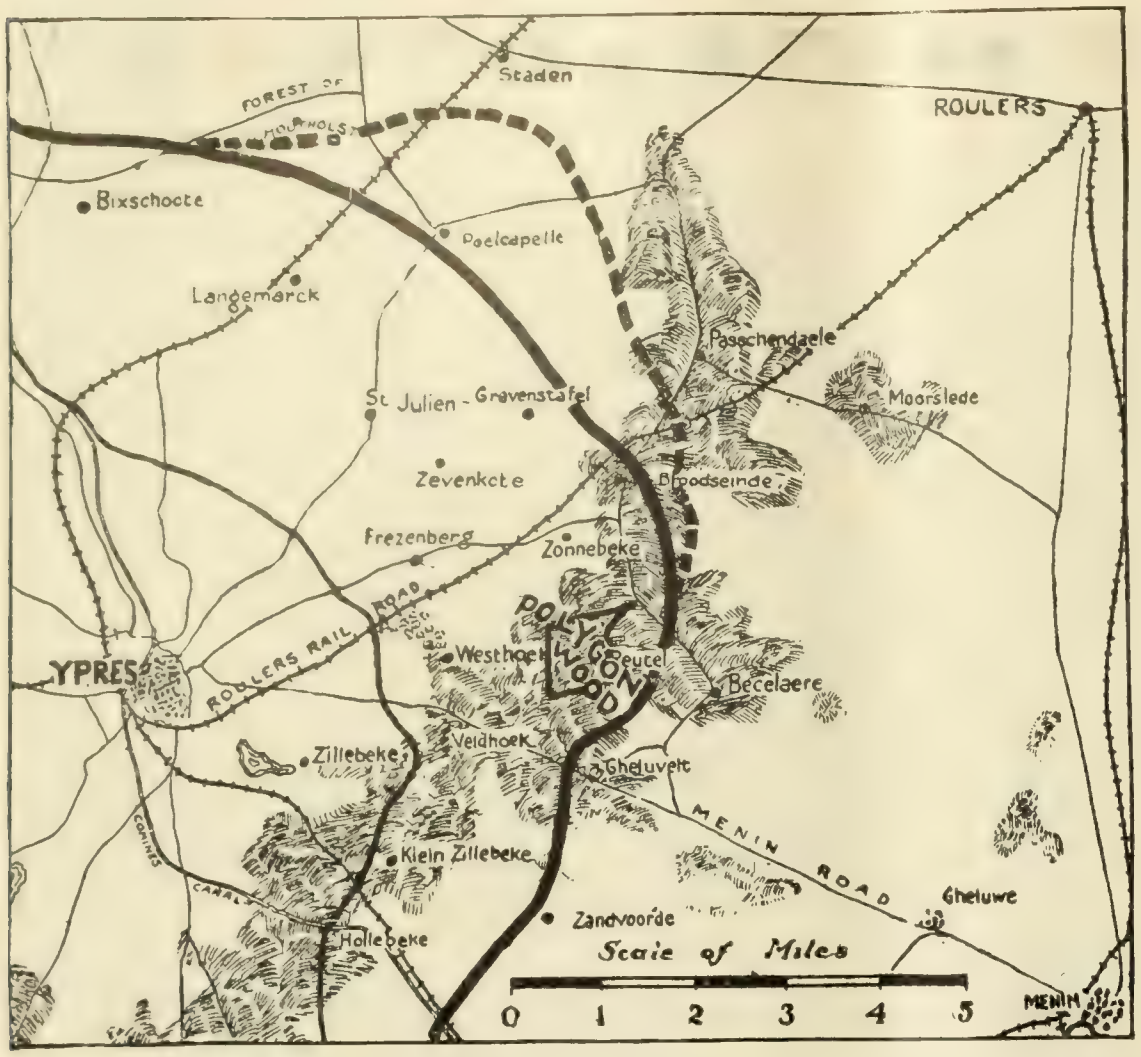
October 10—President proclaims food licensing system. New Russian ministry assumes office.

October 11—Great Britain cuts commercial cable communication with Holland. Lloyd George insists French must have Alsace-Lorraine.

October 12—British gain in the direction of Passchendaele. German Minister of Marine von Capelle resigns.

October 13—Germans land on islands in Gulf of Riga. $1,800,000,000 war budget for six months presented to Austrian Parliament.

October 14—Kerensky appeals to Baltic fleet to defend Petrograd. President Wilson designates October 24 as Liberty Loan Day.



Baltic Islands Occupied The outstanding event of the week on the eastern front was the landing of German troops on the Russian islands of Oesel and Dagö. These two large islands lie in the eastern part of the Baltic, a short distance from the Russian mainland and between the Gulf of Riga and the Gulf of Finland. The German fleet silenced the land batteries protecting the islands and thus made possible the landing of detachments of the army. The incident is interesting to the student of military technique because it is one of the few instances in the present war of the landing of an army on a defended enemy coast. As a rule overseas expeditions have been landed on friendly or neutral territory,

THE WAY IT LOOKED IN PETROGRAD

This extraordinary photograph, published by courtesy of the London *Daily Mail*, shows a scene in the Nevski Prospect during the Leninist revolt in July. A machine gun on the roof of the Public Library, in the background, is firing on the people in the street

FORWARD!

The heavy black line immediately east of Ypres indicates the position of the Allies in July. The second line the position reached by the first week of October. The broken line shows the ground won in the attacks of October 4 and October 9. Notice that the ridge of high ground, indicated by shading, is now almost wholly in the possession of the British and the French

as when the British landed forces in France and at Salonica. The Germans seem to have encountered little difficulty in gaining a hold on the shores of Oesel and Dagö, and doubtless they would have made the attempt soon after the fall of Riga if the mutiny in the German fleet had not made the naval chiefs reluctant for a time to trust to a disaffected and unreliable branch of the service.

With the islands once securely in the possession of the Germans, the situation of the Russians becomes very precarious. Should the Germans use them as bases for an invasion of the mainland, the presence of a hostile army in Esthonia would compel the Russians to retire from their present line of defense along the Dvina to a new line much farther north and east. Should the Germans use the islands as stepping stones for an invasion by way of Finland (which country could all too easily be seduced from its allegiance to Russia by a promise of complete independence), Petrograd will be menaced from the north. The Germans may decide to occupy the Gulf of Finland with their navy and attack the Russian capital directly. In that case everything would depend upon the loyalty and discipline of the Russian navy and the garrison of Kronstadt, and recent events make it doubtful that much dependence can be placed upon the sailors and garrison troops in the Baltic war zone. Even if the Germans refrain from more ambitious plans, their control of the Baltic islands will enable them to make airplane raids on Petrograd from a distance of only 240 miles and to bottle up the Russian fleet in the Gulf of Finland, thus assuring complete German domination of the Baltic.

The Russian Provisional Parliament

The Russian situation may be briefly but not inaccurately summarized in the formula that national unity varies inversely with military success. The early victories in Galicia were followed by a general collapse of the army and the demoralization of the whole political structure of the Republic, but the subsequent disasters enabled Kerensky to make himself virtual dictator and the present menace to Petrograd has made it possible for a coalition government to assume office in spite of the protests of the Bolsheviki. The Democratic Congress closed its sessions on October 7. Every moment that the Congress was in existence was one of anxiety for Premier Kerensky, since the more radical delegates were openly hostile to his government, but he succeeded in gaining the two essential points for which he contended: that the ministry should include Constitutional Democrats as well as Socialists and that it should not be responsible to the new provisional Parliament.

The Parliament, which is an outgrowth of the Democratic Congress, altho it includes also a few representatives of parties less radical than those which composed the Congress, has received the official title of "Temporary Council of the Russian Republic." It will have the right to debate legislation and to put questions to the ministry on their conduct of national affairs, but it will not be empowered to assume for itself the administration of the Government. There will be no legislative body with full governing powers until the general elections can be held for the Constituent Assembly. Plans are already under way for this election and the Government has divided the army and navy into electoral districts so that they may share with the civilian population the privilege of choosing delegates.

The Steam Roller in Flanders

The British have not rested on their laurels. On the contrary, they are pushing their advantage in Flanders with an energy that betokens apprehension of the approach of winter and the inevitable slowing up of the campaign. How much they hope to accomplish before cold weather is uncertain; they have already occupied almost the whole of the Passchendaele-Gheluvelt ridge and hammered into shapeless mud several miles of carefully constructed field fortifications. It seems, however, impossible to expect any decisive victory in the west until next spring. The almost total paralysis of Russia and the consistently unfavorable weather conditions have robbed the Flanders campaign of half its effectiveness. A wet summer and a wet fall have made the country east of Ypres an almost impassable bog. To the Germans the bad weather is of less consequence since their inferiority in numbers and artillery power compels them in any case to remain on the defensive. Many German attacks have been made on the British positions, but they have been small and local in scope; never amounting to a sustained offensive.

Early in the morning on October 9 the British and French made a combined attack northeast of Ypres. The British pushed forward for about a mile, occupying the village of Poelcapelle, while the French reached Houtholst wood. In one place the Germans were caught by surprize, not believing that any attack could be made in such stormy weather. The soldiers had to advance thru a driving rain with streamlets overflowing their banks and converting the battlefield into a shallow lake. The shell holes, filled with rain water, were veritable man-traps. But in spite of every obstacle the attack was carried out in perfect form and its objectives fully gained. Over two thousand prisoners were taken and several pieces of artillery.

Three days later the attack was repeated. Less ground was won, but the British lines were brought closer to Passchendaele. Nearly eight hundred Germans were taken prisoners. No immediate attempt was made by the Germans to regain their lost positions, the torrential rains discouraging both armies alike from assuming the offensive. The Germans admit that, altho fighting on the defensive, their losses during the last few weeks in Flanders have been greater than in the bloodiest battles of the Franco-Prussian war of 1870.

Germans Debate Peace Prospects

The German Reichstag has for several days been considering the possibility of peace in the light of the Pope's proposal, the German and Austro-Hungarian replies and President Wilson's answer. The issues of peace and war became subjects of controversy thru the activities of the Pan-Germans and their new political organization, the Vaterland party. The Socialist deputy Landsberg demanded that the Government state its attitude in regard to the imperialistic agitation of this party and accused chiefs of the army and navy of propagating Pan-German ideas among the soldiers and sailors. War Minister von Stein answered the Socialist charges, denying that any political propaganda was permitted in the army but admitting that the authorities took care that the soldiers were "enlightened" as to the causes and conditions of the war. Secretary Helfferich of the Interior also attempted to justify the conduct of the Government, but he was howled down by the radicals. George Gothien, a Progressive member of the Reichstag, declared that the U-boat campaign had failed and that the German middle class was rapidly becoming impoverished by the war. He demanded an early peace to save the economic life of the German nation.

Dr. von Kühlmann, the German Foreign Secretary, declared that the only important question which forbade an early peace was that of Alsace-Lorraine. He added: "There can be but one answer to the question, 'Can Germany in any form make concessions with regard to Alsace-Lorraine?' That answer is 'No.' So long as one German hand can hold a gun the integrity of the territory handed down to us as a glorious inheritance by our forefathers can never be the object of negotiations or concessions." Yet, in spite of these brave words, the Reichstag is considering a new constitution for Alsace-Lorraine, which, while retaining it within the Empire, will confer an increased measure of home rule. If this is done it will certainly be a "concession," tho not, perhaps, adequate for the purchase of peace. Premier Lloyd-George at once retorted to the peace overtures of von Kühlmann that England would support to the end the French determination to reconquer the lost provinces.

German Sailors Mutiny

It has just been learned thru debates in the Reichstag and the leakage of news thru neutral countries that a serious mutiny took place on board several German warships during the first week of September. That the secret was kept so long from Germany's enemies is a tribute to the efficiency of the censorship. Even now, all of the details of the outbreak are more or less uncertain. The crews of four battleships, the "Westfalen," "Kaiser," "Prinz Regent" and "Luitpold," appear to have risen against their officers while the ships were in Wilhelmshaven harbor. The "Nürnberg" crew revolted during a cruise in the North Sea. None of these mutinies were successful; in each case the insurgent sailors were overpowered and punished. There have been several explanations of the conduct of the sailors: bad food, idleness, dislike of submarine service and pacifist propaganda.

Vice Admiral von Capelle, the Minister of Marine, declared: "It is unfortunately a sad fact that the Russian revolution turned the heads of some persons in our navy and introduced revolutionary ideas among them. Their insensate plan was to recruit representatives on all the ships, to cause the crews to refuse to obey orders, to paralyze the fleet and to force peace upon the country." He alleged that one of the ringleaders of the mutiny had conferred with three members of the Reichstag, Dittman, Haase and Vogtherr, all of whom belong to the anti-war faction of the Socialist party. Naturally, this charge produced a storm in the Reichstag, the Socialists demanding proof and the conservative and imperialist parties demanding the punishment of the guilty. The three men accused of fomenting sedition indignantly denied the accusation. The press took up the debate and argued for and against the prosecution of the Socialists. Many opponents of the Government charged that the ministry was making use of the naval mutiny to combat peace propaganda by bringing allegations of treasonable conduct against members of the Reichstag. Minister of Marine von Capelle has resigned in consequence of the criticism to which he was subjected by the Reichstag.

The significance of the Wilhelmshaven outbreak is very great, since it is the first clear sign of a spirit of insubordination and discontent in the military forces of the empire. Germany has had a fair share of riots and strikes during the stress of war, but these have always been limited to the civilian population. There has hitherto been nothing in Germany like the revolutionary activity of the Russian army or the wholesale surrenders of the Slavic regiments of Austria-Hungary. It is true that on the western front many Germans have yielded themselves willing prisoners, but this rarely took place before discipline had been broken down by prolonged artillery fire.

The Unspeakable Turk

Information from the Caucasus tells of wholesale massacres of the Arabs in Asia Minor carried out by Turkish officials. Among the victims were members of the Arabian committee working in Paris before the war. During the war many of them returned to the Ottoman Empire and were given civil or military posts, but they were recently arrested and hanged on suspicion of disloyalty. The Turkish anger against the Arabs is very easy to understand, for a large part of Arabia has been in open revolt against Turkish sovereignty for months past and in active coöperation with the British forces.

Since the entrance of Greece into the war on the side of the Entente Allies the Turks have commenced the destruction of the Greek settlements in Asia Minor. It is estimated that no less than 700,000 Greeks have been driven from their homes. As yet the number of Greeks killed is not so great as the number of Armenians and Syrians victimized by the Turks, but deportation is usually followed by massacre in Ottoman lands, and several Greek towns have already been wiped out by fire and sword. American missionaries who

THE LIBERTY BANK

You can trust New York to find a new device for interesting people in the Liberty Loan. The National League for Woman's Service erected this replica of the Sub-Treasury Building in [illegible] Square, opened it with appropriate ceremonies and took in $10,000 worth of bonds the first day

have recently returned from Armenia tell of German assistance to the Turks in carrying out their program of deportation. It is apparently the Turkish policy to solve the question of nationalities in their realms by putting to death all Armenians, Syrians, Jews, Greeks and Arabs, so that only Ottoman Turks will be left to inhabit the land. The hope that the Greeks would remain neutral and the fact that the Arabs were fellow Mohammedans may have postponed the massacre of those races till the present, but the policy of elimination now has unrestricted scope. It is not known whether Germany and Austria-Hungary have at any time protested against these massacres or to what extent they have approved them.

Dutch Cables Under Ban The British Government has suspended all commercial cable communication with The Netherlands. This restriction is believed to be due to the failure of the Dutch authorities to stop German traffic in Dutch waters in certain materials useful for military purposes. The decision of the British authorities was not taken with the aim of punishing or coercing the Dutch, but as a precautionary measure to make doubly certain that Germany will be cut off from indirect commercial relations with Allied or neutral countries. Many Dutch ships are still detained in American harbors, having been refused license to import goods into The Netherlands from the United States so long as active trade in contraband of war continues between Holland and Germany. And now the British have added to their restriction on commodity exports to the Dutch an embargo on commercial cablegrams.

A Slacker Tax The most interesting feature of the new federal budget of Australia is the income tax on unenlisted bachelors. Every Australian man without wife or children, who is between the ages of 21 and 45, must pay to the Commonwealth of Australia ten per cent of his taxable income in addition to all other taxes, unless, of course, he is serving in the army. This tax is expected to bring in £500,000 ($2,500,000) during the next ten months, which will be used for the repatriation of soldiers. The new war profits tax will raise about twice this sum, and the regular land and income taxes are expected to yield £9,500,000 ($47,500,000). These sums seem very small after the enormous war expenditures assumed by the United States, but to them must be added heavy state taxes, indirect taxes and large war loans. Thus far in the war Australia has spent £26,000,000 out of revenue ($130,000,000) and raised £189,000,000 by loan ($945,000,000).

The income tax on unenlisted bachelors must not be confused with a payment of bounties to substitutes by those wishing to avoid military service, such as was permitted under the draft law during the American Civil War. No Australian has been drafted for foreign service. The laws of the Commonwealth provide for universal military training, but the proposal to make foreign service compulsory during the war was defeated by a small majority of negative votes when submitted to the people on referendum. The Commonwealth Government is not unwilling to introduce the draft, but it has not ventured to do so in view of the adverse verdict given by the people. Apparently the new tax is designed to put a certain amount of pressure upon those reluctant to enlist as well as to distribute more equitably the burdens of war. Australia, like Canada, has raised by the volunteer system large armies which have done their full share in the work of the war, but in both countries a seditious minority has made it difficult to put the full force of the nation into the struggle. Canada's difficulty is national; the hostility of a part of the French-speaking population to the Dominion Government. Australia's difficulty is chiefly economic; the hostility of the more radical labor unions to the war and their desire to take advantage of the national emergency to carry on "the class war." Large sections of the country have been paralyzed by a series of strikes which extended even to public employees, and seem designed less to gain particular points of controversy than to strike a blow at "the capitalist system" and hamper the prosecution of the war.

A DRINKING BAG

The tin pail is becoming as obsolete in the army as the old oaken bucket. The soldier of today drinks out of a canvas bag. It collapses and packs easily and it has a filter attachment, too

Lansing Makes New Charges Secretary of State Lansing has again made public evidence of German plots undertaken in the United States while we were yet a neutral nation. The incriminating evidence consists of two cablegrams from Foreign Secretary Zimmermann to Ambassador von Bernstorff and one cablegram in reply. The first, dated in January, 1916, announced that the Germany army authorities desired "energetic action in regard to proposed destruction of the Canadian Pacific Railway at several points, with a view to complete and protracted interruption of traffic." The second, sent later in the month, mentioned Joseph McGarrity, John Keating and Jeremiah O'Leary as men who would furnish information as to "persons suitable for carrying on sabotage in the United States and Canada." Sabotage (i. e., secret destruction of factory equipment or products) was especially recommended for munitions factories. Certain precautions were mentioned in the cablegram. "Railway embankments and bridges must not be touched. Embassy must in no circumstances be compromised. Similar precautions must be taken in regard to Irish German-American propaganda." Jeremiah O'Leary, who has been one of the most conspicuous pro-German agitators in America, was described by the German Foreign Office as "reliable but not always discreet." Count Bernstorff's message discussed the prospects of "a vigorous campaign to secure a majority in both houses of Congress favorable to Germany."

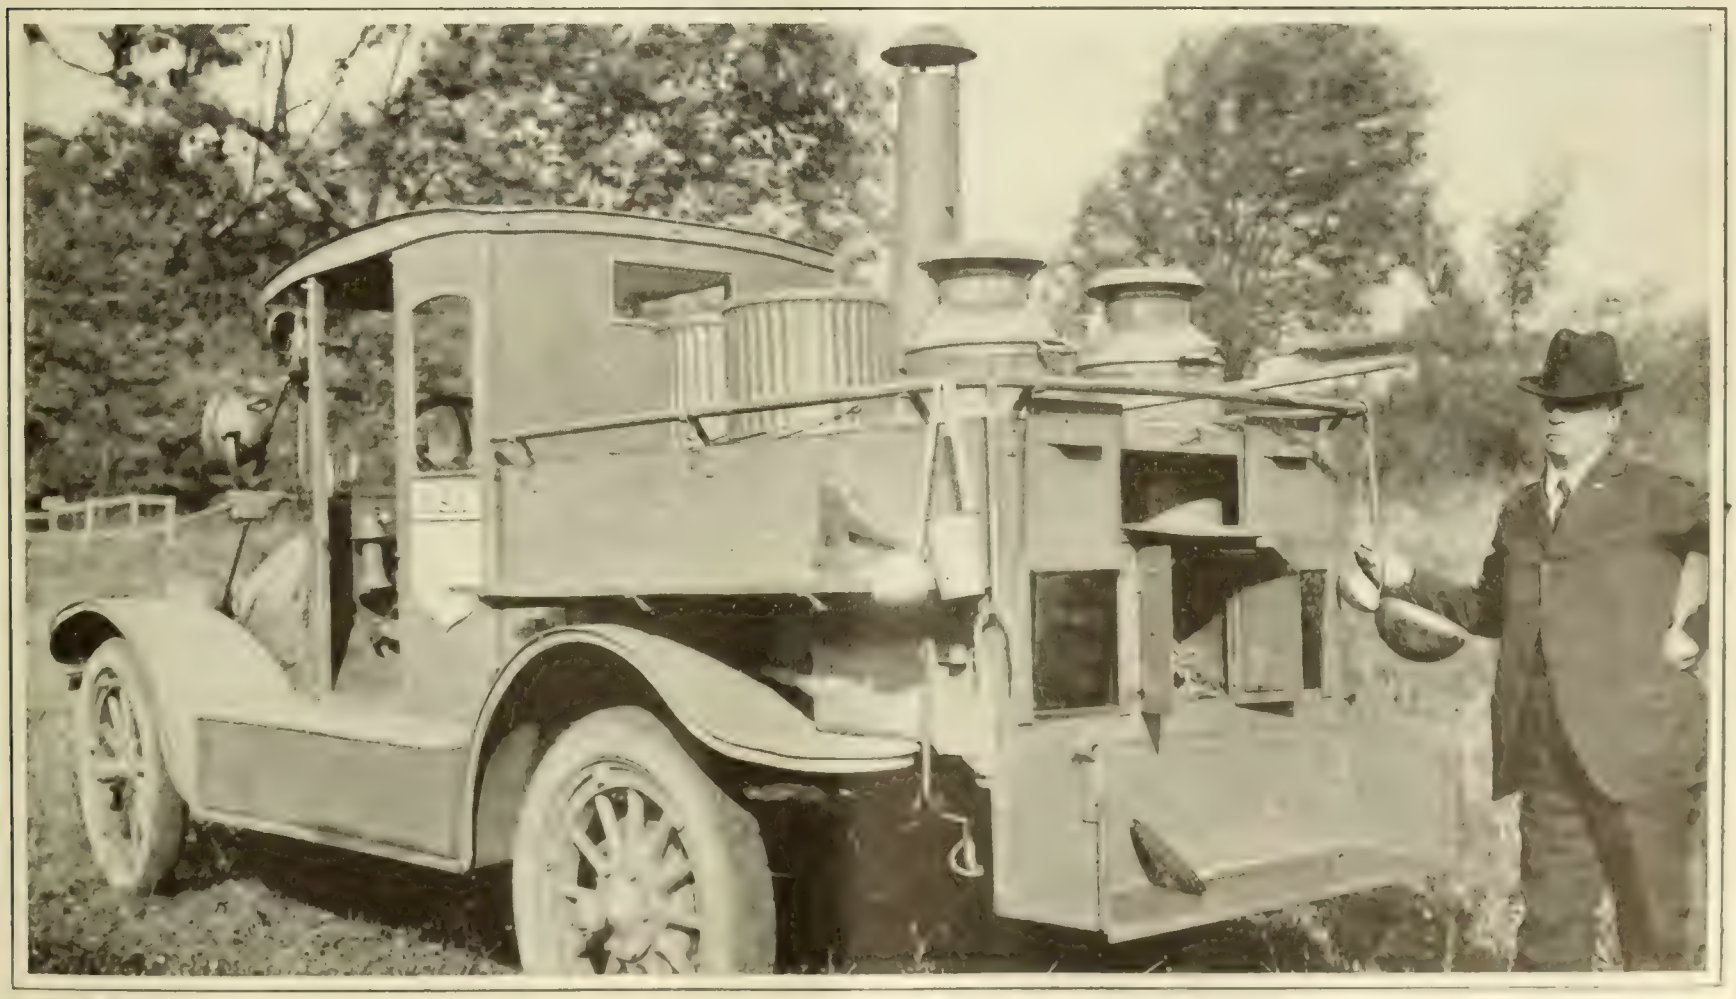
Two of the men mentioned in the cablegrams, Jeremiah O'Leary and Dr. Hale, deny that they had connection with the intrigues of the German diplomatic service. O'Leary's previous record was such, however, that it is not surprizing that the German Government recommended him as a useful tool. It will be remembered that during the Presidential campaign of last year O'Leary sent a telegram to President Wilson berating him for his "pro-English" foreign policy and received the prompt reply, "I would feel deeply mortified to have you or anybody like you vote for me." Ambassador von Bernstorff has already been proved guilty, by earlier revelations, of aiding the French traitor Bolo Pasha and of organizing public sentiment to influence Congress in favor of Germany, using for the purpose an ample corruption fund, but the present evidence furnished by Secretary Lansing convicts him also of promoting the destruction of property in a country to which he was an accredited representative and which had given him every diplomatic courtesy and hospitality.

Food License Plan Proclaimed Acting under the authority given him by the terms of the Food Control Act, President Wilson has proclaimed the system which will govern the manufacture, storage, importation and distribution of essential foodstuffs. Persons, firms, corporations and associations operating cold storage warehouses or grain elevators and warehouses, or engaged in importing, manufacturing or distributing such staples as grain, flour, vegetable oils, fats, meats, fish, poultry, milk and dairy products, canned vegetables, dried fruits and sugar, are required to obtain licenses from the Food Administration License Division at Washington. Those who fail to obtain licenses

before November first are forbidden to carry on the businesses specified in the proclamation. Certain exceptions, however, are allowed. Operators of grain elevators and warehouses and sugar manufacturers are exempted if they have already been licensed. Retailers whose gross sales do not exceed $100,000 a year, common carriers, farmers, fishermen, dealers on an exchange or board of trade, and millers, canners, packers, poultrymen and others the extent of whose business does not exceed a stated minimum are also exempt. In effect, the licensing regulation applies only to the middlemen who do business on a large scale. Those who come within the terms of the proclamation and fail to observe the license requirement are liable to fine and imprisonment. The purpose of the license system is to direct food distribution and render easy the detection of speculation, unreasonable prices and hoarding. Dealers are required to furnish the agents of the Food Administration with all information necessary to facilitate their work of inspection and direction.

Senators Urge Paper Control

One of the subjects which will engage the attention of Congress during the coming session will be that of Federal control of the manufacture and sale of news print paper. In a resolution introduced by Senator Smith, of Arizona, and approved by the Senate Printing Committee it is urged "that all mills producing, and all agencies distributing, print paper and mechanical and chemical pulp in the United States be operated on Government account, and that these products be pooled in the hands of a Government agency and equitably distributed at a price based upon cost of production and distribution, plus a fair profit per ton." Canada, which exports to the United States three-fourths of the print paper made within the Dominion, is invited to form a similar agency to cooperate with our Government.



The report of the Senate committee cites evidence from the findings made by the Federal Trade Commission as to the conditions prevailing in the paper industry. Seven paper manufacturers have already been indicted for violation of the Sherman Law in entering into agreements to restrict the paper supply and maintain a high level of prices. The Federal Trade Commission has reported that at prevailing market prices newsprint will cost the publishers this year more than $105,000,000, and that $17,500,000 of this sum represents net profits in excess of the profits exacted during the previous year. The Senate commission further pointed out that "if the price of paper is held so high that many newspapers cannot afford to continue publication, the information of the public will be curtailed. . . . The Government should do everything in its power to insure the preservation of the press, especially in a time like the present, when newspapers and periodicals are such a vital force in helping the cause of humanity against military madness."

The I. W. W. Again

As a result of the recent confiscation of the records of the Industrial Workers of the World, which were found to contain much incriminating evidence, William D. Haywood, the general secretary of the organization, and 167 of his associates were arrested on charges of seditious conspiracy. So far as the evidence has been made public there has not been a direct connection between the I. W. W. and the agents of the German Government, altho one letter to Mr. Haywood boasted that "we have the good-will of the German people here and we feel that they are in sympathy with our cause." An article in the I. W. W. organ "Solidarity" speaks openly of their wish to have the power to "stop every train, ship, mine and mill, every food and supply train, every wheel of industry and thus paralyze the machinery of murder." One circular advocates "a general strike of all men employed in the harvest fields and fruit orchards," and a book on sabotage which was circulated suggested that in selecting men to injure the railroads the most skilled and experienced railroad men be chosen "who would by a single stroke disable and render useless for some days the materials necessary for the regular performance of the service and the movements of the trains."

Enlarging the Navy

Secretary Daniels of the Navy has awarded contracts to five private shipbuilding companies for the construction of $350,000,000 worth of destroyers, using for the purpose an emergency appropriation voted by Congress. The number of warships of all classes the construction of which has been undertaken by the United States is now placed at 787. The total cost of the naval building program is estimated at no less than $1,150,400,000. This includes not only the actual material and labor which goes into the making of the ships, but the purchase of sites, the building of shipyards and all the costly work of preparation. Private builders

AN OFFICIAL KITCHEN

This army rolling kitchen, which was successfully used on the Mexican border, will probably become the standard means of feeding the American soldiers in France. One of its special features is the truck, which can be detached and used for ordinary transportation while the kitchen is in action

FOR OUR EIGHTY THOUSAND NEGRO TROOPS

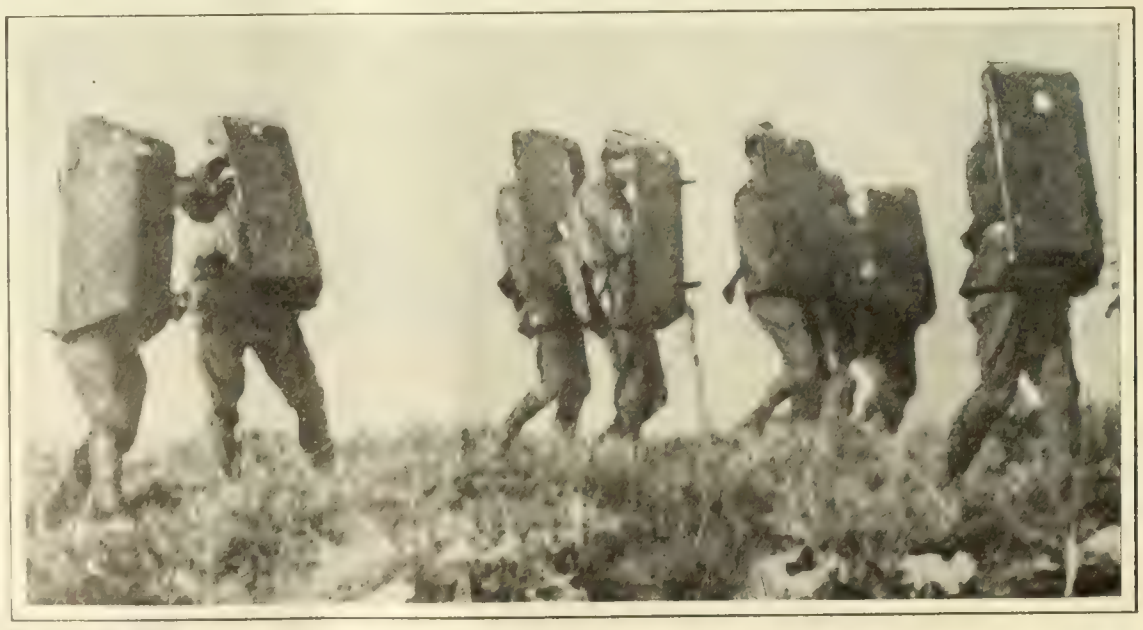
Emmett J. Scott, secretary of Tuskegee Institute, has been appointed as a special assistant to the Secretary of War to look after the interests of the Negro soldiers. Mr. Scott was private secretary to Booker T. Washington for eighteen years and was a member of the commission appointed by President Taft to investigate conditions in Liberia

were unable to take the risk of enlarging their equipment sufficiently to handle the monster construction program and therefore the Navy had to purchase ground and build plants. The work will be pushed to completion as rapidly as possible, and by the time the new ships are built thousands of sailors, already in training, will be ready to operate them.

Sea Insurance Rates Cut

The Treasury Department has announced that the Bureau of War Risk Insurance has reduced its rates on all American steamers and cargoes traversing the war zone from 6½ to 5 per cent. This reduction, it is stated, is made because of the corresponding decrease in risks. Insurance rates on Norwegian cargoes have been reduced from 8 to 7 per cent. Hitherto the alterations in war risk rates have all been in the same direction, upward, and the present "downward revision" is significant of the increasing success of the war against the U-boat. Thruout September and thus far in October shipping losses have been much lower than during any previous month since the beginning of the unrestricted submarine campaign.

During the week which ended October 7 fourteen British ships of more than 1600 tons each and two smaller ships were sunk by mine or submarine. This is not quite so good a record as that of the previous week, in which only eleven large vessels and two small ones were lost, but the week's loss was so small that British shipyards were able to put more tonnage in commission than the Germans were able to destroy. British authorities claim to have sunk more German submarines within the past three months than during any similar period in the past. Perhaps the most significant feature of the situation is the slight extent to which commerce has been impeded by the German blockade of the British coasts. The weekly arrivals and departures of vessels from British ports total more than five thousand, and, in fact, are more numerous at the present time than in March and April. The volume of imports in 1917 was not appreciably less than during the same months of 1916. No one would deny that the incessant sinking of merchant ships is a very serious financial loss to the Allies and full of menace for the future, but there has thus far been no food shortage or privation in France or England which can be directly traced to the operation of the German submarines, and no interruption in the transportation of men and munitions from the United States.



An unfortunate incident of naval warfare was the recent firing on an Italian submarine by American gunners, who mistook it for a German U-boat. One officer and one enlisted man were killed. The American Government sent a message of regret to the Italian Government, altho the fault for the accident seems to rest with the Italian vessel, which failed to answer the American signal. The British and the Germans have each lost a cruiser within the past few days. The British cruiser "Drake," of 14,100 tons, was torpedoed off the Irish coast. The majority of the ship's company was saved, as the accident occurred close to shore.

Testing Soldiers' Minds

The War Department announces that the long-planned system of psychological examinations of drafted men has now been started at four big cantonments, Camp Devens, Massachusetts; Camp Dix, New Jersey; Camp Lee, Virginia, and Camp Taylor, Kentucky. There are about 160,000 men in these camps, and it is possible that no psychological experiment has ever before been carried out on so large a scale. The system of examination used has already been tested out on some four thousand men in the regular army, officers' training camps and naval stations. Plans were first worked out by a committee on the examination of recruits of the American Psychological Association and the work was privately financed until the Government was convinced of its usefulness. Now the examinations are conducted under the authority of Surgeon General Gorgas.

Politics and Murder

Mayor Thomas B. Smith of Philadelphia has been bound over by the grand jury on charges of conspiracy to murder and of misconduct in office. Police Lieutenant David Bennett; Isaac Deutsch, a politician whose fight for election in the fifth ward primary was the immediate occasion of the Philadelphia riot in September; certain members of the police force, and a number of "gunmen" imported from New York have also been held for trial. Men even "higher up" than Mayor Smith have been mentioned in connection with the case. State Senator Edwin H. Vare and his brother, Congressman William S. Vare, were named by witnesses as behind the movement to import thugs into the fifth ward on primary election day. Senator Vare denied the charges brought against himself and his brother. James A. Carey, Deutsch's rival in the primary, testified that Mayor Smith had threatened to "go the limit" to defeat him and secure the election of Deutsch. Members of the police force told the court how they had been ordered to knock down and arrest agents of the Carey faction and to shut their eyes to any violence on the part of the Deutsch faction. Policemen who refused to consent were transferred to other parts of the city for the day so that they could not interfere with the activities of the thugs. Some of the police even took an active part in assaulting or intimidating citizens whose political affiliations were of the wrong sort. Mayor Smith refused to produce official reports of the detective force now in his possession on the ground that a defendant in a criminal case cannot be compelled to give evidence. This refusal made the Mayor subject to the additional charge of contempt of court.

HUMAN TANKS

Not quite so picturesque as the knights of old but quite as well protected and rather freer in their movements are these Italian soldiers going forward to the attack clad in anti-machine gun armor

PEACE WITH VICTORY

BY WILLIAM HOWARD TAFT

EX-PRESIDENT OF THE UNITED STATES

THE Allies are engaged in the greatest war of history to secure permanent world peace. With twenty or more millions of men with the colors, with losses in dead, wounded and captured of more than twenty-five per cent, with debts piling mountain high and reaching many, many billions, they are fighting for a definite purpose, and that is the defeat of German militarism. If the Prussian military caste retains its power to control the military and foreign policy of Germany after this war, peace will not be permanent, and war will begin again when the Chauvinistic advisors of the Hohenzollern dynasty deem a conquest and victory possible.

The Allies have made a stupendous effort and have strained their utmost capacity. Unready for the war, they have concentrated their energy in preparation. In a three years' struggle they have stopped the German advance. In this important respect they have defeated the plan of Germany "in shining armor" to crush her enemies in their unreadiness. But the war has not been won. Germany is in possession of Belgium and part of northern France. She holds Serbia and Rumania, Poland and the Baltic provinces of Russia. Peace now, even tho it be made on the basis of the restoration of the *status quo*, "without indemnities and without annexations," would be a failure to achieve the great purpose for which the Allies have made heart-rending sacrifice. Armaments would continue for the next war, and this war would have been fought in vain. The millions of lives lost and the hundreds of billions worth of the product of men's labor would be wasted.

He who proposes peace now, therefore, either does not see the stake for which the Allies are fighting, or wishes the German military autocracy still to control the destinies of all of us as to peace or war. Those who favor permanent world peace must oppose with might and main the proposals for peace at this juncture in the war, whether made in socialistic councils, in pro-German conferences or by Pope Benedict. That the pontiff of the greatest Christian Church should wish to bring to an end a war in which millions of its communion are on both sides is to be expected. That he should preserve a difficult neutrality is also natural. That his high purpose is to save the world from further suffering goes without saying. But the present is not the opportunity of an intervening peace maker who must assume that compromise is possible. The Allies are fighting for a principle, the maintenance of which affects the future of civilization. If they do not achieve it, they have sacrificed the flower of their youth, and mortgaged their future for a century, and all for nothing. This is not a war in which the stake is territory or the sphere of influence of one nation over another.

© International Film

"Until a victorious result gives security that the world shall not again be drenched in blood, there will be no peace"

THE Allies cannot concede peace until they conquer it. When they do so, it will be permanent. Otherwise they fail. There are wars like that between Japan and Russia, in which President Roosevelt properly and successfully intervened to bring about a peace and helped the parties to a settlement The principle at stake and the power and territory were of such a character that a settlement might be made substantially permanent. But the present issue is like that in our Civil War, which was whether the Union was to be preserved and the cancer of slavery was to be cut out. Peace proposals to President Lincoln were quite as numerous as those of today, and were moved by quite as high motives. But there was no compromise possible. Slavery and disunion either lost or won. So today the great moral object of the war must be achieved or defeated.

Why as citizens of the United States, and as citizens of the world anxious to promote peace, should we feel that any proposal of peace in the present situation would defeat permanent world peace, and should be opposed with all the energy we can command? The answer to this question must be found in the causes of this war and the revelations it has made of Germany's purpose stripped of confusing pretense and naked for the whole world to see.

Germany was long divided into little states, kingdoms, duchies and other forms of one man rule. She was the prey of political intrigue and manipulation of other powers. All her well wishers hoped for and looked forward to her union. The Germans of yore had loved freedom. We Anglo-Saxons were Germans once and our representative system can be traced back to institutions found first in the forests of Germany. In the wars of the first Napoleon, Prussia and other German states were subjected to a great humiliation. The German youth rebelled, organized themselves into military reserves and finally contributed much to the defeat of the man whose lust for universal power finds its counterpart in the aim of the Hohenzollerns of today. The Holy Alliance, retaining the principle of the divine right of kings, and supporting it in all of Germany, left no opportunity for the free exercize of political power by these liberty loving German youths. In 1848, democratic revolutions occurred thruout Germany and in Austria, but they were suppressed Many of the leaders came to the United States and with their followers became our best adopted citizens. When our Civil War came on, their hatred of slavery led them to volunteer for their adopted country, and every battlefield of the war was wet with German blood.

IN Germany itself, however, the liberal element was not allowed to work out its hopes. It had looked to a united and liberal Germany with a government based on the representative system. It was not to be. Under the first William, with his Prime Minister Bismarck, who came to power in 1862, a definite plan was adopted of perfecting the already well disciplined Prussian army so that by "blood and iron" the unity of Germany should be achieved. The whole Prussian nation was made into an army and it soon became a machine with a power of conquest equaled by no other. The cynical, unscrupulous but effective diplomacy of Bismarck first united Prussia with Austria to deprive Denmark of Schleswig-Holstein by force, then secured a quarrel with Austria over the spoils, and in the six weeks' war of 1866 deprived Austria of all German influence by humiliating defeat. After this war, several German states were annexed forcibly to Prussia and offensive and defensive alliances were made with others. Then in 1870 the occasion was seized, when it was known that France was not prepared, to strike. France was beaten, and Alsace and Lorraine were taken from her. The German Empire was established with a Prussian King at its head France was made to pay an indemnity of one billion dollars, with which the military machine of Germany was strengthened [Continued on page 156

THE WAITING LION—WHEN WILL "DER TAG" DAWN?

WILL THE GERMAN FLEET COME OUT?

BY PARK BENJAMIN

ANY one who can find out from the contradictory reports of the submarine situation around the British islands what the German U-boats are really accomplishing is a worthy object for congratulation. On the one hand, we are told by Mr. Lloyd George that as a menace to the food supply they are a failure, and on the other we are officially assured that the British tonnage losses will become perilous, if, in order to make them good, we do not at once speed up our ship-building to a total of more than six million tons a year. Admiral Jellicoe, who, since he speaks from a military viewpoint, is more definite and less extreme, says that the Germans "have not mastered us, but, on the other hand, we have not mastered the submarine. We have not discovered the effective antidote. But we have reduced the losses of merchant shipping." Then he finally concludes that while Germany will hold out as long as there is the faintest hope of the success of the submarine warfare, "once its failure is demonstrated the German people, whatever may be the case with the German Government, will recognize that defeat stares them in the face." The question then is, Are present conditions such as to indicate that this recognition is imminent?

Without perplexing ourselves over the weekly reports of ships over and ships under 1600 tons which have fallen victims to the U-boats' prowess, there are certain recent happenings and probabilities which in the present connection are significant. Thus we have transported and are transporting across the Atlantic thousands of armed men and vast quantities of supplies under convoy conditions more difficult than have ever before been known. Altho the danger zones still exist and are infested by the most formidable submarines of the German navy, not a ship convoying or convoyed has, so far, been sunk nor a man lost. Furthermore less and less is heard of merchant vessels being destroyed by gun-fire from submarines on the surface, and the attacks then necessarily delivered by torpedo seem to be steadily losing in effectiveness. This is partly due to such brilliantly skilful handling of the destroyers by our younger naval officers that this type of swift gunboat has revealed hitherto unheard of capacities in maneuvering and offense; partly to the successful use of underwater bombs which after being set to explode at a certain depth can be thrown overboard to burst in fatal proximity to the submerged U-boat; partly to the arming of the convoyed ships and the provision of trained crews for their guns; partly to the navy's drill and instruction of the transport captains which make them keep their ships in definite relative positions, steer zigzag courses while still progressing in the desired resultant direction and execute simple but precise evolutions in certain emergencies; and so on through a variety of expedients all contributing to a conviction on the part of German submarine commanders that the vicinity of our troop ships is not a place in which to linger, and still less one where appearance on the surface—even to the extent of showing only a periscope—is at all prudent. But beyond this the German torpedo marksmanship is getting distinctly poor. Every report that is published tells of torpedo wakes crossing the ship's path ahead or astern of her. Torpedoes which do not hit their target hurt nobody but the side which projects them. Perhaps it is because it takes considerable time to build a torpedo, which is full of delicate and complicated machinery and costs several thousand dollars, that the Germans are apparently not expending them with the reckless freedom with which they started.

Now, whether they are running out of torpedoes, or whether they are not able to construct them rapidly enough to keep pace with their submarine building, or whether those which they are making are falling off in speed and directability by reason of hasty and hence inferior construction, it is needless to inquire in view of the deductions to be drawn from all the existing circumstances. And that is that altho no specific means capable, as Admiral Jellicoe says, of mastering the submarine has yet been made public, the latter can no longer be regarded as a decisive factor in the determination of the war. And this, by the way, is being openly and publicly said by German politicians who, so far as they dare, are advocating the putting of an end to further dependence upon them.

There is, however, a wide gap between an admission of this sort and an acknowledgment of defeat, no matter how much the trumpeting at the beginning of the ruthlessness staked the outcome [*Continued on page 152.*

GHOSTS AND THE TIME

BY ARTHUR RUSSELL TAYLOR

THE Reverend Justin Hunt stood beside his wife's bed at 3:15 a. m. "There's a strange, blind thing," he said, "roaming about this house. It came upstairs ahead of me just now and went into the study. I'm not afraid of it, but"—his language was as unclerical as the bath-robe he was wearing—"I'd like to know what the devil it is."

The non-neurotic lady in the bed had waked at the creaking of the stairs and had called her husband's name, with this sequel.

"Mercy, Justin!" she said, "what *do* you mean? Get yourself together—come, be sane."

"I am together, all right," he answered. "I fell awake a couple of hours back—maybe it was the spaghetti, I don't know—and went to mulling over Sir Oliver Lodge's book, 'Raymond,' in the sitting-room. Wait—I wasn't reading the seance part at all, but the mighty good stuff at the end, the 'Life and Death'—I think it ought to be all of the book, and the rest chucked—and then—"

"Well?"

"Well, then this strange, blind thing began to get into the game—began to grow up around me. I just wasn't alone—felt in my bones I wasn't alone. I picked up *Life* and read Mr. Martin's editorials—well, it was *there*. Then I went and brewed some coffee, and it was *there*—in the kitchen. I'm not an ass, Marie, and I don't see things at night—you know that."

"Did you *see* this?"

"Certainly not; more, and a lot more. Felt it—felt it in my bones, as I said, and to my boots. Heavens, the feel of it! It was with me all the way upstairs—up to the time you spoke, and then it seemed to crack and go through the study door."

"Well, I'm not going to divorce you," said the lady, "but we're *not* going to have any more spaghetti at night. Why do you call it blind?"

"I give you my word I don't know," said the Reverend Justin. "I just have to. See here, Marie, you must know I'm pretty well wrenched, or I'd never tell you this. Don't chaff—in God's name, don't chaff! I've just met—and I don't care whether it's outer or inner—something horribly uncanny, something outside of life which oughtn't to get at life—which beats life down if it does. I'm *not* afraid of it—only horrified—and I'll prove it!"

He was gone from the bedside, and in thirty seconds there was a heavy fall on the floor of the study.

His physician allowed him to leave his bed in ten days, giving a six-syllabled name to what had brought him there, and then, uttering the single word "Rest," withdrew. A devoted congregation provided for the rest, the clergyman kissed the non-neurotic lady good-bye, and exactly two weeks from the night of his collapse arrived in St. Augustine. He sat that evening, declericalized and with a distinct sense of freedom, in a wonderful hotel, watching the brilliant parade of laces and diamonds, and noting the dog-like convoy of heavy beeves in evening clothes who paid the bills. The man in the chair at his left spoke startlingly to his thought.

"Chewing-gum dukes and breakfast-food barons," he said. "Rings in their noses, poor devils. They do feed, tho. Look at their paunches."

"Not much soul, certainly," replied the Reverend Justin.

"Pardon me," said the man in the chair on the right, cutting in, "you have to use words, of course, but I wouldn't use *that* word. It isn't 'soul' that's lacking—it's just that these chaps aren't really live animals. I suppose that is what you mean. 'Soul' is just reacting to something more than cocktails and bills-of-fare—being a *live* animal. Hold on to that, and you're all right, but you have to look out not to tangle it up with—oh, well, things above living and superstitious things."

"If you *don't* tangle it up with things above living—" began the clergyman.

"Then you are safe from such melancholy moonshine as has come recently from Sir Oliver Lodge. *Have* you seen his last book? And what do you think of a mind like his condescending to tipping tables and mediums and all the rest of it?"

THE mention semed to block reply with the Reverend Justin. The man at the left who had been industriously smoking pointed across the lobby.

"You see that little shrimp over there by the cigar-stand?" he enquired. "Well, I've seen him around here, looking kind of lost and lonely and generally half-baked, for two or three days. Yesterday I made up to him—looked as if he needed it—but didn't get any come-back. Acted brain-scared. Somebody says to me afterward, 'Heavens, he's a first family of Philadelphia!' Seemed to think I ought to cash up to somebody for the privilege of speaking to him. Funny, wasn't it?"

"I wonder," he went on, after an interval, "if you gentlemen would feel like taking a ride in the morning. A coon who drives one of these two-seated carriages you see everywhere was telling me about the Ponce de Leon Springs. He says old Ponce de Leon is buried out there and that folks ought to see it. Of course it would cost a lot less for three than for one. What do you say?"

Mr. Hunt and the man on the right said yes, and the three gave each other their respective names. He on the left proclaimed himself Mr. Simon Bloggs, and readily added that he was a county sheriff from Michigan, making his first visit to the East. The gentleman who objected to "soul" produced cards reading "Ernest Douglas Henderson, M.D." Mr. Hunt, uttering the monosyllable which labeled him, added no more.

A horse, supernaturally thin, in harness astonishingly smart, dragged the party toward the spring next day; and the very black driver interspersed observations to his beast—addrest as "George"—with comments on objects along the road.

"YOU see 'at house, gen'lmen?" he asked, pointing to a forlorn shack. "Some murder theah, a couple yeahs ago. Woman cut off huh husband's haid with an ax in the night—clean, plumb off. He's been ha'ntin' the house eveh since—screechin' an' carryin' on ev'y night. Nobody won't go nigh it afteh dark—it's broke up the prayeh-meetin' up heah at Shiloh Chu'ch, for the membehs won't pass the place. Wash Simmons, forgittin', come by one night about ten—and heah was that man standin' by the gate, holdin' his haid straight out in front of him in bofe hands, and the mouth a-yellin'. Wash ain't speshually swift—not as a reg'lar rule—but he sho'ly got some speed on, that night."

"This, you see," said Dr. Henderson addressing Mr. Hunt, "is the kind of thing I meant when I spoke of 'soul' last night. It's the"—

"Gosh!" exclaimed Mr. Bloggs, glaring back at the haunted hut. "look at that face at the window!"

They had scarcely turned to see, when George answered a tremendous cut by violently bolting forward. All held tight to the carriage, which lurched and swayed at high speed for a matter of two hundred yards. Then it came to a stop.

"How we goin' to git back is what I want to know," said the driver with his teeth chattering. "You don't tell me that hant has taken to *day*-time! I ain't no ways anxious to go by theah. But how we goin' to git back?"

"CUT around thru a field if you want to," said Mr Bloggs. "We'll drive George back there and hitch him, and then go thru that house. I'm not so darn sure what *is* in there—I sure never saw such a map as the one that grinned out of that window, no, never!—but I'm for going thru that house."

"I may as well say that I've poor nerves," said Mr. Hunt. "That is really why I'm down here. Of course, it's all physical, but I believe I'll walk around with the driver."

"All right," Mr. Bloggs replied. "That's good sense. You do that, and leave the house to me and the Doctor."

They found absolutely nothing, tho they searched every nook and corner of the wretched cabin. There was the feel that nothing living had been there for months. After ten minutes they walked toward the road. "I'd like to know," said the Doctor, "if a darkey who had never heard of the murder would [*Continued on page 147*

THE VALUE OF YOUR VOTE

BY J. HORACE McFARLAND

PRESIDENT OF THE AMERICAN CIVIC ASSOCIATION

"I wasted my vote," a man said to me who had cast his ballot for the defeated candidate at a recent election. He was wrong, entirely wrong; the only way to waste one's vote in the American democracy is not to cast it at all. It is then wasted, just as is the bullet which the soldier does not shoot. Yes, it is more completely wasted than is the unshot bullet, for the soldier may have another chance to discharge his gun, while the close of election day marks the end of that particular opportunity to use the ballot.

Every ballot counts and counts every time. It is the voice of that voter, on that occasion, and his voice has exactly equal volume and power with that of any other voter, President Wilson has just one vote, and it counts only as one. It is no larger, no heavier, no more efficient than the one vote of any other citizen of the republic.

Presuming that fifty years is the average life of the male citizen of the United States, it appears that he has had at least twenty-nine opportunities to have his voting voice heard upon equal terms with every other citizen. He has probably had seven occasions to vote for electors who were bound to express his choice for the presidency of the republic, and not less than fourteen times has he been permitted to help select a congressman to work with that president, while recently he has had the same relation to at least one senator. He has had from seven to ten occasions to directly express his preference for governor of his state and for those who will legislate for that state. Each year he has aided to select, unless he has wasted his vote by not casting it, the men who will govern his community, assess and collect the taxes which represent his financial participation in the government; and who will, even more to the point, spend his money to provide him with notable school facilities for his children, more or less satisfactory highways for his travel, and that protection of life and property which makes it practicable for him to go about in such safety that he utterly forgets what it might mean if he had individually to provide this protection.

This citizen, if he lives in a populous community, has other occasions to vote, and for officials of broader powers when he does vote; and they use the money collected from him to light the streets for him, to provide him with sewerage facilities and with many other safeguards to his health. The spending of this money protects him, if he votes intelligently, from the menace of contagious diseases, and provides for the safeguarding of the milk he drinks, and of the very food he buys. Increasingly the hand of government—his hand of government, in the selection of which he had an equal voice with any other voter—is endeavoring to make life safe, comfortable and enjoyable for him and his family.

This mutual service is provided, too, at an exceedingly low price—before the war averaging, including public schools, less than twelve dollars per person per year in the United States. It is the cheapest service any man buys between the cradle and the grave, and costs less in America than anywhere else in the world.

© International Film

Every soldier in a charge counts; so does every ballot in the box. Make your vote count

ALL these things which I have mentioned, and much more, the citizen controls by his vote. If all his fellow citizens wasted their votes by not casting them, the fabric of the government would be torn, and disorder would ensue, despite the provision that elected officials are to serve until their successors are elected.

The security of the American republic depends upon the voter, and upon each one individually. No one privileged to vote is exempt, unless upon military or diplomatic duty; no one is more essential or more important than another.

Here, then, is a high privilege. It is likewise a high and a solemn duty. The value of my vote—who can compute it? War, peace; debt, confusion, anarchy; safety, prosperity, health; the protection of my wife, the education of my children; incapable and wasteful, or wise and efficient government; yes, even life itself, depend upon my vote. I am a sovereign, either born to sovereign equality or achieving it by consent of my fellow citizens, and my vote sets me level with any other sovereign in this great land, and with equal powers and responsibilities.

I have said that my friend did not waste his vote, even if he cast it for the defeated candidate. That is true. But he can do much worse than waste it; he can vote carelessly, or upon a wholly partizan basis, or for unworthy causes, or for men he does not know or believe to be capable. If he gets typhoid fever from drinking polluted Republican water; if his baby's milk is disease-laden thru the carelessness of Democratic inspectors; if his children are cheated of the best education in party-perverted schools; if the life of his automobile is shortened by bumping over partizan-let street paving, who is to blame but himself, if he voted for what he got?

I live in a city which has an assessed valuation of fifty millions of dollars. Five men are to be elected in November who will govern that city for two years. They are to be the directors of a corporation with a conservative capital of fifty millions of dollars, and they will collect from me and my associates a million of dollars before we get another vote at them.

So I must ask myself, "If I owned this fifty million dollar city as my private estate, would I turn it over to these candidates to handle for me for two years?"

Some of us are displeased with the Congress of the United States for what we think is its lack of business capacity and patriotic promptness in this time of war.

But how can such charges be true? We elected them, every single one of them, tho some hold-over senators were elected indirectly by us thru the legislatures. They represent our votes; they are our selected voices in the Government.

Yes, they fully represent our pitiful conception of the value of our votes. We voted upon a candidate's desire rather than upon his deserving! We listened to the song of the partizan; we closed our eyes to the qualification of the man.

IT has been said that the wealth of the United States exceeds the inconceivable sum of two hundred and sixty billions of dollars. The men we elected are the working, paid directors of this vast corporation, which has a hundred millions of stockholders. Did I vote for a congressman upon his fitness for such a directorship?

Congress determines what we will spend in this world war. It is said that at least eight billions of dollars will have been expended by the end of the first year. What expenditure is proceeding now? Every time the clock ticks one second, and every second in every hour, the elected directors of the corporation of the United States of America are spending twenty-four hundred dollars of money I or my heirs must help repay. That, at least, puts a value on my vote, nationally!

In a few days men will vote again. By their ideas as to the value of their votes they will dim or keep bright the democracy for which alone the flower of our young manhood is going abroad to fight. My vote counts to make their sacrifice less effective, if I cast it in self-interest, in partizanship, in carelessness. My vote counts to back them up at home, to help "make the world safe for democracy," if I cast it as if in the visible presence of God.

This is the value of my vote. What is the value of your vote?

The Independent-Harper's Weekly
NEWS-PICTORIAL

FLOUNDERING IN THE FLANDERS MUD

This British official photograph, taken on the western front, shows the sort of difficulties Haig's troops are now contending with in the Yser Campaign. Shrapnel above and mud below are not a very happy combination, but things will be even worse when the winter really sets in so the British are pushing forward with peculiar energy. They can't complain quite as hard as they would like to of the mud because a good deal of it was made by their own artillery which hammered flat a good many miles of German field fortifications which had been constructed with peculiar diligence and care. The men in the picture are taking up bridging for the Yser River, a somewhat strenuous task when the ground you are walking on is almost as much in need of bridging as the river

Press Illustrating

WHEN IT ISN'T MUD IT'S RAIN

The Highlander's waterproof conceals his kilt but leaves enough tam and bare knee to make his nationality perfectly obvious. These men are on their way behind the lines for a rest after the kind of work shown in the picture above. The prospect of a few days on comparatively hard ground, and the cigarets, account for their very cheerful expressions. The country east of Ypres is none too dry at best and a summer and fall of almost continuous rain have made it into a bog which is very nearly impassable. The bad weather is a decided advantage to the Germans because when you are on the defensive you merely have to sit in the mud which is not nearly so hard as advancing thru it. But, despite the difficulties, Haig's troops are forging steadily ahead on the Flanders front

BEWARE OF RUBBISH!

Clean up the rubbish and have regular fire drills in your factories

TEACH YOUR CHILDREN!

No one is too young to learn to count the cost of carelessness

IS PRICE FIXING POSSIBLE?

BY JOSEPH E. DAVIES

MEMBER OF THE FEDERAL TRADE COMMISSION, FORMERLY COMMISSIONER OF CORPORATIONS

THERE is not in the civilized world a warring or a neutral nation with a conscious, deliberate intent to serve the interests of its people that is not addressing itself to the challenge of price control, a challenge that has always defied nations even as in 301 A. D. when Diocletian failed in his attempt to fix the price of certain commodities.

Economists have always maintained that it is impossible to solve this problem. They have, generally, insisted that it is unsound to attempt to solve it, that all such attempts are foredoomed to failure. But it has been, and it is, characteristic of the genius of man to refuse to admit failure as foreordained if the general welfare of society is at stake. So nations go on trying, and with them now is the United States. We are attacking the problem anew, confident that we shall, perhaps by reason of the conditions of production, transportation and distribution prevalent here, find a solution for it.

Prices all over the world have risen, very rapidly. Here in America we all know how the price of steel soared, along with the price of copper, and with the price of a thousand other things. In Norway the price of coal attained the unprecedented figure of sixty dollars a ton. In Italy, Switzerland, France, Australia, South America, the price of foodstuffs has marched up and up. In China the purchasing power of gold is less because silver, which is the medium of exchange there, as a commodity has rapidly increased in value.

It is axiomatic that doubling the amount of currency and credit virtually doubles prices. Double the amount of money, or credit, in the scales and you must double the price of commodities to keep a balance. Or, to put it differently, if you double the amount of money in circulation in a segregated island, you lessen the value of money one-half, in theory at least; in other words, you double prices. It follows then that when nations have been obliged to issue great volumes of paper money such as they have issued in Europe and have extended the use of credit as money to the appreciable extent to which it has been extended during the Great War, the inevitable consequence is an increase in the prices of commodities.

Specifically, there are additional reasons for increases in prices.

One of these reasons is an abnormal increase in the demand for certain commodities. The war has consumed immeasurable quantities of materials; its destruction has been riding the world, seizing insatiably upon quantities of materials mountain huge that heretofore have gone to satisfy other and constructive uses in the ordinary courses of trade. The demand for basic commodities, for nearly all basic commodities, has been tremendously increased. And, of course, there are physical limitations in the production of these commodities. It takes a year and a half to build a paper mill, for instance, and a new supply of raw material to produce paper. It takes eight months to a year to build a steel mill. It takes a year to grow wheat. But these physical limitations are forgotten if five men, or five nations, are intent, desperately, upon gaining possession of a certain commodity that is limited in supply. Then the price is determined by the demand, that is, by the resultant bidding, and the usual relationship of selling price to cost is no longer the determinator of the price.

© *Harris & Ewing*

COMMISSIONER DAVIES

NOT only has the demand for most basic commodities grown far out of its customary relationship to supply, but world supply itself has been diminished, principally by the fact that thirty millions of able-bodied men have been taken out of the processes of production and assigned, as it were, to the processes of destruction. Thus we have not only the negative factor of destruction but also the negative factor of diminished production.

These two factors are operating, with the diminishing value of gold and the inordinate demand, steadily to increase prices.

And there are, also, other lesser but perfectly sound economic reasons working as inevitably as the laws of nature toward the steady increase of prices.

Whenever in the history of the world this situation has in threatening measure confronted any nation that has a conscious and deliberate intent to serve the interests of its people, leaders have tried to prevent the hardship that impended. They could not prevent the working out of economic law. Governments themselves could not do that, but they could prevent in some degree the cupidity of any class of men from seizing an exorbitant profit from situations which were the misfortune of society. Governments insisted, in other words, that inasmuch as the supply of essential commodities was limited, therefore this supply must be conserved and distributed to the benefit of the social whole, with values fair as measured by standards existing normally before the emergency.

THE earliest instances of attempted price fixing were biblical, I believe. It is a matter of record that in 301 A. D. the Emperor Diocletian attempted in Rome to fix the price of certain commodities, along with the price of labor. Sixty years afterward the Emperor Julian attempted the same thing. Again, in the French Revolution, while the English fleet blockaded France, foodstuffs fell off in production, there was unusual demand, prices went up, and the French Government attempted to establish prices and fixed the law of maximum which, after a brief trial, was suspended. Recently Germany has made the most extensive and most intensive effort, after careful preparation, to fix prices, with much less success than might generally be supposed. France also has attempted to fix prices since the war began. England was the last of the three to follow. Now we are attempting to solve the same baffling problem.

On the administrative side our situation briefly is this:

The National Defense act, approved June 3, 1916, gives the President power to fix the price at which materials shall be taken for the use of the Government. There is some question as to whether his power extends to the materials to be used by the Allies, but the consensus of legal opinion is that the power does extend that far.

Under the National Defense act, the Naval Appropriations act of March 4, this year, and the Deficiency Appropriations act of June 15, this year, the President undoubtedly has power to fix prices for the requirements of the Government—a power he has from the start freely exercized, notably thru the Secretaries of War and of the Navy in getting an immediate supply of coal.

The only legislation which has been passed affecting the prices of the commodities which the general public buy is the Lever act, or Food bill, which gives the President power to fix the price of wheat, coal, foods, feeds, fuel, fertilizer and fertilizer ingredients, tools, utensils, implements, machinery and equipment necessary for the actual production of foods, feeds, fuel.

The Pomerene bill, to fix the public price of steel, which has already been accomplished tentatively by voluntary agreement of the producers, and of other commodities, is now pending. It is urged that [*Continued on page 149*

THE PROPORTIONAL MANAGER

A SUCCESSFUL EXPERIMENT IN MAKING ONE CITY GOVERNMENT SAFE FOR DEMOCRACY

BY WILLIAM E. BOYNTON

ASHTABULA, Ohio, has the distinction of being the first city on this continent to adopt proportional representation, thereby securing a form of government that provides a greater degree of real democracy than any other plan so far adopted. The success of this form of municipal government, which will probably come to be known as the proportional-manager plan, should not be without interest at this time, when the people of our country are being called upon to make great sacrifices in order that the world may be made safe for democracy.

This plan, under which Ashtabula has been operating since January 1, 1916, is similar to the ordinary commission-manager form, but differs from it in one important particular: instead of having a small commission of three or five men elected by the ordinary at-large method, its council, or policy determining body, has a sufficient number of members to represent fairly all the principal voting elements in the community, and these are elected by a system of proportional-representation which gives representation to each of these groups in almost exact proportion to its voting strength. This is done by allowing one-seventh of those voting to elect one member; that is where seven are to be elected, as was the case in Ashtabula. The system of election by which this is accomplished appears quite complicated, but experience proved that it can be readily carried out.

AS the result of numerous wet and dry contests, the people of Ashtabula are divided pretty evenly into two main groups: the "Wets," or liberals, and the "Drys." There is also a small group of Socialist voters comprising about one-seventh of the whole. When the votes were counted it was found that three liberals, three drys, and one Socialist had been elected. Several of the successful candidates, the majority of whom were business and professional men, had first been nominated—nomination being by petition only—by some smaller element of voters and later adopted by one of the main groups. As a result practically every voting element of importance in the city is represented in this council. The various sections of the city are also represented very fairly, altho the proportional plan is an election-at-large.

It was predicted by those who opposed this method of election that a council composed of representatives of the different and opposing elements of the community would hardly be able to agree on any policy. There was some trouble and delay in appointing a city manager owing largely to the popular demand for a "home" man for that position, but after the question was settled by the appointment of J. W. Prine, the representative council worked together for the best interests of the city as harmoniously as could be desired.

Mr. Prine had been the local postmaster for twelve years. His main qualifications for the new position were his thoro knowledge of the city, good practical common sense and the ability to handle men and get things done.

It is due to the unity of the administrative organization and the coöperation of its members rather than to the superior ability of any one man that this first experiment with the proportional-manager plan is proving a success.

TO show how the plan is regarded locally, let me quote from an article in the *Proportional-Representation Review* by Mr. P. C. Remick, a prominent business man of Ashtabula who was for several years president of the city Chamber of Commerce: "I can say, without fear of contradiction, that the new form of government is giving general satisfaction. At the outset there was much doubt and opposition, but instead of gaining strength it is gradually disappearing until at this time there is no exprest sentiment whatever in favor of abandoning the charter and returning to the old federal plan."

A short résumé of what has been accomplished will show why the new form of government is giving general satisfaction. In the first place the number of political offices of which there were entirely too many under the old form were reduced by more than a third, so there are no longer any superfluous city hall jobs. By a careful financial policy the bonded indebtedness of the city has been reduced by more than $40,000 while the tax rate was cut, in the main part of the city, from 15.4 mills to 14.2.

The need of a public rest room for the accommodation of women and children had been brought to the attention of several former administrations, but nothing had been done. The new council, acting on the recommendation of the Chamber of Commerce, had a contract made with the owner of the Cook Arcade, then in course of construction, for the lease of two rooms for this purpose and they are now being maintained by the city.

A twelve per cent cut in the price of electric current furnished by the municipal lighting plant was made several months ago. This reduction resulted in such an increase of patronage that the net income was increased rather than diminished and another cut of 25 per cent has been made so that the maximum price is now 5 cents and the minimum, 1⅞ cents per kilowatt.

A notable improvement in the efficiency of the health department has been brought about by abolishing the Board of Health and placing the department under the jurisdiction of the city manager. Apparatus for the testing of milk has been installed and the work of the department is preventing the sale of any milk in the city that is not clean and of good quality.

IT is confidently expected that the city government in Ashtabula will continue to improve. Enough has already been accomplished to show that democracy is not incompatible with the recognized efficiency of the manager plan.

The fact that the ordinary commission-manager form does not give the people a fair chance for representation in its policy-determining body is a serious drawback to the adoption by popular vote of this otherwise most excellent plan of municipal government, and is, I believe, largely responsible for the fact that three out of four charter movements in Ohio cities were turned down by the voters during the past year.

The terms of all members of the Ashtabula council expire with the current year, the election to choose their successors will be held next November. It is expected this election will be attended with good results and the city government go on without a hitch when the newly elected council is seated at the first of the year. If this proves true the proportional-manager form of government will have successfully passed its experimental stage, and other communities need not fear to adopt this up-to-date plan which provides for democracy as well as efficiency in city government.

Ashtabula, Ohio

OLD AND YOUNG

BY HELEN HOYT

The young, the illusioned,
How they pity us, the old!
But who would exchange knowledge,
Who would give back sophistication
For the untried dream,
The rudderless adventuring?
For thought never smitten of reality?
If they will pity wisdom,
If they scorn content,
And ripeness, and restraint—
These young—
How they must pity the Most High!

NATIONAL EFFICIENCY

A MONTHLY SECTION DEVOTED TO BUSINESS, PERSONAL AND NATIONAL EFFICIENCY, CONDUCTED IN ASSOCIATION WITH THE NATIONAL INSTITUTE OF EFFICIENCY AND THE EFFICIENCY SOCIETY

WAR WORK FOR EVERYBODY

BY EDWARD EARLE PURINTON

DIRECTOR OF THE INDEPENDENT WAR SERVICE BUREAU

GENERAL PERSHING declares the war will be won by the side most determined to win. Do we know what this means? The Huns have got the start of us by forty years, in the matter of determination to win the war. How to overcome the forty years' handicap in six months—here is our great national, and individual, war problem.

The entire German population is on a war footing. Every German citizen is practically a German soldier. His time, health, money, thought, labor, emotion—all are conscripted. Food, clothing, housekeeping, are severely regulated and restricted by war needs. Consciously or unconsciously, willingly or unwillingly, every man, woman and child on German soil today is backing up the German army.

Our national program of defense by land, sea and air is superb. Our high officials, great manufacturers, leading business men, are doing more than could have been expected. Our soldier and sailor boys have nobly gone to the front, with the spirit of 1776, plus the science of 1917.

But our *individual support* of the nation's war measures and war heroes, compared with that of the citizen of Germany, has been weak, fitful, wasteful, ineffective. We must settle down to the business of making war—the grim, hard, methodical business of it. We must prove, and quickly, that a national determination made in America is as good as that "made in Germany."

Not more than 15,000,000 people of the United States, according to a recent estimate, are actively engaged in scientific war work every day. There should be 75,000,000 of us so engaged. As a war unit, we are 20 per cent efficient. What is wrong with us? How can we make up that missing 80 per cent of personal war strength, and in so doing beat the Huns?

The Independent War Service Bureau has been trying to analyze the situation. We have come to the following conclusion:

Paul Thompson

The Washington, D. C., Ambulance Corps, motor driving offers a big field to women

© Press Illustrating

Learn what the Y. M. C. A. is doing in the training camps and help them do it

A real determination to conquer anything—whether it be a Kaiser, a disease, a failure, a business loss, or any other kind of alleged misfortune—resolves into seven primary factors. These are as follows: Conviction, emotion, resolution, information, standardization, coöperation, action. To be on the way to victory, a man must first be convinced that the fight is right, and therefore necessary. Then he must have his heart stirred by a feeling strong enough to shake him out of his mental rut. Then he must see in imagination the splendors of victory, and say to himself, "I will conquer!" Then he must learn what to do and how to do it. Then he must readjust his life to a standardized program of daily warfare. Then he must call to his aid all the possible resources, of men, machines, materials. Then he must *act*, regularly, persistently, powerfully, no matter what comes, until the end is reached.

As Americans, we have put our determination to win thru the first three stages—conviction, emotion, resolution. But most of us have yet to complete the last four stages—information, standardization, coöperation, action. Replying to many requests the Independent War Service Bureau, in conjunction with the National Institute of Efficiency, presents this article in the hope of aiding the war *determination and execution* of our readers. Everybody from seven years of age to seventy should find some interesting and profitable war work in the list below, which is the first classified war directory both brief and comprehensive to appear in print.

Suggestion. Have pencil in hand while you read. Put check marks before numerals of all paragraphs that especially interest you. When you finish reading article, go back and note all paragraphs checked, and compare to see which three you consider most valuable in helping you to render greatest and best service. Underscore numerals of each paragraph thus chosen.

Then standardize your two principal war assets—time and money. Settle how much time you can devote to the national service regularly, each day or week. Also apportion the amount of money you can spare by the week or month, as a donation or investment.

Then fill out, sign, mail, the War Work Registration Card. This form is modeled from the blank originally used by The Efficiency Society in its campaign to interest manufacturers, dealers and professional men in a combined effort to sustain and coöperate with the Government in all war matters in which information was gathered showing the service now being given all firms and individuals, the ways in which plants and the abilities of executives can be used, the way in which the Government coöperates, and the effect of war on the business of the country.

Whoever, wherever, whatever you are—please sign the blank. We want to roll up a volunteer army of war workers 100,000 strong! Help us to do it.

In this effort the Efficiency Service of The Independent is joining hands with the Efficiency Society to extend the plan it inaugurated with its war service questionnaire just as the National Institute of Efficiency has already joined with the society in its important work.

The following modes and means of service are condensed for lack of space. The classes of persons to whom the sections apply are named at the top of the section. A few items overlap, therefore all may be read to advantage.

MEN

If you are a man over thirty-one, or under thirty-one and not yet drafted, consider these possibilities.

1. Join the great national army now forming, of professional and industrial workers. Employ spare time, utilize busi-

T. M. Fisher

"Every Scout to Feed a Soldier"; but that's only one of the things that the Scouts do

© International Film

One of the floats in New York's Red Cross parade. Here is war work for every woman

Underwood & Underwood

Train yourself to fill a man's place, like these girls on a South Dakota farm

ness training better, aid the Government—either with or without pay. Be registered anyhow. Apply for membership or information to the United States Public Reserve, Department of Labor, Washington, D. C.

2. Save a little each week, and subscribe to the Liberty Loan. Get particulars from nearest bank or trust company.

3. Study by mail a good course in Personal Efficiency, to make you a better, faster worker, help you cut down waste and prevent loss, increase production capacity of yourself, community, country.

4. Volunteer to work on a farm next summer, in vacation or all summer. Apply to your state agricultural college, or United States Department of Agriculture at Washington, or your state public employment bureau. Farm enlistment headquarters for New York is State Public Employment Bureau, 262 Fulton Street, Brooklyn.

5. Build up your health reserve, be ready for emergency. Late statistics show that every other American is physically unfit for war duty—or business efficiency. Buy a few modern health books, study with your family. Join a national health organization with expert counsellors.

6. Back up the remarkable training camp and field work of the Y. M. C. A. Learn what this means to our boys at the front. Get particulars from local Y. M. C. A. branch, or Y. M. C. A. War Work Council, 124 East Twenty-eighth Street, New York City. Read article "War Work of the Y. M. C. A." in *Munsey's Magazine*, August, 1917. Give something, do something, to help this great work.

7. If not liable for war duty, and able to manage boys, volunteer as Boy Scout leader. Wonderful growth in Boy Scout Movement on war basis demands 100,000 more scoutmasters and assistants. Offer your services to local representative Boy Scouts of America, or write National Council, Boy Scouts of America, 200 Fifth Avenue, New York City.

8. Hang in the windows of your home, club or business place a few patriotic posters, such as "Help Feed Yourself," from your state agricultural college or United States Department of Agriculture at Washington. The Red Cross and other patriotic societies furnish war campaign hangers.

9. Get one or more copies of "The Plattsburg Manual," the book to increase efficiency of beginning soldiers. Give or loan it to men friends of military age. Book is endorsed by Generals Scott, Wood and other high officials. From local book store, or The Century Company, 353 Fourth Avenue, New York.

10. Aid economy at home, be as patriotic as the women of your family. Don't grumble at meatless days. Look cheerful when the pie is absent. Eat a fourth less—Mr. Hoover and other food experts declare that Americans eat about thirty per cent more than they should. Stop being fussy about food—summon all your bravery and try to be as soldier-like as our boys in France who take with a smile their butterless black bread and their oatmeal void of cream and sugar.

BOYS AND YOUTHS

If you are a lad of less than twenty-one, choose among these lines of action.

11. Join the American Boys army, the greatest industrial mobilization of youths ever attempted, with a proposed membership of 2,000,000. Apply for particulars and registration to William Edwin Hall, Director of the United States Boys Working Reserve, Department of Labor, Washington, D. C.

12. Be one of 300,000 Boy Scouts, doing such work as collecting war funds, packing supplies for soldiers, distributing Government literature, marching in parades, listing homes for food conservation, carrying out official slogan "Every Scout to Feed a Soldier" by working farm, backyard and vacant lot gardens. Boy Scouts raised $18,000,000 for the Liberty Loan in four days. The Lord Mayor of London says, "No scheme dealing with the training of the youths of the nation can leave out the Scout movement without losing the advantage of the finest system of boy training yet devised." Join local branch; or help start one—write for particulars to Boy Scouts of America, 200 Fifth Avenue, New York.

13. Do better school work, train mind and body more effectively, for the new responsibilities and opportunities coming after the war. Don't leave school unless absolutely necessary. Secretary of War Baker says, "The most useful thing the high school boy can do is to finish his course, training himself for a productive career, at the same time keeping his body especially fit for military service." Read and try out a modern efficiency book, such as Dr. Gulick's "The Efficient Life," or Dr. Marden's "Training for Efficiency," or my own "Efficient Living." Study also a physical training book, like "Home Gymnastics," (Ling Swedish system), Funk and Wagnalls, 354 Fourth Avenue, New York.

14. Plan a back-yard garden for next season. Join the food production army of 300,000 boys and girls who last season worked a million back-yard gardens, producing crops worth over $3,000,000. Next year 4,000,000 gardens are wanted by the Government. Start planning yours now. Get advice from Carl Vrooman, Assistant Secretary of Agriculture, Washington, D. C.

15. Resolve to beat your state record in growing some kind of crop—corn, beans, potatoes or whatever your soil produces best. Do you know what other boys have done? James Cole, of Minnesota, grew 113 bushels of corn to the acre, where the average yield is 25 bushels; in three years he took $180 in prizes; last year his seed corn alone brought him $45. Vern Johnson, fourteen years old, won the State Boys Corn Club championship by raising 136 bushels to the acre—four times as much as his father could raise, and winning besides the profit of $99.40 on his acre crop. Howard LaFrance, of Michigan, made a net profit of $107.85 on a half acre of potatoes, besides keeping about $40 worth of seed potatoes for next year, the total half-acre crop being 210 bushels. If you want to be a prize-winning "soldier of the commissary" obtain directions for Boys Club Work from Prof. O. H. Benson, Department of Agriculture, Washington, D. C., or from agricultural department of your state university, or from your state agricultural college.

16. Make [illegible]

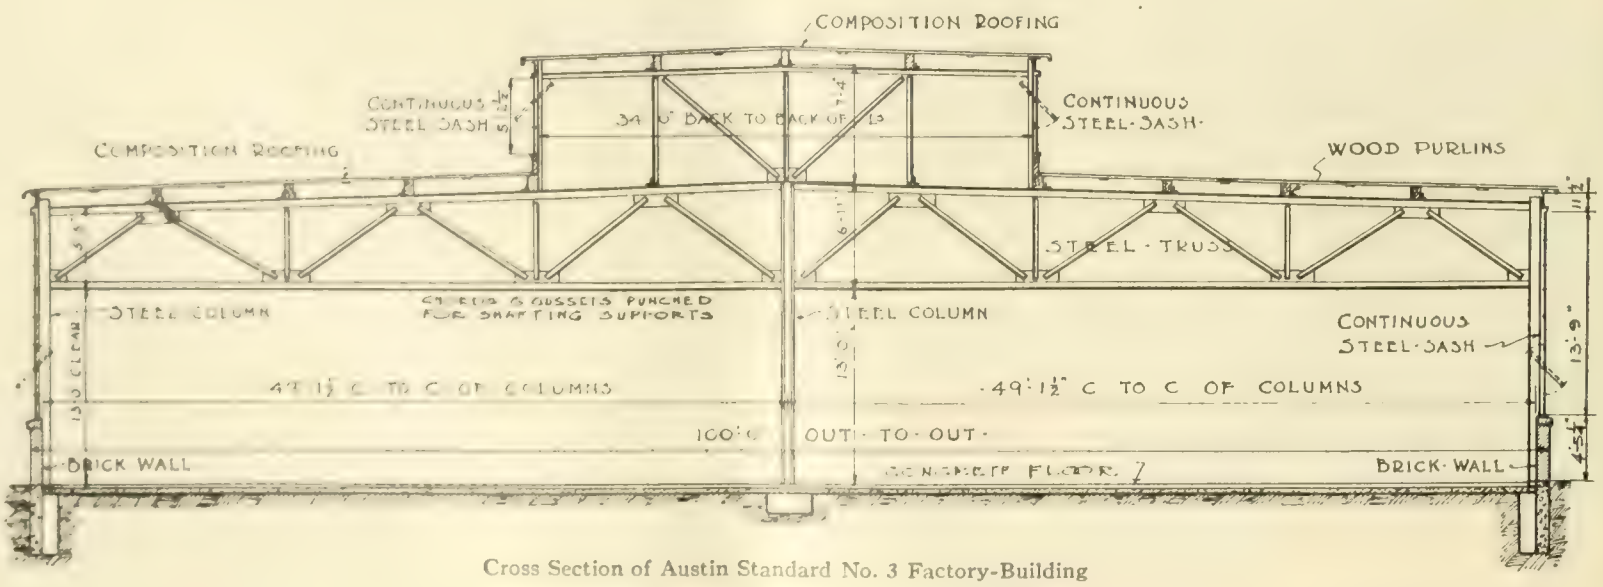
AUSTIN STANDARD

Delivered Complete on a Production Schedule

Exterior of a "High No. 3" Austin Standard Factory-Building, completed for the General Electric Co., Schenectady, N. Y., Sept. 21, 1917

WE hold for you today, in stock and under contract, the materials necessary for any building you may require that will approximate any one or any combination of our nine types of our Austin Standard Factory-Buildings.



Austin Standard Factory-Buildings embody the cumulative effort of forty years of factory building, combined with suggestions from the best engineering talent of Austin customers throughout the country, formulated in proven designs for nine standard cross-sections; and are delivered complete as a product of specialized, well-organized effort, scheduled on a definite production basis.

IN addition to the nine Austin Standard Factory-Buildings we offer a comprehensive service in the design, construction and equipment of individual buildings or complete plants.

The *Engineering Department* embraces six geographical centers where almost immediate service is available.

The *Construction Department* is thoroughly organized, and supplied with the most recent labor-saving equipment.

The *Equipment Department* purchases and installs heating, lighting, plumbing, power-equipment and production-machinery as desired.

Cross Section of Austin Standard No. 3 Factory-Building

FACTORY-BUILDINGS

Quality, Cost, and Time of Completion Guaranteed

Interior of a "High No. 3" Austin Standard Factory-Building, completed for the General Electric Co., Schenectady, N. Y., Sept. 21, 1917

THIS view is centered on one bay 50 feet wide. Note the clear span, and good daylighting. Over 3600 square feet of glass and only one column for every 2000 square feet of floor mean well daylighted, clear working floor area, dollars and cents in daily operation.

Note that this is a Revised No. 3 Standard. The entire roof system is raised 10 feet, and columns made heavier to allow for two 10-ton overhead cranes.

Austin Standard Factory-Buildings are modern, superbly daylighted, good-looking, permanent buildings, a real asset to any plant.

"Results, Not Excuses" is the slogan on the cover of the new *Book of Austin Buildings*. If you need a factory building of any kind it will pay you to send for this catalog.

THIS building, the longest the General Electric Company ever built at one time at Schenectady, is 860 feet long and 100 feet wide. We delivered this 86,000 square feet of Austin Revised Standard No. 3 building complete in 76 working-days after the order was signed, *4 days ahead of schedule*.

We can, subject to prior sale, erect complete on your property Austin Standard Buildings Nos. 1, 2 and 3, in 30 working-days from the date of your order. Nos. 4, 5, 6 and 7 can be delivered in 60 working-days. Other standards in slightly longer time. We guarantee quality, cost, and time of completion.

BIG BUSINESS IN THE WAR

BY WILLIAM R. HAYWARD

MONTHLY ARTICLE OF THE EFFICIENCY SOCIETY

IN times like the present values change over night. The salary of a popular dancer is liable to drop to a point where it may approximate that of a successful executive; conversely, men who have been accustomed to a place somewhere within the vague category of the "laboring classes" acquire an importance in the general scheme such as many "professional" people ordinarily enjoy. New standards have been set up and material things, like steel and timber, and immaterial things, like service and ability, are judged in terms of war's requirements.

Especially does war affect business, from this standpoint of values, and I hope here to be able to emphasize the opportunity that war brings to those concerned with the business life of the nation. The opportunity is not one for dividend making, but rather for so strengthening the position of business, within the larger life of the nation, that when peace again comes business shall continue to be the logical and best expression of the national genius.

Hitherto, American business has been a singular admixture. The gospel of *laissez faire* has been the general basis, but added to it there have been individual schemes in industry that have social objects consciously in view, and which, incidentally, have been both more radical and more successful than any others in the world. There have been, in other words, any number of profiteers, and a percentage—relatively of enormous value to the community—of men who have been conscious patriots and big business men simultaneously. The declaration of war splendidly increased the latter class; Ford and Schwab outshine thousands of others only in the greater extent of the facilities they have offered in the national cause. Business, "big" and lesser, has responded stirringly to the call, and is now faithfully submitting itself to the process of being officially whipped into shape—necessarily a stupendous task in the case of a nation that has been accustomed for years to a modicum of legislative interference with individual ambition in industry.

By far the greatest problem that America at war faces is her industrial problem. The Government has found that raising the personnel of vast armies is child's play compared with diverting industry from the thousand smaller channels in which it flows in peace times into one gigantic steady stream that will provide the armies with equipment, and keep them supplied at a point four thousand miles away from our nearest fort. But there are signs that this problem has been rightly apprehended and is being successfully tackled. Things are happening that the cartoonist overlooks when he depicts Congress as a bespectacled, incompetent old fogy and Columbia as a maiden enmeshed in masses of red tape.

Without doubt there is enough stiffness and officialism at Washington to cause delays, misunderstanding and various other manifestations of administrative weakness. But a fair comparison takes into consideration conditions as they were before the entry of the United States into the war, and then judges the progress, actual and prospective. From this point of view, the most remarkable as well as the most encouraging sign is the way in which the representative business men of the nation are giving their time, energy and ability not only as individuals but in coöperation with other business men on the one hand and with the Government on the other.

INDUSTRY for the first time in its history is grasping what team work means from the standpoint of the nation's need. Thru the various boards of business men and their sub-committees, extraordinary results have been attained within the four months during which the work of the Advisory Commission of the Council of National Defense has been at work. To mention but a few of these: the mobilization of 262,000 miles of the railroads of the country along with the telephone and telegraph systems; the completion of a military inventory of 27,000 manufacturing plants; the saving of millions of dollars thru the appointment of local committees of business men to assist the quartermaster's department in the army in the economical and efficient purchase of supplies, and by the coördination of purchases thru the agency of the general munitions board; arrangements for the conservation and expeditious shipment of coal for both federal and civilian use; the organization of a committee which will visit Russia for the purpose of giving much needed assistance in the organization of transportation; enlistment of numbers of reserve engineer regiments that are going to France to aid in the rehabilitation of the railroads.

Highly significant among these Government business activities is the agreement which the Council has been able to bring about between capital and labor on the question of labor conditions, which abroad have proved such a stumbling block to war efficiency from the industrial standpoint. Production has been held up; almost endless trouble has been given the English administration by threatened and actual strikes; and the results of unwise enforcement of output beyond the physical capacity of the workers, have provided a warning from which we, in this country, may profit.

It is impossible that industry should go on without many changes in labor conditions. The entry of women into the strictly industrial sphere itself creates an imperative need of careful adjustments. The point is, however, that it has already been agreed to submit to the Government questions of labor conditions that may arise before drastic action that might seriously cripple some branch of industry, is taken. Here is fitting proof of the nation-wide realization that without successful organization of our resources, the bravery of our soldiers will go for nothing.

Uppermost in the minds of men is the thought: "How can I help thru my business? Where will my personal training and experience, and the facilities for production of my personnel and plant, best fit in?" In a good many cases the Government has not yet worked out the answer. But the answer will be given, and when it is acted upon the foundation will be laid for one of the most fundamental and far-reaching changes in the history of industry, one might almost say in the history of the nation. For America's millions literally live, move and have their being by reason of their countless forms of business activity, and war is not merely proving the existence of these mutual dependencies, but is also demanding a general recognition of them. War is making a nation out of a hundred million people. Out of business it is forging the nation's greatest weapon. Never was business so vital, never has efficiency had such a goal, and never was there such promise of permanently giving to business the national significance which is its logical due.

IN this connection a paragraph in a recent book from the pen of Gerald Stanley Lee—an able analyst of social phenomena—is of renewed interest. Before America entered the war he wrote: "While we have to admit we have not finished off as many Fords as we might, we have already made one point with our method; we have proved once for all to ourselves in Ford's vast experiment station in Detroit, and in a thousand smaller and less-known ways, that an organization of self-propelled men can do a third more work in a day than an organization of propelled men. . . . Ford has put self-starters into his men, and the result is an efficiency that America most earnestly wishes the iron-levered Prussian minds, swinging out into control of Germany today, would take note of in time. We think it can be shown that Prussian efficiency, based on industrial military genius and on ordering men about, must result there as it does in America, in hordes of plodders, and we believe that Ford efficiency, based on dramatic genius, on imagination about men, gains inevitably the most tremendous material result."

Instances could be multiplied by way of showing how general the new and broader conception of business has become. From a conception it must be, and is being, translated into the concrete terms of human betterment. Above all, it will do more than anything else to win the war.

New York City

Known for Its Tone

And Because It

Plays *All* Records

The Brunswick has an all-wood sound chamber—built like a violin.

This throat gives The Brunswick a clear, vibrant voice. When you hear it, you will have a new appreciation of phonographic reproduction. One must compare it.

Another feature that decides many in favor of The Brunswick is its ability to play all records, whatever make. This removes limitations.

This means Brunswick owners may now enjoy the now famous Pathe Discs, for which a sapphire-ball reproducer is furnished. Pathe, as you know, has the world's largest collection of records.

The Brunswick is designed and built by the House of Brunswick, for 76 years a leader in the wood working art. The Brunswick is furnished in ten models, ranging from $30 to $1500.

Hear The Brunswick, and compare before you decide. It is the final type, a composite of all wanted features—truly, "All Phonographs in One."
